Messrs. GILL & SONS have parted with their late representative Mr. F. A. Martin, and in future will be represented by Messrs. Slater, Knott, and Bartlett.

\* \* \*

MR. JOHN MURRAY has appointed Mr. F. A. Martin to represent him in visiting the great public and secondary schools.

\* \* \*

THE tercentenary of the Bodleian Library will be celebrated in October. It was on November 8, 1602, that the present library was thrown open. There was a great library at Oxford before the Bodleian. This was the collection founded by Humphrey, Duke of Gloucester, about 1450. After a century's existence, Duke Humphrey's collection was broken up and dispersed. The "University either could or would do nothing to repair the loss." So Sir Thomas Bodley undertook at his own expense to refill the shelves of Duke Humphrey's empty library, and to endow the institution.

\* \* \*

THE Franco-English Guild at Paris, which hitherto has restricted its services to women, is now opening a section for men. This new step has been taken on the suggestion, and with the active co-operation, of the "Comité de Patronage des Etudiants Etrangers à la Sorbonne," a committee that has M. Casimir-Périer for its President, and counts among its members most of the leading men at the Sorbonne. M. Léopold Sudre, Docteur-ès-Lettres, the distinguished philologist, is to be "Directeur des Etudes" of the men's section of the Guild. Englishmen will be able to obtain advice and information, not only about their studies, but about many other matters that concern foreigners in Paris, on application to the Secretary, the Franco-English Guild, 6 Rue de la Sorbonne, Paris.

### THE TRAINING OF SECONDARY TEACHERS.

*To the Editor of the Educational Times.*

SIR,—Among the many educational questions now before the public, not the least important is that of the training and registration of teachers in secondary schools—a matter on which the future success of English secondary education largely depends. Even the educational public may not, perhaps, realize the dangers ahead, and I would, therefore, beg for a few lines of your space to draw attention to the subject.

The Order in Council of March 6, 1902, contemplates, as we know, a double basis for a course of training for the young college graduate. Such a person may undergo a course of professional study at certain Universities or training colleges, or may become a student-teacher in a recognized school. The danger with the former plan is that the professional theory may be divorced from the best professional practice, and the training be, therefore, somewhat too academic. A more serious danger in the second method is the introduction of a veiled pupil-teachership, whereby needy schools may be tempted to employ an unfair proportion of such teachers, and thus injure the position of the staff and the work generally. It is to be hoped that the Registration Council may be able to safeguard the profession of teaching by securing, on the one hand, for training colleges and Universities adequate facilities for practice in the best schools, and, on the other hand, that the student-teacher system may not be made a cheap and easy option whereby students may, as it were, learn the mere tricks of the trade without any broad basis of philosophical study of education.

These dangers may be avoided if the schools and Universities would combine to evolve a method of training teachers analogous to the professional training of the best medical schools, and so secure professional efficiency, as the New Order in Council secures professional status.—I am, Sir, &c.,

Manchester High School,  
May 17, 1902.

SARA A. BURSTALL.

[This letter has already appeared in the daily journals. Writing to the *Birmingham Daily Post* (May 21), Mr. Thomas Allen, M.A., Woodbury, Malvern Link, made the following comments:—"No doubt, as your correspondent the Head Mistress of the Manchester High School states, the training of teachers in secondary schools is a very important question; but it seems to me she regards it rather from the side of the general public than from the side of the teacher. Of course a trained teacher is more valuable for teaching than a raw inexperienced one, but at whose expense is the training to be? As far as I can see, the expense must come out of the pocket of the teacher. The question at once arises—Does the trained teacher command more money than the untrained one, and will the trained teacher have reasonable security for the outlay? Accordingly, the training of teachers in secondary schools involves the very serious question of tenure. What that is in endowed secondary schools it is hoped that many of the readers of your valuable paper already grasp. But, for the benefit of those who do not yet understand the insecurity which at present exists, I would ask to be allowed to draw their attention to the following two sentences in paragraph 133 of Part III. of the Secondary Education Commission Report: 'One of our witnesses went so far as to urge the maintenance of the present system on the ground that "a school is a monarchical institution," nor would he give to the head the right of appeal which he refused to the assistant teacher. Admitting that there might have been cases in which the dismissed head master was in the right and the governing body in the wrong, he still maintained that in the long run it was better not to limit the latter's authority, as "hard cases make bad law." In other words, in cases of dismissal head teachers and governing bodies are not only infallible, but they are also invested—and that in free England—with unlimited powers. 'A monarchical institution!' If the British constitution were formed on the lines of the schemes of the Charity Commissioners, there would be something said and done. Fortunately, the majority of governing bodies and head teachers do not make use of their arbitrary powers.'"]

### SECONDARY TEACHERS AND THE REGISTRATION FEE.

*To the Editor of the Educational Times.*

SIR,—It appears that a guinea fee is to be levied on every secondary teacher coming on to the new Register. Might I suggest that, as salaries in secondary schools are often absurdly low, many of them falling below £100 a year, the Board of Education would be acting more justly to secondary teachers by authorizing a graduated fee—for example, a guinea on all salaries above £200 a year, 15s. on those between £150 and £200, half a guinea on those between £120 and £150, and so on?

An all-round fee to secondary teachers is scarcely fair, especially if, as it is reported, members of the N.U.T. are to come on to the Register free.—I am, &c.,

City of London School, May 17, 1902.

A. G. MUNRO.

### REGISTRATION REGULATIONS.

*To the Editor of the Educational Times.*

SIR,—I read with much interest your article, in the March number, on "The Registration of Teachers," and, whilst agreeing with some points of your criticism, I fancy that you take somewhat too pessimistic a view of the utility of these regulations. I notice that you take exception to the non-provision for the registration of secondary teachers on the sole ground of experience, and the non-recognition of minor certificates in the case of teachers in the lower forms. Now, Sir, in my humble opinion, both these classes are amply provided for by Clause 4; for, in the case of teachers whose pecuniary difficulties preclude them from a University education, an avenue to registration is opened by the F.C.P. and L.C.P. diplomas and the Oxford and Cambridge Higher Locals, which examinations represent a highly respectable standard of intellectual attainments. Again, a secondary teacher of long standing ought not to fear the ordeal of an examination in the theory and practice of education, as the subjects of examination constitute the underlying principles of the art of which he is professedly an exponent. Consequently I think the Education Department has acted wisely in

declining to recognize minor certificates, and in requiring a proof of advanced education from all engaged in the profession.

I very much doubt whether there will be any such influx of elementary teachers into secondary schools as you suggest, for two reasons: firstly, the salaries enjoyed by assistant masters in the smaller secondary schools are not on so munificent a scale as to allure the generally better paid assistant in a Board school; secondly, a teacher registered in Column A, unless possessed of the same qualifications as are necessary to secure admission to Column B, would be, in reality, unqualified to teach in a secondary school. With regard to the restriction of the supply of secondary teachers, I consider such a consummation eminently desirable; for the hitherto utterly inadequate salaries of such teachers must inevitably rise to something approaching a respectable level after the elimination of the ignorant and incompetent from their ranks. Official registration will prevent, in the future, the failures in other avocations from swelling the ranks of our profession, and will at last raise the social status of the schoolmaster to the level of the doctor or the lawyer.—I am, &c., REGINALD G. F. ROBERTS, A.C.P.  
Towcester Grammar School, May 19, 1902.

### THE NEW PRESIDENT OF COLUMBIA.

#### "THE TRUE UNIVERSITY'S IDEAL."

PROF. NICHOLAS MURRAY BUTLER, who was elected President of Columbia University on January 6, was formally installed on April 19. President Roosevelt made his first official visit to New York on the occasion; and it is 113 years since a President of the United States visited Columbia as an official guest. Mr. Carnegie and Lord Kelvin were also among those present. In his address, says the *New York Herald* (April 20), President Butler declared that the kindly and generous greetings he had received humbled as well as inspired him. They expressed a confidence and a hopefulness which it would tax human capacity to the utmost to justify, while they pictured a possible future for the University which fired the imagination and stirred the soul.

He traced the growth of education through the centuries, and explained the service of the University in Church and State. Great personalities, he said, made great Universities, and great personalities must be left free to grow and express themselves, each in his own way, if they are to reach a maximum of efficiency.

"What the future development of the great Universities is to be perhaps no one can foresee," he said. "But this much is certain: every city which, because of its size or wealth or position, aims to be a centre of enlightenment and a true world capital must be the home of a great University. Here students and teachers will throng by the mere force of intellectual gravitation, and here service will abound from the mere host of opportunities. The city, not in its corporate capacity, but as a spiritual entity, will be the main support of the University, and the University in turn will be the chief servant of the city's higher life. True citizens will vie with one another in strengthening the University for scholarship and for service. In doing so can say, with Horace, that they have builded themselves monuments more lasting than bronze, and loftier than the pyramids reared by kings—monuments which neither flood nor storm nor the long flight of years can overturn or destroy.

"Sir John de Balliol, doing a penance fixed by the Abbot of Durham; Walter de Merton, making over his manor house and estates to secure to others the advantages which he had not himself enjoyed; William of Wykeham, caring generously for New College and for Winchester School; John Harvard, leaving half his property and his library to the infant college by the Charles; and Elihu Yale, giving money and his books to the collegiate school in New Haven, have written their names on the roll of the immortals, and have conferred untold benefits upon the human race. Who were their wealthy, powerful, and high-born contemporaries? Where are they in the grateful esteem of the generations that have come after them? What service have they made possible? What now avails their wealth, their power, their high birth? Balliol, Merton, Harvard, Yale, are names known wherever the English language is spoken, and beyond. They signify high purpose, zeal for learning, opposition to philistinism and ignorance. They are closely interwoven with the social, the religious, the political, the literary history of our race. Where else are there monuments such as theirs?

"Scholarship and service are the true University's ideal. The University of to-day is not the 'home of lost causes and forsaken beliefs and unpopular names and impossible loyalties.' It keeps step with the march of progress, widens its sympathies with growing knowledge, and among a democratic people seeks only to instruct, to uplift, and to serve, in order that the cause of religion and learning and of human freedom and opportunity may be continually advanced from century to century and from age to age."

## MACMILLAN & CO.'S NEW EDUCATIONAL BOOKS.

MACMILLAN'S MANUALS FOR TEACHERS.—New Volume.

**PRINCIPLES OF CLASS TEACHING.** By J. J. FINDLAY, M.A., Head Master of the Cardiff Intermediate School for Boys. Globe 8vo, 5s.

MACMILLAN'S ENGLISH CLASSICS.—New Volume.

**BURKE'S THOUGHTS ON THE CAUSE OF THE PRESENT DISCONTENTS.** Edited, with Introduction and Notes, by F. G. SELBY, M.A. Globe 8vo, 2s. 6d.

**INDO-IRANIAN PHONOLOGY,** with special reference to the Middle and New Indo-Iranian Languages. By LOUIS H. GRAY, Ph.D. 8vo. [Shortly.]

### GREEK AND LATIN.

MACMILLAN'S GREEK COURSE.—New Volume.

**GREEK PROSE COMPOSITION.** By S. O. ANDREW, M.A., Head Master of the Hulme Grammar School, Oldham. Globe 8vo, 3s. 6d.

\* \* \* KEY, for Teachers only. 5s. net.

[Ready shortly.]

**THE ELEMENTS OF GREEK.** A First Book, with Grammar, Exercises, and Vocabularies, by F. K. BALL, Ph.D. Illustrated. Crown 8vo, 6s.

**LATIN PASSAGES FOR TRANSLATION.** For the Use of Higher Forms in Schools, and of Students working for Pass Degrees. Selected by M. ALFORD, Lecturer in Classics at Girton and Westfield Colleges. Globe 8vo, 3s.

*Educational News.*—"A better work of its kind we have not seen. The passages have been selected with scholarly skill, and their arrangement is excellent."

### MATHEMATICS AND SCIENCE.

**WOOLWICH MATHEMATICAL PAPERS,** for Admission into the Royal Military Academy, for the years 1892-1901. Edited by E. J. BROOKSMITH, B.A., LL.M. Crown 8vo, 6s.

**AN ELEMENTARY TREATISE ON THE CALCULUS.** With Illustrations from Geometry, Mechanics, and Physics. By Professor GEORGE A. GIBSON, M.A., F.R.S.E. Crown 8vo, 7s. 6d.

*Nature.*—"Among several notable characteristics possessed by this work, the most prominent appears to be the severity of its logic. In one important respect it differs also from the usual English mathematical treatise—it seems to speak to the student, warning him against too probable error and giving him advice. This is a feature which should be encouraged. . . . A work which seems to leave no difficulty unnoticed."

**SPHERICAL TRIGONOMETRY FOR THE USE OF COLLEGES AND SCHOOLS.** By the late I. TODHUNTER, M.A., F.R.S. Revised by J. G. LEATHEM, M.A., D.Sc. Crown 8vo, 7s. 6d.

*School World.*—"Mr. Leatham has performed his task of revision in a very able and judicious way. . . . Substantial additions have been made, all of real interest and importance."

**SOLUTIONS OF THE PROBLEMS AND THEOREMS IN SMITH AND BRYANT'S GEOMETRY.** By CHARLES SMITH, M.A. Crown 8vo, 8s. 6d.

**A COLLEGE TEXT-BOOK OF CHEMISTRY.** By IRA REMSEN, President of Johns Hopkins University. Extra crown 8vo, 8s. 6d. net.

*Guardian.*—"The author's skill in writing elementary text-books is well known, and this work displays the features by which his other writings of the kind are characterized. An unusual facility is shown in emphasizing facts which illustrate general principles, or are otherwise of special interest, while all that is unessential is excluded, and the whole is put together in a clear and simple manner so as to form an interesting and readable text-book."

Thoroughly revised and brought up to date.

**PRACTICAL BOTANY FOR BEGINNERS.** By F. O. BOWER, Sc.D., F.R.S., Regius Professor of Botany in the University of Glasgow, and D. T. GWYNNE VAUGHAN, M.A., Assistant in Botany in the University of Glasgow. Second Edition. Globe 8vo, 3s. 6d.

*Journal of Horticulture.*—"Books that are so easy to follow, and which really lead one on, and teach practical botany, are remarkably rare, and that is why we welcome this primer of 307 pages."

**A UNIVERSITY TEXT BOOK OF BOTANY.** By Professor DOUGLAS H. CAMPBELL, Ph.D. With many Illustrations. 8vo, 17s. net.

FROM  
**WILLIAMS & NORGATE'S**  
LIST OF SCHOOL BOOKS.

**EUGÈNE'S THE STUDENT'S COMPARATIVE GRAMMAR OF THE FRENCH LANGUAGE.** With an Historical Sketch of the Formation of French. For the Use of Public Schools. With Exercises. By EUGÈNE FASNACHT, late French Master, Westminster School. Twenty-second Edition, thoroughly Revised. Square crown 8vo, cloth, 5s. Or, separately, Grammar, 3s.; Exercises, 2s. 6d.

"In itself this is in many ways the most satisfactory grammar for beginners that we have as yet seen."—*Athenæum*.

**EUGÈNE'S FRENCH METHOD.** Elementary French Lessons. Easy Rules and Exercises preparatory to the "Student's Comparative French Grammar." By the same Author. Sixteenth Edition. Crown 8vo, cloth, 1s. 6d.

"Certainly deserves to rank among the best of our elementary French exercise books."—*Educational Times*.

**EUGÈNE'S COMPARATIVE FRENCH-ENGLISH STUDIES.** Grammatical and Idiomatic. Being an entirely Rewritten Edition of the "French Exercises for Middle and Upper Forms," Fourteenth Edition. Cloth, 2s. 6d.

**BOELLE (JAMES).—FRENCH COMPOSITION THROUGH LORD MACAULAY'S ENGLISH.** Edited, with Notes, Hints, and Introduction, by JAMES BOELLE, B.A., Univ. Gall, Senior French Master, Dulwich College, &c., &c. Crown 8vo, cloth. Vol. I. Frederick the Great. 3s. Vol. II. Warren Hastings. 3s. 6d. Vol. III. Lord Clive. 3s.

"This, we may say at once, is an exceedingly useful idea, well carried out, and one of the best things of its class that we have seen. . . . We can pronounce the equivalence of the idioms recommended to be quite unusually just."—*Saturday Review*.

**DELBOS.—THE STUDENT'S GRADUATED FRENCH READER.** For the Use of Public Schools. I.—First Year: Anecdotes, Tales, Historical Pieces. Edited, with Notes and a complete Vocabulary, by LÉON DELBOS, M.A., late of King's College, London. Twelfth Edition. 166 pages. Crown 8vo, cloth, 2s.

II.—Second Year: Historical Pieces and Tales. Sixth Edition. 180 pages. Crown 8vo, cloth, 2s.

"It would be no easy matter to find a French reader more completely satisfactory in every respect than that of M. Delbos."—*Athenæum*.

"This is a very satisfactory collection from the best authors, selected with great care, and supplied with adequate notes. . . . A thoroughly good book of this kind should, in fact, be calculated to inspire a taste for literature in the student's mind. The volumes edited by M. Delbos fairly meet this requirement."—*Journal of Education*.

**DELBOS.—LITTLE EUGÈNE'S FRENCH READER.** For Beginners. Anecdotes and Tales. Edited, with Notes and a complete Vocabulary. Second Edition. Crown 8vo, cloth, 1s. 6d.

**WEISSE'S COMPLETE PRACTICAL GRAMMAR OF THE GERMAN LANGUAGE.** With Exercises on Conversation, Letters, Poems, and Treatises, &c. Fourth Edition, almost entirely Rewritten. Crown 8vo, cloth, 6s.

"We have no hesitation in pronouncing this the fullest and most satisfactory German grammar yet published in England."—*Journal of Education*.

**WEISSE'S SHORT GUIDE TO GERMAN IDIOMS.** Being a Collection of the Idioms most in use. With Examination Papers. 8vo, cloth, 2s.

**A SHORT SKETCH OF GERMAN LITERATURE.** Prepared for the Scottish Leaving Certificate Examinations. By VIVIAN PHILLIPS, B.A., Fettes College. Thoroughly Revised. Second Edition. Pott 8vo, 1s.

**ARMY SERIES.**

EDITED BY J. T. W. PEROWNE, M.A.

**LE COUP DE PISTOLET, &c.** By PROSPER MÉRIMÉE. 2s. 6d.

"The first two volumes are an excellent choice, and we advise any one, whether candidate or lay, to purchase the volume of Merimée."—*Journal of Education*.

**VAILLANTE.** By JACQUES VINCENT. 2s. 6d.

"The books are well got up, and in 'Vaillante' an excellent choice has been made."—*Guardian*.

**AUF VERLOBNEM POSTEN, AND NAZZARENA**

**DANTL.** By JOHANNES V. DEWALL. 3s.

"The two stories by J. v. Dewall are well suited for their purpose: the style and diction are not too difficult for those whose acquaintance with German is not extensive, and ample explanatory annotation is provided."—*Saturday Review*.

**CONTES MILITAIRES.** By A. DAUDET. 2s. 6d.

"Written at fever heat immediately after the great 1870 war, they show Daudet's power in many ways at its highest. . . . We therefore do more than recommend—we urge—all readers of French to get the stories in some form, and the present one is both good and cheap. The paper is excellent, and the type clear and bold. . . . A neat map of Paris will assist the reader in following the movement of the stories."—*Schoolmaster*.

**ERZÄHLUNGEN.** By E. HOEFER. 3s.

Recently Published. Fcap. 8vo, cloth, 1s. 6d.

**ELEMENTARY LESSONS IN CAPE DUTCH (Afrikander Taal).**

A. WERNER AND G. HUNT,

*Approved and adopted by the Educational Department.*

"We most cordially recommend this book to any one going out to settle in South Africa. . . . The dialogues and exercises in the book before us are admirably planned."—*Reformer*.

"To those outward bound such a book is sure to be useful."—*Practical Teacher*.

A new edition of our Educational Catalogue is now ready, and will be sent, post free, to any applicant.

## AMERICAN UNIVERSITIES.

A JOINT MEETING of members of the College of Preceptors and of the Assistant Masters' Association was held at the College of Preceptors on May 21, when the Chair was taken by Prof. A. F. MURISON, and a paper entitled "Some Notes on American Universities" was read by Prof. KNIGHT, LL.D., of the University of St. Andrews.

### RICH ENDOWMENTS.

Prof. Knight said that American Universities had been richly endowed by wealthy commercial men who desired their names to be remembered by posterity. This desire on the part of men of the States to found colleges and endow them was one of the most hopeful omens for the future of that country. A new type of humanity would be developed and would react on the legislature. In the Universities of Europe they could trace the evolution of two radical types with the successive modifications they had undergone. Within the Universities there had been many ups and downs, but there had been a constant development, and scientific study had steadily advanced all along the line. Some of them were very inferior to others, but all of them had sprung up from a genuine love of knowledge, if not of wisdom, and from a desire for the diffusion of knowledge throughout society. The policy of Great Britain towards America, which had cost us and lost us so much, had been of great advantage to our cousins. It had led to the assimilation of European elements in the American race. A rapprochement between the two countries had begun, and would continue to grow, and from this the Anglo-Saxon race would be richer and stronger. It was difficult for an outside observer to be also a critic and competent adviser, but it should not be difficult to introduce a measure that should regulate the conferring of degrees by all the colleges. Some central authority was required to tell the nation what was the value of the education given, and of the degrees conferred. The Universities of America had started on a career of progress which had placed them on a footing of equality with those of Europe. They were relatively far wealthier than the Universities of Europe, and they had an assured future in the interest with which millionaires were subsidizing them.

### THE GOVERNING BODY.

It was a blessing to the nation that no University was a mere examining body. The primary function of the University was to bring teacher and taught into direct and vital relation. The most serious defect was the power of the trustees. It was an excellent plan for the Board of Trustees to appoint a President with almost autocratic power. He was responsible for selecting the staff of teachers and for securing the very best men he could get. He was not appointed as our Principals were; and he might be dismissed at any time by the trustees. In some of the colleges the President was expected to devote all his energies to obtaining fresh subscriptions and donations. This was not universal; but it had been made the ground of dismissal of several Presidents that they did not obtain money in sufficient quantities. The academical arrangements of the American colleges were more complicated than ours, and changed more rapidly. More subjects were required to be taken for the B.A. degree. The range and extent left us far behind. So in the case of women students the number of subjects selected was greatly in excess of those taken at Cambridge. In favour of this it might be said that it tended towards versatility. This was characteristic of American life.

### THE STUDENT SOCIETIES.

No influence on undergraduate life in America had been more powerful than that of the student-societies. These had influenced the destinies of every University. This was true to a certain extent of Universities in every country, but in America these student-societies had features peculiar to themselves, having elements of freemasonry in them. Many of them were secret societies and curiously named. Some were named after the letters of the Greek alphabet, and were known as the Greek

Letter Societies. They had usually a club house, with business rooms, and occasionally sleeping quarters. To obtain admission in early academic life was regarded as a great honour. As a social bond the influence was certainly very great. These societies were seen at their best at Amherst and Williams. Elsewhere they had occasionally a disturbing element, but everywhere they developed *esprit de corps*. There were thirteen of these societies at Amherst, and thirty members in each society. There was immense competition for entrance into them. In some of the colleges the societies were social rather than athletic or intellectual. None but gentlemen could be elected, and they must be fair scholars. It was a self-education to belong to one of these societies. The bond was stronger than that of the class room. These Greek letter societies had altogether a membership of a hundred thousand.

#### SOME GREAT UNIVERSITIES.

The Johns Hopkins University at Baltimore was founded about twenty-five years ago. Johns Hopkins came from the country as a poor boy to obtain the means of livelihood. He succeeded in acquiring a large fortune, and devoted it to founding a University and a hospital, two distinct foundations in different parts of the city. Three and a half million dollars were bequeathed to the University, and three million dollars to the hospital. The story of the University was a very striking one. It now had over three thousand students, twelve hundred of them being Marylanders, and many of them foreigners. The University of Pennsylvania had had a great career. In point of numbers it was more important than the Johns Hopkins. The Chicago University was founded in 1890 by John D. Rockefeller. Its growth was a record in the history of the world. There was an old institution in the city of Chicago which closed its work in 1886. Preliminary negotiations were carried on with the Baptist Society for the formation of a University. Six hundred thousand dollars were subscribed by Rockefeller, and four hundred thousand by the Baptists. Buildings were secured and trustees appointed, and at the first meeting of the Board, Prof. Harper, of Yale College, was elected President. He began work in 1891. Donations poured into the University coffers, and it was furnished with a chemical laboratory, an Oriental museum, and an observatory. It opened its doors to students in 1892, and obtained six hundred. In 1895 there were two thousand. It is now doing good work of an advanced character.

#### COLLEGES FOR WOMEN.

In America co-education was the rule in the greater number of the Universities and colleges; but there were also separate colleges exclusively for women, and there were annexes to the men's colleges where women were taught separately. Thus, there were three different arrangements for the education of women in America. During the twenty years following the Civil War four women's colleges received over 6,000,000 dol. in endowments and gifts. Beyond question, it was Mary Lyon's noble work which led the way to the higher education of women. Before her time all that was common to the sexes was the reading of the Bible and the Catechism. She was a singularly noble and devout woman, and her life has been described as an additional verse to the 11th chapter of the Epistle to the Hebrews. She succeeded in carrying out her idea against enormous opposition. A girl of remarkable power, she committed the Latin grammar to memory in three days. Her main idea was that education was the birthright of every woman. Owing to her work it came about that, two hundred years after the foundation of colleges for men, one for women was started in Massachusetts, called the Mount Holyoke Seminary. Miss Lyon tried to widen the interest in her college, to obtain teachers that would accept small salaries, and to introduce self-help among the teachers in order to promote economy. She abolished caste; she dignified labour and systematic work. 8,600 students have attended Mount Holyoke Seminary since its foundation, and 2,600 have graduated.

#### WELLESLEY.

Wellesley College for Women was founded in 1875 to "enable those young women who desire a liberal education to obtain the advantages which are enjoyed at similar institutions of the higher grade." It is undenominational, Sunday services being conducted by clergymen of various denominations successively. It has full power to grant degrees. It has eight hundred students, with ninety professors and instructors, while 198 courses of study are offered. The entrance examination includes three languages, and is very severe. Undergraduate life at this College is very different from that of most students. Girls do not select their

college as young men do, for the reason that their father or grandfather had been there before them. As a rule they go where they can get the best and hardest work to do. At Wellesley there are three ways in which women students might live. They might live at the Central College Hall, or in one of the houses in the extensive grounds, or they might board in the village of Wellesley. It is undoubtedly an advantage for the girls to be for the first years in the main building. They get a better insight into college life, and learn a standard of proportion which the quiet of the cottage could not give. There is not much opportunity for leisure and quiet. The cottages supply that afterwards; but any girl at Wellesley can see as much of society as is good for her. Athletics receive great attention at Wellesley. No other women's college in the world has such opportunities for athletics; it has three hundred and sixty acres of ground, including a golf course of eighteen holes.

#### INTERNATIONAL RECOGNITION.

The academic degrees of the Universities of America should be recognized in England, Scotland, and Ireland as qualifying for all our post-graduate work; and the possession of the B.Sc. in America should admit the student to the fullest post-graduate study for the D.Sc. The Universities themselves must make these arrangements, and this inter-University courtesy would do much to promote friendly relations amongst the Anglo-Saxon race.

Miss STEVENS said she had met many of the students and professors of American Universities, and it was most refreshing to see how true and earnest the American women graduates were. With them education seemed to be a sort of religion, to which everything else had to be subordinated.

Mr. G. W. ROWE said that he had no intention of making any remarks on his own account, but would like to give a rough *précis* of some articles that had appeared lately in the American monthly the *Forum*, by Professor G. T. Ladd, of Yale. Professor Ladd considered the true functions of a University to be three: (1) The highest mental and moral culture of its own students; (2) the advancement, by research and discovery, of science, scholarship, and philosophy; (3) the diffusion of the benefits of a liberal culture over the whole nation. The American Universities had failed to fulfil these functions, since (1) the nation was sorely suffering from the lack of trained leaders; (2) the great majority of the teachers and advanced pupils in the Universities had never themselves been trained so as to be interested in, or capable of, the higher kinds of research, discovery, and productive activity; and (3), with however good a will, the professor could not train his pupils, mentally or morally, if he was obliged to do his work in the midst of a loosely organized or disintegrating educational system. This disintegration was due to the "elective" curriculum in vogue in American Universities, whereby a student on entrance was allowed to choose a course of study covering any variety of subjects he might prefer. The value of the teacher was under-estimated, owing to the application of a too exclusively commercial standard to the results of higher education. In conclusion, the two sore spots in the administration of the Universities of the United States were (1) the intense competition for mere numbers, and (2) the relatively insignificant place given to the manhood of the teachers.

Mr. ORCHARD said that, while we had something to learn from the American Universities, they had also much to learn from us. It was desirable to have a closer relationship between the British and American Universities. Cecil Rhodes had done something to effect this, and it was to be hoped that some American millionaire would follow his example. The spirit of enterprise and activity of the American Universities, combined with the experience and wisdom of our British Universities, could not fail to produce valuable results.

The CHAIRMAN said he was glad they had an opportunity of hearing both sides of the question. He was inclined to think that, if the remarks of Professor Knight and those of Professor Ladd were carefully analysed, some means would be found of harmonizing the two. There was probably no essential difference, but only a difference in the point of view and in the selection of particulars for comment. There could be no doubt that these American institutions were of the highest importance to the country and full of promise for the future. Something had been said as to the insufficiency of the professors for their work. There might be immaturity here and there, but he thought it was planted in good soil and in a favourable atmosphere; it was the kind of fault that got mended every day, and perhaps it was not peculiar to America. He himself had been much impressed thirty years ago by the keenness of young American graduates he had met in Germany; and the stream of graduates from America for further study in Germany had swollen since then, and the results were making themselves apparent in the literary as well as in the purely academic work of the American Universities.

A vote of thanks to the lecturer concluded the proceedings.

### MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on May 14. Present: Rev. J. Stewart, Vice-President, in the Chair; Mr. Barlet, Rev. J. O. Bevan, Rev. A. W. Boulden, Mr. Charles, Miss Day, Mr. Eve, Mr. Harris, Rev. Dr. Hiron, Miss Jebb, Mr. Kelland, Rev. R. Lee, Mr. Leatham, Mr. Milne, Mr. Pinches, and Rev. J. Twentyman.

The minutes of the last meeting were read and confirmed.

Saturday, July 19, was fixed as the date of the next ordinary General Meeting of the members of the College.

The report of the Examination Committee was adopted.

Mr. C. Nathan, B.Sc. Lond., A.C.P., was elected a member of the College.

The following books had been presented to the Library since the last meeting of the Council:—

By the AUTHOR.—An Old Westminster Endowment: A History of the Grey Coat Hospital. By Miss E. Day.

By the BUREAU OF EDUCATION, WASHINGTON, U.S.A.—Report of the Commissioner of Education, 1899-1900, Vol. II.

By A. & C. BLACK.—Black's Elementary Geography Readers, Nos. IV.A and IV.B: Black's Sir Walter Scott Continuous Readers (Kenilworth and Waverley); Finnemore's Men of Renown; Fowler's First Course of Essay-Writing; Herbertson's Descriptive Geography from Original Sources (Central and South America with West Indies); Kirkman's De Glouvet's France de Montorel; Ord's Shakespeare's Henry V., Part I.; Ormiston's The Old Semite and the New Monarchy; Taylor's Synthetical Maps (The South-Western District and Leinster).

By the CLARENDON PRESS.—Trechmann's Moliere's Les Facheux.

By K. & J. COOPER.—Macmillan's Simple Essays.

By MACMILLAN & CO.—Allpress's Schrader's Friedrich der Grosse, and Word and Phrase-book to the same; Ash's Zastrow's Wilhelm der Siegreiche, and Word and Phrase-book to the same; Bower and Gwynne-Vaughan's Practical Botany for Beginners.

By RIVINGTONS.—Morich's Deutsches Allerlei, and Selections from Hebel's Schatzkasten; Willis's Algebra, Part II, and Answers. Supplement to the R.U.I. Calendar for 1902.

### EARLY LESSONS IN SCIENCE.

#### MORE FREEDOM AND LESS RED TAPE.

PROF. H. E. ARMSTRONG, of the Central Technical College, London, addressed a large meeting of the Southampton and District Teachers' Guild in the hall of the Hartley Institution (May 10) on the question: "What is of chief importance in Early Lessons in Science?" Dr. S. W. Richardson, President of the Guild and Principal of the Hartley College, occupied the chair. Introducing Prof. Armstrong, he said he took it that the most important thing in education was the training of the mind. The mere acquisition of knowledge itself was comparatively unimportant, but, unfortunately, in our system of education we were apt to pay too much attention to the acquisition of knowledge, and not sufficient to the method whereby that knowledge was imparted. Teachers were very much bound down by syllabuses, examinations, and rules. It seemed desirable that more freedom should be given to teachers in that respect, and he hoped that the address of Prof. Armstrong would tend to develop a greater desire for that freedom.

Prof. Armstrong contended for greater liberty to teachers in the training of their pupils—for the introduction of methods that would make children think, and for more freedom to teachers in arranging and developing the course of study. Although it was generally held that the object they had in view was the training of the faculties rather than the mere communication of facts, and though it was true, as the Chairman had said, that more freedom in that matter was required by teachers, he imagined that they were not altogether clear as to what was meant by training the faculties; they had not got a clear idea of what faculties there were to be trained. Instruction in schools tended to develop one set of faculties, and to leave undeveloped to a very large extent what might be called the practical faculties. Coming to the immediate subject of his address, he spoke of the unfortunate use that was made of the word "science" in school teaching. What was needed in schools was the use and application of the adjective rather than of the noun in this matter—that scientific method should be introduced into the school, and should become the possession of everybody—that those particular habits which characterized the true worker in science should become general habits, with the object of developing the practice of the faculties. We could not help recognizing that, with one or two exceptions, all the work done in schools at the present day was what might be called desk work, and desk training must be a very incomplete preparation for life work.

Prof. Armstrong proceeded to insist on the importance of teaching the art of inquiry, and to deprecate the class system pursued in schools—the system of dividing the time of the scholars into certain periods. Tasks should be set children to

work out by practical methods that would appeal to them, that they could understand, and that would carry them on to greater knowledge. The choice of subject-matter depended on many circumstances—on districts, on the situation of the school, on the teacher's peculiarities and attainments—but it should take the form of object study. They should get rid of the time-table and give up the class system in schools altogether, and then they would begin to teach children to help themselves. The system of cutting time up into half-hours and other periods in school work was an absolutely false system in connexion with the work of the world. Prof. Armstrong contended that one of the most important results of working on the lines he advocated would be to educate the teachers themselves. Under the present system the teacher had no chance of improving, of making experiments, of developing, and they must give freedom for some change of this kind to be made if our teachers were to develop in the course of their work. He declared that the results achieved by two teachers equally trained and qualified, teaching the one under a system where payment by results, examinations, and inspectors prevailed, and the other under a system free from those restraints, would be extraordinarily in favour of the teacher adopting the latter system—a system that would turn out young people capable of helping themselves, of thinking for themselves. Many boys, he asserted, were being ruined by masters under the object-lesson system. Under the freer plan he advocated not only would the intelligence of the pupils be increased, but teaching would become a most interesting, instead of a most laborious, work. If we were to advance and make teachers a more important body than they are, it would be by leaving them to develop in every possible way new methods of dealing with old subjects. Prof. Armstrong, in conclusion, pointed out the conditions under which botany and chemistry should be taught in schools.

A short discussion followed, in which some of the speakers, following the lines of Prof. Armstrong's address, condemned the use of text-books in scientific teaching, it being urged that these books should be abolished entirely from schools, and everything be done from demonstration and written out afterwards.

### SLIPSHOD ENGLISH.

Two or three months back the *Pilot* lent its columns to an interesting correspondence on "Slipshod English." The subject is an attractive one: we all think that we can write good English, or, at least, know good English when it is written. Our head masters pen letters to the *Times* maintaining that to a classical scholar all other things, including a command of English, are added—letters that carry their own refutation. Self-taught geniuses like Cobbett and Mr. Moon, who knew no language but their own, expose with better reason the blunders of King's speeches and Dean's English. The subject, in fact, is a candle to which every moth instinctively flies, and most of them, we may add, singe their wings. Thus a learned and litigious Canon wrote to the *Pilot* to protest against the incorrect construction of "I bid him come," and a more learned Oxford professor gave a *catena* of instances from the "Anglo-Saxon Chronicle" down to Tennyson. "A Grandmother" took offence at "an avenue of trees on either side of the drive," and bade us substitute (or "to substitute," as Canon MacColl would have it) "each." Perhaps respect for years prevented any correspondent of the *Pilot* from pointing out that the correction implies at least six rows of trees, or that Byron has been heckled by every commentator for writing: "A palace and a prison on each hand."

"The lady doth protest too much, methinks," and the Canon likewise, yet we welcome any endeavour, however amateurish, to stem the torrent of slovenly English wherewith our cheap press and our half-educated scribblers threaten to deluge us. Nor is it only the halfpenny newspapers and penny dreadfuls that offend. We are grateful to Canon Lyttelton for mailing to the counter one pretentious absurdity from the *Times*: "Is there no spiritual purge to make the eye of a camel easier for a South African millionaire?"

Teachers are by no means infallible in this respect, and we are well aware that by exposing the errors of those in high places we may be laying ourselves open to retort. To his "Errors in the use of English" Dr. Hodgson might easily have added an appendix of examples taken from educational literature and the educational press. If we are not immaculate, however, we know our own failings, and, like Chaucer's parson, are no less ready to learn than to teach.

We take as the first sample to hand the "Special Report on the Rural Schools of France," to which we directed attention in a recent number. Excellent as far as method is concerned, it is as "regardless of English" as Barham's little Margate boy, and offends the least fastidious taste. We need not go beyond the first page for proofs of our charge. In his second sentence Mr. Brereton says: "There has been a tendency . . . to ignore this essential unity of any course of education, and to regard the latter as a more or less fortuitous aggregate of subjects." What is here "the former"? Even Mr. Sadler, whose English is generally beyond reproach, falls into this vulgar error, and writes in his introduction: "To each report is appended the name of its author, and it should be understood that the latter alone is responsible," &c. On the very same page of Mr. Brereton's report we read: "The wide extension given to the term [technical instruction] is due to the reason that the experiment has brought to light the vast ramifications of knowledge that lie at the root of every truly scientific training." It would be tedious to dissect this slipshod English. Our italics will suffice to show what is wrong.

We had marked several other passages for quotation, but can only find space for one. We give it the preference, not because it is worse than the others, but because it contains two instances of a construction that is coming in like a flood:—

I questioned a good many people in the matter, which is a very serious one, and the majority seemed to think that the real reason was not anything to do with a distaste for the work or owing to the profession becoming less attractive, but rather for economic reasons, brought about mainly by the ranks of the teachers being so encumbered.

Shades of Blair and Lindley Murray! Are Mr. Moon and Dr. Alexander Bain still living forces? A reason is "not anything to do with" something, but is for other reasons! But what of the participial construction? It is dangerous to maintain a universal negative, and we are well aware that Scott wrote "upon Nigel inquiring" when he should have written "Nigel's," and that Thackeray, a higher authority on English style than Scott, wrote: "These circumstances may lead to your ladyship quitting this house," though, had he been brought to book, we fancy he would not have defended himself, but would have quoted his own epigram: "Albert no doubt was in a hurry." It is quite true that we can hardly take up a newspaper without finding a similar instance. The last leader in the *Daily Chronicle* that we happen to have read had: "One of the reasons for the Boers remaining in the field." Mason, indeed, admits such cases as: "You will oblige me by *all leaving* the room." "I have my doubts as to *this being true*"; but a purist like Dr. Hodgson logically refuses to allow any such slovenly exceptions. It may be that before the end of the century the construction will be naturalized, and, clumsy and lazy as it is, receive the *imprimatur* of the grammarians. Usage, as Horace tells us, is the final court of appeal. Meanwhile Mr. Gladstone's challenge holds good, and we may with him protest against an ugly neologism, if not a solecism.

To pass on to undisputed matter, we find in the Report not only obvious slips, such as "a source derived from a body of notes," but Gallicisms on every page, as "children *deprived* of primary instruction" (obviously a rendering of *dépourvus*), "concordance between various curricula" (for "correlation of"), "in the respect of the progress" (for "in respect"), "schools conducted at such regardless expense," "delegates function regularly."

It has been maintained that no man can be really bilingual; if he acquires another language, so that he breathes it as his native element, he thereby loses the full use of his mother tongue. Max Müller, it is said, lost the power of writing idiomatic German, and Mr. Bodley, as the first edition of his "France" showed, has in part forgotten the English idiom. Mr. Cloudesley Brereton, we have no doubt, is a perfect French scholar.

Under the head of Gallicisms we may call attention to a few vulgar errors that still deface our novels and newspapers, though gross blunders such as "war à l'outrance," "*coûte qui coûte*," "*en deshabille*," have been scotched, if not killed. A *double entendre* may be defended as once good French, though now obsolete; but a *nom de plume* (when and where did the phrase originate?) never was and never will be French. *Embarras de richesses* may be good French, but it is rarely heard on the other side of the Channel. Littré knows it not, and we have searched in vain for an instance in a French author—except that we did light on one in Voltaire.

Our second whipping boy shall be a recent number of the *Author*, the official organ of the Incorporated Society of Authors. Of the participial construction whereon we have animadverted it contains at least a dozen examples, and one of "the latter" with-

out any "former"; and, not content with these achievements, it displays a crop of other blunders both common and peculiar. Among the former we find the *participium pendens*: "It is a curious fact, looking through the opinions as a whole, that many are still willing," &c.; the split infinitive; the confusion of "which" and "that," thus: "There are many contracts *which* have been entered into by the editor on behalf of the company *which* are binding at law and from *which* the contributors cannot retire." Among the latter, or idiosyncrasies, we notice "an altruistic spirit which is hardly *practicable* in this practical age"; "a precarious *though* unsatisfactory living"; "the company is registered under a different name to the magazine"; "owing to the misconstruction of certain writers, presumably of an idealistic tendency, of a letter, &c." All these blunders, and we might have added to the list, occur in the editorial portion of a magazine that professes to be the author's guide, philosopher, and friend. "Quis custodiet ipsos custodes?"

We have yet to note another type of slipshod English—the most offensive of all, because of its pretentiousness. Fine writing, or tall talk, our simple fathers called it; "the Corinthian order" it was christened by Mr. Matthew Arnold;

#### Chryselephantino berylus commista smaragdo

was the happy parody by the late Mr. E. E. Bowen of the style of our most popular living theologian. A recent article in the *Speaker* on Mr. G. K. Chesterton may serve the turn. The first canon of your fine writer is to pile up epithets and to use as many words as possible in a new and unnatural sense. "To join issue with Mr. Chesterton would appear but a *mournful* ingratitude"; "a doleful consummation"; "an effective ultimate triumph"; "a massacre of visible assassination"; and what may serve as a palmary instance of tautology—"so many innumerable human lives"; "to indurate into the brain"; "all perspective is levelled"; "all effort is effected"; "to crush into an inchoate mass": these are a few samples out of many that we might pick from this single article, of the abuse or misuse of words.

## REVIEWS.

### THE OXFORD ILIAD.

*Homeri Opera.* Recognoverunt brevique adnotatione critica instruxerunt David B. Monro et Thomas W. Allen. Tom. I. (Iliadis libros I.-XII. continens). Tom. II. (Iliadis libros XIII.-XXIV. continens). (Oxonii: e Typographeo Clarendoniano.)

To the twenty volumes of the "Oxford Classical Texts" ("Scriptorum Classicorum Bibliotheca Oxoniensis") already issued from the Clarendon Press Messrs. Monro and Allen have now added an extremely careful, laborious, and able recension of the "Iliad" in two handy volumes. Having formed their text with a masterful grasp of the materials and of scholarly methods, they have been able to confine their critical remarks to a very few lines at the bottom of the page. We do not know whether the printer followed the example of Foulis, of Glasgow, who fixed up his proofs at the gates of the University with an offer of half-a-crown for every correction; but, in any case, the volumes are beautiful and accurate examples of his art, a pleasure to eye and hand and mind.

In a "Praefatio" of a dozen pages Mr. Monro explains the method of editorial procedure. He does not explain why he has chosen to do so in Latin. English, it may be safely said, is nowadays quite capable of expressing his meaning; and he has long since proved himself capable of lucid exposition in English, even on Homeric subjects. His Latin, indeed, is fluent and piquant, and quite as good as if it had been made in Germany; but we should all have taken that for granted. Perhaps he wishes to speak across the Channel, and surmises that Latin will serve his purpose more effectively than the insular speech. The practice is traditional and picturesque, no doubt; yet not devoid of an element of incongruity. It is a scholarly performance, however, though not without a suspicion of diligent use of the file.

The construction of a critical text is a sufficiently arduous undertaking. The poet himself—final or original—stands far back in the mists of the past. But criticism was at work on the poems as early as the fifth century before the Christian era, though perhaps not to much purpose; the codices are numerous; and the Alexandrian grammarians, as well as recent discoverers, contribute a huge mass of material for sifting. Again, if it be

the fact, as Mr. Monro (with most other scholars) thinks is probable, that there was little or no literary use of writing in the time of Homer, and that the preservation and diffusion of poems depended not on the pens of copyists, but on the memories and tongues of singers and rhapsodes, there arises a double difficulty, from lapses of memory, and from arbitrary modifications, whether in matter or in dialect, on the part of the reciters. Thus there emerge three lines of investigation :

Primum danda est opera ut librorum testimonia colligantur atque rite aestimentur. Deinde ad antiquos convertendum, ac lectionis varietas e fragmentis doctrinae Alexandrinae iustauranda. Postremo, si de pristino epicorum sermone coniecturas capere libet, res est non in chartis papyrisque posita, sed in scientia linguarum cum Graecae tum cognatarum.

There is, perhaps, a fourth line, to some extent parallel with the third, but environed with greater perils than all the preliminary and indispensable three followed by Messrs. Monro and Allen in their quest for a text "si non optimum—ut qui ipsius poetae manum contingeret—attamen in optimis Graeciae saeculis vulgatum."

The codices of Homer are so numerous as to have proved a hindrance rather than a help: "arti criticae non tam instrumenta quam impedimenta." The editors have used about a hundred and thirty of them. In more than a hundred of these Mr. Allen either collated the whole text or else noted various readings of more or less promise; he also marshalled them in groups or families, which are here tabulated. The basis of this grouping must be sought elsewhere; yet the essential grounds of classification would have found an appropriate place here. We should also have liked a reasoned statement of the grounds of preference of one source over another. Dr. Leaf's London and Paris readings have been utilized, as well as those recorded in numerous fragmentary papyri recently discovered in Egypt. The remarkable thing is that such a wide comparison should yield such few and such unimportant variations. The vulgate is seen to have taken an early and persistent hold. Yet, as Prof. Platt has said, "no one in any degree acquainted with Homeric criticism can acquiesce contentedly in the vulgate." It is necessary to look farther afield.

There being no complete codex of earlier date than the tenth century, Mr. Monro turns to the old grammarians. Prince of these was Aristarchus. To his recension Giphanius, followed by F. A. Wolf, traced the text we have; but Mr. Monro gives ample reasons against this view. Moreover, he adopts Ludwig's conclusion that, while the old vulgate text, on which (as Sir Richard Jebb says) "the copies known to the Alexandrians must have rested," differed to some extent from the text of Aristarchus, it came nearer to our text ("eandem ad codices nostros propius accedere"), whose authority is thus enhanced by a hoarier antiquity. Still the early critics are not to be neglected. The line of recorded editors stretches down from Antimachus of Clarus, in Ionia, a contemporary of Socrates; there were the half-dozen so-called "civic editions," the "common" or "popular" editions, and others. There was thus a considerable quantity of materials for Homeric criticism in the Alexandrian library—at the least fifteen books, collected throughout Greece by the aid and advice of the most learned men: "instrumentum criticum vel hodie non contemnendum." Mr. Monro speaks highly of Aristarchus and his work, laying just stress on his discrimination of the quality of his codices and his reliance on the good ones. As to the newly found papyri, they in the main agree with the vulgate, but some of them interpolate verses whose origin is not yet clear. The date assigned to them is the second or third century before Christ, which makes them older than Aristarchus; so that, if they were known to him, they would fall into his less esteemed class of codices. The interpolated verses may, indeed, be a survival of rhapsodist additions, which the critics expelled from the vulgate.

On the question of dialect Mr. Monro becomes reserved ("paucam habeo quae dicam"). He mentions with honour Bentley's discovery of the latent *digamma*, and the labours of Bekker and Cobet on the lines of Bentley's suggestion. He estimates still more highly the achievement of Fick, "qui primus intellexit linguae epicae origines extra fines Ioniae quaerendas esse," but dissents from the view that the original dialect was Lesbian Æolic, holding that it was quite as closely related with Arcadian and Cyprian. Still he leaves his attitude to Fick rather vague—a contrast with Sir Richard Jebb's precise statement in just a few lines. After all, what does it matter for the present purpose? "Ceterum si concedendum est, quod plerique hodie concedunt,

Homeri carmina non Ionica primum cantata esse, sed ex antiqua Achaeorum dialecto a rhapsodis Ionibus tractata, quid ad nos de Homero edendo cogitantes?" Mr. Monro shrinks from a complete reconstruction, and consequently from all and any reconstruction, on that basis. He is content with a text "in optimis Graeciae saeculis vulgatum."

Assuming that he has recovered such a text, so far as it is recoverable from the accessible materials—admittedly a necessary and important achievement of scholarship—evidently this cannot be the last word on the text of Homer. The old editors and grammarians down in Alexandria or elsewhere did not know everything. They did not suspect the *digamma*, and the *digamma* conspicuously raises questions. Thus Messrs. Monro and Allen insert a *ν* *εφελευστικόν* in many places where previous editors left an apparent *hiatus* under the silent guardianship of the *digamma*. Presumably they have done so in accordance with the codices, and not merely on their own judgment; for they do not (so far as we have observed) give any special intimation on the point—a point that ought to have been made particularly clear. How much still remains to be attempted within the scope of Mr. Monro's third line of investigation may be inferred from Prof. Platt's courageous challenge in "The Cambridge Homer." We referred to a fourth line of procedure, having in view what may be called literary, rather than philological, considerations. The principle must probably work for long without trenching on the received text, by natural consequence of the differing acquirements and sensibilities of critics; but nevertheless it is to be worked. For example, our editors eject *ἡρίμησ'* (vulg.) from "Iliad" I. 11, and insert *ἡρίμασεν* (after five codices). In I. 95, in a summary repetition of the incident, we have *ἡρίμησ'*—necessary, indeed, by reason of the metre. But, if the two passages be taken together, and a literary test applied to the competing readings in 11, is it so certain that the vulgate reading should be ejected? Again, in I. 14, our editors give *στέμματ' ἔχων ἐν χερσίν* (without any indication of a various reading), and in I. 28, necessarily, *στέμμα θεοῖο*. Heyne and others give *στέμμα τ' ἔχων*. Not all the codices in the world—nothing short of Homer's own manuscript—would satisfy us that *στέμματ' ἔχων* is the true reading; and, even if Homer had written it, we should still protest that he had been nodding. We have pointedly recognized the perils of such a line of criticism, but still we are satisfied that they are worth facing by individual pioneers. Meantime the present edition may confidently be expected to hold the field for many a day as the received text on the basis of the traditional materials.

#### "A NEW LIBRARY OF REFERENCE."

*The New Volumes of the "Encyclopædia Britannica."* Vols. I. and II. (Vols. XXV. and XXVI. of the complete work.) (A. & C. Black, and the *Times*.)

The new series of volumes, two of which are now published, constitutes, in combination with the existing volumes of the ninth edition, practically the tenth edition of this celebrated and useful work, and supplies, as the title-page justly claims, "a new, distinctive, and independent library of reference, dealing with recent events and developments." The contrast between the original three quarto volumes of 1771 and the present shelfful of portly tomes is sufficiently striking, and the intervening history of the enterprise marks with unique distinction the house of Messrs. Black; while the copestone is honourably inscribed with the name and fame of the *Times*. The essence of the success of the mighty undertaking lies in the elevated conception of the work and in the consequent collaboration of the most eminent specialists in every subject; but, at the back of these forces are to be recognized the clear-sightedness, courage, and administrative capacity of the men of business. The great difficulty is to keep the work up to date; and we fancy the publishers, though justly proud of their achievement, are rather sanguine if they really expect that "the aim of the editors to make the new volumes so complete that no further edition will be required by the present generation" has actually been fulfilled. The world is still moving—as fast as it did a generation ago. But, no doubt, the future like the past, will effectively provide for its needs, and, in the meantime, and for any reasonable time to come, the editors have accomplished their work with conspicuous success. A book that is habitually used by half a million purchasers may look the future in the face with serene composure.

The first of the eleven volumes scarcely contains the letter A—Aachen to Australia. Whether we dip into the treatises on the

larger subjects (such as Acoustics, Aeronautics, Africa, Agriculture, Algebraic Forms, Anatomy, Archaeology, Architecture, Arbitration (International), Armies, Astronomy), or look at the short paragraphs of a dozen lines, we discern at once thorough care and balance of judgment, as well as the best and latest information. The second volume runs from Austria-Hungary to Chicaco, and presents similar features. It is introduced by a comprehensive "Survey of recent Political Progress" from the pen of Mr. Edward Dicey. The history and conditions of the various countries are amply and luminously treated; special studies (Bacteriology, Military Balloons, Banking, Barbizon School, Billiards, Boilers, Building Societies, Canals, Channel Tunnel, Chartered Companies, Chess, &c.) are thoroughly up to date; the biographies include Bagehot (by Sir R. Giffen), Bancroft (by Professor Sloane), Beaconsfield (by Mr. Frederick Greenwood), Bismarck and Beust (by Mr. J. W. Headlam), Browning (by Mr. Leslie Stephen), &c.; and the details are marked with vigilant care. The text of both volumes is liberally illustrated both by full-page plates and inset representations, sketch-maps, plans, diagrams, and figures. The sketch-map of the partition of Africa shows (among other things) the incorporation of the Boer Republics; Santos Dumont's balloon is figured in two aspects in a plate; other plates reproduce fine examples of the art of Sir L. Alma-Tadema, M. Barye, M. Jules Breton, M. J. B. Carpeaux, Mr. Ford Madox Brown, &c. There are several full-page maps, and the whole series will contain some 125 double-page coloured maps of minute detail. The difficult selection and treatment of eminent personages still living appear, by the examples in these two volumes, to have been managed judiciously. The freshness and vitality of the work are manifest. It should find a place in the school library, and for teachers its possession is not a question of advantage, but only of expense.

"A GERMAN OF THE GERMANS."

*Maximilian I., Holy Roman Emperor.* By R. W. Seton Watson. (Constable.)

It was a happy idea to break a sober record by inserting illustrations in a Stanhope Historical Essay. Mr. Seton Watson gives thirteen illustrations, most of them portraits, which enhance greatly the interest and value of his able and sympathetic sketch of "the last representative of the dying mediæval chivalry," "the last monarch of the ancient German stamp," "the first German patriot king of modern times." Not merely limits of space, but also a sound instinct, have led Mr. Watson to concentrate his main forces upon the personality of Maximilian, rather than to retell the history of the times his hero lived in. The general history is accessible elsewhere; the characteristics of Maximilian are well worth presentation in large relief. The fact is that the real Maximilian is all but lost in severe history, for he was more an idealist than a matter-of-fact man. Mr. Watson says:

His actual achievements in the hard concrete of facts are, from a national point of view, but small; but these are more than balanced by his activity in other and more abstract directions. It is in his relations to the budding thought of modern life that we can feel the real charm and fascination of Maximilian's character. For his was a nature which could never rest satisfied with the past, and aspired to ends which only the far distant future was destined to attain. . . . His greatest achievements lie outside the province of politics; indeed, regarded as a whole, his life is not so much a great historical drama as an epic poem of chivalry, rich in bright colours and romantic episodes, and crowded with the swift turns and surprises of fortune.

Mr. Watson traces concisely, but lucidly, "the tragi-comedy of Maximilian's political life"; and he confesses that "it is with a certain sense of relief" that he passes to his hero's real merits. He tells how Maximilian won almost universal favour "by his restless activity, his manly self-reliance, his wide and human sympathy with all ranks and classes of the people"; how, "above all, he identified himself with the struggling ideals of a new German national feeling, and with the growing opposition to France, to Italy, and to Rome, and, as a national hero, inspired the devotion alike of the scholar, the knight, and the peasant." This involves a sketch of the German Renaissance, with especial regard to Maximilian's relations to the leading Humanists—notably Wimpfeling, Brant, Holbein, Celtès, Peutingier, Pirckheimer, and Dürer—to his literary achievements, and to his encouragement of literature, science, and art. The volume will prove highly attractive, and may lead on to deeper study of the period.

AN AMERICAN "TEXT-BOOK IN CIVICS."

*The American Federal State.* By Roscoe Lewis Ashley, A.M. (Macmillan.)

Mr. Ashley describes his book as "a text-book in civics for high schools and academies," and says it is "intended not only to describe the organization and work of the different American Governments, but to make prominent the relation of the citizens to the Governments and to each other." He takes as his standpoint the State, meaning by the State "the whole body of citizens considered as an organized unit." Without inquiring into the nature of this organization, or into the distinction between the State and the Government, we note that Mr. Ashley is led by his principle to four steps:

First, to explain some of the more important principles of political science with practical applications; second, to show how the American Federal State became what it is; third, to describe the national, State (commonwealth), and local governments; and, fourth, to give some idea of the policies of the State in regard to great public questions, and of the problems that confront it.

The aim, then, is comprehensive. But the author is careful to keep his main purpose disentangled from the mass of supporting details. He gives no more history than is necessary as a framework to show the development of nationality; and he subordinates discussion on government and description of governmental machinery to explanation of the real character and actual working of the governments. At the beginning of each chapter he places a judiciously chosen list of books of reference, and at the end of each chapter he marshals the matters it contains under the main headings, and propounds testing questions (with more references in detail) after the manner of Prof. Fiske. The whole of the field is surveyed in orderly and lucid fashion; and, even if the references were wholly neglected, the student would yet gain from the text a vivid understanding of the working of United States institutions. It is a great pity that the book, as a whole, does not fit into our school system. But it ought to be within the reach of the more enterprising students, and parts of it might be communicated with advantage by teachers to more advanced pupils. For such as have an eye to studies in constitutional history and political institutions, Mr. Ashley's work will be found a valuable and trustworthy guide. At all points, whether in the formation and working of the constitution, in the various departments of national and State Government, in municipal administration, party organization, taxation, commerce and industry, and foreign affairs, the main considerations are judiciously selected and clearly set out. Cuba and the Philippines receive attention; the final chapter sums up "the duties of citizenship"; and important constitutional documents are printed in appendices.

THE REJUVENATION OF "GRIEB."

*Grieb's Englisch-Deutsches and Deutsch-Englisches Wörterbuch.* Zwei Bände. Vol. I. *English and German.* Tenth Edition. By Arnold Schröer, Ph.D. (Frowde.)

Perhaps there is no German dictionary that has had more vogue in England than Grieb's; and, now that Mr. Frowde has taken it in charge, it is assured of a still wider popularity, which the new edition amply deserves. Dr. Schröer, who is Professor of English Philology in the University of Freiburg i.B., has laboured hard to bring the work up to the mark: there are four years between the date of his "Vorwort" and the date of his "Nachwort," and his elaborate re-arrangement, revision, and enlargement of the book testify to true German thoroughness. He has given very particular attention to pronunciation and etymology. For English students the pronunciation is a subordinate matter; but Dr. Schröer has had his difficulties in representing it to his countrymen—difficulties that he has very fairly overcome. The same remark applies generally to the etymology, though in that department he has had large and efficient assistance from English works. He lays special stress on the etymologies as the starting-point for an orderly development of the meanings. In this department the improvement is signally marked. The problem of selection of the vocabulary has been rather trying. Completeness is impossible; even the "Oxford Dictionary," "the grandest lexicographical undertaking of our century," is not, and will not be, complete. Dr. Schröer has in view a practical book, a handbook, with large print and good paper, and yet at a moderate price, and so he must make a selection of vocables. He leaves aside Old and Middle English, except in so far as important writers, from Spenser at least, compel attention; and he cannot exhaust the terms of trade and commerce,

or of the technological departments of recent development. A handbook "has no room for such ballast"; a technical or literary glossary is the place for it. What is wanted is living English. Yet suppose we open the volume at a venture: we find "restore (noun), restority, restrainer, resty (restive), ret, rete, rection, rethor, rethorick." Once more: "gazon (French = rasen), geal (irdisch), geason, geat, ged (Scot.), gemman (gentleman), gendarme, genio (Ital.), geniting, geniton, genteelize." Evidently, then, a good deal of space might have been saved by refusing to take on board "such ballast"; and it might have been more profitably occupied by idioms and phrases, though there is very reasonable provision of these notwithstanding. There is an expected example under "owl": "to take owl, übel nehmen." But probably this "owl" has strayed from "ill." Dr. Schröer's indefatigable persistence appears vividly in his "Nachträge." Here he presents such classical gems as "boss, boulder, corny (betrunken), crib (die gute anstellung od. stelle), fluke, oof, &c." In the body of the work he records "spatchcock" (marking it, indeed, as "familiär"), and even a variety of that famous word—"spitchcock." But the editor's zeal is pervasive, and the result is a thoroughly practical, useful, and handy dictionary. The print is good, and the binding is made for wear. The German-English volume, we understand, will follow presently.

#### "WEBSTER."

*Webster's International Dictionary of the English Language.*  
New Edition. (Bell.)

"Webster" has achieved such a position of authority as a single-volume dictionary that it needs no recommendation or criticism. The distinctive feature of the new edition is a supplement of 238 pages (three columns a page), containing 25,000 new words, phrases, and definitions, so as to bring the work abreast of the varied progress of recent years in all departments of activity, mental and physical. "The aim has been," says Dr. W. T. Harris, the accomplished editor-in-chief (United States Commissioner of Education), "to gather the fruitage of the language during the past decade on the same principles that were applied in the great revision of Webster—the International of 1890." The definitions in the various sciences have been contributed by specialists, most of whom are distinguished occupants of Chairs in American Universities or of posts directly involving exceptional knowledge of particular branches. The department of Etymology has been supplied from Harvard. A special feature is "the rich contribution of words and meanings peculiar to Australasia," which "has been prepared with great care and thoroughness by gentlemen qualified both by Australasian residence and by scholarly equipment." The editor-in-chief has himself taken in hand the definitions in Philosophy and Psychology. The presence of "automobile" and "motor-car" shows that "Webster" moves with the times. "Ping-pong," we daresay, is already noted down for the next revision. In all respects a pre-eminently capable and useful work, which should be found in every school library and at the elbow of every teacher and writer. The binding, we should add, has been specially adapted to stand the inevitable strain on so heavy a volume.

#### IMAGINATION IN MATHEMATICS.

*The Cultivation of the Mathematical Imagination.* By Mary Everest Boole. (Colchester: Benham & Co.)

This interesting little treatise, written at the suggestion of Prof. John Perry, is divided into two parts. The first part, on "The Cultivation of the Mathematical Imagination," develops the idea that a mind already in possession of some sound general knowledge of the truths connected with a subject is better fitted than one not so prepared to derive full benefit from systematic instruction in, and careful study of, that subject. The second part is devoted to demonstrating that, from a hygienic point of view, it is unwise to teach new processes in connexion with unfamiliar ideas, and *vice versa*. To these fundamental propositions nobody will take exception, but there will be considerable hesitation in accepting as a practical working scheme the system of preliminary training that the author shadows forth for mathematics in particular, but that is equally applicable to all scientific subjects. It must always be borne in mind that a child or student, on commencing the serious study of any subject, it better without *any* previous knowledge of it than with *erroneous* ideas, and hence it becomes one of the essentials for the perfect success of the proposed ideal education that all children should constantly, from the earliest infancy, be under the guidance of

able preparatory teachers, not only to some extent specialists in their respective branches, but also well-read in subjects generally. The difficulty of such attainment is self-evident. Again, though the best education is admitted to be such a training as draws out from the pupil the elements that are to be combined to produce knowledge, there is grave reason to question whether any advantage can be derived from letting a child dwell on any difficult point, however important, to the extent that induces a feeling approaching hopeless bewilderment and stupidity. It must also be remembered that the natural bent of the individual mind is an important factor in determining how far that mind can rediscover the details of any particular subject. The little book will do work of great value if it increase in teachers the sense of their share in the responsibility of making their labours effective—if it deepen the feeling that they must be thoroughly conversant with the subjects they teach, and that they must do their utmost not to limit their instruction to going over the facts given in text-books. To seek to fill lessons with a living interest, to draw out ideas, to suggest analogies and appeal to concrete illustrations, to show (as far as is practicable) the reasons for using particular processes—these are some of the elements of the desired success. There are a few misprints, one or two of which are important—one on page 18, where the quadratic equation appears as  $x^2 + 10 = 2x$ , and one on page 20, in the discussion of finite straight lines.

#### A NOVEL OF THE SCHOOL.

*The Girl from St. Agneta's.* By J. H. Yoxall, M.P. (Ralph, Holland, & Co.)

Mr. Yoxall displays alertness and versatility in his new rôle of novelist. The vaguely suggestive sub-title, "A Fantasia on a Fugue," though more applicable to the part played by the minor character it originates with than to the story of the heroine, may, perhaps, be taken to deprecate the expectation of a sober-grey treatment of ordinary conditions of school-life. It so happens, indeed, that the characters are mainly teachers at work or on holiday, or in perplexities; but the real interest lies more in the personal relations than in the professional circumstances. "The Girl" is a good girl, a good daughter and sister, and a good teacher; and, of course, she is the heroine. But she is overshadowed by the hero, as was all but inevitable with a forcible, not to say impetuous, author. One cannot help thinking that Mr. Yoxall altered his original conception of the Principal after the earlier chapters; at any rate, that important character develops in an unexpected and very satisfactory fashion. Mrs. Chetwyndham, the rectress of Studley Walton, who raises the question of reasonable tenure and rational treatment, may be drawn from life for aught we know; but, as a type of any considerable class, she rather impresses one as a caricature. Her arbitrary and foolish conduct does not seem likely to impress the real difficulties of teachers in national schools. Her daughter, a "Girthing" girl, is responsible for a bit of a mystery, and for a romantic escapade, under motives by no means improbable. The episodes in England are varied by an expedition to the Holiday School of Languages at Caen, which widens the scope for incident and description. "The course of true love never did run smooth," nor does it run smooth for "the Girl from St. Agneta's"; still, it runs. The story is brisk and bustling, with touches of humour and dashes of virile criticism. At the same time it displays an impatient facility, somewhat readily running into extravagance, and essentially antagonistic to solid and enduring achievement. Mr. Yoxall should provide himself with a knife and a file, and apply them with his accustomed vigour.

## GENERAL NOTICES.

### CLASSICS.

"University Tutorial Series."—*Tacitus: Histories III.* Edited by W. H. Balgarnie, M.A. (Clive.)

Besides a general account of Tacitus and his works, and a summary of the book in hand, Mr. Balgarnie's introduction sketches the main features of the Imperial government and the development of the Roman military organization. The notes are judicious, and often vigorous; the incidental translations are independent and suggestive, and occasional parallels, classical and English, are very pertinent. If "the perfect force entirely disappears in the potential subjunctive"—"*haudfacile disceverim, I find it very hard to decide*" (iii. 28)—its disappearance had better be traced. In iii. 70 *Martialis* is said to be *e primipilaribus*, and Mr. Balgarnie translates "once a senior centurion." Mr. Spooner has not insisted in vain; yet there is room for a demonstra-

tion of the position. Messrs. Church and Brodribb's "a centurion of the first rank," here and elsewhere, seems still more in need of demonstration. Mr. Balgarnie has done his work with ability and discretion.

"Black's Historical Latin Readers."—*The Old Senate and the New Monarchy*. By F. M. Ormiston.

The third and final volume of the series. It consists of 42 extracts, mainly from Cæsar, Velleius Paterculus, Florus, Cicero, and Suetonius, occasionally modified a little for simplicity. The collection forms a continuous account of the main points in Roman history between B.C. 60 and A.D. 14. Each extract—a passage of about 20 or 30 lines—is prefaced by a brief explanation of the situation described or illustrated in the text, and of its relation to what precedes. The language "is about equal in difficulty to an average chapter of Cæsar." The extracts should have been assigned to their several authors: has Miss Ormiston had regard to Long's estimate of Florus ("Decl. of the Rom. Rep.," I. 33, 121)? The notes are slight, intentionally; they will be serviceable as far as they go. Only *iudicare* (xxxix. 13) does not mean "to pronounce judgment"; and the technical phrase *aqua et igni interdicti* (x. 7) should have been more precisely explained. On *conservata patriæ pretium* (x. 9) Miss Ormiston says "the participle is equivalent to a gerundive, but it is used of a completed action." There seems to be somewhat of a confusion in this: better keep the gerundive out of the question. The reference to Roby (ii., § 1,406) cannot justify "equivalent to a gerundive." Similarity (cf. Livy, "Præf.": "ante conditam condendamve urbem") is not equivalence. The vocabulary is well done, but the pupils ought to have a dictionary. "No attempt has been made," says Miss Ormiston, "to render a dictionary unnecessary." Why, then, the vocabulary at all? The illustrations are good and useful. The volume is, on the whole, a good idea well executed.

"University Tutorial Series."—*Euthyphro and Menæxenus* (Plato).

Edited by T. R. Mills, M.A. (Clive.)

The introduction borrows from a previous volume of the series a sketch of Plato's life and an arrangement of the dialogues in a supposed order of development. The latter part seems rather premature, and, in any case, somewhat condensed. Mr. Mills adds a concise account of the early philosophers and the sophists, an adequate sketch of the life and teaching of Socrates, and a lucid analysis of the two dialogues in hand. The text is based on Schanz's edition, and the notes are accurate, suitable, and sufficient. The Greek is printed in excellent type. A very serviceable school edition.

*Latin Passages for Translation*. Selected by M. Alford. (Macmillan.)

Miss Alford has evidently expended much care on the selection and arrangement of her materials. She gives no fewer than 250 extracts, "an abundance of the best Latin prose" (1-132), and also a considerable quantity of good Latin verse (133-250). Endorsing the opinion of Ascham, she has chosen some of the pieces "especially as suitable for retranslation." The aim of the book not being critical, she has, in some cases, adopted "an easier reading, if backed by fair authority, in preference to one which was better supported." This does not seem to matter much; but was it worth while? Miss Alford acknowledges two emendations of her own. In a passage (105) from Tacitus, "Annals," XV. 44, she alters "multi crucibus adfixi aut flamma usti, alique, ubi . . ." to "aut crucibus adfixi aut palis reservarentur flammandi atque ubi . . ." "I have inserted two words," she says, "intended to give the general sense of what Tacitus wrote, as nearly as I could arrive at it." But the insertion of the two words involves other modifications, and it is difficult to see why the text should be altered at all, both sense and construction appearing to be perfectly plain. Again, in Cæsar, "De Bello Civili," III. 8, Miss Alford gives "reliquos posse deterreri sperans," adding *posse* to get over the difficulty with *deterreri* (present for future). But does *posse* mend the matter? And is there, in fact, any matter to mend? Besides, is not the common reading *terreri*? However, these are trifles—marks of exaggerated carefulness. It is a capital collection "for the use of higher forms in schools and of students working for pass degrees"; and we hope the author will be encouraged to publish her renderings of the passages "for the use of teachers and private students."

#### ENGLISH LANGUAGE AND LITERATURE.

*The Complete Works of Geoffrey Chaucer*. By Rev. Walter Skeat, Litt. D. (Clarendon Press.)

Who now reads Chaucer? If we may venture to adapt some well known lines of Pope, we may say that "if he pleases yet," it is through the pious labours of the present editor. What English teacher has not been grateful for the editions of some of the "Canterbury Tales," with their introductions on the grammar and versification of Chaucer, which first made the music of this sweet singer audible to his ears? Prof. Skeat has done well to publish this volume. It is not the good fortune of all to possess his great six-volume edition published by the Oxford Press, and it will be a great convenience to many to possess in a handy form an edition that excludes the many poems now known not to be Chaucer's that other editions still include. The only exception is the inclusion of the three extant fragments of the translation of "Le Roman

de la Rose," of which Prof. Skeat writes: "only the first of them can be reconciled with Chaucer's usual diction and grammar." There are valuable glossarial indices and an introduction containing a life of Chaucer, a list of his stanzas, and "grammatical hints"—a summarized but singularly clear "minimum of information" necessary to the student.

*Shakespeare's Macbeth and the Ruin of Souls*. By William Miller, C.I.E., D.D., LL.D. (Natesan.)

Dr. Miller, the well known Principal of the Madras Christian College, and Vice-Chancellor of the University of Madras, follows up his exposition of the lessons of "King Lear" with a similar analysis of the moral teaching of "Macbeth." "It is as a supreme example" of the strife that "rages endlessly and everywhere on earth between the kingdom of heaven and the kingdom of hell," says Dr. Miller, "that 'Macbeth' holds the place of the most solemnly instructive of the gifts of literature to the generations of weak humanity." He challenges the opinion of such critics as represent that Macbeth was lacking in courage: "of no character described in poetry can it be said more truly than of Macbeth that he is brave to the innermost recesses of his being." Again, he reads Lady Macbeth very differently from most critics, and supports his view with marked ability. Both the literary and the moral handling must be acknowledged as extremely capable.

"Blackwoods' English Classics."—*Milton: Samson Agonistes*. By E. H. Blakeney, M.A.

Mr. Blakeney substantially adopts Masson's text, collating it with Mr. Beeching's Oxford "Milton," and punctuating at his proper peril. The introduction (32 pages) gives a fresh and sympathetic account of Milton's life and work, with a special section on the "Samson Agonistes." Mr. Blakeney writes simply and attractively, with command of the subject, and with firm control in point of selection. The notes (70 pages) are very full and instructive, both on matter and on manner; they indicate a thoroughly equipped mind and a well-balanced judgment. Mr. Blakeney confesses that Milton is the poet "whom, of all poets, I love best." They will be very dull pupils that fail, on study of this edition, to become inspired by a like feeling. There is a literary touch, restrained yet efficient, that cannot but work excellent results.

"The Warwick Shakespeare."—*Much Ado about Nothing*. Edited by J. C. Smith, M.A. (Blackie.)

A careful piece of work that well maintains the high standard of the previous volumes of this series. A somewhat difficult chapter "On the Text" seems rather out of keeping with the otherwise simple character of the notes and criticisms; and we cannot but think that, instead of printing a list of references to the play in later works, it would have been more profitable to have pointed out more fully than is done the indebtedness of Shakespeare to Lyly in his treatment of the Watchman and in the euphuistic "wit combats" of Benedick and Beatrice.

"Sir Walter Scott Continuous Readers."—*Waverley*. Edited by E. E. Smith. (Black.)

Miss Smith has cut down the novel to the required length, preserving the story. Her introduction sketches the historical conditions of the time and place, with remarks on the author, mainly in reference to the particular book. "He seems," she thinks, "to have put more of himself into this, his first novel, than into many of the later ones." Well, this is a risky line of speculation, and not very much in place here. The notes will be helpful to some extent; but they should have been severely revised, and perhaps extended, at headquarters. "Conniving at a crime" is an amazing explanation of "composition of felony." A Scots farmer has "stirks" that are not "heifers" or "young cows," and he would be rather surprised to learn that a "stot" is a "three-year-old bull." "A hantle siller" is not "a good handful," though to a poor fellow "a good handful" might be a "hantle." There is no philological relation between the words, and no Scot would think of "handful" in connexion with "hantle." "Insight plenishing"—a sufficiently remarkable expression—is explained as "indoor furniture"; and, sure enough, there is "insight" in the text (page 56)—a mere blunder for "inside," the true and obvious reading. To explain "fendy" as "careful" is to miss the essential meaning. Why, "haggis" itself is only "a national Scotch pudding"! The editors, particular and general, must be very Sassenachs. Anyhow, this won't do.

*Advanced Dictation Sentences and Spelling*. (Relfe.)

Lists of words (with meanings) are given, and sentences embodying the words follow, words of similar sound having the prominence of thick type "to appeal to the eye." Interspersed among the exercises are lists of "the most awkward words in the English language"—a challenge to the pupils' courage. But then there is the promised reward of virtue: "pupils may rely upon a thorough mastery of English orthography by working carefully through this little book." It is positively cruel to suggest an omission, but we have not met with "analogous," which is both common and commonly misspelt. "Movable" is given; would "moveable" be considered wrong? But this is a terrible collection—more formidable than a dictionary complete, because unrelieved in severity. Are the pupils supposed to be in training for printers, or proof-readers, or spelling-bee com-

petitors? Perhaps, however, teachers that use it will have bowels of compassion—unless when they apply it as an instrument of disciplinary infliction.

#### MODERN LANGUAGES.

*Grands Prosateurs du dix-septième siècle.* Edited by Louis Brandin. (Black.)

Mr. Kirkman's series is growing rapidly, which may be taken as a sign that it is supplying a want. Certainly the volume before us will prove very useful: it will serve our University students, and may even be read in the highest forms of our schools. We have no hesitation in commending the selection made by M. Brandin. Pascal is represented by three "Lettres Provinciales," Mme. de Sévigné by eight of her lively letters, La Rochefoucauld by the "Portrait de lui-même" and by some of his maxims, Bossuet by a large extract from the "Discours sur l'Histoire Universelle" (but there is no specimen of his oratory), La Bruyère by extracts from the "Caractères," Fénelon by a portion of his "Lettre à l'Académie," and—apparently an after-thought—Descartes by some pages from the "Discours de la Méthode." The editor has added short biographies, which give all essentials, and useful notes, which explain difficulties in the text very briefly or suggest variations from modern usage, or English renderings. Mr. Kirkman has prefixed a short introduction on French literature in the seventeenth century and a useful chronological table. There are also portraits of the authors. We observe a few small blunders, mostly misprints, but they are mere trifles in a book that merits praise for careful editing and printing.

*A Selection from the Comedies of Marivaux.* Edited by E. W. Olmsted, Ph.D. (Macmillan.)

There is a large circle of readers that will appreciate the dainty comedies of Marivaux, and will be grateful to Prof. Olmsted, of Cornell University, for enabling them to read three of his best plays, namely, "Le Jeu de l'Amour et du Hasard," "Le Legs," and "Les Fausses Confidences," which will undoubtedly make them desire a still closer acquaintance with their kindly author, an excellent account of whose life is given by way of introduction. The notes are very short, and will not interfere with the enjoyment of the text, which is clearly and carefully printed. We have noted only one or two mistakes: Page 24, last line, read *voilà*; page 62, line 12, and page 63, line 8, there should be signs of interrogation; page 71, line 14, *Il* omitted; page 102, line 4, no comma after *voilà*.

*La Tâche du Petit Pierre* (Jeanne Mairet). Edited by O. B. Super, Ph.D. (Heath.)

The tale is well known, as it forms the greater part of "Dent's Second French Book." The edition before us is not in any way noteworthy. The preface promises "unusually full" notes; four pages and a half to eighty pages of text does not seem an "unusually full" allowance. The vocabulary is practically complete; but the principal parts of verbs should be given in a book "intended for use in very elementary classes." A few pages of sentences, based on the text, for retranslation, are given at the end.

*Les Histoires de Tante* (R. d'Alissas). Edited by the Authors (M. and K. Roget), under the direction of F. F. Roget. (Macmillan.)

This little collection of eight short stories makes an admirable reader for elementary classes. The French is simple and fluent, the matter is varied, and the pictures, though not of uniform merit, are, on the whole, satisfactory. In the notes, all is explained that can possibly give difficulty; there are good renderings into English and grammatical notes, which are often couched in such technical language as to be positively forbidding. The vocabulary is complete.

#### MATHEMATICS.

*Solutions of the Problems and Theorems in Smith and Bryant's Geometry.* By Charles Smith, M.A. (Macmillan.)

A valuable book of reference, whose publication very many engaged in teaching will no doubt welcome. The solutions of the more difficult problems and theorems are, moreover, likely to make the volume interesting as well as useful to a number of readers. The name of the author should create the greatest confidence in the methods adopted and in the results obtained.

*A Second Arithmetic.* By Dr. W. T. Knight. (Relfe.)

Dr. Knight's "Second Arithmetic" is a sequel to his "First Arithmetic," which appeared last year. He has adhered to the plan of attacking difficulties singly. The reasons for the rules given are introduced to a far greater extent than in the previous volume; at the same time the author recognizes that in the instruction of junior students the burden of explanation must ultimately fall on the teacher. The number of exercises and of miscellaneous questions from examination papers is large. If the attempts of examination candidates afford a test, the mastery of problems in stocks usually gives special trouble to pupils; hence it may be well to mention that there are many excellent examples on the subject in Dr. Knight's book, though it would be an additional advantage if the consideration of brokerage entered into a larger proportion of them. The answers to Exercises and Problems are not included in the present volume, but have been issued separately.

*Original Investigation; or How to attack an Exercise in Geometry.*

By Elisha S. Loomis, Ph.D. (Ginn.)

It is to be supposed that there are many teachers and students already thoroughly familiar with the details of the subject discussed in this very useful and interesting little treatise; nevertheless they may still find a pleasure in reading it. To those, on the other hand, that are not yet acquainted with the principles developed by the author, the benefit to be derived from a careful study of its pages can scarcely be over-estimated. The aim of the work is to show in connexion with mathematical investigation what processes are essential, and the proper places that each should occupy. Too often synthetic or deductive methods are alone employed, whereas every theorem or problem ought in the first place to be submitted to analysis, if it is to be approached with any degree of confidence on the part of the investigator. When induction has led to the determination of the general truths on which the particular demonstration or solution depends, then and only then is it time to appeal to synthesis in order to frame the formal proof in the usual manner. Problems are broadly classified as "determinate," "indeterminate," "over-determinate," and "impossible"; and the writer gives most valuable information as to the means of discovering whether the solution of a problem lies within the range of Euclidean geometry or not. From such theorems or problems as are specially suitable for the purpose of illustrating the various leading methods of treatment Dr. Loomis has made selections, and has discussed very fully and carefully the propositions chosen.

"Oliver and Boyd's Educational Series."—*The Tweeddale Arithmetics.* (Edinburgh: Oliver & Boyd. London: Simpkin, Marshall, & Co.)

This series will be complete in six small volumes, of which the last (the "Merit" volume) appears to be still in the press. The explanation of rules is intended to be given orally; and, in the hands of competent teachers, "The Tweeddale Arithmetics" will be found very suitable for class purposes. Each book is arranged so as to cover a year's work, and consists mainly of a large collection of graduated exercises, many typical cases being fully worked in the later volumes, so as to show the best methods of dealing with them. There is a very limited quantity of text, including tables and such facts as require to be committed to memory. It will be found that rules considered at the close of one book are treated again at the commencement of the succeeding one, the exercises being of a more advanced character. Book V. contains some useful pages on the decimal coinage and the metric system. The answers to the exercises are not given.

#### PHYSICS.

*Introduction to the Study of Physics.* Vol. I., *General Physical Measurements.* By A. F. Walden, M.A., and J. J. Manley. (Black.)

A practical guide to demonstrations in mechanics, hydrostatics, and pneumatics. A striking feature is the simplicity of some of the apparatus recommended; for instance, directions are given for constructing a sensitive spring balance from a clock-spring and some curve paper, and for making a reliable seconds pendulum from a bob, thread, needle, corks, and retort stand. Minute instructions are given whereby accuracy may be secured. The book furnishes a good training in scientific method and physical manipulation.

*Practical Exercises on Sound, Light, and Heat.*

By Joseph S. Dexter, B.Sc. (Longmans.)

The plan generally adopted here is to prescribe how the apparatus should be arranged and the experiment conducted, and then to suggest questions on what is observed and what inferences are drawn by the student. The answers to these questions are not always given or suggested, but a capable instructor would be able to provide them easily enough. This method is highly instructive when carefully carried out.

*Practical Science.* By J. H. Leonard, B.Sc. (Murray.)

A very elementary school course of experiments on mechanics, hydrostatics, and heat. So far as it goes, it is exceedingly thorough. Not only are the exercises well selected and completely described, but they are also fully discussed, so as to draw nearly every possible lesson from them. They should teach familiarity with the rule, the balance, and the thermometer, and at the same time develop the habit of neat work and careful observation. Great stress is properly laid on the transcription of processes and results in a note-book.

#### MISCELLANEOUS.

*The Commercial Law of England.* A Handbook for Business Men and Advanced Classes in Schools. By J. A. Slater, B.A., LL.B. (Pitman.)

The design of this handbook of English commercial law, as stated by its author in a prefatory note, is "for the service of advanced classes in schools; but it has been designed in an equally important degree as a constant desk companion to the modern man of business." Advanced students in our existing schools do not make any branch of English law a subject of serious study, nor are they likely to do so under the present conditions of entering on a business career. Boys leave school for business between the ages of fourteen and sixteen, and, that being so, commercial law can form no part of their educational outfit. With regard to the modern man of business, we scarcely believe that he

will betake himself to the study of legal text-books in the intervals of his work. He will, doubtless, follow the well established practice of putting himself in the hands of a legal expert when overtaken in a lawsuit or in the entanglements that might lead to one. The time may come when the average man of business will be so fully informed as to his legal rights and obligations as to be able to dispense with expert advice; but that time is not yet. It does not, however, detract from the merits of the little book before us that it may not be as widely useful as its author hopes. The book is carefully written. Owing to the multiplicity of subjects dealt with—contracts, bills of exchange, partnership, insurance, patents, bankruptcy, &c.—the treatment is necessarily general; but we have not found it confused or inaccurate. The definitions are based on judicial decisions, or adopted from standard text writers. In short, a good deal of well arranged legal information will be found in this compendium of commercial law, and its perusal will well repay either the student preparing for a commercial career or the man actually immersed in business.

"Monographs on Artists." Edited by H. Knackfuss.—VI. *Botticelli*. By Ernst Steinmann. Translated by Campbell Dodgson. (Grevell.)

One of the most welcome volumes of this attractive series, containing a biography of the artist, an account of his works, and ninety admirably produced illustrations. Botticelli has risen greatly in favour of late, as he certainly deserved to do, being one of the happiest pioneers of the Italian Renaissance. We trust that these excellent "Monographs" are thoroughly well known to the artistic public, for there is no library of the great artists (especially at their very reasonable price) at all approaching them in value.

## FIRST GLANCES.

### CLASSICS.

Blackie's Illustrated Latin Series.—(1) *The Odes of Horace*. Edited by Stephen Gwynn. 5s.

[48 illustrations, 3 (full-page) beautifully coloured.]

(2) *Cæsar: The Gallic War, Book VI*. Edited by Prof. John Brown, B.A. 2s.

[Revised edition, more fully illustrated. Map.]

### ENGLISH LANGUAGE AND LITERATURE.

Athenæum Press Series.—*Selections from De Quincey*. Edited by Prof. M. H. Turk, Ph.D. 4s. 6d. Ginn.

[Introduction (72 pages), text (400 pages), notes (100 pages).]

Blackie's English Classics.—*Milton's Lycidas*. Edited by H. B. Cotterill, M.A. 1s. 6d.

[Frontispiece, facsimile (reduced) of a page of the Trinity College MS. Poem overwhelmed between introduction (60 pages) and notes and appendices (40 pages).]

Blackie's Picture Shakespeare.—*Richard the Second*. 1s.

[Introduction, notes, appendices, coloured frontispiece, and numerous illustrations.]

Boswell's *Journal of a Tour to the Hebrides*. Edited by H. B. Cotterill, M.A. 2s. 6d. Macmillan.

[Full biographical sketch and notes.]

Snell, Anna: *Reading made Easy*. Part I. 8d. Philip.

[New and enlarged edition. "Normal-word Method."]

### MODERN LANGUAGES.

Blackie's Little French Classics.—(1) *Longer Fables* (Selections from *La Fontaine*). Edited by Arthur H. Wall, M.A. (2) *Selections in Verse and Prose from Musset*. Edited by F. W. B. Smart, M.A. 4d. net each.

[Well selected and pointedly annotated.]

Heath's Modern Language Series.—*Practical French Grammar*. By W. H. Fraser, B.A., and J. Squair, B.A. 3s. 6d.; or, in two sections, 2s. and 2s. 6d.

["Aims to provide a practical and thorough course in French grammar and elementary composition for schools and colleges" in accordance "with recent advances in the methods of modern language teaching."]

Hossfeld's Method.—*A Smaller German Grammar*. By the Rev. A. L. Becker. 1s. Hirschfeld.

["For elementary and middle schools and private students; combining the essentials of grammar, exercises, reading lessons, conversations, and vocabularies."]

Hossfeld's Series.—*A New English and Spanish Vocabulary, Alphabetical and Analogical*. By Fernando de Arteaga, Hon. M.A. (Oxon.). 2s. 6d. net. Hirschfeld.

["On the lines of similar works already issued in the same series." "The subjects, which embrace all the chief departments of knowledge, are arranged in alphabetical order under 56 heads. The English terms proper to each subject are given in alphabetical order also, so as to facilitate reference." 724 pages; handy, practical, useful.]

Hugo: *Notre-Dame de Paris*. Abridged and Edited by Prof. John R. Wightman, Ph.D. 4s. Ginn.

[Judiciously abridged. Introduction and brief notes.]

James-Molé: *English and French Dictionary*. By W. James and A. Molé. 6s. net. Sampson Low.

["16th, entirely new and modern, edition. Completely rewritten and greatly enlarged." English-French part, 564 pages; French-English, 663 pages; 3 columns each page. Large stock of phrases; very clear print; firm and flexible binding.]

### HISTORY AND GEOGRAPHY.

Atlas, *The International Students', of Modern Geography*. Compiled under the direction of J. G. Bartholomew, F.R.S.E., F.R.G.S., &c. 6s. net. Newnes.

["A series of 105 physical, political, and statistical maps compiled from British and foreign surveys and the latest results of international research." Full index. Well printed and strongly bound. Excellent; amazing at the price.]

Atlas for South African Schools. By J. G. Bartholomew. Nelson.

["A new series of physical and political maps." Fourth Edition, enlarged. Notably "new map of South Africa in 6 sections, specially prepared from the latest surveys." Also "new plates have been prepared for South African geology, temperature, and rainfall." Excellent.]

Blackie's Illustrated Continental Geography Readers.—*Africa*. 1s.

[12 excellent full-page coloured maps and many most useful sketch maps. Good illustrations, 12 of them coloured and full-page. Text admirably descriptive; but the origin of the Boer War is not satisfactorily stated.]

Cambridge Historical Series.—*History of Scotland*. Vol. II. By P. Hume Brown, M.A., LL.D. 6s. Cambridge University Press.

[1542 to 1688. 4 maps and plans.]

Dawe, Rev. C. S., M.A.: *King Edward's Realm*. 1s. 6d. Educational Supply Association.

[Bright side of the "story of the making of the Empire."]

### MISCELLANEOUS.

Art-Workers' Quarterly. No. 2 (April). 2s. 6d. net. Chapman & Hall.

[Eleven supplementary plates. Admirable in all respects.]

Bell-Ranske, Jutta: *Health, Speech, and Song*. 4s. 6d. net. Swan Sonnenschein.

["A practical guide to voice-production." Numerous plates. "I am a singer and know the infinite difficulties of my art."]

Bertz, Edward: *The French Prisoners*. 2s. 6d. Macmillan.

["A story for boys." New edition. Illustrations by J. Macfarlane. Scene, Germany and Paris, 1870. Sufficient adventure; religious tone.]

Britain at Work. Part I. 7d. net. Cassell.

["A pictorial description of our national industries."]

Butterflies and Moths of Europe. By W. F. Kirby, F.L.S., F.E.S. Part I. 7d. net. Cassell.

[Fortnightly parts. Numerous coloured plates and illustrations. The first part leads off handsomely.]

Cassell's Cyclopadia of Mechanics. Second series. 7s. 6d.

["Contains many thousand receipts, processes, and memoranda for workshop use, based on personal experience and expert knowledge." Index of 9,250 items. 1,250 illustrations. Most varied, and thoroughly practical.]

Chœurs à trois voix. 6d. Curwen.

[Both notations. 12 pieces; varied.]

Cordingley, W. G.: *A Dictionary of Abbreviations and Contractions commonly used in General Mercantile Transactions*. 1s. net. Effingham Wilson.

[It is hardly complimentary to business lads or their teachers that they should be supposed to need to be told what "Mr.," "Wed.," "G.P.O.," "L. & N.W.R.," "£. s. d.," &c., stand for.]

Cricket of To-day and Yesterday. By Percy Cross Standing. Parts I.-III. 7d. net each. Jack.

[To be completed in 12 fortnightly parts, each with a coloured plate. Some 400 illustrations. Promises to be a most interesting and handsome work.]

Davis, Jeanette E.: *The Elements of Modern Dressmaking*. Cassell.

["For the amateur and professional dressmaker"; also "a handbook for the use of students and candidates preparing for the examination in dressmaking under the City and Guilds of London Institute." With numerous diagrams. Revised edition.]

Day, Miss E. S.: *An Old Westminster Endowment*. 3s. net. Rees.

["A History of the Grey Coat Hospital as recorded in the Minute Books." Illustrations and maps.]

Eliot, George: *Silas Marner*. 6d. Blackwood.

[People's edition. Good type. Frontispiece.]

**Familiar Wild Flowers.** By F. E. Hulme, F.L.S., F.S.A. Parts I. and II. 6d. net each. Cassell.

[New and enlarged edition. Illustrations delicately coloured.]

**Foulke, Elizabeth E.:** *Twilight Stories.* 1s. 9d. net. American School and College Text-Book Agency (for Silver, Burdett, & Co.). [25 simple pieces in prose and verse, with illustrations.]

**Fowler, W. Warde:** *More Tales of the Birds.* 3s. 6d. Macmillan. [9 tales. Delightful series, matching the former. Illustrated admirably by Frances L. Fuller.]

**Gillington, M. C.:** *The Country Pellar and other old English Songs.* 1s. Curwen. [12 songs. Arranged by Percy E. Fletcher. Good selection, well presented.]

**Gow, William:** *Drift of Isla.* 2s. 6d. Elliot Stock. [Minor poet. The Scots poems, reminiscent of Burns in form, the best. Execution too impatient. Pretty get-up.]

**Greenwood, Thomas:** *Edward Edwards, the Chief Pioneer of Municipal Free Libraries.* 2s. 6d. net. Scott, Greenwood, & Co.

["The principal materials for this record have been found in his [Edwards's] private diaries." Elaborate, sympathetic, and permanently valuable.]

**Heath, D. C.:** *The Work of a Village Association.* Heath. [An address to the Conference of Education Associations, Newark, N.J., April, 1901. Well worth the notice of school managers and parents generally.]

**Hutchinson, Rev. H. N., B.A., F.G.S., &c.:** *The Living Rulers of Mankind.* Vol. I. Demy 4to. 7s. 6d. G. Allen.

[245 illustrations and 3 coloured pictures. Alphabetically arranged. Abyssinia to Italy. Brightly written and admirably illustrated.]

**Jenkins, B. G., F.R.A.S.:** *The British Weather Chart, 1902.* 6d. R. Morgan.

[16th year of publication. On scientific principles.]

**Kerner & Oliver:** *The Natural History of Plants.* Part I. 1s. 6d. net. Blackie.

[New and cheaper edition, in 16 monthly parts. About 2000 original woodcut illustrations.]

**Macmillan's Summary of Attendances for Infants' Schools.** For Five years. 3s. 6d.

["Arranged to meet the requirements for a separate summary of attendances for children under and over five respectively in one book." Clearly arranged; strong paper; substantial binding.]

**Maeterlinck, Maurice:** *The Buried Temple.* Translated by Alfred Sutro. 5s. G. Allen.

[With portrait. Five essays reprinted from various reviews (1899-1901). A literary handling of the basis of justice "and all our morality." Able, interesting, and popular.]

**Nelson's Coloured Pictures for Composition Lessons.** Set 1. 2d.

["Each packet contains 12 pictures, ready gummed, for affixing to the scholar's exercise-book or examination paper." By all means affix them.]

**Nelson's Kindergarten Number Cards.** 2d.

["Afford an interesting and instructive arithmetical occupation for infants." Yes; but let the infants themselves find out their virtues.]

**"One & All" Gardening, 1902.** Edited by Edward Owen Greening. 2d. Agricultural and Horticultural Association.

["A popular annual for amateurs, allotment holders, and working gardeners." 200 pages. Packed with useful information. Many illustrations.]

**Philips' Popular Mannikin.** Edited by W. S. Furneaux. 3s. 6d. net. [Ingenious, elaborate, and careful.]

**Questions of the Day.—Commercial Trusts: the Growth and Rights of Aggregated Capital.** By John R. Dos Passos, of the New York Bar. 5s. Putnam.

["An argument delivered before the Industrial Commission at Washington, D.C., December 12, 1899. Corrected and revised."]

**Roche, Antony, M.R.C.P.I., &c.:** *The Imperial Health Manual.* Baillière, Tindall, & Cox.

["Authorized English edition of the Official Health Manual issued by the Imperial Health Department of Germany. Second English edition, revised from the latest German edition."]

**Smith, Samuel, M.P.:** *National Defence.* 2d. Thynne.

[Reprint of letter to the *Times* (February 24), and of an article thereon to the *Spectator* (March 1).]

**"Work" Handbooks.—Basket Work of all kinds.** Edited by Paul N. Hasluck. 1s. Cassell.

[Numerous engravings and diagrams. "The greater part consists substantially of matter contributed by a working basket maker." Seems very complete and practical.]

## OXFORD UNIVERSITY PRESS.

**ARITHMETIC.** With or without Answers to the Exercises. By R. HARGREAVES, M.A. Crown 8vo, cloth, 4s. 6d.

**GEOMETRICAL EXERCISES FROM NIXON'S "EUCLID REVISED."** With Solutions. By ALEXANDER LARMOR, M.A. Crown 8vo, cloth, 3s. 6d.

**THE "JUNIOR" EUCLID.** Books III and IV. By S. W. FINN, M.A. Crown 8vo, cloth, 2s.

**CHART OF THE RULES OF HARMONY.** For Students. By ARTHUR SOMERVILLE. 4to, printed on thick card, 1s. net.

**A SCHOOL HISTORY OF ENGLAND.** With Maps, Plans, and Bibliographies. By OWEN M. EDWARDS, R. S. RAIT, H. W. C. DAVIS, G. N. RICHARDSON, A. J. CARLYLE, and W. G. POGGON-SMITH. Crown 8vo, cloth, 3s. 6d.

**COMPANION TO ENGLISH HISTORY (MIDDLE AGES).** Edited by FRANCIS PIERREPONT BARNARD, M.A., F.S.A. With 97 Plates. Crown 8vo, cloth, 8s. 6d. net.

**POEMS OF ENGLISH COUNTRY LIFE.** Selected and Edited, with Introduction and Notes, by H. B. GEORGE, M.A., and W. H. HADOW, M.A. Crown 8vo, cloth, 2s.

**A CONCISE FRENCH GRAMMAR.** Including Phonology, Accidence, and Syntax, with Historical Notes. For use in Upper and Middle Forms. By A. H. WALL, M.A. Crown 8vo, cloth, 4s. 6d.

**MOLIÈRE.—LES FÂCHEUX.** Edited, with Introduction and Notes, by E. J. TRECHMANN, M.A., Ph.D. Extra fcap. 8vo, cloth, 2s.

**A GUIDE TO ADVANCED GERMAN PROSE COMPOSITION.** Containing Selections from Modern English Authors, from the Sandhurst Papers, and from Magazines and Newspapers. With copious Notes and Idiomatic Renderings of some of the more difficult Phrases and Sentences; the whole being preceded by an exhaustive Grammatical Introduction. By EDUARD EHRKE. Extra fcap. 8vo, cloth, 3s.

**CLASSICAL ARCHAEOLOGY IN SCHOOLS.** By PERCY GARDNER, Litt.D. With an Appendix containing Lists of Archaeological Apparatus by Professor P. GARDNER and J. L. MYRES, M.A. Printed by request of a Committee of the Head Masters' Conference. 8vo, paper covers, 1s. net.

**SCENES FROM SOPHOCLES: AJAX, ANTIGONE.** Edited, with Introduction and Notes, by C. E. LAURENCE, M.A. With Illustrations. Extra fcap. 8vo, cloth, 1s. 6d. each.

**EURIPIDES.—HECUBA.** Edited by C. B. HEBERDEN, M.A. Extra fcap. 8vo, cloth, 2s. 6d.

**EURIPIDES.—MEDEA.** By the same Editor. Third Edition, Revised. Extra fcap. 8vo, cloth, 2s.

**TALES OF THE ROMAN REPUBLIC.** Parts I and II. Adapted from the Text of Livy. With Notes, Maps, Vocabulary, and English Exercises. By J. B. ALLEN, M.A. Extra fcap. 8vo, stiff covers, 1s. 6d. each.

**MANUAL OF THE FOUR GOSPELS.** By T. H. STOKER, D.D. PART I: *The Gospel Narrative.* PART II: *The Gospel Teaching.* Crown 8vo, cloth, 3s. 6d.; or separately, Parts I and II, 2s. each.

**OUTLINES OF TEXTUAL CRITICISM APPLIED TO THE NEW TESTAMENT.** By C. E. HAMMOND, M.A. Sixth Edition, Revised. Crown 8vo, cloth, with 4 Plates, 4s. 6d.

**THE STUDENT'S HANDBOOK TO THE UNIVERSITY AND COLLEGES OF OXFORD.** Fifteenth Edition. Revised to January, 1901. Crown 8vo, cloth boards, 2s. 6d. net.

COMPLETE CATALOGUE POST FREE ON APPLICATION.

LONDON: HENRY FROWDE, OXFORD UNIVERSITY PRESS WAREHOUSE, AMEN CORNER, E.C.

# BLACKIE & SON'S NEW BOOKS

WRITE FOR EDUCATIONAL CATALOGUE.

- TERENCE—PHORMIO.** Edited by W. CECIL LAMING, M.A. Cloth gilt, 4s. 6d.  
This contains 22 Illustrations, including several reproductions from the Vatican MS. There is no Vocabulary.
- VIRGIL—GEORGICS III. and IV.** Edited by S. E. WINBOLT, M.A. With or without Vocabulary. Illustrated. 1s. 6d. each.
- A FIRST LATIN COURSE.** A Latin Book for Beginners, based throughout on Oral Methods of Teaching. By E. H. SCOTT, B.A., and FRANK JONES, B.A. 1s. 6d.
- HOMER—ODYSSEY. Book I.** Edited by the Rev. E. C. EVERARD OWEN, M.A. With or without Vocabulary. Illustrated. 2s.  
*The Educational Times says:* "A bright, serviceable, and scholarly edition. . . . The well executed illustrations enhance the value of the book."
- XENOPHON—ANABASIS. Book II.** Edited by the Rev. G. H. NALL, M.A. With or without Vocabulary. Illustrated. 2s.
- KING LEAR.** Edited by D. NICHOL SMITH, M.A. (*Warwick Shakespeare.*) 1s. 6d.
- RICHARD THE SECOND.** Edited, with Introduction, Notes, &c., in *The Picture Shakespeare.* Cloth, 1s.
- MILTON—LYCIDAS.** Edited, with Introduction, Notes, &c., by H. B. COTTERILL, M.A. 1s. 6d.
- MILTON'S ENGLISH SONNETS.** Edited by E. H. BLAKENEY, M.A. Paper, 2d.; cloth, 3d.
- AN INTRODUCTION TO BRITISH HISTORY.** (*For Junior Forms.*) A brightly written account of British History from earliest times to the present day. Beautifully illustrated with many pictures in colours and in black and white. Cloth, 1s. 2d.
- EASY MATHEMATICAL PROBLEM PAPERS.** By CHARLES DAVISON, Sc.D., Mathematical Master at King Edward's High School, Birmingham. Containing numerous Problems in Algebra (up to and including the Binomial Theorem), Euclid (Books I.—VI. and XI.), and Trigonometry to the Solution of Triangles and Geometrical Applications. With Answers and Hints for Solution. Cloth, 2s. 6d.
- EDUCATIONAL STUDIES AND ADDRESSES.** By T. G. ROOPER, M.A., H.M. Inspector of Schools.  
**Contents.**—Séguin—Manual Training—Obedience—Lord Collingwood's Theory and Practice of Education—Gaiety in Education—Individualism in Education—The Tree of Knowledge and the Tree of Life—On Spencer's "Education"—Geography in Elementary Education—On Methods of Teaching Geography—Miguel de Cervantes Saavedra—An Experiment in School Gardening. **Crown 8vo, cloth, 2s. 6d. net.**
- FRENCH IN PICTURE AND TALK.** Eight Pictorial Conversational Sheets, for the teaching of French to young beginners. Each picture has the names of the objects represented printed in French, and these are to be used as the basis of conversation lessons as fully developed in the handbook below. Boldly printed on strong manilla paper 18 × 24 inches. Mounted on roller, 6s. per set.
- FRENCH IN PICTURE AND TALK.** A Handbook of Conversational French (for Teachers' use), corresponding to the sheets. By MARGUERITE NINET. Price 2s. 6d.

## SKELETON FRENCH AND GERMAN GRAMMARS.

- A SKELETON GERMAN GRAMMAR.** By Professor H. G. ATKINS, of King's College. Printed in red and black. Cloth, 1s.  
This new book is intended to give the minimum of grammar requisite for reading. It does not profess to contain everything that the pupil ought to know; it does claim that he ought to know everything it contains. It is not intended as a manual for the study of grammar after the old fashion, that is to say, for grammar's sake, but rather as a guide for the beginner who proceeds direct to the translation of a German text, or begins by grappling with the difficulties of *real* German in a similar way by any direct method.
- A SKELETON FRENCH GRAMMAR.** By Professor H. G. ATKINS, King's College, London. [Nearly ready.]

## BLACKIE'S LITTLE FRENCH CLASSICS.

New Volumes. Cloth, 4d. each. Complete list on application.

- CHATEAUBRIAND—SELECTIONS FROM LES MARTYRS.** Edited by E. T. SCHOEDELIN, B.A., of Highgate School.
- CORNEILLE—LE CID.** Edited by LOUIS BARBÉ, B.A., of Glasgow Academy.
- RACINE—LES PLAIDEURS.** Edited by D. LOWE TURNBULL, M.A., of George Heriot's School, Edinburgh.
- MICHELET—SELECTIONS FROM L'INSECTE.** Edited by MAURICE GEROTHWOHL, B.Phil. [In May.]

MATHEMATICS.

9133. (W. J. GREENSTREET, M.A.)—Prove that there are

$$(p-1) \{(p^2+1)^n - 1\} / p^2$$

integers less than  $(p^2+1)^n$  which are divisible by  $p$  and not by  $p^2$  ( $n$  and  $p$  integral).

Solutions (I.) by Lt.-Col. ALLAN CUNNINGHAM, R.E.; (II.) by R. CHARTRES, and others.

(I.) Let  $s'$  = number of numbers ( $< N$ ) containing  $p$ ,  
 $s''$  = " " " ( $< N$ ) " "  $p^2$ ,

$E(x)$  = integer part of the number  $x$ .

$$s' = E[(N-1)/p], \quad s'' = E[(N-1)/p^2].$$

Then Let  $N = (p^2+1)^n$ ; then every term of  $(N-1)$  contains both  $p$  and  $p^2$ . Hence, in this case

$$s' = [(p^2+1)^n - 1] / p, \quad s'' = [(p^2+1)^n - 1] / p^2,$$

and the number sought =  $s' - s'' = (1/p - 1/p^2) [(p^2+1)^n - 1]$ , which reduces to the form given.

(II.)  $(p^2+1)^n - 1 \equiv Ap^2$  numbers to be considered, of which the favourable cases are  $p, 2p, \dots, (p+1)p, (p+2)p, \dots = (p-1)p^2$  of the above.

14917. (A. M. NESBITT, M.A.)—Three conics  $S_1, S_2, S_3$  have a common point  $O$ . The remaining intersections of  $S_2S_3$  are the vertices of a triangle  $\Delta_1$ , those of  $S_3S_1$  of a triangle  $\Delta_2$ , and those of  $S_1S_2$  of a triangle  $\Delta_3$ . Prove that the nine sides of these three triangles all touch the same conic  $U$ . Or, reciprocally: Given three parabolas, their common tangents, taking the curves in pairs, will form three triangles (one for each pair) whose nine vertices lie on a conic.

Solutions (I.) by Professor MORLEY; (II.) by Professor NANSON; (III.) by Professor JAN DE VRIES; (IV.) by the PROPOSER.

(I.) Consider the more general theorem: the three common four-lines of three conics  $S_1, S_2, S_3$ , taken in pairs, are inscribed in a cubic curve. For let the triangle of reference be three lines each touching two conics. The conics are then

- (1)  $\xi_1^2 + l_1 \xi_2 \xi_3 + m_1 \xi_2 \xi_1 + n_1 \xi_1 \xi_2 = 0$ ,
- (2)  $\xi_2^2 + l_2 \xi_2 \xi_3 + m_2 \xi_3 \xi_1 + n_2 \xi_1 \xi_2 = 0$ ,
- (3)  $\xi_3^2 + l_3 \xi_2 \xi_3 + m_3 \xi_3 \xi_1 + n_3 \xi_1 \xi_2 = 0$ .

Eliminating  $\xi_1$  from (2) and (3), we have

$$n_3 \xi_2^3 - m_2 \xi_3^3 + \text{terms in both } \xi_2, \xi_3 = 0.$$

Hence a cubic, whose cube terms are  $l_1 x^3 + m_2 x_2^3 + n_3 x_3^3$ , can pass through those vertices of the three four-lines which lie on the triangle of reference. (A) That is, these nine points are the basis-points of a pencil of cubics.

Draw a cubic through three points of one four-line which are not on a line, and through three points of each of the other four-lines which are on a line. By (A), the cubic contains all points of the first four-line. Now take other collinear points of the second four-line; we have again a cubic meeting the former in ten points, therefore the same cubic. Thus the theorem is proved.

If, now the conics have a common line, nine of the eighteen points are on it, and the cubic breaks up into a line and a conic through the other nine points, which is Mr. NESBITT's theorem. If the conics have two lines in common, we have in reciprocal form the theorem that the radical axes of three circles meet.

(II.) The envelope of the degenerate conics of the system  $l_1 S_1 + l_2 S_2 + l_3 S_3$  is a class cubic which when  $S_1, S_2, S_3$  have a common point  $O$  degenerates into the point  $O$  and a conic touching the sides of  $\Delta_1, \Delta_2, \Delta_3$ .

[The rest in Vol.]

14765. (Professor JAN DE VRIES.)—The equation

$$a_{11}x^2 + 2a_{12}xy + a_{22}y^2 + b_1x + b_2y = 0$$

being referred to rectangular axes, the axes are supposed to turn about the origin. Prove that the function  $I = (a_{11} - a_{22})b_1b_2 - a_{12}(b_1^2 - b_2^2)$  does not undergo change of form. What is the proper geometric meaning of  $I = 0$ ?

Solution (I.) by the PROPOSER; (II.) by CONSTANCE I. MARKS, B.A., and Professor SANJANA, M.A.

Using known symbols, we put

$$a_{11}x^2 + 2a_{12}xy + a_{22}y^2 = (a_1x_1 + a_2x_2)^2 = a_x^2.$$

The axes being turned through an angle  $\phi$ , we have, denoting the new coordinates by  $\xi_1, \xi_2$ ,  $x_1 = \xi_1 \cos \phi + \xi_2 \sin \phi$ ,  $x_2 = -\xi_1 \sin \phi + \xi_2 \cos \phi$ .

Then  $a_x = a_1x_1 + a_2x_2 = (a_1 \cos \phi - a_2 \sin \phi) \xi_1 + (a_1 \sin \phi + a_2 \cos \phi) \xi_2 = a_1\xi_1 + a_2\xi_2$ .

Hence  $a_1 = a_1 \cos \phi - a_2 \sin \phi$ ,  $a_2 = a_1 \sin \phi + a_2 \cos \phi$ .

Since  $\xi_1 = x_1 \cos \phi - x_2 \sin \phi$ ,  $\xi_2 = x_1 \sin \phi + x_2 \cos \phi$ ,

the symbolical coefficients  $a_1, a_2$  are transformed by the same substitution as the variables.

If  $b_1, b_2$  denote a new set of symbolical coefficients, it is easily proved that the functions  $a_1b_1 + a_2b_2$  and  $a_1b_2 - a_2b_1$  are orthogonal invariants. Hence we get the invariant

$$I = (a_1b_1 + a_2b_2)(a_1b_2 - a_2b_1).$$

Or, writing  $a_{11}, a_{12}$ , and  $a_{22}$  instead of  $a_1^2, a_1a_2$ , and  $a_2^2$ .

$$I = (a_{11} - a_{22})b_1b_2 - a_{12}(b_1^2 - b_2^2).$$

In order to find the geometric meaning of  $I = 0$ , take the tangent of the conic at the origin as axis  $OY$ . Then the conic will be represented by an equation of the form  $a_{11}\xi^2 + 2a_{12}\xi\eta + a_{22}\eta^2 + \beta_1\xi = 0$ , and  $I = -a_{12}\beta_1^2 = 0$ , or  $a_{12} = 0$ . Hence it follows that the origin is a vertex of the conic. [Sol. II. in Vol.]

14800. (R. F. DAVIS, M.A.)—Prove that the equations  $xy = ac + bu, yz = bd + cv, zu = ce + dx, uv = da + ey, vx = eb + az$  are not independent, and that, giving any three, the other two follow.

Solutions (I.) by H. W. CURJEL, M.A., J. H. TAYLOR, M.A., and others; (II.) by ALEBROP; (III.) by Professor SANJANA, M.A.

(I.) The symmetry of the equations shows that it is immaterial which three are considered as given. If the first three are given, then

$$cix = xyz - xbd = acz + buz - xbd = acz + bce$$

and  $cuv = uyz - bdu = cey + dxy - bdu = cey + cda$ ;

therefore  $vx = eb + az$  and  $uv = da + ey$ , unless  $c = 0$ . If  $c = 0$ , then of the first three equations two only are independent, for they may be written  $u/x = y/b = d/z$ , and from these with one of the remaining two the remaining equation follows.

(II.) Démontrons, par exemple, que (4) et (5) sont conséquences de (1), (2) et (3). En divisant (2) par (3), on trouve  $c(uv - ey) = d(xy - bu)$ . En y introduisant la valeur de  $xy$  donné par (1), il vient  $uv - ey = da$ , qui n'est autre que (4). Maintenant, on déduit de même (5) de (2), (3) et (4). On pourrait aussi s'appuyer sur ce qu'on peut supposer que  $a, b, c, d, e$  soient les côtés d'un pentagone cyclique et  $x, y, z, u, v$  les diagonales joignant les sommets de deux en deux.

(III.) Let the first three be given

$$y \cdot x - c \cdot a - b \cdot u = 0, \quad y \cdot z - c \cdot v - b \cdot d = 0, \quad zu = ce + dx \dots (1, 2, 3).$$

From (1) and (2) by cross multiplication

$$\frac{y}{ad - uv} = \frac{b}{-xv + az} = \frac{c}{-uz + dx} = \frac{c}{-ce} \quad [\text{by (3)}] = -\frac{1}{e}.$$

Hence  $ye + ad = uv \dots \dots \dots (4)$   
 and  $eb + az = vx \dots \dots \dots (5)$ .

10198. (JOHN GRIFFITHS, M.A.)—The coordinates  $x, y, z$  being proportional to the perpendicular distances from the sides of a triangle  $ABC$ , prove that (1) the locus of a point  $(x, y, z)$  such that its pedal circle (i.e., the circle which passes through the feet of the perpendiculars drawn from the point in question upon the sides of the triangle) touches the nine-point circle is the cubic

$$x(y^2 - z^2) \cos A + y(z^2 - x^2) \cos B + z(x^2 - y^2) \cos C = 0;$$

and (2) trace this curve.

Solution by W. H. BLYTHE, M.A.

It may be shown that the radical axis of the circum-circle with that of the pedal circle is

$$\begin{aligned} \lambda a + \mu b + \nu \gamma &= 0, \\ \text{where} \\ \lambda &= (pbc + qca + rab) \\ &\quad + a^2 + b^2 + c^2 \\ &= bc(1 + p \cos A \\ &\quad + \cos^2 A), \end{aligned}$$

with similar expressions for  $\mu$  and  $\nu$ , and where

$$p\gamma z = y^2 + z^2,$$

with similar expressions for  $q$  and  $r$ .

(See FERRERS, *Trilinear Cons.*, pp. 85-93.)

Now the radical axis of the nine-points and circum-circle is

$$\frac{1}{2} (a \cos A + \beta \cos B + \gamma \cos C) = 0;$$

therefore the equation of the radical axis of the nine-points circle with the pedal circle is

$$2(\lambda a + \mu b + \nu \gamma) = a \cos A + \beta \cos B + \gamma \cos C.$$

Eliminate  $a$  between this equation and that of the nine-points circle, and express the condition that the resulting expression may be a complete square: we find

$$(p^2 - 4) \cos^2 A - 2(qr - 2p) \cos B \cos C + \text{similar terms} = 0.$$

This then is the condition that the circles touch one another. Multiply by  $x^2y^2z^2$  and substitute values of  $p, q, r$ : the result is the square of  $x(y^2-z^2)\cos A + y(z^2-x^2)\cos B + z(x^2-y^2)\cos C = 0$ .

(2) To trace the curve, we notice that  $x, y, z$  is the focus of a conic touching the sides of the triangle, the auxiliary circle of which touches the nine-points circle.

The curve passes through  $A, B, C, H, O, L, M, N, I, I_1, I_2, I_3$ , namely, the angular points of the triangle, the ortho-centre, circum-centre, the points at which  $AO, BO, CO$  meet the opposite sides, the in-centre, and four escribed centres. Also  $HA, HB, HC, HO$  are the tangents drawn from  $H$ , and  $OI, OI_1, OI_2, OI_3$  the tangents from  $O$ .

This is sufficient to determine the curve, which is a cubic having three real asymptotes; one serpentine branch touches one asymptote and contains an angular point, the ortho-centre, in-centre, circum-centre, cuts the opposite side at a known point, and passes on to the opposite escribed centre.

When the curve cuts the circum-circle, which it does at three points besides  $A, B, C$ , the point of intersection is the focus of a parabola which touches the sides, and the direction of the axis of this parabola must give the direction of an asymptote; for the inverse point, which is also on the curve, is at infinity.

Suppose the angle  $A$  in the figure to move along  $AC$ , the positions of  $B$  and  $C$  being unchanged. If at  $Z$  the angle  $ZBC = ZCB$ , the curve degenerates into a straight line  $ZO$  and a hyperbola the transverse axis of which is  $ZO$ , and which passes through  $BN_1, CM_1, HB$  and  $HC$  being tangents.

If  $A$  still continues to move along  $AC$  between  $Z$  and  $Y$ , we find that the serpentine branch passes through  $A$ . At  $Y$ , where the angle  $CAB = CBA$ , the curve again degenerates into a straight line  $CO$  and the corresponding hyperbola.

Between  $Y$  and  $X$  the serpentine passes through  $C$  till we obtain the final change, when the angle  $BAC = BCA$ , and the serpentine again passes through  $B$ .

If the triangle be equilateral, the curve degenerates into the three straight lines  $AO, BO, CO$ .

Note.—Join  $HA, HB, HC$ : then both  $O$  and  $I$  will be found in one of the triangles  $HAB, HBC, HCA$ . Since the curve can only cross the lines  $HA, HB, HC$  at  $H$  or at  $A, B, C$ , the serpentine branch must cut the base of the triangle in which  $O$  and  $I$  lie.

[Quest. 14975 (H. BATEMAN) may be treated on the same lines, its equation being  $x(y^2-z^2)\sin A + \dots = 0$ .]

[Mr. R. TUCKER, M.A., calls attention to a Question almost identical with Quest. 14975 set by Mr. F. D. THOMSON and solved geometrically by Dr. HIRST (*v. Educational Times*, Oct., 1864, and *Reprint*, Vol. II., p. 57).—EDITOR.]

10049. (J. LEMAIRE.)—Soit un quadrilatère  $ABCD$  et une droite parallèle à la diagonale  $BD$ . Cette droite rencontre  $AB, BC, CD, DA$  respectivement en  $E, F, G, H$ ;  $AF$  et  $AG$  coupent  $CD$  et  $BC$  en  $I$  et  $K$ . Enfin  $EK$  et  $HI$  se rencontrent en  $O$ . Démontrer que la droite  $CO$  passe par le milieu de  $EH$ .

Solutions (I.) by C. E. HILLYER, M.A.; (II.) by D. BIDDLE.

(I.) First, let  $EH$  be any transversal meeting  $BD$  in  $P$  and  $AC$  in  $Q$ . Let  $OC$  meet  $EH$  in  $X$ ; then  $X$  shall be the harmonic conjugate of  $P$  with respect to  $E$  and  $H$ .

Let  $AK, CH$  meet in  $R$ , and  $AI, CE$  in  $S$ . Then, from the quadrilateral  $ABCD$ , we have  $P, E, F, Q, G, H$  in involution; therefore  $P$  is also in the diagonal  $RS$  of the quadrilateral  $ASCR$ , i.e.,  $RS, EH, BD$  are concurrent.

Again, let  $CE, HI$  meet in  $T$ , and  $CH, EK$  in  $U$ . Then we have  $(EFGH) = (I.EFGH) = (ESCT)$ ;

and again,  $(EFGH) = (K.EFGH) = (UCRH) = (HRCU)$ .

Therefore  $(ESCT) = (HRCU)$ .

Therefore  $TU$  passes through  $P$ . Therefore, from the quadrilateral  $CUOT$ ,  $X$  is the harmonic conjugate of  $P$  with respect to  $E$  and  $H$ .

Now, when  $EH$  is parallel to  $BD$ ,  $P$  is at an infinite distance, and  $X$  becomes the mid-point of  $EH$ .

Remarks.—The following are some additional points of interest in connexion with the figure:—

(1) If  $EI, HK$  meet in  $O'$ ,  $OO', AC, KI$  are concurrent in the harmonic conjugate of  $Q$  with respect to  $A$  and  $C$ .

(2)  $OA$  passes through  $X$ , and  $OA, O'C$  also meet in a point  $Y$  in  $HE$ , and the intersection of  $OO'$  and  $HE$  is the harmonic conjugate of  $Q$  with respect to  $X$  and  $Y$ .

(3) The intersection of  $HK$  with  $AB$  and the intersection of  $EI$  with  $AD$  are collinear with  $P$ .

(4) If  $KI$  meets  $EH$  in  $V$ , then  $CV$  meets  $BD$  in the third diagonal of the quadrilateral  $ABCD$ . [Sol. II. in Vol.]

15001. (A. M. NESBITT, M.A.)—Two conics  $U$  and  $V$  intersect in  $ABC$ , and through  $O$  two arbitrary straight lines  $OP, OQ$  are drawn:  $OP$  cuts  $U$  in  $P$  and  $V$  in  $Q'$ ;  $OQ$  cuts  $U$  in  $P'$  and  $V$  in  $Q$ . Prove that the four straight lines  $OP, OQ, PP', QQ'$  and the three sides of the triangle  $ABC$  all touch one and the same conic.

Solutions (I.) by R. F. DAVIS, M.A., and the PROPOSER;

(II.) by Professor NANSON; (III.) by LIONEL E. REAY, B.A.

(I.) Projecting the figure so that  $B, C$  become the foci, the theorem becomes:—If two circles  $U, V$  intersect in  $O, A$ , and through  $O$  two secants  $POQ', QOP'$  are drawn ( $P, P'$  lying on  $U$ ), then a parabola can be described with  $A$  as focus so as to touch  $POQ', QOP', PP'$  and  $QQ'$ . This is obvious since the SIMSON lines of  $A$  with respect to the triangles  $OPP', OQQ'$  are coincident.

(II.) The envelope of a line cut in involution by three conics  $S_1, S_2, S_3$  is a class cubic which when  $S_1, S_2, S_3$  have a common point  $O$  reduces to the point  $O$  and a conic  $\Sigma$ . If, then,  $\Delta_r$  be the triangle formed by the remaining intersections of  $S_p, S_q$ , where  $p, q, r = 1, 2, 3$ , the sides of the three triangles  $\Delta_r$  touch  $\Sigma$ . Taking now  $S_1, S_2, S_3$  to be  $U, V$ , and the line pair  $OP, OQ$ , the three triangles  $\Delta_r$  are  $ABC, OPP', OQQ'$ . Therefore, &c.

(III.)  $ABC$  and  $OPP'$  are two triangles whose vertices lie on a conic; therefore their sides touch a conic, that is,  $PP'$  touches the conic determined by the five tangents  $AB, BC, CA, OP, OQ$ .

Similarly, if any other conic through  $OABC$  cuts  $OP$  and  $OQ$  at  $Q'$  and  $Q$ , then  $QQ'$  touches this same conic.

14079. (REV. T. ROACH, M.A.)—Prove geometrically

$$\sin^{-1} \frac{2}{3} + \sin^{-1} \frac{1}{3} + \sin^{-1} \frac{1}{6} = \frac{1}{2}\pi.$$

Solutions (I.) by R. TUCKER, M.A., and LIONEL E. REAY, B.A.;

(II.) by the PROPOSER.

(I.) Take a circle, diameter

$$AB = 65,$$

$$BC = BE = 52, AF = BD = 16;$$

$$\text{then } AE = 39, AD = BF = 63.$$

Now  $ABEF$  is a quadrilateral in the circle; therefore

$$AB \cdot EF + AF \cdot BE = AE \cdot BF,$$

$$\text{i.e., } 65EF = 39 \cdot 63 - 16 \cdot 52,$$

$$\text{or } 5EF = 189 - 64 = 125;$$

$$\text{therefore } EF = 25;$$

hence right angle  $ACB = \&c$ .

(II.) Take  $OA = 63, AB$ , perpendicular = 16; therefore  $OB = 65, BOA = \sin^{-1} \frac{16}{65}$ . In  $OB$  take  $OM = 12, MC$ , perpendicular = 5; therefore  $OC = 13, COB = \sin^{-1} \frac{5}{13}$ . Draw  $CPQ$  on  $MR$  perpendicular to  $OA$ ;

then  $CQ = CP + MR = 5 \times \frac{2}{3} + 12 \times \frac{1}{3} = \frac{25}{3}$  and  $OQ = \frac{52}{3}$ . In  $OC$  take

ON = 3, ND, perpendicular = 4; then OD = 5, DOC =  $\sin^{-1} \frac{3}{5}$ . If OD is not perpendicular to OA, let it take up some position as in figure, and draw DST and NV perpendicular to OA; then

$$DT = DN + NV = 4 \times \frac{3}{5} + 13 + 3 \times \frac{3}{5} + 13 = 5 = OD;$$

therefore DOT must equal  $\frac{1}{2}\pi$ .

**14888.** (D. BIDDLE.)—ABC being a plane triangle having  $a > b > c$ , produce BC to D, BA to E, CA to F; and prove that, if  $CD = ab/(a-b)$ ,  $BE = ac/(a-c)$ , and  $AF = bc/(b-c)$ , then D, E, F are collinear.

Solutions (I.) by H. W. CURJEL, M.A., A. W. POOLE, and H. DEW :  
(II.) by Rev. T. WIGGINS, B.A.

$$(I.) \quad DB = a^2/(a-b), \quad AE = c^2/(a-c), \quad FC = b^2/(b-c);$$

therefore  $(EA \cdot FC \cdot DB)/(EB \cdot FA \cdot DC) = (a^2 \cdot b^2 \cdot c^2)/(ac \cdot bc \cdot ab) = 1$  ;  
therefore D, E, F are collinear.

(II.) Take AF and CD the given lengths. Produce BA to meet FD in E'. Then, if  $AE' = c^2/(a-c)$ , E' coincides with E and F, E, D are collinear. Draw AK parallel to BD; therefore

$$FA/AK = FC/CD \quad \text{and} \quad AK/AE' = BD/BE';$$

$$\text{therefore} \quad FA/AE' = (FC \cdot BD)/(CD \cdot BE');$$

$$\text{therefore} \quad \frac{BE'}{AE'} = \frac{FC \cdot BD}{CD \cdot FA} = \frac{[b + bc/(b-c)][a + ab/(a-b)]}{[ab/(a-b)][bc/(b-c)]} = a/c;$$

$$\text{therefore} \quad (c + AE')/AE' = a/c, \quad \text{whence} \quad AE' = c^2/(a-c) = AE.$$

**14922.** (ROBERT W. D. CHRISTIE.)—Find a multiplier M which will make the modular equation  $x^y - 1 = M(1/x^y - 1)$  true for any prime whatever, e.g.,  $y = 6, x = 7, M = 8, 7^6 - 1 = 8(7^6/8 - 1)$ , i.e.,  $9 - 1 = 8/8 - 8$  or  $-9 = 8 \pmod{17}$ .

Solution by the PROPOSER.

By the theory of primitive roots  $r^{2m-1} + 1 = 0 \pmod{P_{4m-1}}$ ; therefore

$$r^{2m-3}(r^{2m-1} + 1) = 0; \quad \text{therefore} \quad -r^{2m-3} = r^{4m-4};$$

$$\text{therefore} \quad \frac{(r^{2m-3}-1)(r^{2m-3})}{1-r^{2m-3}} = r^{4m-4};$$

$$\text{therefore} \quad r^{2m-3}-1 = r^{4m-4} \left( \frac{1-r^{2m-3}}{r^{2m-3}} \right) = r^{2m-1} - r^{4m-4} = r^{p-3}(r^{-(2m-3)} - 1),$$

whence  $M = r^{p-3}$ , where  $r$  is any root of the prime  $p = 4m - 1$ .

In an exactly similar way we establish

$$(r^{2m-2}-1) = r^{p-3}(r^{-(2m-2)} - 1),$$

where  $r$  is any primitive root of the prime  $p = 4m + 1$ .

**15089.** (The late Professor R. B. CLAYTON.)—Normals lying in a given plane are drawn to a series of confocal quadrics. Show that they envelop a parabola.

Solution by the PROPOSER.

Since any normal is cut by the principal planes in a constant ratio, and the normals which lie in a given plane are met by the principal planes in three given lines, we have to find the envelope of a line meeting the sides of a fixed triangle in the points X, Y, Z, so that the ratio XY : XZ is constant. But this envelope is known to be a parabola.

RICHARDSON, M.A.)—If  $a$  be an edge of a tetrahedron, A the dihedral angle at that edge,  $\Delta$  the area of a face,  $l$  the perpendicular distance between a pair of opposite edges, and V the volume, then  $3V \Sigma (1/l^2) = \Sigma (a \cot A)$  and  $9V^2 \Sigma (1/l^2) = \Sigma (\Delta^2)$ .

**15142.** (Professor NANSON.)—If

$$x + y + z + w = 0, \quad ax + by + cz + dw = 0, \\ (a-d)^2(b-c)^2(xw + yz) + (b-d)^2(c-a)^2(yw + zx) \\ + (c-d)^2(a-b)^2(zw + xy) = 0,$$

prove that  $x : y : z : w = (d-b)(d-c)(b-c) : (d-c)(d-a)(c-a) : (d-a)(d-b)(a-b) : (b-c)(c-a)(a-b)$ .

**15143.** (J. S. LAWSON, M.A.)—Sum the series

$$3 - 20x - 30x^2 - 290x^3 - \dots \text{ ad inf.},$$

where  $x < \frac{1}{2}$ , the series being recurring.

**15144.** (R. KNOWLES.)—Prove that the sums of a finite number ( $r$ ) of terms in the two series

$$1 + (m+1)x + (2m+1)x^2 + \dots + (mr-m+1)x^{r-1}$$

and  $1 + (m+1)^2x + (2m+1)^2x^2 + \dots + (mr-m+1)^2x^{r-1}$ ,  $m$  being any positive integer, are respectively

$$\frac{[1 + (m-1)x - (mr+1)x^r + (mr-m+1)x^{r+1}] + (1-x)^2}{[1 + (m^2+2m-2)x + (m-1)^2x^2 - (mr+1)^2x^r + (2m^2r^2 - 2m^2r + 4mr - m^2 - 2m + 2)x^{r+1} - (mr-m+1)^2x^{r+2}] + (1-x)^3}.$$

## OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

**8284.** (D. BIDDLE.)—Each of  $n$  bags, placed in a row, contains  $n$  balls, of colour distinct from those in the other bags. A ball is taken at random from the first bag, and is transferred to the second, and then one from the second is similarly transferred to the third, and so on; and, when the last bag is reached, a ball is taken from that and is placed in the first, and the process is repeated until each bag has been visited  $n$  times (putting in and taking out). Find the respective probabilities that at the end (1) no bag shall contain two balls of the same colour, (2) all the balls in each bag shall be of one colour, as at first, but the bags in which they are severally found shall be different from those which they originally occupied.

**8346.** (W. J. McCLELLAND, M.A.)—The triangle formed by joining the feet of the symmedians of any triangle cuts off from the vertices three triangles, the feet of the perpendiculars of which are the feet of the symmedians of the co-pedal triangles. [For the symmedians divide the opposite sides in the ratios  $b^2 : c^2$ ,  $c^2 : a^2$ ,  $a^2 : b^2$ .]

**8578.** (C. E. McVICKER, M.A.)—PONCELET'S theorem *does not hold on the sphere*. Prove, however, that the problem, "To inscribe in a small circle a spherical polygon of  $n$  sides, each of which shall touch another given small circle," is still either indeterminate or impossible.

**8806.** (R. TUCKER, M.A.)— $O$  is the in-centre of the triangle  $ABC$ ,  $K_1, K_2, K_3$  are the LEMOINE points of the triangles  $BOC, COA, AOB$ ; show that their trilinear coordinates are proportional to  $t_2 + t_3, 3t_2 + t_3, t_2 + 3t_3$ , &c., where  $t_1, t_2, t_3$  stand for  $\tan \frac{1}{2}A, \tan \frac{1}{2}B, \tan \frac{1}{2}C$  respectively. If the external bisectors of the angles  $A, B, C$  meet the opposite sides in  $p, q, r$ , then  $pK_1, qK_2, rK_3$  intersect by pairs on the internal bisectors of  $ABC$  in  $L, M, N$  say; prove area of

$$\Delta LMN = 10\Delta^2 \cdot R/(s+a)(s+b)(s+c).$$

Find also the area of the triangle  $K_1K_2K_3$ .

## NOTICES TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss CONSTANCE I. MARKS, B.A., 10 Matheson Rd., West Kensington, W.

## THE LONDON MATHEMATICAL SOCIETY.

Thursday, May 8th, 1902.—Dr. Hobson, President, in the Chair.

Mr. J. E. Wright, Trinity College, Cambridge, was elected a member. Dr. G. Prasad was admitted into the Society.

The following communications were made to the Society:—

Prof. Burnside: "On Groups in which every Two Conjugate Operations are Permutable."

Mr. A. E. Western: "Fermat's Theorem on Binary Powers."

Mr. H. S. Carslaw: "The Application of Contour Integration to the Solution of Problems in the Theory of Conduction of Heat, and to the Development of an Arbitrary Function in Series."

Dr. G. Prasad: "On the use of Fourier's Series in the Theory of Conduction of Heat."

Dr. F. S. Macaulay: "Some Formulæ in Elimination."

The President will represent the Society at the centenary celebration of the birth of Abel, which is to be held at Christiania in September, 1902.

## FRENCH VERBS MADE EASY.

By C. PAYNE.

PRICE SIXPENCE.

A strong linen card, only measuring 10 inches by  $6\frac{1}{2}$  inches, and when folded  $6\frac{1}{2}$  by  $3\frac{1}{2}$  inches, yet containing all the Irregular Verbs, as well as the Four Regular Conjugations and everything that has to be known about the Verbs, and so arranged that it can be committed to memory in a few lessons without the slightest difficulty. Thousands of copies have already been sold, and it has been introduced into some of the leading public schools and other educational establishments. To be obtained through all booksellers, or post free at published price from—

O. PAYNE, 42 George Street, Croydon.

The usual discount allowed to Schools.

PARIS EXHIBITION, 1900. Highest Possible Award.

**JOSEPH GILLOTT'S**  
THE ONLY 'GRAND PRIX' PENS.  
Exclusively Awarded for Steel Pens.

Nos. for Schools—351, 352, 382, 404, 729, 303, 170, 166, 5, 6, 292, 293, 291 (Mapping), 659 (Drawing); and (for Vertical Writing) 1045, 1046.

NOW READY.

## LARGE PORTRAITS IN COLOUR

OF

His Majesty King Edward VII.

AND OF

Her Majesty Queen Alexandra.

Reproduced from Oil-Paintings by Mr. W. H. MARGETSON, who was specially commissioned by Messrs. Cassell & Company to prepare them.

Each Portrait is printed on plate paper about 21 inches by  $15\frac{1}{2}$  inches.

These magnificent Portraits are issued at 6d. each, printed on plate paper; or mounted on cardboard, with suspenders (suitable for hanging on school walls), price 1s. each.

Can be seen at the leading Educational Booksellers throughout the Kingdom.

CASSELL & COMPANY, Limited,  
La Belle Sauvage, London, E.C.

## EDUCATIONAL REVIEW.

Edited by NICHOLAS MURRAY BUTLER.

"We find the 'Educational Review' absolutely indispensable at every turn."—MICHAEL E. SADLER, Director of Special Inquiries and Reports, Board of Education, London, England. September 13, 1901.

"I wish I could tell you how much of stimulus and inspiration I get from reading the 'Educational Review.' The educational world can never repay you for the work you have put into that richly stored magazine. I have just gone through the entire twenty-one volumes in order to get some things that I especially desired, and I am simply amazed at what I find in those volumes."—WILBUR P. GOODY, High School, Hartford, Conn. September, 1901.

"To men like myself it is a sort of working library. Its volumes stand always at my elbow."—Prof. PAUL H. HANCOX, Harvard University.

"The broadest and most able of the American periodicals devoted to education."—New York Times.

"An educational magazine of which the teaching profession may well be proud. There is nothing better in educational journalism in any country. And it has an editor who has convictions, and the courage of them."—School and Home Education, Bloomington, Ill.

"The 'Review' has from the first issue taken its place at the head of American periodicals devoted to education. It is, indeed, the first educational paper in America to win for our country the respect of educationalists abroad."—Journal of Pedagogy, Ypsilanti, Mich.

# EDUCATIONAL TIMES,

AND  
Journal of the College of Preceptors.

Vol. LV.] New Series, No. 495.

JULY 2, 1902.

{ Price to Non-Members, 6d.  
{ By Post, 7d.

**COLLEGE OF PRECEPTORS.**—The Half-Yearly General Meeting of the Members of the Corporation will be held at the College, Bloomsbury Square, W.C., on Saturday, the 19th of July, 1902, at 3 p.m. C. R. HODGSON, B.A., Secretary.

**COLLEGE OF PRECEPTORS.**—EXAMINATIONS, 1902.

- 1. DIPLOMAS.**—The next Examination of Teachers for the Diplomas of the College will commence on the 8th of July, 1902.—At the *Midsummer* Examination, persons who have previously passed in Theory and Practice of Education at the Diploma Examination may be examined practically for Certificates of Ability to Teach.
- 2. CERTIFICATE EXAMINATIONS.**—The Midsummer Examination for Certificates will commence on the 1st of July, 1902.
- 3. LOWER FORMS EXAMINATIONS.**—The Midsummer Examination will commence on the 1st of July, 1902.
- 4. PROFESSIONAL PRELIMINARY EXAMINATIONS.**—These Examinations are held in March and September. The next Examination will commence on the 2nd of September, 1902.
- 5. INSPECTION AND EXAMINATION OF SCHOOLS.**—Visiting Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

**PRIZES.**

*Diploma Examination.*—The following Prizes will be offered for competition:—Theory and Practice of Education, £10; Classics (Greek and Latin), £5; Mathematics, £5; Natural Science, £5. The Doreck Scholarship of £20 will be awarded on the results of the Christmas Examination.

*Certificate Examination.*—Prizes will be awarded as follows, subject to the conditions stated in the Regulations:—

- First Class.*—Four Prizes for General Proficiency; two each for Classics, Mathematics, Modern Languages, Natural Sciences, and English subjects; one for Scripture History.
  - Second Class.*—Four Prizes for General Proficiency.
  - Third Class.*—Four Prizes for General Proficiency.
- Two Medals will also be awarded to the best Candidates in Shorthand.

The Regulations for the above Examinations can be obtained on application to the Secretary at the College, Bloomsbury Square, W.C.

C. R. HODGSON, B.A., Secretary.

**PROFESSIONAL PRELIMINARY EXAMINATIONS.**—The COLLEGE of PRECEPTORS will hold an Examination for Certificates recognized by the Board of Education, the Incorporated Law Society, the General Medical Council, the Royal College of Physicians of London, the Royal College of Surgeons of England, the Royal College of Veterinary Surgeons, the Pharmaceutical Society of Great Britain, and other bodies, on the 2nd, 3rd, and 4th of September, 1902.

The Examination will take place in London, and at the following Local Centres:—Birmingham, Bristol, Leeds, Liverpool.

Examination Fee, 2s. Regulations and Entry Forms may be obtained on application to the Secretary of the College of Preceptors, Bloomsbury Square, W.C.

C. R. HODGSON, B.A., Secretary.

**UNIVERSITY DIPLOMA FOR WOMEN.**

**THE UNIVERSITY OF ST. ANDREWS** grants Diploma and Title of L.L.A. to WOMEN.

60 Examination Centres in Great Britain and abroad. For Prospectus, apply to the SECRETARY, L.L.A. Scheme, The University, St. Andrews, N.B.

**COLLEGE OF PRECEPTORS.**  
**THE CALENDAR FOR 1902**

is now ready, and may be obtained from Mr. F. HODGSON, 89 Farringdon Street, E.C. Price, free by post,

- To Members of the College ... 1s. 6d.
- To Non-Members ... 2s. 6d.

The Calendar contains, in addition to the Lists of Members, and of Schools sending in candidates to the Certificate Examinations, the Regulations respecting the Examinations to be held in 1902, &c., and the

**EXAMINATION PAPERS**

set at the Certificate, Lower Forms, Professional Preliminary, and Diploma Examinations held in 1901.

**ST. GEORGE'S TRAINING COLLEGE FOR WOMEN TEACHERS, EDINBURGH.**

*Principal*—Miss M. R. WALKER.

This College provides a complete Course of Professional Training for Ladies who desire to become Teachers in Secondary Schools or Governesses in Families. The Course, which lasts for one year, includes attendance at the University Lectures on Education, in addition to Lectures delivered by the College Staff, and the Students have ample opportunities of gaining experience in Class Teaching in good Schools. Students are admitted in January and October. For prospectus and further particulars apply to the PRINCIPAL, 5 Melville Street, Edinburgh.

**HOME AND COLONIAL SCHOOL SOCIETY.** (Incorporated for Examination and Certificate purposes with the National Froebel Union.)

**Training College** (non-Government Branch) for KINDERGARTEN TEACHERS and LOWER FORM MISTRESSES IN HIGH SCHOOLS, Highbury Hill House, N.

*Principal*—Rev. D. J. THOMAS, M.A.  
*Vice-Principal*—Miss M. M. FENSTONE.  
*Head of Kindergarten*—Miss G. JOHNSON.

Students trained for the Examinations of the National Froebel Union.

**Special arrangements made for Students who wish to qualify as Mistresses in the Lower Forms of High Schools.**

There is a House of Residence under the sanction of the Committee.

**A High School for Girls** under the Inspection of London University, with Transition Classes and a Kindergarten, is attached to the College for purposes of Demonstration and Practice.

Apply—THE SECRETARY, Highbury Hill House, N.

**Diploma Correspondence College.**

**A HIGH-CLASS CORRESPONDENCE INSTITUTION.**

*Specially arranged Courses for*

**MATRICULATION**

AND

**A.C.P.**

Full particulars on application to the Principal—

Dr. KNIPE, Dip. Corr. Coll., Fishponds, Bristol.

**NOTICE.**—The "EDUCATIONAL TIMES" for AUGUST will contain the CLASS LISTS of SUCCESSFUL CANDIDATES at the MID-SUMMER EXAMINATIONS of the College of Preceptors.

**LONDON COLLEGE OF MUSIC.** (Incorporated.)

GREAT MARLBOROUGH STREET, LONDON, W.

Patron: HIS GRACE THE DUKE OF LEEDS.  
Dr. F. J. KARN, Mus. Bac. Cantab., Principal.

G. AUGUSTUS HOLMES, Esq., Director of Examinations.

EXAMINATIONS in PIANOFORTE PLAYING, SINGING, THEORY, and all branches of Music will be held in London and 350 Provincial Centres in July (June for Scotland and Ireland), when certificates will be granted to all successful candidates.

The Higher Examinations in Practical and Theoretical Music for Diplomas of Associate (A.L.C.M.), Licentiate (L.L.C.M.), the Teachers' Diploma (L.C.M.), and Fellowship (F.L.C.M.), take place in July (June for Scotland and Ireland) and December.

SYLLABUS for 1902 containing particulars of (1) The Teachers' Diploma (L.C.M.), (2) The new Cumulative Certificate, and (3) Four Exhibitions value £6. 6s. each, may be had of the SECRETARY.

In the Educational Department students are received and thoroughly trained under the best professors at moderate fees. Day and Evening Classes are held.

A VACATION COURSE of Instruction in Special Subjects for Teachers and others is held at Easter, August, and Christmas.

T. WEEKES HOLMES, Secretary.

**THE ASSOCIATED BOARD OF THE ROYAL ACADEMY OF MUSIC AND THE ROYAL COLLEGE OF MUSIC FOR LOCAL EXAMINATIONS IN MUSIC.**

*Patron*—HIS MAJESTY THE KING.

*President*—H.R.H. THE PRINCE OF WALES, K.G.

LOCAL CENTRE EXAMINATIONS held annually in March and April at all Centres. In London and a few Suburban Centres they are held in November and December as well as March and April. (See Syllabus A.)

SCHOOL EXAMINATIONS, held three times a year—viz., March and April, June and July, and October and November. (See Syllabus B.) Entries for the June-July Examination will be received on or before May 14th, 1902.

Specimen Theory Papers set in the Local Centre and School Examinations of 1896 to 1901, inclusive, can be obtained on application to the Central Office. Price 3d. per set, per year, post free.

Copies of Syllabuses A and B, and all information, will be sent on application to

JAMES MUIR, Secretary.

### DEPARTMENT FOR THE TRAINING OF SECONDARY TEACHERS.

(Recognized by the Cambridge Syndicate.)

*Professor of Education*—J. A. GREEN, B.A. Lond., Assisted by Miss A. N. JOHNSTON, M.A., and Mr. F. FLETCHER, B.A.

Preparation is offered for the Cambridge Diploma (Theoretical and Practical) and for the Teachers' Diploma of the University of London.

Full particulars of the Course (which is open to both men and women students), Fees, Scholarships, &c., may be had on application to the REGISTRAR.

## KING'S COLLEGE, LONDON (UNIVERSITY OF LONDON).

### DEPARTMENT FOR TRAINING TEACHERS FOR SECONDARY SCHOOLS.

The Course, which is intended to meet the requirements of the Teachers' Registration Council, is both Practical (including properly directed work in a Secondary School) and Theoretical (preparing for the London Teachers' Diploma and the Certificate of the Teachers' Training Syndicate).

The Course occupies a year, beginning in October or January. The fee is £30 for the year if paid in advance, or £10. 10s. per Term (three Terms).

For further particulars apply to the SECRETARY, King's College, Strand, W.C.

## BEDFORD COLLEGE FOR WOMEN

(UNIVERSITY OF LONDON),  
YORK PLACE, BAKER STREET, W.

*Principal*—Miss ETHEL HURLBATT.

The Session 1902-3 will open on Thursday, October 2nd.

The College provides Instruction for Students preparing for the University of London Degrees in Arts, Science, and Preliminary Medicine, also instruction in subjects of General Education.

There is a Training Department for Teachers, a Hygiene Department and an Art School.

Students can reside in the College. Full particulars on application to the PRINCIPAL.

## BEDFORD COLLEGE FOR WOMEN

(UNIVERSITY OF LONDON),  
YORK PLACE, BAKER STREET, W.

### DEPARTMENT FOR PROFESSIONAL TRAINING IN TEACHING.

*Head of the Department*—Miss HANNAH ROBERTSON, B.A.

The Course includes full preparation for the Examinations for the Teaching Diplomas granted by the Universities of London and Cambridge, held annually in December.

## DATCHELOR TRAINING COLLEGE FOR TEACHERS.

CAMBERWELL GROVE, S.E.

*Principal*—Miss RIGG.

*Mistress of Method*—Miss CARPENTER.

Other Teachers and Lecturers.

Provides a practical course of professional training for Teachers in Secondary Schools, with abundant opportunity for class teaching in the Datchelor (400 pupils) and other Schools.

Students prepared for the Cambridge Teachers' Certificate and London Teaching Diploma.

Free Studentship awarded annually to a University Graduate in September or January, when the College courses begin.

Also a Kindergarten Division preparing for the Examinations of the National Froebel Union. Also a Preparatory Division preparing for Inter. Arts, or Cambridge Higher Local Examination.

Fees £15 to £20 a year for Non-residents. A comfortable Hall of Residence. Terms moderate.

## THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN TEACHERS.

*Principal*—Miss M. PUNNETT, B.A. (Lond.).

A residential College providing a year's professional training for Secondary Teachers.

The course includes preparation for the Cambridge Teacher's Certificate (Theory and Practice), and for the Teachers' Diploma of the London University. The Students attend the Cambridge University Lectures on Teaching, in addition to those of the Resident and Visiting Lecturers. Ample opportunity is given for practice in teaching science, languages, mathematics, and other subjects in various schools in Cambridge.

Students are admitted in January and in September. Full particulars as to qualifications for admission, scholarships, and bursaries may be obtained on application to the PRINCIPAL, Wollaston Road, Cambridge.

## THE MARIA GREY TRAINING COLLEGE FOR WOMEN TEACHERS

offer a full Course of Professional Training to Ladies who desire to become Teachers in Secondary Schools, or in Kindergartens.

For all particulars as to qualifications for Entrance, Terms, Scholarships, Hall of Residence, &c., apply to the Principal, Miss ALICE WOODS, at the College, Salisbury Road, Brondesbury, London, N.W.

### THE INCORPORATED

### FROEBEL EDUCATIONAL INSTITUTE,

TALGARH ROAD, WEST KENSINGTON, LONDON, W.

*Chairman of the Committee*—Mr. W. MATHER, M.P.

*Treasurer*—Mr. C. G. MONTEPIORE.

*Secretary*—Mr. ARTHUR G. SYMONDS, M.A.

### TRAINING COLLEGE FOR TEACHERS.

*Principal*—Miss E. E. LAWRENCE.

KINDERGARTEN AND SCHOOL.

*Headmistress*—Miss A. YELLAND.

Further particulars may be obtained on application to the PRINCIPAL.

## YOUNG LADY (Senior Associated

Board Piano, I.S.M. advanced Honours Singing, Senior Cambridge dis. Harmony) pupil of Dr. G. M. Garrett, desires post as MUSIC MISTRESS. Six years' experience. Non-res. £80; res. £45.—E. B., 9 Warwick Road, Stratford-on-Avon.

## JOINT AGENCY FOR ASSISTANT MASTERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

*Registrar*—Rev. F. TAYLOR, M.A. Cantab.

Low Commissions. Liberal Discount.

Headmasters having vacancies on their staffs, and Assistant Masters seeking appointments, are asked to communicate with the REGISTRAR.

Office Hours—10 a.m. to 5 p.m., Saturdays, 10 a.m. to 1 p.m. Interviews generally between these hours or by special appointment.

## JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, and Private Schools' Association.)

*Address*—74 GOWER STREET, LONDON, W.C.

*Registrar*—Miss AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Head Mistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged. Office hours—9.30 a.m. to 5.30 p.m. Hours for interviews are from 10.30 a.m. to 1 p.m., and 2 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only, when the Office is closed.

## SCHOOL BOARD FOR LONDON.

HEAD AND ASSISTANT TEACHERS FOR PUPIL-TEACHERS' SCHOOLS.

(a) The Board require a HEAD MASTER for the "Batterssea" Pupil Teachers' School, Amies Street, Battersea Hill, S.W.

The School meets on the morning and afternoon of each day, except Wednesday and Saturday afternoons, but the Board reserve to themselves the right of also utilising the services of the Teachers on certain evenings.

The Course of Instruction comprises the subjects included in Schedule V. of the Board of Education's Code and the Science and Art subjects taken by Pupil Teachers under the Regulations of the Directory of Board of Education, South Kensington.

The salary will be £350 per annum, rising by £5 per annum for each year of satisfactory service to a maximum of £400.

(b) The services of a Woman ASSISTANT qualified to teach the subjects set out in Schedule V. of the New Code of the Board of Education, and with special qualifications for teaching Needlework, are required by the Board's Pupil Teachers' School, Offord Road, Barnsbury, N.

Salary of Assistant Teacher £130 per annum, rising by annual increments of £5 to £165 per annum.

*Notices applicable to (a) and (b).*

Applications to be made on Form 40 P.T., on which, with other information, copies only of three testimonials must be given. A copy of this form can be obtained from the Clerk of the Board. If a written application is made for one it must be accompanied by a stamped and addressed envelope or wrapper.

Applications must be received by the CLERK of the BOARD, School Board Offices, Victoria Embankment, W.C., by or before the first post on Wednesday, July 9th, 1902.

Applicants who applied for the recently advertised vacancies for Assistants in the Board's Pupil Teachers' Schools can have the Form 40 P.T. they then submitted placed before the Committee on informing the Clerk of the Board by or before the first post of Wednesday, July 9th.

All communications on the subject of this notice should be marked outside "P.T. Schools."

Candidates from the country invited to attend the Committee will be allowed third-class return railway fare to London, and, if necessary, hotel expenses not exceeding ten shillings a day for two days. If application for such payment is made it must be accompanied by receipted vouchers; but if a candidate, after being nominated, refuses to take up the appointment, these expenses will not be allowed. Applicants who do not receive, on or before July 12th, a summons to attend before the Committee will understand that they have not been included in the list of candidates to be seen, and will not be further communicated with.

## EXPERIENCED young Lady NURSE

(Norland Training) seeks Re-employment in School or Institution (Girls' preferred). Excellent testimonials. £35 to £40.—M., 167 New Park Road, Brixton Hill, S.W.

**University Tutorial College.**

Principal: WILLIAM BRIGGS, LL.D., M.A., F.R.A.S.

Vice-Principal: JOHN BRIGGS, M.A., F.Z.S.

**ANSWERS TO EXAMINATION QUESTIONS IN CHEMISTRY:** Theoretical and Practical. Ordinary Course, 1887-91 inclusive. Crown 8vo, boards, 1s.

By T. HANDS, M.A.

**NUMERICAL EXERCISES IN INORGANIC CHEMISTRY.** Crown 8vo, 2s.; with the Answers, 2s. 6d.; Answers separately, 6d.

**THE BIBLE FOR THE YOUNG.** A Series for Schools and Families. By Rev. J. PATERSON SMYTH, B.D., LL.D., Author of "How we got our Bible," "How God inspired the Bible," "How to read the Bible," "The Old Documents and the New Bible," &c.

The *Guardian* says of first volume:—"Packed with thought. Very far above the average standard of Sunday-school lessons." Similarly warm appreciation is expressed by the *Record*, *Literary World*, *Bookman*, &c. &c.

The aim of this series is expressed by the Latin motto in the Introduction—"Placere, docere, movere." 1st. To make the Bible characters live before the child. 2nd. To move his heart to definite high purposes. But it is under the 2nd head ("docere") that the chief characteristic of the series appears—the effort, running all through, to save the child from scepticism in after-life by guarding him against the crude and narrow teaching of the Bible in his childhood.

The old plan was to wait till religious difficulties had made people unbelievers, and then give them books of Christian evidence to win them back by explaining that their childhood's teaching had not been quite correct, and must now be modified by a broader and slightly different view. This series tries the other method of not exposing them to unbelief.

NOW READY.

**GENESIS, ST. MATTHEW,  
JOSHUA, AND THE JUDGES.**

Single Volumes, 1s.; cloth, 1s. 6d. net. Two Volumes together, 52 lessons, including 4 for Festivals, cloth, 2s.

**GEOGRAPHY.—ECLECTIC PHYSICAL GEOGRAPHY.** By R. HINMAN. With numerous Illustrations. Crown 8vo, 5s.

**GEOMETRY.—A PRIMER OF ORTHOGRAPHIC PROJECTION** (Solid Geometry, &c.). By G. T. PLUNKETT. Crown 8vo, 2s. 6d.

**GRAMMAR.—AN ENGLISH GRAMMAR WITH ANALYSIS AND PROBODY.** For the use of Teachers and the Higher Classes in Schools. By S. E. STRONG, M.A., Q.U.L., Inspector of Schools; and A. R. EAGAR, M.A., T.C.D., First Senior Moderator, and sometime Professor of English Language at Alexandra College, Dublin. Crown 8vo, cloth, 3s.

**HEAT.—A SCHOOL COURSE IN HEAT.** Revised and Enlarged. By W. LARDEN, M.A., Assistant Master in the R.N.E. College, Devonport, late Science Scholar, Merton College, Oxford. Fifth Edition. Enlarged and re-written. Crown 8vo, cloth, 5s.

A Text-book at Rugby, Clifton, Cheltenham, Bedford, Birmingham, Uppingham, and other eminent Schools and Colleges.

**HISTORY.—SCHOOL CHRONOLOGY; OR, THE GREAT DATES OF HISTORY.** By the Rev. W. J. CONYBEARE, M.A., sometime Fellow of Trinity College, Cambridge. New Edition, by the Rev. EDWARD CONYBEARE, 16mo, paper cover, 1s.

**HISTORY.—HARMONY OF HISTORY.** By ASHLEY BICKERSTETH, B.A. 4to, 2s. 6d.

**HISTORY.—OUTLINES OF ROMAN HISTORY.** Four Periods on Sheet. By ASHLEY BICKERSTETH, B.A. 4to, 2s. 6d.

**MECHANICS.—A TEXT-BOOK OF MECHANICS AND HYDROSTATICS.** By HERBERT HANCOCK, M.A., F.R.A.S., F.R.Met.Soc., late Scholar and Triple prizeman at St. John's College, Cambridge. Lecturer on Geometry to the Architectural Association, London. With over 400 Diagrams. Crown 8vo, cloth extra, 5s.

**PHILOSOPHY.—DUGALD STEWART'S OUTLINES OF MORAL PHILOSOPHY.** By JAMES M'COSE. With a Memoir, Supplement, and Questions. Post 8vo, 3s. 6d.

**PHYSICAL EDUCATION.—HOW TO GET STRONG AND HOW TO STAY SO.** By WILLIAM BLAIKIE. With Illustrations. 16mo, cloth, 5s.

**PHYSICAL EDUCATION.—SOUND BODIES FOR OUR BOYS AND GIRLS.** By WILLIAM BLAIKIE. With numerous Illustrations. 16mo, cloth, 2s. 6d.

**PHYSICAL EDUCATION.—A MANUAL OF SWEDISH DRILL FOR TEACHERS AND STUDENTS.** By GEORGE L. MELIO, Gold Medallist. New Edition. Crown 8vo, boards, 2s. 6d.

**PHYSICAL SCIENCE.—SHORT STUDIES IN PHYSICAL SCIENCE.** By VAUGHAN CORNISH, M.Sc. Illustrated. Crown 8vo, cloth, 5s.

**ZOOLOGY.—TEXT-BOOK OF ZOOLOGY.** By Dr. J. E. V. BOAS, Lecturer in Zoology in the Royal College of Agriculture, Copenhagen. Translated by W. J. KIRKALDY, Tutor in Natural Science to the Association for the Education of Women, Oxford, and E. C. POLLARD, B.Sc. Lond., Assistant Lecturer in Biology, University Extension College, Reading. Illustrated with 427 Figures. 1 vol. roy. 8vo, cloth extra, 21s. net.

London: SAMPSON LOW, MARSTON & COMPANY, Ltd., St. Dunstan's House, Fetter Lane, Fleet Street, E.C.

## CASEY'S EUCLID.

### THE ELEMENTS OF EUCLID.

BOOKS I.—VI., and PROPOSITIONS I.—XXI. of BOOK XI. Together with Appendix on the CYLINDER, SPHERE, CONE, &c., with Copious Annotations and Numerous Exercises.  
By JOHN CASEY, LL.D., F.R.S., Fellow of the Royal University of Ireland, Vice-President, Royal Irish Academy, &c., &c.  
Tenth Edition, price 4s. 6d., post free; or in Two Parts, each Half-a-Crown.

### A KEY TO THE EXERCISES

IN THE SIX BOOKS OF CASEY'S "ELEMENTS OF EUCLID."  
By JOSEPH B. CASEY, Tutor, University College, Dublin.  
Second Edition. Small 8vo, price 6s.

### A SEQUEL TO THE

FIRST SIX BOOKS OF THE "ELEMENTS OF EUCLID."  
Sixth Edition, Revised and greatly Enlarged, price 3s. 6d., cloth. Now ready.

Now Ready, Second Edition, Revised and Enlarged, 564 pp., price 12s.

### A TREATISE ON THE

### ANALYTICAL GEOMETRY

OF THE POINT, LINE, CIRCLE, AND THE CONIC SECTIONS.  
Containing an account of its most recent Extensions, with numerous Examples.  
New Edition. Crown 8vo.

### A TREATISE ON

### ELEMENTARY TRIGONOMETRY.

With numerous Examples and Questions for Examination.  
Third Edition. Small 8vo, 148 pp., price 3s.

### KEY TO THE EXERCISES

IN THE TREATISE ON ELEMENTARY TRIGONOMETRY.  
With numerous Examples and Questions. Second Edition. Price 3s.

### A TREATISE ON

### PLANE TRIGONOMETRY.

Containing an account of Hyperbolic Functions, with numerous Examples.  
Crown 8vo. Second Edition.

Crown 8vo, price 5s.

### A TREATISE ON

### SPHERICAL TRIGONOMETRY,

AND ITS APPLICATION TO GEODESY AND ASTRONOMY.  
With numerous Examples.

## EDUCATIONAL REVIEW.

Edited by NICHOLAS MURRAY BUTLER.

"We find the 'Educational Review' absolutely indispensable at every turn."—MICHAEL E. SADLER, Director of Special Inquiries and Reports, Board of Education, London, England. September 13, 1901.

"I wish I could tell you how much of stimulus and inspiration I get from reading the 'Educational Review.' The educational world can never repay you for the work you have put into that richly stored magazine. I have just gone through the entire twenty-one volumes in order to get some things that I especially desired, and I am simply amazed at what I find in those volumes."—WILBUR P. GORDY, High School, Hartford, Conn. September, 1901.

"To men like myself it is a sort of working library. Its volumes stand always at my elbow."—Prof. PAUL H. HANUS, Harvard University.

"The broadest and most able of the American periodicals devoted to education."—*New York Times*.

"An educational magazine of which the teaching profession may well be proud. There is nothing better in educational journalism in any country. And it has an editor who has convictions, and the courage of them."—*School and Home Education*, Bloomington, Ill.

"The 'Review' has from the first issue taken its place at the head of American periodicals devoted to education. It is, indeed, the first educational paper in America to win for our country the respect of educationalists abroad."—*Journal of Pedagogy*, Ypsilanti, Mich.

14s. 6d. a Year, 1s. 10d. a Copy. Ten Numbers, none being issued for July and August. Current numbers kept in stock.

3. Papers set at Examination of Pupils for Certificates, Midsummer, 1901.
4. Do. do. do. Christmas, 1901.
5. Papers set at Professional Preliminary Examination, March, 1901.
6. Do. do. do. September, 1901.
7. Papers set at Lower Forms Examination ... .. Midsummer, 1901.
8. Do. do. ... .. Christmas, 1901.

\* Nos. 3, 4, 5, and 6 may be had separately, price, free by post, 7d. each set. Nos. 7 and 8, price, free by post, 4d. each set.

LONDON: FRANCIS HODGSON, 89 FARRINGTON STREET, E.C.

## PROFESSOR MEIKLEJOHN'S SERIES.

**Julius Cæsar.** Edited by M. J. C. MEIKLEJOHN, B.A. (Oxon.). Crown 8vo, 136 pp. . . . . 1s. 0d.

"The apparatus of explanation and commentary is very complete. The introductory matter (19 pages) sets forth the probable date of the play, the source of the materials, the duration of the action, the dates of the historical events referred to, the details of the plot and a summary as well, and an account of the chief characters both as represented in the play and as known to history."—*The Educational Times*.

**A Short Arithmetic.** By G. A. CHRISTIAN, B.A., and A. H. BAKER, B.A. Crown 8vo, 196 pp. . . . . 1s. 0d.

With Answers, 1s. 6d.  
"For boys and girls competing for the various County Council Scholarships nothing better could be desired."—*The Teachers' Aid*.

"It is one of the best Short Arithmetics ever produced. A great feature is the large number of examples culled from the various public examinations."—*The Teachers' Monthly*.

**A Short Geography, with the Commercial Highways of the World.** Nineteenth Edition. Crown 8vo, 196 pp. . . . . 1s. 0d.

"Terse, practical, informative, and statistic. This shilling Geography is exactly what a School Geography needs to be."—*The Teachers' Aid*.

"Clearness and conciseness exemplified."—*The Private Schoolmaster*.

**Australasia: its Geography, Resources, Commerce, and Chronicle of Discovery.** By M. J. C. MEIKLEJOHN, B.A. Crown 8vo, 86 pp. . . . . 6d.

**Asia: its Geography, Resources, Commerce, &c.** By M. J. C. MEIKLEJOHN, B.A. Crown 8vo, 92 pp. (*Ready shortly*). . . . . 6d.

**Africa: its Geography, Resources, and Chronicle of Discovery up to 1897.** By M. J. C. MEIKLEJOHN, B.A. Oxon. Third Edition. Crown 8vo, 76 pp. . . . . 4d.

**The British Colonies and Dependencies: their Resources and Commerce.** With Chapters on the Interchange of Productions and Climatic Conditions. By M. J. C. MEIKLEJOHN, B.A. Third Edition. Crown 8vo, 96 pp. . . . . 6d.

**A Short History of England and Great Britain, B.C. 55 to A.D. 1890.** Fourteenth Edition. Crown 8vo . . . . . 1s. 0d.

"In the 'Short History' there is plenty of anecdote, ballad, and stray gems of literature: and we find, though not with its usual emphasis, the Professor's expertness in the use and disposition of type."—*Education*.

**Outlines of the History of England and Great Britain to A.D. 1890.** Fifth Edition. Crown 8vo, 84 pp. . . . . 6d.

**A Short Grammar of the English Tongue, with Three Hundred and Thirty Exercises.** Twelfth Edition . . . . . 1s. 0d.

**A Short History of the English Language.** Crown 8vo, 76 pp. . . . . 1s. 0d.

**An Outline of the History of English Literature.** Crown 8vo, 110 pp. . . . . 1s. 6d.

**A New Spelling Book.** With Side Lights from History. Eighth Edition. Crown 8vo, 152 pp. . . . . 1s. 0d.

"We agree with the main principle here followed—that spelling should be learnt through the eye rather than through the ear."—*The School Guardian*.

**The Book of the French Verb.** By J. DE CUSANCE. 107 pp. + viii. . . . . 1s. 0d.

This little book contains perfectly clear and open Tables of the Irregular French Verbs, each displayed across two pages. The chief Idioms connected with the Verbs are also given.

**A First French Book.** By J. DE CUSANCE. With a Preface by Professor MEIKLEJOHN. Crown 8vo, 120 pp. . . . . 1s. 0d.

"It is an uncommonly good French grammar, full of valuable material, and will make a thoroughly practical text-book."—*The Educational News*.

A. M. HOLDEN, 11 PATERNOSTER SQUARE, E.C.

## MR. EDWARD ARNOLD'S LIST.

### A New Geometry Book.

**ELEMENTARY GEOMETRY.** By W. C. FLETCHER, M.A., Head Master of the Liverpool Institute, late Fellow of St. John's College, Cambridge. Small crown 8vo, cloth. [*In a few days*].

This book is meant to contain the irreducible minimum of geometrical knowledge, less than the whole of which is not worth considering as knowledge at all. It contains the whole substance of Euclid I.-IV. and VI., with the exception of the unimportant proposition IV. 10.

**A FIRST GEOMETRY BOOK.** A Simple Course of Exercises based on Experiment and Discovery, introductory to the study of Geometry. By J. G. HAMILTON, B.A., Lecturer on Geometry at the Froebel Educational Institute, and F. KETTLE, B.A., Head Master of Clapham High School for Boys. Crown 8vo, fully Illustrated, cloth, 1s. Answers (for Teachers only), 6d.

### History and Geography of Australia.

**THE AUSTRALIAN COMMONWEALTH: Its History and Geography.** A Reading Book for Schools. With numerous Illustrations and a Coloured Map. 144 pages. Cloth, 1s.

This book has been written by a gentleman who has lived for some time in each of the Australian States, and who has an intimate knowledge of all that concerns the new Commonwealth. With the proclamation of the Commonwealth the island continent took a new place among the nations of the world, and its new importance is now being emphasized in the schools of the Mother Country.

## LITERARY READING BOOKS.

**IN REALMS OF GOLD.** An English Reading Book for Junior Forms. Containing Folk-tales from many Lands, stories from Homer, Virgil, Chaucer, Malory, Froissart, Shakespeare, Scott, and others. Illustrated with Black-and-white Reproductions of well known Pictures. 224 pages. Cloth, 1s. 3d.

**IN THE WORLD OF BOOKS.** An English Reading Book for Middle Forms. Containing extracts from English prose and poetry by the best writers, selected to supply matter as suggestive as possible to the teacher of literature and general history. Illustrated with Black-and-white Reproductions of Pictures by Greuze, Turner, and other celebrated artists. 256 pages. Cloth, 1s. 6d.

**TELLERS OF TALES.** Biographies of some English Novelists, with Extracts from their Works. Edited by R. WILSON, B.A. 240 pages. Cloth, 1s. 6d. The authors represented are Scott, Dickens, Thackeray, Reade, Kingsley, Stevenson, George Eliot, and Charlotte Brontë.

**LAUREATA.** A Selection from the best Poets, from Shakespeare to Swinburne, including a number of Copyright Poems by W. E. Henley, Henry Newbolt, Rudyard Kipling, and Matthew Arnold. Edited by R. WILSON, B.A. 224 pages. Cloth, 1s. 6d.

**MEN AND MOVEMENTS IN EUROPEAN HISTORY.** From the Time of Charlemagne to that of Victor Emmanuel. 256 pages. Cloth, 1s. 6d.

**A FIRST COURSE IN ENGLISH ANALYSIS AND GRAMMAR.** By RICHARD WILSON, B.A. 144 pages. Cloth, 1s. This book differs from others of similar scope and aim in the arrangement of the parts of the subject.

The broad division into accidence and syntax, the only logical division for a *synthetical* language, is discarded, and what remains of accidence in English, now an *analytical* language, is taught along with syntax.

The pupil is taken step by step through a course which does not permit him to forget what he has already acquired, and as soon as each grammatical principle has been explained he is taught how to apply it in the practical work of analysis and parsing.

**ARNOLD'S NEW SHILLING GEOGRAPHY.** The World, with special reference to the British Empire. With Diagrams and Sketch Maps, Statistical Tables, Questions, and Map Exercises. Suitable for Junior and Lower Middle Forms. 160 pages. Crown 8vo, cloth, 1s.

**FRANCAIS POUR LES TOUT PETITS.** By JETTA S. WOLFF, Author of "Les Français en Ménage," &c. Well Illustrated. Cloth, 1s. 3d.

A Complete Educational Catalogue will be forwarded post free on application. Also a specially prepared list of books suitable for holiday tasks.

LONDON: EDWARD ARNOLD, 37 BEDFORD STREET, STRAND.

# COLLEGE OF PRECEPTORS' EXAMINATIONS, MIDSUMMER, 1903.

## Mr. Murray's List of Special Text-Books.

### ENGLISH LANGUAGE AND LITERATURE.

**PRIMARY ENGLISH GRAMMAR FOR ELEMENTARY SCHOOLS.** With 134 Exercises and carefully graduated Parsing Lessons. By T. D. HALL, M.A. 16mo, 1s.

This work aims at the clearest and simplest statement possible of the first principles of English Grammar for the use of children from about eight to twelve years of age.

**SCHOOL MANUAL OF ENGLISH GRAMMAR.** With Historical Introduction and copious Exercises. By Sir Wm. SMITH, D.C.L., and T. D. HALL, M.A. With Appendices. Crown 8vo, 3s. 6d.

This work has been prepared with a special view to the requirements of Schools in which English, as a *living language*, is systematically taught, and differs from most modern grammars in its thoroughly practical character. A distinguishing feature of the book is the constant appeal for every usage to the authority of Standard English Authors.

**MANUAL OF ENGLISH COMPOSITION.** With copious Illustrations and Practical Exercises. Suited equally for Schools and for Private Students of English. By T. D. HALL, M.A. Crown 8vo, 3s. 6d.

**SMALLER HISTORY OF ENGLISH LITERATURE.** Giving a Sketch of the Lives of our Chief Writers. By JAMES ROWLEY. Small crown 8vo, 3s. 6d.

The important position which the study of English literature is now taking in education has led to the publication of this work, and of the accompanying volume of specimens. Both books have been undertaken at the request of many eminent teachers, and no pains have been spared to adapt them to the purpose for which they are designed—as elementary works to be used in schools.

**SHORT SPECIMENS OF ENGLISH LITERATURE.** Selected from the Chief Authors and arranged chronologically. By JAMES ROWLEY. With Notes. Small crown 8vo, 3s. 6d.

**STUDENTS MANUAL OF ENGLISH LITERATURE.** A History of English Literature of the Chief English Writers, founded upon the Manual of THOMAS B. SHAW. A new Edition, thoroughly revised. By A. HAMILTON THOMPSON, B.A., of St. John's College, Cambridge, and University Extension Lecturer in English Literature. With Notes, &c. Crown 8vo, 7s. 6d.

**STUDENTS SPECIMENS OF ENGLISH LITERATURE.** Selected from the Best Writers, and arranged Chronologically. By T. B. SHAW, M.A. Crown 8vo, 5s.

**AN INTRODUCTION TO POETRY.** By LAURIE MAGNUS, M.A. Feap. 8vo, 2s.

### SCIENCE.

**THE FACE OF NATURE.** Popular Readings in Elementary Science. By the Rev. C. T. O'NEVEN, D.D., Canon of St. Patrick's, Rector of Enniskillen. With numerous Diagrams. Feap. 8vo, 2s.

**A FIRST COURSE OF PRACTICAL SCIENCE,** with full Directions for Experiments and numerous Exercises. By J. H. LEONARD, B.Sc. Lond. With a Preface by Dr. GLADSTONE, F.R.S. Feap. 8vo, 1s. 6d.

"The exercises described are suitable for quite young beginners, and they will serve the double purpose of applying the pupil's knowledge of arithmetic and developing a scientific frame of mind. . . . The experiments are described concisely and are well arranged."—*Nature*.

**A FIRST COURSE OF CHEMISTRY.** By J. H. LEONARD, B.Sc. Lond. 1s. 6d.

**THE GROUNDWORK OF SCIENCE.** By ST. GEORGE MIVART, M.D., Ph.D., F.R.S. Crown 8vo, 6s.

**CHAPTERS IN MODERN BOTANY.** By PATRICK GEDDES, Professor of Botany, University College, Dundee. With Illustrations. Crown 8vo, 3s. 6d.

**THE STUDY OF ANIMAL LIFE.** By J. ARTHUR THOMPSON, Regius Professor of Natural Science in the University of Aberdeen; Joint Author of the "Evolution of Sex." Author of "Outlines of Zoology." With many Illustrations. Crown 8vo, 5s.

**THE PHYSIOLOGY OF THE SENSES.** By JOHN MCKENDRICK, Professor of Physiology in the University of Glasgow, and Dr. SNOODGRASS, Physiological Laboratory, Glasgow. With Illustrations. Crown 8vo, 4s. 6d.

**THE REALM OF NATURE.** A Manual of Physiography. By Dr. HUGH ROBERT MILL, Librarian to the Royal Geographical Society. With Nineteen Coloured Maps and 68 Illustrations. Crown 8vo, 5s.

**AN INTRODUCTION TO MODERN GEOLOGY.** By R. D. ROBERTS, sometime Fellow of Clare College, Cambridge; Fellow of University College, London; Secretary to the Cambridge and London University Extension Syndicate. With Coloured Maps and Illustrations. Crown 8vo, 5s.

### HISTORY.

**SMALLER HISTORY OF ROME.** From the Earliest Times to the Establishment of the Empire. Thoroughly Revised by A. H. J. GREENIDGE, M.A., Fellow of Hertford College, Oxford. With a Supplementary Chapter on the Empire to 117 A.D. by G. MIDDLETON, M.A., under the direction of Prof. W. M. RAMSAY, M.A., D.C.L. With Coloured Map, Plans, and Illustrations. Crown 8vo, 3s. 6d.

**STUDENT'S HISTORY OF MODERN EUROPE.** From the Capture of Constantinople by the Turks, 1453, to the Treaty of Berlin, 1878. By RICHARD LODGE, M.A., Fellow and Tutor of Brasenose College, Oxford. Fourth Edition, Thoroughly Revised. Crown 8vo, 7s. 6d.

**STUDENT'S HISTORY OF EUROPE DURING THE MIDDLE AGES.** By HENRY HALLAM, LL.D. Crown 8vo, 7s. 6d.

**SMALLER HISTORY OF ENGLAND.** From the Earliest Times to the Year 1887. Revised and Enlarged. By RICHARD LODGE, M.A. With Coloured Maps and 68 Woodcuts. Crown 8vo, 3s. 6d.

**THE STUDENTS HUME.** A History of England from the Earliest Times to the Revolution in 1688. By DAVID HUME. Incorporating the Researches of recent Historians. Revised, corrected, and continued to the Treaty of Berlin in 1878, by J. S. BREWER, M.A. With Notes, Illustrations, and 7 Coloured Maps and Woodcuts. Crown 8vo, 7s. 6d.

\* Also in Three Parts. 2s. 6d. each.

- I. From B.C. 55 to the Death of Richard III., A.D. 1485.
- II. Henry VII. to the Revolution, 1688.
- III. The Revolution to the Treaty of Berlin, 1878.

### SIR WILLIAM SMITH'S EDUCATIONAL SERIES.

#### LATIN COURSE.

**YOUNG BEGINNERS' LATIN COURSE.** 2s. each.

- I. First Latin Book. Grammar, Easy Questions, Exercises, and Vocabulary.
- II. Second Latin Book. An Easy Latin Reading Book, with Analysis of Sentences.
- III. Third Latin Book. Exercises on the Syntax, with Vocabulary.
- IV. Fourth Latin Book. A Latin Vocabulary for Beginners, arranged according to Subjects and Etymologies.

**PRINCIPIA LATINA.**

- PART I. Grammar, Delectus, Exercises, and Vocabulary. Thirty-eighth Edition. 3s. 6d.  
Appendix to Part I. Additional Exercises and Exam. Papers. 2s. 6d.
- PART II. A First Latin Reading Book. 3s. 6d.
- PART III. A First Latin Verse Book. 3s. 6d.
- PART IV. Latin Prose Composition. 3s. 6d.
- PART V. Short Tales and Anecdotes for Translation into Prose. 3s. 6d.

#### GREEK COURSE.

**INITIA GRÆCA.**

- PART I. A First Greek Course, containing Accidence, Rules of Syntax, Exercises, and Vocabulary. Edited and carefully Revised throughout by FRANCIS BROOKS, M.A., Lecturer in Classics at University College, Bristol, and formerly Classical Scholar of Balliol College, Oxford. 3s. 6d.  
Appendix to Part I. Additional Exercises and Exam. Papers. 2s. 6d.
- PART II. A Greek Reading Book. 3s. 6d.
- PART III. Prose Composition. 3s. 6d.

#### GERMAN COURSE.

**GERMAN PRINCIPIA.**

- PART I. Grammar, Exercises, Vocabulary, and Materials for Conversation. 3s. 6d.
- PART II. Reading Book, with Dictionary. 3s. 6d.
- PRACTICAL GERMAN GRAMMAR.** For Advanced Students. 3s. 6d.

#### ITALIAN COURSE.

**ITALIAN PRINCIPIA.**

- PART I. Grammar, Delectus, Exercises, Vocabulary. A New Edition, thoroughly Revised and in part Rewritten. By C. F. COSCIA, Professor of Italian in the University of Oxford. 3s. 6d.
- PART II. A Reading Book. 3s. 6d.

A Complete Illustrated Catalogue of Standard Educational Works published by Mr. Murray may be had, post free, on application. This Catalogue includes Sir William Smith's Famous Series of Students' Manuals, Smaller Manuals, Dictionaries, Principia, &c.

## The Educational Times.

### The Education Bill in Committee.

As we anticipated, the closure has already been invoked to drive the Education Bill through Committee. In spite of glaring breaches of the principle of a single Authority—a principle, however, that need not be made a fetish—the first clause was carried as it stood, not without angry manifestations of dissent. Mr. Balfour contented himself with pleading that the Authorities set up by the Bill would, at all events, be an improvement upon the existing system. We trust the modest expectation will be realized. Very much will depend on the spirit that guides their action. Our hopes would have been higher if their responsibility had been less vicarious, though it is something to have obtained a clear declaration that the ultimate control shall lie with the Council, and not with the Committee of the Council.

Before entering upon Clause 2, Mr. Balfour found it necessary to make an explicit statement on the financial part of the Bill. The result is that the Government propose to insert in Part III., after Clause 10, a new clause, providing that—

in lieu of the grants under the Voluntary Schools Act of 1897, and under Section 97 of the Elementary Education Act of 1870, as amended, there shall be annually paid to every Local Education Authority out of moneys provided by Parliament (a) a sum equal to 4s. per scholar, and (b) an additional sum of 1d. per scholar for every 2d. by which the product of 1d. rate falls short of 10s. per scholar, but the total amount payable to any Local Education Authority on account of all Parliamentary grants, including the grant under this section, shall not in any year exceed three-fourths of the total expenditure of the Authority under Part III. of this Act, and the amount payable under this section to the Local Education Authority shall, where necessary, be reduced accordingly. For the purposes of this section the number of scholars shall be taken as the number of scholars in average attendance as certified by the Board of Education in public elementary schools.

This means that the grant to voluntary schools, which was £640,000 last year, and the grant to necessitous School Boards, which was £220,000, are to be discontinued, and that to this £860,000 is to be added from the Exchequer a fresh sum of over £900,000, making a total of £1,760,000, or more than double the grants given since 1896. Instead of making an equal distribution of about 7s. 6d. per scholar, the all-round grant is fixed at 4s. a head, the balance being destined to relieve such districts as are unable otherwise to sustain the burden thrown upon them by the

elementary system. But in no case will the Exchequer grants exceed three-fourths of the total expenditure on this branch. The proportionment of the grant in aid to the financial inability of a district is no new principle, and in many places its operation will be beneficent. But the proposal generally is a complex affair. It gives a sharper edge to the question of the educational relations of local areas and the Government, especially on the keenly disputed point of control. It is conditioned by no requirement of an equivalent contribution from the rates. It ought to improve education. One can only hope that measures will be taken to ensure such improvement. This large grant, be it noted, is confined to elementary education.

Naturally on Clause 2 the first amendment sought to render the provision of secondary education compulsory—to replace "may" by "shall." While many Local Authorities will need no urging to do their duty in this most important matter, it cannot be ignored that there are many districts, mostly country areas, where the conception and appreciation of secondary education are extremely rudimentary, and where the desire for it is kept in severe restraint by a vigorous dislike of rates. It would be an amiable rather than a practical idea to hope more from leading the Authorities in such districts than from driving them; and some of them have already had healthy experience of pressure from the Board of Education. Mr. Balfour eventually offered a compromise, so that the clause should read: "the Local Authority shall consider the needs and take such steps, after consultation with the Education Department, as may seem desirable to aid the supply of education other than elementary." The compromise was accepted, and it will probably suffice in practice. The Education Department is not likely either to let backward districts go to sleep or to overdrive them.

But what is this education "other than elementary"? One does not quite understand why there should be so much reluctance to express its contents in positive form. We will fill the gap with Mr. A. J. Mundella's analysis:

The education described as "other than elementary" which will be brought under the new Authority falls under two distinct classes. The first class comprises the education, primary and secondary, of the "middle classes," by means of schools and colleges of various sorts, private and public, which have not hitherto been under a public Authority. The second class comprises the higher or continued education of scholars in public elementary schools, for which the means hitherto adopted have been evening schools and classes, higher-grade schools, science and art

classes, municipal technical schools, pupil-teacher centres, and training colleges for teachers.

There is no great mystery about the matter, but, in view of the stringent limitation of the sphere of elementary education, it is well to have definite conceptions. It is Clause 2 that must make provision for all these varied branches of the important department of secondary education, and it cannot define too clearly the intentions of the Legislature. After much debate, Mr. Balfour agreed to another compromise, extending his previous concession in these terms: education other than elementary, "including the training of teachers and the general co-ordination of all forms of education." An ardent educational spirit might have prompted a more liberal and explicit phraseology on a matter that goes to the very roots of national prosperity and advancement.

Of the financial amendments, we may notice particularly the one that aimed at making it compulsory, instead of optional, on the part of a Local Education Authority to apply the whole of the residue under the Local Taxation Act—the whisky money—for the purposes of secondary education. Here again the rates came into competition, and the voice of the agricultural member waxed loud and insistent, but it was significant that Sir William Hart Dyke most heartily supported the amendment, especially in the interests of technical education. Happily the House took the same view, and the amendment was carried by 251 against 151—a majority of 100. No doubt, as Mr. Mundella points out, "the new Authority ought to be armed with (1) the power and (2) the obligation to (3) provide schools which shall be (4) sufficient in number, (5) suitable in curriculum, (6) adequate in staff, (7) equipment, and (8) maintenance, (9) efficient in results, (10) moderate in fees, (11) representative in management, and (12) available for all who desire to attend." That is the counsel of perfection. But, in all the circumstances, there seems to be good reason to be thankful for the measure of improvement that has so far been attained.

*King's College,  
London.*

THE following resolution was passed at a meeting of the Council of King's College, London, on June 13, by a majority of 22

votes against 2:—

That, in view of the situation created by the University of London Act, 1898, the Council, while determining to maintain the connexion of the College with the Church of England as set forth in Section 5 of King's College, London, Act, 1882, resolves that, so soon as may be, every religious test as a qualification for office, position, or membership, in or under the Council or College, other than professorships or lectureships in the Faculty of Theology, shall cease to exist; and, further, that all necessary and proper steps be taken to give effect to this resolution.

Section 5 of the Act of 1882 lays it down that the purpose of the College is "to give instruction in the various branches of literature and science and the doctrines and duties of Christianity as the same are inculcated by the Church of England." It is needless to anticipate the "necessary and proper steps" for giving effect to the resolution; but, presumably, such a change of interpretation of the section will require statutory readjustment of the terms. There arises also the question whether the present professors within the scope of the resolution will be released from their obligations under the religious test administered to them on acceptance

of office. One would anticipate that they will be declared free. The College is to be heartily congratulated.

The result being satisfactory, we do not care to consider the official explanations too curiously. If the Council refused to surrender to the late Liberal Government, this, we are assured, was because of the provocative manner of Sir William Harcourt's delivery of a summary and peremptory demand. The present decision, on the other hand, has been reached on a calm and dispassionate consideration of the merits of the case, which led to the view that it was not merely the wisest, but "the only, step to be taken to carry out the designs of King's College." The plain and simple fact is that the step was inevitable, unless the College was prepared to stand out of the London University movement and to maintain an independent position, without share in the Parliamentary grant. One cannot but recall the fact that University College has been working for some three-quarters of a century without ever having a shred of religious tests, and that King's was founded expressly to counterbalance the non-ecclesiastical institution in Gower Street by instruction under Church oversight and influence. The historical development has its lessons, though it would be ungenerous to press them just now.

Another point, which we should not have sought, but which we may not avoid, is forced upon us by the manner in which the Bishop of London and Principal Robertson have dealt with the new situation in public utterances. The Principal is reported to have said that he regards the new step as a proclamation that the Church of England, in accordance with her best and noblest traditions, positively welcomes as her ally the very best work that can be done in the name of science and literature—that she welcomes the disinterested pursuit of truth in every form as an ally of religion and piety. Here is a true note. If it were otherwise, indeed, the Church would be maintaining two contradictory positions and placing herself in an attitude not a little trying to thoughtful and sincere minds. We believe the Principal is entirely right, and we rejoice with him that, on the present occasion, the Church has recognized her best and noblest traditions. But a difficulty remains: the high principle is limited. The theological staff, who might be expected to be the most disinterested of all searchers after truth, are still to remain in bonds while the others go free.

The Bishop, too—if he has been correctly reported—has left room for further explanation. He assured the friends of the College that no one need fear that it will drift away from the Church of England. There is no very apparent reason, indeed, why there should be any such fear. But the Bishop is reported to have said this:—

It is not very likely, while a Keble man is Chairman and another Keble man is on the Council, that we for a moment would give our consent to it. What we feel is that the real security of King's College should be a living security. Keble has no sort of test of this kind.

But are two members of Council—even two Keble men—a sure guarantee for the permanence of the connexion? No doubt the only real security is a living security; but what is a living security? Can it be other than proved devotion to truth? A religious test does not exclude mental reservations. And again, if Keble, the great exemplar, "has no sort of test of this kind," what is the obvious inference? But the ob-

scurity we find in the Bishop's utterance may be due to some misapprehension.

What we are concerned with is not the propriety or the impropriety of tests in the theological department, but simply the logic applied to the change. Still the trend of opinion demands attention. Vagaries of investigation in all departments, whether under or not under tests, are well known, but probably they are the natural outcome of human endowment and circumstance, and not (or very rarely) of mere perversity or dishonesty. In any case, new and strange opinions can be effectively met by argument alone, and not by the expulsion of a Maurice, or even by the burning of a Bruno. A test slackly enforced is both useless and of bad example; a test firmly enforced checks or restricts the pursuit of truth. The middle position seems of little moment either way. The experience of President Gilman, for twenty-five years the distinguished head of Johns Hopkins, and now President of the Carnegie Institution at Washington, is well worth noting. "In the conduct of a University," says Dr. Gilman, "secure the ablest men as professors regardless of other qualifications, excepting those of personal merit and adaptation to the chairs that are to be filled. Give them freedom, give them auxiliaries, give them liberal support." But the first of these things is freedom. It is significant, too, that the Rev. Dr. MacKenna, presiding at the annual meeting of Mansfield College a fortnight ago, remarked, in calling upon Dr. Edward Moore, Professor-elect of Harvard University, to address the assembly,

that Harvard had showed them an example which he hoped would be followed in this country soon and widely—that of establishing or putting its theological school, its Divinity Faculty, upon an absolutely free and broad basis, especially in freedom from that most sad bondage, an expectation that the professor should in deference to differences of opinion keep back any of his own deepest convictions. They were perfectly aware in England a very great start had been made in the direction of catholicity by the recognition of the fact that it was not liberty to hold one's tongue when one differed, but liberty to speak with the certainty that what was said would be received in a generous and thoughtful manner.

There lies the essential point: "in a generous and thoughtful manner." At the same time it is to be acknowledged that, under existing conditions, King's College could not have reasonably been expected to take a longer step towards absolute freedom of research and teaching. Minds differ strenuously and honestly, and impatience is unwise.

### NOTES.

We are glad to see that the activity of the Childhood Society is finding a permanent record. The first volume of the "Transactions" is slim, but its successors will, no doubt, grow with increase of years. The objects of the Society deserve to be made widely known. They are stated to be:

To promote the study of educational methods and of the environment of children during school life best suited to ensure the mental and physical development of normal children, as well as of those whose conditions are abnormal or who are feebly gifted mentally.

To supply information and diffuse knowledge on points connected with the mental and physical status of children, by means of publications, lectures, &c.

To promote the training of teachers specially qualified to deal with such children; and assist by legislation, philanthropic efforts, or otherwise, the provision necessary for them.

Besides the outline of the Society's proceedings, the volume gives the substance of a number of lectures on per-

tinient subjects, as well as the (first prize) essay on "Suggestions (from a teacher's point of view) for the best Methods of giving effect to the Code for Day Schools, having regard to the various conditions of age, social influences, and future means of livelihood," by Mr. Mark Hughes, B.A., A.C.P. The whole collection will be found to be most instructive; and it ought to attract favourable attention to the work of the Society.

It is much to be regretted that Miss Honnor Morten has resigned her seat at the London School Board. Her single-handed contest against corporal punishment in the schools has been most creditable to her sensibility and humanity; but her resignation is not likely to soften the hearts—or, rather, the heads—of the remaining members on the subject; while it deprives them of the direct benefit of her large experience in other matters of educational importance. No sensible teacher would apply physical force as a remedy save in the very last resort; and, if the teachers in the rougher districts insist that such force is absolutely necessary, on occasion, for the maintenance of order, one may be tolerably satisfied that there is very substantial ground for their opinion. The true remedy must be sought at an earlier stage—in the home conditions of the children. No one can doubt for a moment that both teachers and School Board members would alike be gratified if corporal punishment could be diminished and abolished. The facts of social life must, however, be faced in practical ways.

THERE will be little surprise at the scathing condemnation recorded in the Report of the Committee on Military Education and Training. Scarcely one of the seventy-three witnesses examined but expressed dissatisfaction with the existing state of education, both professional and general, among military officers as a class; not a few of them going so far as to affirm that it is no uncommon thing to find officers unable to write a good letter or to draw up an intelligible report—not only officers that have passed in by the back gate of the Militia, but also officers that have entered by the front door of Woolwich and Sandhurst. The Committee's recommendations aim at a thorough grounding in a limited number of subjects, and the elimination of "cram." They would substitute one general examination for the separate examinations of entrants; and this general examination would embrace (1) English; (2) mathematics; (3) either French or German; (4) either Latin or experimental science; and (5) a voluntary subject—Greek, higher mathematics, or one of the alternative subjects under (3) or (4) not taken as a compulsory subject. The Committee wish to encourage University candidates, and even suggest that schools of military instruction should be organized at the Universities. When all is said and done, the efficiency of the initial check depends on competent examiners with a free hand. Sandhurst is respited, with a significant hint about "lack of supervision," if not even "positive neglect." The most hopeful point of all would be the free career to brains, unchecked by intolerable and ridiculous expenses, or by social preferences of the less fit, or by the preposterous operation of the principle of seniority.

LEAGUES are many, but the Victoria League is the first, so far as we have observed, to take up the question of specific "Imperial education." As Mr. Wyndham said at the first annual meeting of the League (June 18), the danger of mere mechanical expansion in the political world may be met by extended knowledge in every part of the Empire as to the conditions of the rest. Not only may, but must. Mr. Asquith referred to the painful experiences of the South African War. He said:

It was one of the illustrations of the enormous ignorance that prevailed in the mother country as regarded the outlying parts of the Empire, and in the outlying parts of the Empire as regarded the mother country. Imperial sentiment was an excellent thing, but it was not enough—we must have knowledge of local conditions, requirements, and possibilities before we could bring to fruitful exercise what was more necessary, namely, that power of exchanging imaginations with one another which was essential if our unity was to be something more than a phrase.

True; but what seems most urgently needed is that the politicians—or, say, statesmen—and the directors of the Press should either go to school or be required somehow to keep up an elementary knowledge of the facts, and, moreover, to guide their action upon such knowledge. After all, it may be a question whether much knowledge may not be overpowered by very small considerations of individual interest. The moral teacher is, therefore, needed. The continuous and scandalous neglect of India is a far more powerful argument than the South African War, though that ought to be sufficiently impressive. By all means let "Imperial education" expand and flourish—especially on the moral side.

"THE relations of a college to its undergraduate members are in the nature of a contract terminable at pleasure on either side." Such is reported to have been a *dictum* of one of the members of an Oxford college tribunal that recently expelled five undergraduates. We do not profess to decide whether this statement is legally sound or whether any legal process is available on behalf of the unfortunate undergraduates. But we have no doubt at all that, if such be the law, a legal remedy has not been provided because the legislature and society have assumed rational and fairly equitable conduct on the part of college and University authorities. If we lived by strict rules of law, the law would be very different from what it is. From all that can be learned of the proceedings, there appears to be the gravest reason to fear that these undergraduates, whatever their offence, were tried and condemned in defiance of elementary rules of judicial procedure. The appeal to the Visitor, unhappily, is an empty formality. We suspect the case is not likely to encourage parents to rush into contracts of the sort. If a mandamus will not go—and we are loth to believe that it will not—the powers of Parliament ought to be invoked to provide the means of incontestable justice.

In another column we publish a spirited appeal by Mr. Somerset Bateman for "one great union of teachers." We should be reluctant, indeed, to adopt his assertion that "each class of teachers seems to be setting up its own sectarian assembly and grinding its own axe." Rather we should regard it as hopeful that teachers should associate in groups to give expression to their ideas from their own

points of view, which may be self-regarding without being selfish, and, far from precluding, may actually be preparing the way for, co-operation, or even union, with the rest. A forcible expression, however, is sometimes useful, and very likely Mr. Bateman intends no more than what we have just said. Undoubtedly, in the profession of teaching, as elsewhere, it remains true that

All your strength is in your union,  
All your danger is in discord;

and the differences among teachers, regarded in anything like true perspective, are quite insignificant in comparison with the elements of common interest. Mr. Bateman specifies some advantages that would naturally attend "one great union" of teachers. The question is a large one, and not free from complications; but we confidently anticipate that it will receive due consideration in influential quarters.

THE Exhibition and Conference on Science Teaching and Nature Study at Hartley College, Southampton, proved a gratifying success, much to the credit of the local Teachers' Guild and of those in immediate charge of the arrangements. Examples of appliances used in science teaching and in Nature study and of the work of students in those departments were liberally contributed not only by individual teachers and others interested, but also by schools all over the South of England and the Isle of Wight. The Conference also indicated vividly how strong a hold the idea of Nature study has taken in these parts. The spirit of Gilbert White, as somebody said, still lives in Hampshire. We are glad to learn that a full account of the proceedings will be published. The meeting was a pleasant foretaste of the great gathering to be held in London during the current month.

WE regret to have overstrained the mathematical faculties of our genial contemporary, *Secondary Education*. In our article on "Slipshod English" last month (not "in the May number") we said that "an avenue of trees on each side of the drive" "implies at least six rows of trees." How that can be our friend professes himself "quite unable to see." But he admits that our mathematical problems have often seemed incapable of solution "until the following month demonstrated the fact that the supposed impossibility was merely due to a defect in the reasoning faculties of a puzzled student." It is only in the mathematical department, however, that we acknowledge the need of formal solutions of our problems; but we do not doubt that further study will eventually enable our acute contemporary not only to distinguish May from June, but even to count six.

### SUMMARY OF THE MONTH.

THE general discussion of the Education Bill has proceeded with vigour throughout the country. The House of Commons, after preliminaries, at length went into Committee on the Bill (June 2). A number of motions of instruction to the Committee were ruled out by the Speaker, notably three having for their object the division of the Bill into two separate Bills, for secondary and for elementary education. On Clause 1, three motions of amendment were successively defeated: for the postponement of the clause; for limiting the Bill to secondary education; and for

the retention of the School Boards in boroughs. Next day (June 3) Mr. Balfour made it clear that the ultimate control is intended to lie with the Council, and not with the Committee of the Council; if Clause 12 did not carry out that object, let it be modified so as to do so. A motion against autonomy in elementary education for the smaller boroughs was defeated after long discussion. On June 4 the powers to be given in elementary education to municipal boroughs over ten thousand, and to urban districts over twenty thousand, occupied the whole sitting. The Government held its ground all along the line. It was not till June 17 that the Bill was taken up again, when the closure was applied (for the second time during Committee), and Clause 1 was carried. The fortunes of Clause 2 are narrated in our first leading article.

A MEETING to protest against the Education Bill was held at Queen's Hall, Langham Place, London, under the auspices of the London Progressive Education Council (June 10), Lord Rosebery in the chair. Sir Henry Campbell-Bannerman wrote:

It is time that the Liberals of London rose in denunciation of a Bill whose main principles will be applied to them in a future Session, if the Government have their way. It is quite enough to say that the Bill seeks to crush the healthy and democratic School Board, and fosters the inefficient but privileged Committee; that it favours sectarian schools under clerical control, and levies rates while ignoring the rights of the ratepayers; that it does nothing to maintain or extend higher education; that it fails to provide for the training of teachers, and leaves that great profession mainly closed against any but one sect; that it, in fact, hinders the establishment of a really national system. If the people of London do not desire to be sucked into this whirlpool of evil, they should speak out now, while we in Parliament are seeking to amend the Bill, if we cannot end it.

LORD ROSEBERY said London knows that, if the Government policy is successful, "it is only being kept as a *bonne bouche* for the last." The aspect of the Bill that seemed to him "the gravest of all" was this:

You are now going for the first time since the abolition of Church rates to hand over the rates of the country—the educational rates of the country—to a body which will be practically a close corporation, and on which the minority which is to represent the public is to be reduced to the proportion of one-third. . . . Financially it is not a very small matter. . . . If we are to maintain the School Board standard all through England, in the county areas the additional burden on the rates will be £1,661,385; in the county boroughs, exclusive of London, it will be £722,871; making a total new burden on the rates of this Government Bill of no less a sum than £2,384,256. . . . Under this Bill this enormous burden will be handed over in the main, if not altogether, to be spent or to be directed by a governing body in which, as I say, the proportion of popular representation will be insignificant. This is a new and a dangerous proposition. It strikes deep down at the very foundations of our constitutional structure in this country. I do not believe that through an English House of Commons—a British House of Commons—unless the Commons of England have derogated immeasurably from the traditions of their forefathers, it is possible that any such proposition can pass.

On the point of efficiency, Lord Rosebery said: "In this great conjuncture, in this moment of the world when the nations are all striving—we are all striving against each other—for commercial and popular existence, the Government presents us with this Bill—a Bill which, as I venture to say, without rhetorical expression, will do more to stunt the educational development of the country at a moment when it requires inspiration and development than almost any measure that I can conceive possible."

MR. ASQUITH said they regarded the Bill as "the deliberate throwing away of a priceless opportunity which may not recur for years, even for generations, of building up, upon the lines and in the spirit which the conditions of our time and country require, the great and really national system of education." He remarked:

When the Archbishop was a great educational authority and reformer, speaking as a member of a Royal Commission, he said: "The important thing, if you want to make education efficient in a country like England, is to associate with the management and control local interest and local sentiment." What ought to have been done in those rural districts? In the first place, you should have enlarged the area with which you have got to deal. You will never have efficient schools so long as each parish has its own. What you want is to group your parishes in a not too large, but in a fair-sized and properly manageable, administrative area, because, if you do so, you will have a larger reservoir of rating to draw upon; you will have a larger number of capable

people interesting themselves in education and able to give their time and energy to management; you will be able to have bigger schools, pay higher salaries to your teachers, and in every way to improve your educational appliances. That is the first thing that ought to be done, and then, inasmuch as it will be absolutely necessary, if that is to be done, either out of the Exchequer or out of the local rate to provide additional funds, the case has become absolutely irresistible for predominant popular management. There is no case in this country of a rate raised locally for any local service in which the expenditure of the rate is not controlled by local representative management. Then again, when you had got your new area, your improved authority, and your additional local powers, it would have been perfectly possible to arrive at an arrangement by which the County Council should act as the Secondary Authority and should exercise a co-ordinate influence and power as among the different local areas with which it is concerned. That, I believe, would be a statesmanlike and perfectly practical solution of the whole matter.

MR. JOHN MORLEY, speaking at Edinburgh (June 7), declared himself perfectly willing—"nay anxious"—"to look at any Bill which would unite in England all the forces, whether religious forces, educational forces, or the patriotic forces, of all who wish well to and love their country."

But this Bill can only intensify sectarian divisions. It disperses and subdivides educational effort. It hands over yearly large endowments out of the rates to schools which are in effect under private and sectarian management. It injures the truly national schools, while it encourages the multiplication of schools in which the education will encourage that spirit of social division which I do not think you know in Scotland, but which in England, at least, is one of the consequences of the relation, which I for my part detest in all countries—the relation of the establishment of a Church by a State. And, finally, this Bill is no settlement like the settlement of 1870. It will give a new force, it will give a new leverage, to the denominational system.

THE ARCHBISHOP OF CANTERBURY, speaking at the annual meeting of the Church Defence and Church Instruction Committee, said the Education Bill was drawn up evidently with a desire to do justice to the Church.

They looked upon the Bill with a very strong hope that it would be really serviceable in the discharge of the duties which certainly were incumbent upon the Church—namely, to give effective and real religious instruction to all her own children. It had been represented that the Church desired to proselytize. The Church never had any such purpose in view. It was quite true that the Church did wish every inhabitant of these islands to be a Churchman, but they did not wish that in the sense that they desired to use any secret or hidden methods to bring that about. They did not wish to go behind the backs of the parents of the children, and to teach what the parents disapproved of. In the heat of controversy, Churchmen had said things which were not wise, and had expressed themselves in a tone of hostility to Nonconformists, which had done incalculable mischief. It was certainly not in the mind of the Church as a body to say such things, and still less was it in their minds to act in such a manner. They desired to be just all round. If they could conciliate the Nonconformists, and get them to approach the Church more nearly than they did, he believed they would be able to satisfy all they wished.

THE BISHOP OF HEREFORD, one of the most liberal-minded occupants of the Episcopal bench, writes to a correspondent:

I should be strongly opposed to a system of secular elementary schools, believing that, if no religious instruction were given in the day schools, many children would never receive any religious instruction at all, and also that such a system would react unfavourably on the teachers. Moreover, even if it were possible to give religious instruction to all children in Sunday schools, this instruction alone, given only once a week, would not be nearly so influential on life and character as instruction given day by day and every day. While holding this view, I set great value on the Sunday school, and I feel that we ought to do much more than is generally done in the way of good and interesting Sunday instruction for both children and adults. My point is that it would be a great loss if our children were not instructed in the Bible, especially the Gospel narrative, day by day; and it should be borne in mind that, as a rule, all Englishmen, whether Churchmen or Nonconformists, desire that the children in all our elementary schools should have the benefit of good Biblical teaching as part of their daily education.

SIR RICHARD JEBB, speaking at a meeting of the Central Council of Diocesan Conferences, held in the Jerusalem Chamber, Westminster, said:

The optional clause should be dropped and the action of the Bill made compulsory. Elementary education was inseparable from secondary education. There was no doubt that denominational schools

were demanded by the people. There were now fourteen thousand schools of the voluntary character, where three million children were being educated, and what was desired was to bring up elementary education to a proper standard, and maintain that standard at a proper level. The buildings which would be erected under the new propositions or be handed over represented the capital value of not less than £26,000,000, which was a worthy contribution towards the cost of education. The Local Authority would direct what changes should take place in the time-table, subject to the approval of the Board of Education. The educational interests of the ratepayers were amply guarded by the decisions of the managers being subject to the approval of the Local Authority and the power given them to veto the appointment of a teacher on the ground of educational deficiency. The appointment of one-third of the managing body by the Local Authority amply covered the rights which they should possess. There would be under the Bill no more privately managed schools; in every school the element of publicity and criticism would be preserved by the managers chosen by the Local Authority. As to the financial question, there was a general feeling that a share should come out of the Imperial Exchequer; and, as the child was educated for the Empire and not the locality, the demand was fair and reasonable. Under the Bill as proposed he considered that education would rest on a permanent basis adequate to the needs of the nation.

THE Incorporated Association of Assistant Masters in Secondary Schools "welcomes the Education Bill, because it proposes to constitute the County and County Borough Councils the paramount Local Education Authorities; because it will make the residue under the Local Taxation (Customs and Excise) Act, 1890, applicable to secondary as well as to technical education; and because it will compel the Local Authorities to include 'persons of experience in education' in their Education Committees." But it objects to the option clause (5), and wishes the limitation of 2d. in the pound (Clause 2) removed; desires, as in the case of Wales, a Treasury grant for higher education proportioned to the local rate, "inasmuch as higher education is a national service"; deprecates the possibility of separate committees for higher and elementary education without a provision for co-ordination; suggests that the teachers in the area registered under Column A and Column B respectively should be recognized as bodies to nominate [Clause 12 (2)] "persons of experience" in education; and holds that transfers under Clause 15 (a) should be subject to the approval of the Board of Education. In particular the Association desires to see Clauses 4 and 5 of the Bill of 1900 incorporated in Part II. (Higher Education) as follows:—

4.—(1) Every Local Education Authority shall make such reports and returns, and give such information to the Board of Education with respect to their proceedings under the Local Taxation (Customs and Excise) Act, 1890, and this Act, as that Board may require. (2) Every Local Education Authority shall, in the exercise of their powers of establishing and aiding schools under the said Acts, have regard to the existing supply of efficient schools, and to the existing application of money applicable to purposes of education.

5.—(1) If the governing body of any school feel aggrieved at the action of any Local Education Authority on the ground that it acts unequally or unfairly with respect to that school, or is otherwise prejudicial to the school, they may complain to the Board of Education, and that Board, after communicating with the Local Education Authority, shall determine the matter, and the Local Education Authority shall comply with any order made by the Board of Education for removing the ground of the complaint. (2) For the purposes of this section the expression "governing body" shall include any corporation, trustees, or other persons managing a school.

MESSEURS. F. C. BOTTRILL and E. J. Brentnall, Hon. Secretaries of the West Lambeth Teachers' Association, following up Mr. Yoxall's complaint in the House of Commons, draw attention to "a grave injustice dealt to many elementary teachers by the regulations governing the new Register of Teachers" (*Pall Mall Gazette*, June 19). After explaining the provisions, they write:

Thus, all teachers in elementary schools who possess a University degree or its equivalent, plus the Board of Education Certificate, are shut out from obtaining registration in Column B simply because they are teachers in elementary schools, though the qualifications for teaching are practically the same whether the child be in a public elementary or non-elementary school, and the work in the higher classes of an elementary school is of a more advanced character than in the preparatory classes of a secondary school. . . . Another injustice to the elementary teachers has been dealt in the representation on the Registration Council: . . . 5,000 secondary teachers have five representatives; 45,000 elementary teachers have one representative.

THE Trade Union Congress Parliamentary Committee, at an

Education Conference at Exeter Hall, unanimously passed the following resolution:—

That, as the Government Bill will destroy popularly constituted bodies of education, this Conference condemns in the strongest possible terms the Government policy on education; and, further, it is of opinion that the abolition of School Boards will have a most destructive effect on the education of the people and take away the advantages which the workers have in direct representation in the management of Board schools; and, therefore, calls upon the Government to withdraw the present Bill.

WHILE the Teachers' Guild give general approval to the Education Bill, members make the following suggestions:—(1) That the optional clauses be made compulsory; (2) that dismissals, as well as appointments, in primary schools be subject to veto; (3) that women should be put on Secondary Education Authorities; (4) that the disabilities of pupil-teachers in country districts be removed; and (5) that the Bill should provide definitely for an increase in the rate beyond 2d.

AT the annual meeting of the Association of School Boards of Scotland, in Glasgow, the following resolution was adopted:—

That it be remitted to the Executive to oppose the Government Education Bill, in so far as it conflicts with the declared policy of this Association, makes for the abolition of the School Board system, and interferes with the right of the people to control expenditure under the rates.

MR. BARTLEY, in the House of Commons (June 2), asked the Vice-President of the Committee of Council whether secondary schools carried on for private profit were now eligible for public grants out of taxation as well as those secondary schools which were conducted so as to pay a substantial dividend on the capital employed. Sir John Gorst: They are not eligible for public grants. Mr. Bartley asked on what authority financial grants were made by the Board of Education towards the education of pupils in secondary schools whose pupils were financially able to pay, and did pay, substantial fees for their education. Sir John Gorst: The sums granted by Parliament are administered by the Board of Education in accordance with regulations annually laid before Parliament. Such grants are made to schools which, from their character and financial position, are eligible to receive aid from public funds, and not to individual scholars.

THE Head Master of the Princess's Road Board School, Moss-side, Manchester, having forwarded to Sir Francis Knollys a letter inquiring if His Majesty's desire for an extension of the summer holidays of school children in commemoration of the Coronation could be officially announced in some form, received the following answer:—

In reply to your letter, I beg to say I have written, by the King's commands, to the head masters of thirty-four public schools in England, Scotland, and Wales, expressing the hope that they might feel themselves at liberty to grant an extra week's holiday in celebration of the Coronation. It is, I fear, impossible to address personally the head master of every school throughout the kingdom on the same subject, but it would afford gratification to His Majesty to know that all the schools had obtained an extension of their summer holiday.

THE Government has decided that a reduction of attendances up to the limit of one week should be allowed in schools in England and Scotland in view of His Majesty's wish that the scholars should have a week's holiday during the Coronation.

THE Senior Wrangler of the year, Mr. Ebenezer Cunningham, Scholar of St. John's, reflects honour on Dame Owen's School, Islington, and a share of it may also be claimed by the Canal Road Board School (Hoxton) and the Crouch End Board School—that is, in so far as any school can make a Senior Wrangler. There are not a few cases in the list where distinctions may similarly be traced back to elementary schools. They emphasize the essential importance of the ladder.

The only lady Wrangler is Miss A. E. Bennett, of Girton, who is equal to No. 13. She does honour to the North London Collegiate School, and testifies to the utility of a Clothworker's Exhibition.

The ladies have also done well in the other Triposes. Miss Welsh gains a Class I. in Part I. of the Classical Tripos; and three ladies take the highest places with eight men in Part II. In Modern and Mediaeval Languages, Moral Sciences, and History the ladies are still more triumphant.

A considerable sprinkling of the "sports" appear to have been studious. The Senior Wrangler is a good oarsman; and well

known athletic names appear frequently in good positions in the lists of Classics and History.

THE disruption of Victoria University continues to be a burning question throughout the North, though some of the foremost local journals even are "becoming somewhat weary" of the discussion. The Liverpool Royal Institution has petitioned in favour of a Liverpool charter. The Yorkshire College, backed by the Lords Lieutenant, the County Councils, and the Technical Instruction Committees of all the Ridings, is determined to oppose disruption in every legitimate way possible, and, if unsuccessful, to assert its right to be "residuary legatee" of Victoria. Both Owens and Victoria University have decided to petition for an independent University in Manchester; and Convocation in Victoria University has just (June 23) decided, by 137 votes against 87 (calling for a local inquiry first), in favour of such application.

THE University of Wales has decided to fix the registry of the Court at Cardiff. The Corporation of Cardiff has obtained Parliamentary powers to make a free gift of a site for the offices, and also to contribute £6,000. It has also just made a free gift of five acres in Cathays Park to the University College for buildings.

THE University of Wales (Graduates) Bill has passed the House of Commons. The object is to put Welsh graduates on the same footing as graduates of Oxford, Cambridge, London, and Victoria in certain respects, by removal of anomalies in the conditions of entrance into the legal profession. For instance, a Welsh graduate has had to be articulated to a solicitor for five years, whereas a graduate of one of the other Universities has only to serve for three years.

PRINCIPAL LODGE writes to the *Times* (June 10) to call attention to the two chief methods for the encouragement of University education, "which so far have been regarded with favour." He says:

One mode is the scholarship method—viz., to pay the expenses of students, and so enable large numbers to attend existing places of instruction, at the same time expressing a pious hope that such places, though possessing attractive features, may in some respects reform and develop new and improved departments—an operation which, if undertaken, clearly entails on those places an era of beggary, and the necessity of laying their case before persons able to help. The other mode is the equipment method—viz., the provision of the best possible educational appliances and the highest grade of University professor, and then leaving it to individuals, or to the public bodies of districts, or of other countries, to arrange a method by which their students shall go and reap the benefit of the instruction so provided. For science, splendidly fitted laboratories, as in Germany; for history and literature, lectures of the highest class, as in Paris. These attract suitable students from all parts of the world automatically; any question of how they can live and pay the fees, if any, being a matter for private arrangement at home—not for committees at University centres. It would be, perhaps, as easy, and it would certainly seem more natural, for the colonies to subscribe each to send its own scholars to a splendid educational home centre, if such existed in this country, as it is for them subsequently to send donations to improve the appliances for teaching at inadequately equipped places to which their youth may already have been gratuitously sent. If, however, the other method has anywhere been adopted, then it would seem appropriate that a contribution towards equipment should accompany any influx of students to the mother country, whether that influx occurs under the scheme of the 1851 Exhibition Commissioners or under some other auspices.

## UNIVERSITIES.

(From our Correspondents.)

WE are at the moment of writing in the middle of Oxford. "Commem." festivities, the first "Commem." for three years. It seemed probable that the Coronation would cut things somewhat short, but a way out of the difficulty was found by commencing rather sooner, Hertford opening the entertainments with a ball on the Friday night (instead of Monday), while Magdalen transferred their usual concert from the Wednesday to the preceding Saturday, and did not suffer perceptibly from the competition of Mr. Ben Greet's pastoral play at Worcester.

On Monday there was quite a plethora of balls, the chief being the very elaborate entertainment by Magdalen in a special marquee in St. Swithin's quad, and that of the Bullingdon Club in the Town Hall. Oriel also competed, and, on its usual more modest and perhaps as effective scale, Wadham. Indeed, we do not hold very much with these twenty-five shillings a ticket extravagant festivals.

On Tuesday we had the Eucania. The list of recipients of honorary degrees was not very inspiring, and we hear the Council had several disappointments in their attempt to secure a representative selection. Among those that accepted, Japan was doubly represented by the Japanese Minister and Count Matsukata; the numerous American visitors gave a special welcome to Mr. Choate, while Lord Cromer may be taken to represent our "forward" Colonial policy. The new D.C.L.'s, as usual, attended the Masonic *fête* which the Apollo University Lodge gave on the Tuesday afternoon after the Eucania. A new element of local colour was introduced into the meeting in the Sheldonian by the new D.Litt. and D.Sc. gowns.

Of recently announced scholarships and prizes it is remarkable that in the Hertford, of five names mentioned, four, including the winner, Mr. Burroughs, are Balliol men, the only other college with a representative being Queen's (Mr. Rolt). It is also noticeable that again, as in 1900, the examiners have refused to award the Lothian, from want of any essay of "sufficient merit": this is surely rather a serious reflection on our much-belauded History School. As we foretold in the last letter, the question of compulsory Greek is really to come before Congregation next term: the Hebdomadal Council have drawn up a series of resolutions. As this will result in the greatest contest since the Ladies' Degree question, it will be as well to give the resolutions in full.

1. That candidates shall not be required to offer both Greek and Latin in the examination in stated subjects in Responsions.
2. That all candidates shall be required to pass in two out of the four following languages:—Greek, Latin, French, and German; one of the two being either Greek or Latin.
3. That in Greek and Latin an option shall be allowed between presented books and unprepared translations.
4. That in French and German the examination shall be in unprepared translations and prose composition only.
5. That the Grammar paper shall be discontinued, but the papers on Greek prepared books shall contain grammar questions on the passages set.
6. That for those who offer Latin prose composition shall be retained.

It is beside the point at present to discuss the principles laid down in 2 to 6, for it has been decided that, if the first resolution be not carried, the others shall not be put.

Doubtless next term the pamphleteer will be in full evidence, and many pens are being trimmed for the fray. We fancy the contest will be a close and severe one, for the apostles of modern subjects, the men of science, and the utilitarians are a steadily growing force; nay, more, we fancy a good many tutors in Pass subjects are ready to escape from the task of trying to drive Plato's "Apology" and "Meno" and Aristotle's "Ethics" into unresponsive Pass-men. Yet those who are ready to sacrifice Greek because of the Pass-man or science student or Rhodes' scholar do not realize that the result will be the abolition of Greek, except for a few genuine scholars and, perhaps of necessity, for those who wish to read theology.

The masterly and lucid judgment given by Mr. Lyttelton in the question of the appeal of the University and the colleges against the new and much higher assessment which the City authorities desired to impose has put University officials and college bursars on very good terms with themselves, and the City fathers sat in undisguised dismay as the figures given by Mr. Lyttelton for the University Buildings, the Clarendon Press, and Magdalen and Keble Colleges were pronounced. Mr. Lyttelton based his judgment at 3 per cent. on "the substituted building" principle, dismissing the 5 per cent. assessment on the ground that the colleges were able to borrow money for the purpose of these buildings at the lower figure. The City has been allowed three weeks to consider whether it will appeal, and, for the sake of the ratepayers, we hope it will not. The whole question of the assessment was one, as Mr. Lyttelton said, *svi generis*; but the veriest outsider in these matters could see that the "fancy value" of £2,000 put on college chapels was absurd.

The new buildings of University are now well on the way to completion, and may be pronounced a satisfactory addition to the

High Street. Merton has now done away with another piece of old Oxford by the demolition of some of the old houses which faced the New Schools' quadrangle in King Street. In their place, we are told, houses are to be erected for married Fellows.

The University eleven surprised both itself and its critics (who are numerous and outspoken) by following up its victory over the Irish gentlemen by an excellent victory over a somewhat weakened Surrey eleven. As Cambridge succeeded in London in doing the same, the University teams must be rather better than we imagined. On our side there is no one of the Paluoret or R. C. Foster stamp, and we do not think there is a bowler of the same class as Dowson or E. R. Wilson.

The Oxford competitors at Henley will be rather few and, apart from University, not very good. There will be an Oxford Leander eight, and a good deal of criticism has been caused by the non-inclusion of any Cambridge men. We believe that, as a matter of fact, some Cantabs were invited, but, owing to their college requiring their services, they were obliged to decline.

The announcement of peace was followed by a great want of it in Oxford on the Monday. Bonfires, both premeditated and extempore, flourished exceedingly. The Corn Market was full of rowdy undergraduates and a good many more rowdy who posed as undergraduates, and there was a certain amount of the "indiscriminate osculation"—to quote from one of the papers—which, we believe, was originated by Londoners on Mafeking night. The undergraduate, when let loose, is a peculiarly irresponsible person, and it is as well that he should learn that there are certain things which gentlemen don't do.

*A propos* of the Rhodes scholars and the possible complications which may arise, the *Oxford Magazine* has an amusing "diary," of which the following excerpts may amuse some (not too exacting) readers:—

April 1.—Just seen Rhodes' will. Free culture at Oxford! What Oxford? Idaho or Maryland? Must look up a map.

April 2.—Find there's an Oxford in England, too. Sorry. Should have preferred something more up to date. Wired Bursar for details.

April 3.—Rhodes says college authorities children. Have mailed them two dozen box-kites, four clockwork coyotes, and two casks molasses candy—preliminary commission for seeing business through.

April 23.—Long letter from Bursar. Haven't time to read it all. Speaks of "imbibing the spirit of the place." No doubt meant as caution. Very proper. Have mailed him my brother's temperance certificate; quite easy to alter initials. This will reassure Bursar.

April 25.—Another letter from Bursar. Likes "local colour" of my wires, and is sure I shall become one of Oxford's "polished gentlemen." Think he takes me for a coloured man.

April 26.—Brilliant idea! Send nigger in my name. Nigger will live cheap and remit balance.

April 27.—Got good-sized local coloured nigger to go for 200 dols. a year. Am having him blackleaded for polish.

April 29.—Nigger taking capital polish. Am having Stars and Stripes enamelled on his chest for more "local colour."

April 30.—Great disappointment. Nigger struck for 250 dols. Have just had him lynched.

May 1.—Late nigger's father has offered to go for 180 dols. Will do, but does not take polish so well as his son.

ANOTHER May term gone, regretted by none. Cambridge. It is impossible to imagine anything more doleful than the appearance of Cambridge streets at a time which is usually associated with merrymaking and frivolity. Of course, a certain number of visitors came up for the races and the balls, but the summer frocks and picture hats were never in evidence; everything was dull as ditch-water, and no one was grieved when the long farce was over.

The declaration of peace led to a little demonstration. The undergraduates had apparently decided to do nothing, as there were too many concurrent claims on youthful energy. The local Bumbles, however, would not have it so; they proceeded to erect barricades across every street leading into the Market Place, and so gave the frolicsome undergraduate a direct invitation to light up the usual bonfire in the prohibited area. The barricades were quickly demolished, and proved useful for building a bonfire; some buildings being erected in the Market Place also provided assistance in the way of fuel, and a thoroughly enjoyable evening was spent by the majority of the men in residence and a large number of prominent townsmen who came out to see the fun. The police behaved excellently, as usual; the proctors were a trifle fussy, and actually caught two men (out of the two thousand)

who were stoking the fire, and sent them down. A novel feature of the proceedings was an imitation of De Wet's tactics in breaking the block-house lines: some enterprising spirits drove the cattle on Midsummer Common through Sidney Street to Petty Cury, and rushed the barricades under cover of their four-footed friends. Scattered cows were discovered the following morning in various parts of the neighbourhood.

The honorary degree day was a trifle more interesting than usual this year, and was graced by the presence of two Indian potentates, the Maharajahs of Gwalior and Kolhapur. Diamonds and pearls were much in evidence, and the ladies were delighted. Plain men like the Master of the Rolls, Sir Harry Johnston, of Uganda fame, Sir Albert Hime, Prime Minister of Natal, and Sir Joseph Ridgeway, Governor of Ceylon, hardly attracted the notice they deserved, especially as they appeared in mufti. Viscount Hayashi, the Japanese envoy, had a very flattering reception, but within the past twenty-five years nothing has equalled the scene when Lord Kitchener, fresh from his Soudan achievements, honoured the University by accepting a degree.

The May races were held in detestable weather, and a gloom was thrown over the scene by the sudden death of the Master of Trinity Hall after the second night's racing. "Ben" Latham, as he always has been to many generations of Hall men, was the last representative of a departed class, the college don to whom the interests of his college were the be-all and end-all of his existence. Many stories are told of him and his single-hearted zeal for the good of his "boys," as he used to call them. Once he is said to have remarked to an unsatisfactory member of his college: "You can't row, and you don't read, and you wear tight trousers; you ought to go to—" mentioning the name of a smaller college which carries on a plucky struggle against adversity. In conversation with a Master of a certain college which generously admits our Asiatic brethren to the advantages of academic life, he is reported to have asked: "What sort of an entry have you this year?" The answer was: "A very good one." "Any white men?" was the Master's naive inquiry. His successor is Mr. E. A. Beck, the Senior Tutor, whereat there is much rejoicing in undergraduate circles, as well as satisfaction throughout the University, and especially among old "Hall" men.

The great meat scandals are over, and the trial of the butcher and his men has resulted in an acquittal; whether the Caius undergraduates are thoroughly satisfied at the disclosures made in court is another matter.

There are people irreverent enough to believe that the late Cecil Rhodes was correct in his estimate of the financial abilities of college officials, but, great as is the mismanagement in college affairs, a still more grotesque spectacle is provided by those who manage University finance. A sound business man put in charge of the place for twelve months with dictatorial powers would cut down the expenses of education by one-third and of living by one-half.

Dr. Chase, the President of Queens', has been elected Vice-Chancellor for the ensuing year: he is an amiable and courteous person who will make no mistakes, and who will be a worthy figurehead to represent the University to the outside world.

The Master of Magdalene has, by the sudden death of his brother, succeeded to the Barony of Braybrooke and to the possession of the family seat at Audley End. It may not be generally known that the Mastership of Magdalene is in the gift of the owner for the time being of Audley End. It is hoped that the present Master will see his way to remaining in office, that his wise and courteous counsels may still be at the disposal of the University. It is refreshing in these degenerate days to have resident in Cambridge one, if only one, example of the courteous manners of a past generation.

The examinations are all over, and the lists published. Much heart-burning has arisen from the fact that the number of plucks in the first part of the General has reached the somewhat large figure of 44 per cent. Doubtless the examiners are right; but the writer of these notes is inclined to think that the abnormal number of failures is more likely to be due to a variation in the capacity of a small number of examiners than in the acquirements of a large number of candidates. The number of men classed in the Mathematical Tripos—seventy-two—is almost the smallest on record; Natural Science is rapidly becoming the popular avenue to an Honours degree, while Theology and Law also draw away a good many men from the older triposes.

Dr. Roberts, the Secretary of the Extension Syndicate, is resigning his office at the beginning of next term, and his successor is shortly to be appointed. Rumours are in circulation

that the Syndicate which is considering the proposed changes in the scheme of poll examinations is not a very harmonious body, and that decisions have been arrived at by very minute majorities. If this is so, the normal *non-placet* awaits the ultimate report.

The University Golf Club is laying out new links near Coton, about two miles from the town; and there is no doubt the club will take a new lease of life in consequence.

The proctors for next year are Mr. Hobson, of Christ's, and Mr. Comber, of Pembroke. The former has experience, and the new man is likely to prove a success.

### EUCLID AND GEOMETRY: PROPOSALS OF REFORM.

THE *Mathematical Gazette* for May devotes considerable space to the publication in full of the Report of the Mathematical Association's Committee on Geometry. This Report arouses a keen interest, for it gives, respecting the improved teaching of geometry, the views and suggestions of a large and important body of thinkers drawn for the most part from the teachers of mathematics in many of our principal colleges and schools. The moderate spirit of the proposed reform is clearly shown in Article 7, which disclaims any intention of promoting such changes as would render invalid Euclid's proof of any proposition. The more general suggestions are few, but very important.

In the first place, it is proposed to include in the recognized school curriculum an introductory course in geometry of an informal and experimental character, and to take proper account of it in the examination room. The course is intended to lead (1) to a more thorough grasp of geometrical truths when taught later in a formal manner, (2) to a proper appreciation of the necessity for accurate constructions, and (3) to skill in the use of instruments. The suggestion is likely to meet with universal approval. At the present time it is a well known fact that large numbers of examination candidates make no attempt to produce either in size or in shape the figure required by a geometrical question that involves even the simplest numerical data. Suppose, for example, the dimensions of some right-angled triangle given and the construction asked for, how many candidates reproduce *verbatim* I. 22, yet remain blissfully unconscious of the special type and magnitude of the triangle indicated!

A natural consequence of the proposal to establish such preliminary courses of instruction is the idea that the theorems and problems of geometry should be taught independently, and salutary stress is laid on the importance of deriving, as far as possible, each demonstration from first principles and of constantly emphasizing the connexion between associated theorems. In discussing the question of order in teaching, the Committee wisely advocates taking nearly the whole of Book III. before Book II. For the various detailed suggestions in connexion with the several books, those interested must necessarily be referred to the Report itself.

In forming conclusions upon the proposed modifications of each book of the "Elements," it is necessary to bear in mind, what is evident on the face of the Report, that the individual articles are the result of the most careful thought and are based on wide and prolonged experience. Generally, however, we anticipate that the propositions proposed as supplementary to those recognized by Euclid will be regarded as very valuable additions; while the omission of existing theorems or problems is justly deemed advisable in consequence of one or more of the following considerations: (1) that the proposition is not required; (2) that the question involved may be more effectively treated from a different standpoint; (3) that, being easy of proof and of limited application, it may with advantage be treated as an exercise rather than as a proposition; and (4) that it may more suitably be regarded as an exercise in geometrical drawing.

In connexion with the detailed treatment of Book I., it is necessary to draw attention to Article 30. Obviously what is intended is that an irregular figure should be reduced to a triangle of equal area by one—or, if needed, more than one—application of I. 37, and not of I. 38, as stated. Again, important alterations affecting the discussion of the theory of ratio and proportion are thought to be desirable. The Committee points out a remedy for a defect that is only too abundantly evidenced in the answers to examination papers—namely, the want of logical sequence shown in the comparison of congruent figures. The proposed method of arranging the corresponding elements in parallel columns is excellent. It is not new, of course, but it is far too rarely adopted in practice.

# J. & J. PATON,

143 Cannon Street,

LONDON, E.C.,

Beg respectfully to inform Head Masters that they insert SCHOLARSHIP EXAMINATION NOTICES and other Advertisements promptly and accurately in all LONDON and PROVINCIAL NEWSPAPERS and PERIODICALS throughout the United Kingdom, also in all Indian, Colonial, and Foreign papers.

The charges are at lowest office rates. Estimates and scheme of insertions forwarded free, on receipt of particulars of proposed expenditure, over given period.

## PATON'S LIST OF SCHOOLS AND TUTORS, 1902,

720 pages, red cloth, post free, 1s. 6d.

## ARE YOU SATISFIED

WITH YOUR

PRESENT

PROSPECTUS?

It has to travel many miles—all over England, Scotland, Ireland, and Wales, and probably to India, the Colonies, and the Continent—and speak to parents on your behalf.

## DOES IT DO JUSTICE TO YOUR SCHOOL?

Are the claims of your School amply set forth? Is it finely printed on good paper—and are your blocks the best that can be made? If not, and you will favour us with an enquiry, we shall be pleased to send you suggestions for a new one, and specimens of the Prospectuses we have printed—with estimate of cost—*free of charge*.

J. & J. PATON,

EDUCATIONAL AGENTS,

143 CANNON STREET, LONDON, E.C.

# MESSRS. WM. BLACKWOOD & SONS' NEW EDUCATIONAL WORKS.

Catalogues forwarded post free on application.

## FORTHCOMING BOOKS

*Designed to cover the requirements of the*

### REVISED MATRICULATION SYLLABUS.

**Matriculation English Course.** By W. H. Low, M.A. Lond., and JOHN BRIGGS, M.A. Camb. 3s. 6d. [*Ready September 1902.*]

This book contains grammar, analysis, composition, précis-writing, and paraphrase.

**Matriculation Latin Passages.** Being a selection of Prose and Verse from the best Latin writers. Edited by B. J. HAYES, M.A. Lond. and Camb. 3s. 6d. KKY. 3s. 6d. net. [*In preparation.*]

**Matriculation Latin Unseens.** Being the Passages set for Translation from Unprescribed Books, 1875-1902. 1s. [*Ready July 1902.*]

**Tutorial Greek Course.** [*In preparation.*]

**Matriculation Modern History.** Being the History of England, 1485-1901, with some reference to the Contemporary History of Europe and Colonial Developments. By C. S. FEARENSIDE, M.A. Oxon. 3s. 6d. [*Ready September 1902.*]

#### Matriculation Geography, Physical and General.

**The New Matriculation Algebra.** Being the *Tutorial Algebra*, Elementary Course, adapted to the London Matriculation Revised Syllabus and containing a Chapter on Graphs. By RUPERT DEAKIN, M.A. 3s. 6d. [*Ready August 1902.*]

**Matriculation Advanced Algebra and Geometry.** Edited by Wm. BRIGGS, LL.D., M.A. 4s. 6d. [*In preparation.*]

**The New Matriculation Chemistry.** Being the *Tutorial Chemistry*, Part I., with Matriculation Supplements on Metals and their Compounds and the Chemistry of Daily Life. 4s. 6d. [*Ready September 1902.*]

**Matriculation Physics: Heat, Light, and Sound.** By R. W. STEWART, D.Sc. Lond., and JOHN DON, M.A., B.Sc. Lond. 4s. 6d. [*Ready.*]

**The New Matriculation Botany.** 3s. 6d. [*Ready September 1902.*]

*Now ready, crown 8vo, price 3s. 6d.*

# THE TUTORIAL ARITHMETIC.

By W. P. WORKMAN, M.A., B.Sc.,

Head Master of Kingswood School, Bath; late Fellow of Trinity College; and Smith's Prizeman.

### SOME RECENT PRESS NOTICES.

**Schoolmaster.**—"This book takes first place among our text-books in arithmetic. No other single book can compete with this one."

**Journal of Education.**—"The treatment of fractions is a great improvement on that usually found in school arithmetics. A very interesting chapter is that on 'Congruences.'"

**Westminster Review.**—"The *Tutorial Arithmetic* is in every respect an admirable book, and seems destined to supersede all other secondary treatises on the subject."

**Mechanical World.**—"The authors have invested such subjects as circulating decimals and prime numbers with an amount of attractiveness which is in pleasing contrast with the usual rigorous and unsympathetic treatment ordinarily accorded these subjects."

**Aberdeen Free Press.**—"This book does not confine itself to the old ruts. On the theory of circulating decimals, prime numbers, &c., the work becomes quite fascinating. It is one of the most thorough and informative arithmetic text-books in existence."

**Educational News.**—"This is a book of high merit throughout. It is the most important work of its kind issued within recent years."

**School World.**—"The principal merit of this treatise is the attention paid to methods of computation. The treatment of theoretical points is clear as well as sound, and the examples on the metric system are mostly of the right kind. Altogether this is a stimulating and novel book."

**Civil Service Student.**—"Admirably conceived and lucidly expressed. The author appears to have that special knowledge, belonging only to the practical teacher, of the needs alike of teacher and student."

**Practical Teacher.**—"A distinct advance on most existing text-books."

### CURRENT EVENTS.

THE half-yearly meeting of members of the College of Preceptors will be held in the College Library on Saturday, July 19, at 3 p.m.

THE Nature-study Conference in London, we may remind our readers, is fixed for July 23.

THE Board of Education have decided, at the suggestion of the Council of the Society of Arts, to hold during the early part of next year an Exhibition of Engraving and Etching in the Victoria and Albert Museum, South Kensington. The Exhibition will consist of examples of copper and steel engraving, including line mezzotint and stipple (plain and coloured), aquatint, and etching. Communications should be addressed to the Secretary, Exhibition of Engraving and Etching, Board of Education, South Kensington, S.W.

THE Catholic Association has organized a series of summer trips, tours, and pilgrimages—among the rest a language holiday course at Douai ("a place made memorable in the annals of the Faith in England"), the party leaving London on August 4. Apply to Valentine M. Durnford, K.S.G., 22 Paternoster Row, E.C., before July 21.

THE scheme for the allocation of the grant Endowments of £10,000 a year from the Technical Education Board of the London County Council has been finally adopted by the University of London, the consent of the institutions concerned having been obtained. (See below, page 293.)

THE Public Health Institute, Edinburgh, completed by the liberality of Sir John Usher, has now been formally handed over to the University.

MRS. MARGARET OGILVIE has endowed with an income of £200 a University Readership in Ophthalmology, to be held by the honorary surgeon to the Oxford Eye Hospital.

LORD DERBY has given three acres of land towards a site for a new Grammar School at Bury, and has offered £1,000, in addition, upon certain conditions not yet disclosed.

THE Oxford D.C.L. has been conferred upon the Hon. Joseph H. Choate, the American Ambassador; Viscount Hayashi, the Japanese Ambassador; Lord Cromer; and Count Matsukata. D.Sc., on Mr. W. H. M. Christie, Astronomer Royal, and Dr. Arthur W. Rücker, Principal of the University of London. D.Litt., on Prof. Kielhorn, C.I.E., of Göttingen.

At Oxford, too, the honorary degree of D.D. has been conferred upon the Ven. H. N. Churton, M.A., Bishop-elect of Nassau, and upon the Rev. J. E. Mercer, M.A., Bishop-nominate of Tasmania; and the degree of M.A. upon Mr. W. J. Smith-Jerome (B.M. London), University Lecturer in Medical Pharmacology and Materia Medica.

THE University of Cambridge has conferred the following honorary degrees:—

LL.D.: Mr. Whitelaw Reid, Special American Ambassador to the King on the occasion of His Majesty's coronation; Maharaja Dhizaj Sir Madho Ras Sindhia, Maharaja of Gwalior, G.C.S.I., A.D.C.; Sir Shahu Chhatrapati Maharaj, G.C.S.I., Maharaja of Kohlapur; the Duke of Argyll; Viscount Hayashi, Japanese Ambassador; Sir Richard Henn Collins, Master of the Rolls; Sir Joseph West Ridgeway, Governor of Ceylon; Sir Albert Henry Hime, Prime Minister of Natal; General Sir F. W. Grenfell, Governor and Commander-in-chief of Malta.

Sc.D.: Sir H. H. Johnston, Special Commissioner for the Uganda Protectorate; Dr. A. W. Rücker, Principal of the University of London; and Robert Ball, Acting Director of the Geological Survey of Canada.

Litt.D.: Rev. William Sunday, Lady Margaret Professor of Divinity in the University of Oxford; and Frederic Seebohm.

Mus.D.: H. W. Parke, Battell Professor of Music at Yale.

THE Cambridge honorary M.A. has been conferred on Mr. T. H. Middleton, Professor of Agriculture; Mr. Abrahams, Reader in Talmudic and Rabbinic Literature; and Mr. A. P. Goudy, Lecturer in Russian.

EDINBURGH UNIVERSITY has conferred its honorary LL.D. upon the following Colonial Premiers and Governors:—Right Hon. Edmund Barton, K.C. (Australia); the Hon. Sir Robert Bond, K.C.M.G. (Newfoundland); General Sir F. W. Grenfell, G.C.B., G.C.M.G. (Malta); Lt.-Col. the Hon. Sir A. H. Hime, R.E., K.C.M.G. (Natal); the Right Hon. Sir Wilfrid Laurier, G.C.M.G. (Canada); Sir William Macgregor, M.D., K.C.M.G. (West Africa); the Right Hon. Sir J. W. Ridgeway, G.C.M.G., K.C.B., K.C.S.I. (Ceylon); the Right Hon. R. J. Seddon (New Zealand); Sir W. J. Sendall, K.C.M.G., G.C.M.G. (West Indies); and the Right Hon. Sir J. Gordon Sprigg, K.C.M.G. (Cape Colony).

DUBLIN UNIVERSITY has conferred the following honorary degrees:—

D.Litt.—Alexander Campbell Fraser, Professor Emeritus of Logic and Metaphysics, University of Edinburgh; George Abraham Grierson, Fellow of the University of Calcutta, and chief of the Linguistic Survey of India; M. Theodore Reinach, the historian and archaeologist; and William Ridgeway, Professor of Archaeology in the University of Cambridge.

D.Sc.—Sir William Abney; Josiah Willard Gibbs, Professor of Mathematics in Yale University; and George Johnston Stoney, F.R.S.

LL.D.—John Winthrop Hackett, member of the Legislative Council of West Australia; Sir Albert H. Hime, K.C.M.G. (Natal), an old student of Trinity College; and Horace Brooks Marshall, one of the Sheriffs of the City of London.

DURHAM UNIVERSITY has conferred the honorary D.C.L. on Prof. Pringle-Pattison, Dr. Fraser's successor at Edinburgh.

COLUMBIA UNIVERSITY has conferred its honorary LL.D. upon Mr. Michael Ernest Sadler, of the Board of Education.

THE University of Missouri, very appropriately, has conferred its honorary LL.D. upon Mr. Samuel L. Clemens. Did not "Mark Twain," once upon a time, bear a hand in working a steambot on the Mississippi? There seems to be an "Innocent Abroad."

THE most notable feature of the Coronation Honours is the institution of an Order of Merit. The dozen names in the first list worthily represent the Army and the Navy, literature, science, and art. Lord Rayleigh, Lord Kelvin, Lord Lister, Mr. Morley, Mr. Lecky, Sir William Huggins, and Mr. G. F. Watts are excellent representatives of the three latter departments. Carlyle, it will be remembered, accepted the Prussian Order *pour le Mérite*, though he afterwards declined G.C.B.

LORD KELVIN is also made Privy Councillor. Principal Rücker, of the University of London, is knighted. Prof.

Ramsay, of University College, London, is made K.C.B. Principal Lodge, of Birmingham, Dr. Isambard Owen, of the University of Wales, Dr. Villiers Stanford, of Trinity (Cambridge), and the Hon. H. McLaurin, Chancellor of the University of Sydney, are knighted.

THE physicians and surgeons are well to the front. Lord Lister is made a Privy Councillor. Sir W. S. Church, Bart., President of the Royal College of Physicians, is made K.C.B. Sir Francis Laking and Sir Frederick Treves become baronets. Mr. H. G. Howse, President of the Royal College of Surgeons (England); Mr. Halliday Croom, President of the Royal College of Surgeons (Edinburgh); Dr. Thomas Fraser, President of the Royal College of Physicians (Edinburgh); Mr. Victor Horsley, of University College, London; Prof. Macewen, of Glasgow; Dr. W. J. Collins; and Mr. Alfred Cooper, F.R.C.S.—are knighted.

SIR ALFRED LYALL is to be congratulated on his admission to the Privy Council, and Mr. Leslie Stephen on his K.C.B. The literary Knights Bachelor are Mr. F. C. Burnand, Mr. W. Laird Clowes, Dr. Conan Doyle, and Mr. Gilbert Parker, M.P.

ART is represented by Sir Edward Poynter, P.R.A., who receives a baronetcy; and by Mr. W. Emerson, President of the Royal Society of British Architects; Mr. E. Waterlow, A.R.A., President of the Royal Society of Painters in Water Colours; Mr. John Thornycroft, F.R.S.; and Mr. Charles Wyndham—who are knighted.

THE Senate of the University of London Scholarships. has approved the following conditions for the Gilchrist Scholarships and Studentships for Women:—(1) Four scholarships of £40 a year for two years, two open annually to candidates that have passed the Intermediate Examination and are not of more than two years' academic standing. One scholarship may be raised to £50 if the holder studies experimental science and her college fees would exceed £40 a year. (2) One studentship of £100 for one year, open to a graduate in Honours of the University for a course of study in an approved institution in preparation for some profession, which she must promise to practise at least two years. Applicants to be of not more than three years' standing from first graduation. Apply to the Principal before the end of February. (3) One travelling scholarship of £70, open to secondary teachers holding the University diploma—preferably such as shall have been trained in the proposed Day Training College for Teachers. Scholars must have been engaged in teaching for at least two years, and must at election be holding an appointment in a school. No examination, but nomination by a Committee of Selection, who report by April 15. Further particulars in *London University Gazette* for June 7.

A MITCHELL Studentship in Economics and Political Science (including Commerce and Industry), £100, is open (September 15). Apply to the Academic Registrar, University of London, by August 31.

THE following prizes and scholarships, for women only, will be awarded on the results of the Cambridge Higher Local Examination in June, 1903:—(1) £5 to each of the best five candidates engaged in tuition as a profession or preparing for that profession; (2) the Lowman Memorial Prize (interest on £125 Caledonian Railway 4 per cent. Debenture Stock) to the candidate highest in Group A among those engaged in or preparing for the work of tuition; (3) two scholarships, £50 a year each, tenable at Newnham for three years, for success in special groups; (4) Gilchrist Scholarship, £50 a year, tenable at Girton or at Newnham.

for three years; (5) Liverpool Clough Scholarship, £60 a year, tenable at Newnham for two years. See the Regulations for the examinations now published.

THE University of Oxford School of Geography offers a Geographical Scholarship, £60, open to such as have taken Honours in one of the Final Schools of the University. Examination, October 14. Apply to the Reader in Geography, Old Ashmolean Building, Oxford, by October 1.

FROM the proceeds of his book on "The Cause and Conduct of the War," Sir Conan Doyle proposes to set apart £1,000 to found a scholarship for enabling some poor South African Boer or British student to study at Edinburgh University. With the rest he will encourage the movement for civilian riflemen.

THE Universities of the Maritime Provinces of Canada are sending a memorial to the executors of Mr. Rhodes's will asking that the conditions of the will be altered so as to give all the provinces of the Dominion an opportunity to compete for the Oxford scholarships. The will provides only for Ontario and Quebec, two out of seven provinces.

AT the City of London School it is intended to form a class in journalism next term, and the most promising boy in this class, as discovered by examinations and examples, will be awarded the G. W. Steevens Travelling Scholarship of £400.

Vacancies and Appointments. IN connexion with the grant of £10,000 a year recently voted to the University of London by the London County Council in aid of the work of the Faculties of Arts, Science, Engineering, and Economics, the Senate have made the following appointments:—Prof. Ramsay, F.R.S., Teacher of Chemistry at University College; Prof. Capper, Teacher of Mechanical Engineering at King's College; Prof. Unwin, F.R.S., Teacher of Civil and Mechanical Engineering at the Central Technical College. At the London School of Economics and Political Science: Prof. Hewins, Director of the School, Teacher of Modern Economic History; Mr. A. L. Bowley, Teacher of Statistics; Mr. Edwin Cannan, Teacher of Economic Theory; Prof. Foxwell, Teacher of Banking and Currency; Mr. Herbert Hall, teacher of the Sources of Early Economic History; Mr. H. J. Mackinder, Teacher of Economic Geography; and Mr. A. L. Sargent, Lecturer on Foreign Trade. Also Dr. Karl Breul and Dr. Robert Priebsch to the Professorships of German, founded by the University; and Dr. J. Norman Collier, F.R.S., to the Professorship of Organic Chemistry at University College.

THE REV. ARCHIBALD ROBERTSON, D.D., LL.D., Principal of King's College, has been elected Vice-Chancellor of London University for 1902-3.

THE Chair of Modern History at Cambridge is vacant through the lamented death of Lord Acton.

MR. E. A. BECK, M.A., Fellow and Senior Tutor of Trinity Hall, Cambridge, has been elected Master, in succession to the Rev. H. Latham, M.A.

AT Cambridge, too, Mr. E. G. Duff, M.A., of Wadham College, Oxford, has been elected Sanders Reader in Bibliography; the Special Board of Indian Civil Service Studies have appointed Syed Ali Bilgrami, B.A., LL.B., Calcutta, to be University Teacher of Marathi; and Mr. Leonard Doncaster, B.A., Scholar of King's College, has been appointed assistant to the Superintendent of the Museum of Zoology.

THE REV. HERMANN GOLLANZ, M.A., D.Lit., has been elected to the Goldsmid Chair of Hebrew, and Mr. R. A. Nicholson, M.A., to the Chair of Persian, at University College, London. Prof. Nicholson has also been appointed University Lecturer in Persian at Cambridge.

DR. ROBERT LATTA, Professor of Moral Philosophy, Aberdeen University, has been appointed to the Chair of Logic in the University of Glasgow, in succession to Dr. Adamson.

MR. JAMES TAIT, M.A., late Fellow of Pembroke College, Oxford, Lecturer in Ancient History and Assistant Lecturer in History, Owens College, Manchester, has been appointed to the newly instituted Chair of Ancient and Mediæval History at Owens.

THE REV. J. H. B. MASTERMAN, M.A., has been appointed to the temporary (three years) Chair of History in the University of Birmingham.

MR. J. H. CLAPHAM, Fellow of King's College, Cambridge, has been elected to the newly instituted Professorship of Political Economy at the Yorkshire College, Leeds.

DR. T. WITTON DAVIES, formerly Lecturer, has been appointed Professor of Semitic Languages in the University College of North Wales. Prof. Davies also holds the Chair of Hebrew and Old Testament in the Baptist College, Bangor.

THE Wardenship of Trinity Hall, Glenalmond, is vacant through the resignation of Canon John Huntley Skrine, M.A.

MR. DAVID H. M'CURTAIN, M.A., B.Sc. Lond., Head Master of the Secondary Department of the North Kelvinside School, Maryhill, Glasgow, has been appointed Principal of the new School of Science at Crewe.

THE REV. A. R. JOHNSON, M.A., second master in the Exeter Grammar School, has been appointed Rector of Marwood, Barnstaple.

THE REV. JOHN M. EUSTACE, M.A., assistant master at Weymouth College, has been appointed Rector of Challacombe, Barnstaple.

Literary Items. MESSRS. MACMILLAN & Co. announce a new and popular issue of the illustrated edition of Green's "Short History of the English People," in forty monthly parts. The complete work will make four handsome volumes.

MESSRS. BLACKWOOD & SONS have in the press a new edition, in four volumes, of Sir Walter Scott's "Minstrelsy of the Scottish Border," prepared by Mr. T. F. Henderson, author of an interesting volume on "The Casket Letters." The last critical edition of the "Minstrelsy" (Lockhart's) was published some seventy years ago.

THE Department of Comparative Literature in Columbia University has decided to publish a *Journal of Comparative Literature* quarterly. Many of the foremost European scholars have promised co-operation.

MESSRS. INGLIS, KER, & Co., of Glasgow, will publish in the autumn a "Life of Dr. Parker," of the City Temple, by the Rev. Dr. Anderson, of Windermere, who has successfully written the biographies of Principal James Morison and Dr. Fergus Ferguson. Dr. Anderson will speak with the

authority and fulness derivable from a lifelong intimacy with Dr. Parker.

MESSEURS. BROWNE & NOLAN, of Dublin, will presently issue a revised and completed edition of "Ireland, Industrial and Agricultural," a timely exposition of the condition, resources, and economic possibilities of the country, edited by Mr. William P. Coyne, M.A., F.S.S., for the Department of Agriculture and Technical Instruction for Ireland. The volume will be illustrated by upwards of a hundred full-page plates, maps, and diagrams.

SIR ISAAC PITMAN & SONS have just issued the first number of *Business Life*, a monthly pennyworth, "directed to the growing demand for special training in all departments of business life which is being made by the stress of competition with other nations." The contents are of a practical character, and the personal element is represented in "Successful Students" (with portraits) and "Life Stories of Successful Men." The successful man of the current number is Dr. T. J. Macnamara, M.P. (with portrait).

THE results of the third examination for the General National Diploma in Agriculture, recently held at Leeds, "indicate a continued improvement in the standard of knowledge attained," but "the general education of many of the candidates is very deficient. . . . Many students whose papers were otherwise creditable exhibited a remarkable ignorance of spelling, grammar, and ordinary English composition."

MR. A. SONNENSCHIEIN, who has laboured long and earnestly for the simplification of the methods of teaching English children to read, held a conference with London Board-school teachers (June 9) on "The Teaching of Reading in Elementary Schools" in the Board Room on the Victoria Embankment. The object of the conference was to show that reading, writing, and spelling from dictation of words of regular structure can be taught in a year, whereas from three to five years are now spent in this study.

THE new Regulations for the Cambridge Higher Local Examination, containing the announcement of set subjects in the various Groups for December, 1903, and June, 1904, as well as for December, 1902, and June, 1903, can now be obtained from the Local Secretaries or from Dr. Keynes, Syndicate Buildings, Cambridge.

AT a meeting of the governors of George Heriot's Trust, Edinburgh (June 9), a letter was read from a student whose fees had been remitted, stating that, having had constant work for the past two years, he was now in a position to repay the sum—£12. Scotland is not yet wholly demoralized by grants in aid of deserving students.

IN the opinion of the *Outlook* (May 24) "the gentlemen who are now called secondary inspectors are not qualified by attainments, standing, or experience to estimate the work of a good secondary school. Most of them are the old South Kensington men new christened; the new ones are men without sufficient experience to guide them; and very few have taught in secondary schools themselves."

THE Court of Governors of Owens College, Manchester, decided (June 4) to apply for a charter for an independent University in Manchester, to be called the Victoria University of Manchester. The Court were of opinion that any powers and advantages possessed by the Victoria University and its graduates, including the use of the name Victoria, should be equally continued (if desired) to the proposed

Universities in Leeds, Liverpool, and Manchester and their graduates.

THE *Jewish Chronicle* (June 7) says that, in view of the improved position of Hebrew in the University of London, "the curriculum at Jews' College is being reorganized, and a more absorbing attention is to be devoted to Hebrew studies, which are in future to culminate in the Diploma of Rabbi. Meanwhile, it is desired that before long Jews' College may be an affiliated College in Semitics of the University, and there can be little doubt that the closest bond must, in the near future, exist between Jews' College and University College."

ON Speech Day at Wellington (June 18), the Master (the Rev. Bertram Pollock) stated that 700 old Wellington boys had been to the front, 70 had died in their country's service, 253 have been mentioned in dispatches, 41 had received the D.S.O., Sir Ian Hamilton had received a K.C.B., and two Victoria Crosses had been won. One of the V.C.'s (Captain Towse) was present.

PRESIDENT BUTLER'S admirable inaugural address on "Scholarship and Service," on his installation at Columbia University (April 19), is published in full in the June number of the *Educational Review*, which Dr. Butler himself so ably edits. The same number contains an interesting article on "The Abolition of Compulsory Greek in Germany," and a very useful and handy "Bibliography of Education for 1901."

THE *conversazione* given by the President, Council, and professors at University College, London, on June 19 was brilliant and successful.

A STATUTE has been promulgated in Congregation of Oxford University for the transfer of the control of the training of secondary teachers, now entrusted to the Delegacy of Local Examinations, to an independent delegacy. Mr. Sidgwick pointed out that the present step was called for by the action of the Board of Education in making a diploma necessary for junior inspectorships and by the draft Order in Council requiring a diploma in the case of registration of teachers. He observed that beyond this transfer no change was involved, except the giving a University *status* to a Reader in Education if such an official be hereafter created.

#### AN IDEAL UNIVERSITY FOR LONDON.

PROF. E. H. STARLING, M.D., F.R.S., delivered the annual Foundation Day oration at University College, London (June 5), taking for his subject "The Building of the University." He said that he proposed to deal with the best manner in which they might complete the work begun seventy-five years ago by their founders—namely, the establishment in London of a University which should be adapted to the needs of this monstrous metropolis, and should offer to all classes and creeds of the Empire an education which would fit them to take their part in the struggle not only for mere existence, but for the persistence of the English race and English ideals. A single institute or group of institutes would not be an adequate solution of the problem. The University must be equally accessible to dwellers in the north, south, east, and west of London—a condition which could only be fulfilled in the case of a single institute by placing the University in the heart of the City. A better and more feasible way was to adopt a process of division, so that a complete University centre should be provided in the close neighbourhood of the railroads which served those four quarters of the London area.

Such a division of the University could be accomplished without in any way destroying the unity of the whole. In their ideal University there would be a centre in each of the four quarters of London. Each of those centres would be in so far a complete University in that it would be a place for study and research in all branches of knowledge, and would be a community of teachers

and scholars. The local business affairs of each centre would be under the control of a committee or council appointed by the Senate of the University, but containing representatives of the local body of professors. All those centres would be but parts of this University, with common aims, with similar curricula, and the same standard of examination. The Senate of the University, which would contain representatives from all centres, would be responsible for the appointment of the local governing bodies, and would keep in their own hands the power of appointing and dismissing professors. It would be possible in that way to provide for the training of ten thousand students within the University of London, and to ensure the freedom of teaching and research and the living contact of each student with men of different ideals and modes of thought, which were the most valuable factors in a University training.

Such a University could not be founded without the possession of adequate means. Each centre would necessitate the erection of buildings at a cost of about £500,000, on ground covering from five to ten acres. For a moderate endowment of its professorships and the maintenance of its laboratories a yearly income of £50,000 should be provided in addition to the income from students' fees, which might amount to another £30,000. Those might seem large sums to those who were ignorant of the money spent abroad by the State on Universities or of the income which was available from ancient endowments at Oxford and Cambridge. The united income of the colleges at Oxford was £330,000 a year, and at Cambridge nearly £300,000 a year. The yearly Government grant to the University at Strasburg, with only 1,000 students, was £50,000. He was convinced that there would be no difficulty in raising those amounts in London, either by the generosity of its rich men or by grants from public funds, if only those interested in the making of a University would combine their efforts towards a common end. The task was rendered easier by the fact that in the building of the University they could utilize for University purposes in London many of the buildings and endowments already existing, and it was in the hope of inaugurating a common movement in that direction that University College had declared itself ready to be incorporated in the University.

The first step in the making of a great London University was indeed halfway towards accomplishment. Towards the sum of £170,000 necessary for the incorporation of University College more than half had been already subscribed. But it was only a first step. Where were they to find the other centres? The solution of that question was already under consideration by various bodies in the University. The Faculty of Medicine of that University was engaged in drawing up plans for the establishment of a great institute for preliminary and early medical studies in the immediate neighbourhood of the University buildings in South Kensington, at a cost of £150,000 for laboratories, and at least an equal sum for endowment of professorships. The University already contributed a considerable sum annually out of their grant from the Technical Education Board to the expenses of the Engineering School, the Central Institute of the City and Guilds, and it was to be hoped that this was but the prelude to an incorporation of that school in the University. A similar incorporation of the Royal College of Science would present many difficulties, seeing that that school of science was a Government Department. Part, at any rate, of its work would gain by being directly under the control of the University, and they might confidently look forward to the time when the vacant ground round the Imperial Institute, including the building itself, would be occupied by a group of institutes which together would form a complete University centre for West London, where many, if not all, faculties would be represented. For the University centre of South London they had already a nucleus in King's College. The incorporation of that institution in the University would probably cost less than that of University College. But its buildings permitted of little or no expansion, and it would be far better to give them back to the Government if the University could receive in exchange five to ten acres of land in a corresponding position south of the river, and erect thereon new buildings fitted to modern requirements, and with accommodation for a large number of students which would be provided by South London and the southern railroads. The East London centre was urgently required for the scientific training of men who were to be leaders and captains of industry in that great manufacturing district. The facilities for University education in that part of London were at present most rudimentary, but it seemed possible that the University might use the excellent institute maintained by the Drapers' Company, at any rate as a

nucleus on which to build its fourth centre. In this centre the Faculties of Science, Applied Science, and Engineering would take a foremost place. The Arts Faculty, however, would not be absent, and would be represented at least by such subjects as modern languages, history, and economics, which were the foundation of any Commercial Faculty of a University.

In addition to those centres, there would be a number of schools of the University which would preserve their autonomy, but would direct their teaching according to the requirements of the University. Such schools would be mainly post-graduate in character, in that it would be their office to graft on the general training in method acquired within the walls of the University itself the special professional training necessary to fit the man for the pursuit of medicine, law, commerce, administration, &c. Among such institutions would be the twelve medical schools attached to the great hospitals of London, the School of Economics and Commerce, the various training schools, and, it was to be hoped, the great legal corporations, which had so far failed to grasp the extent of their responsibilities in the formation of a Legal Faculty of the University. The utilization of the polytechnics would require careful consideration.

## CORRESPONDENCE.

[We do not hold ourselves responsible for the opinions expressed by our correspondents.—Ed. E.T.]

### THE COLLEGE OF PRECEPTORS AND THE EDUCATION BILL.

*To the Editor of the Educational Times.*

SIR,—My attention has been drawn to a communication under the above heading which appears this month in the correspondence columns of a contemporary.

I beg to utter a respectful protest against the action of the Dean in writing this letter, and in dating it from the College of Preceptors. I do this irrespectively of the opinions he has advanced. The Dean occupies a position of greater responsibility than that of an ordinary member of Council, for he is, to a large extent, their official representative. One would naturally expect, therefore, that a certain measure of reserve would be imposed.

This is illustrated by the fact that, at the very time the Dean was inditing the letter in question, he was also engaged in preparing the draft of a Report to be presented to the next meeting of the Council, in order to be dealt with before formal presentation to the forthcoming half-yearly meeting.

If he had been requested by the Council to write, the matter would have worn a different complexion, or if there had been any debate on the question from which he could have gathered, more or less completely, the sense of the Council, there might have been some excuse; but, judging from the published reports, no such debate has taken place, so that, in effect, the Council is partly pledged without its knowledge and against its will.

Apparently, the Dean, in the course of conversation, had picked up the opinions of two or three of the members. Unfortunately, in a measure of this kind, religious animosity and political bias frequently shape the feelings and obscure the educational bearings of any particular policy; but I submit that, in an official pronouncement of the whole Council, the measure would have a fair chance of being considered from the educational standpoint alone; and, if such were the object of my letter, I should be quite ready to offer a challenge to the Dean, and to assert that, if a ballot were taken, a majority of the Council and of the members of the College would be found in favour of the main principles embodied in the Government Bill. But I am not now concerned to defend or to oppose the Bill; one is jealous only that the College should be kept outside religious or political partisanship and that the impartiality of one of our own officers of Council should be maintained.

Unfortunately, owing to the action of the Dean, the question has become somewhat obscured, and the direct result of his un-called-for intervention will be to exacerbate the discussion at the College on the 19th prox., and, it may be, to draw it off on a false issue.

Mr. Eve throws a doubt on the advisability of imposing a test to ascertain whether or not a teacher conscientiously believes the

doctrines he seeks to be allowed to teach. His recent action leads to the conclusion that a test might sometimes be advantageously employed to ascertain the wisdom and prudence of certain office-bearers in our own College. "It is impossible to describe in Parliamentary language" the evil effects at this crisis of a lack of judgment on the part of our leaders.—I am, Sir, &c.,

J. O. BEVAN.

55 Gunterstone Road, West Kensington, W.

June 14, 1902.

*To the Editor of the Educational Times.*

SIR,—My letter was not intended to be official; I regret if there was anything about it to justify a contrary idea. It began with a plain statement of fact necessitated by what seemed to me an erroneous impression conveyed in the previous number of the *Journal of Education*. The Report adopted by the Council bears out this statement. The remainder of the letter was, as I plainly stated, an expression of my own opinion.—I am, Sir, &c.

H. W. EVE.

37 Gordon Square, W.C., June 24, 1902.

### THE EDUCATIONISTS' OPPORTUNITY:

"ONE GREAT UNION OF TEACHERS."

*To the Editor of the Educational Times.*

SIR,—Some years ago I heard Dr. Fairbairn deliver at Aberystwyth a striking address, in which he spoke of the unique opportunity that lay before the founders of the Welsh University, inasmuch that they had a free field and were not hampered by the dead hand of the past. Such an opportunity lies before English educators at the present moment. Everything educational is in the melting-pot, and it is theirs to take care lest they should have to repeat, in a somewhat different sense, Thring's caustic comment: "There came forth this calf." He has told us that "the skilled workman is the lord of all things on earth," and "that the foremost teachers of the English-speaking race are the most living creators of the life that is to be."

Believing that to be true, I wish to lay before your readers an idea that I trust may prove fruitful. The problem is "to make English education effective and to secure adequate power for teachers." To secure this requires union and sinking of differences. Yet each class of teachers seems to be setting up its own sectarian assembly and grinding its own axe. Thus the power of the teaching profession is weakened in the same way that Cyrus weakened the river Gyndes, by distribution into too many channels. And, if I may be pardoned the use of another metaphor, a thick tree has to be sawn through—the tree of opposition and indifference; to effect this there come little groups of woodmen whose axes only dint the roots, whereas one saw worked by steam would soon bring it down.

Cannot all the subdivisions lay aside their differences and unite to form one great union of secondary teachers, if not of all teachers? All teaching is at bottom one, as Prof. Laurie stated so emphatically before one Commission. The coming Register is another proof of the solidarity of the profession. Cannot the College of Preceptors or some other great body formulate a scheme for swallowing up the members of all minor bodies? Many advantages would follow. (1) The public would believe teachers to be in real earnest. (2) Every recommendation would carry many times the weight that a recommendation from a smaller body can carry. (3) Teachers would learn to regard the problems of the profession from a general rather than a particular standpoint. (4) It would be possible to secure good tenure by a determination on the part of such a united body to have it. (5) A really stable and general fund might be created—membership of this might be made compulsory—for paying annuities to assistants on retirement or to their widows when necessary.

When I consider (as a secondary teacher who has suffered many things) what the N.U.T. has accomplished for its members, I repeat:

O fortunati, quorum iam mœnia surgunt!

But, like Æneas, I look forward to "fines Italos fataliaque arva," where a mighty "imperium magistrale" will spring up and "debellare superbos."—I am, Sir, &c.,

The Endowed School, Watford, SOMERSET BATEMAN.

June 1, 1902.

[We comment on this letter in our "Notes."—ED. E. T.]

### THE ANNUAL CEREMONIAL: COLLEGE DIPLOMAS AND ACADEMIC COSTUME.

*To the Editor of the Educational Times.*

SIR,—Most people who have attended the annual distribution of prizes and certificates of the College of Preceptors must have been struck by the small percentage of graduates who attend to receive their diplomas. It is, of course, evident that many who live in the country find it impossible to be present; but I think there are many who might be induced to put in an appearance if they were specially requested by notice to do so. The ever-increasing number of teachers who take the College diplomas, and the recognition of the L.C.P. and F.C.P. as qualifications for registration, surely warrant a slightly more elaborate ceremony than the one at present in vogue. In this connexion it would be interesting to know why academic costume, for which elaborate regulations are laid down in the College Calendar, is not worn. Its adoption would at least add to the attractiveness of the distribution. I beg, then, to offer the following suggestions:—(1) That all teachers entitled to diplomas be requested to make a special effort to attend; (2) that graduates who have already received their diplomas be likewise made welcome; and (3) that academic costume be worn.—I am, Sir, &c.,

Collegiate School, Grimsby,

W. HUBERT COLLINS, A.C.P.

June 9, 1902.

[(1) This should scarcely be necessary, and, where necessary, would hardly be effective; still, it is a simple matter. (2) All are welcome, as of course. (3) The point will, no doubt, receive due attention.—ED. E. T.]

### THE TEACHERS' REGISTRATION COUNCIL:

THE REGISTRAR'S TENURE.

*To the Editor of the Educational Times.*

SIR,—I beg to enclose herewith a copy of a letter I have addressed to the Teachers' Registration Council. It seems to me that the system of tenure in that branch of the Board of Education should be clearly defined. For who will not consider it a scandal and a shame if the Registrar be dismissed summarily without appeal and without compensation, when he may be clearly in the right? And yet what is to prevent this if the system of tenure there resembles that of most, if not all, head masters of schools under schemes of the Charity Commissioners?—I am, Sir, &c.,

THOMAS ALLEN.

Woodbury, Malvern Link, June 13, 1902.

Mr. Allen's letter, dated June 7, is as follows:—

I have this morning under date of the 5th inst. received the following communication from South Kensington:—

"In reply to your letter of the 29th ultimo, I beg to inform you that I have not received instructions from the Teachers' Registration Council to make any statement on the subjects mentioned in your letter."

Now it seems to me that it should be known what is the system of tenure under the Registration Council. Accordingly I beg to ask (1) whether the Registrar will have to sign a declaration that he will acquiesce in his own dismissal should such be resolved upon; (2) whether he will be liable to summary dismissal without appeal and without compensation, when he may be clearly in the right; and (3) whether there is anything in the nature of automatic removal in your branch of the Board of Education.

I gather that primary teachers are on the high road to have a right of appeal. I rejoice thereat. Which of your body will now come forward and object to a similar boon being granted to teachers in endowed schools?

[It is well to be jealous on the question of tenure; but tenure in public schools seems to be on a materially different footing from tenure of this Registrarship. The signing of the declaration does not place the Registrar in a worse position; it simply prevents a misguided man from giving useless trouble to both parties. It is not easy to see how the Registrar can be clearly in the right if the Council decide that he is clearly in the wrong. In any case, he appears to be very amply guaranteed by the number and by the character—personal, representative, and public—of the Council.—ED. E. T.]

L.L.A.—One cannot go beyond the terms of the Order. Qualifications not inserted there are—for the present, at any rate—inadequate, however highly they may be esteemed elsewhere.

## MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on June 14. Present: Rev. T. W. Sharpe, President, in the Chair; Rev. J. O. Bevan, Dr. Brcal, Mr. Brown, Mr. Butler, Mr. Charles, Miss Crookshank, Mr. Eve, Mr. Holland, Mr. Kelland, Mr. Pinches, Rev. Dr. Robson, Mr. Rule, Dr. R. P. Scott, and Mr. Storr.

The minutes of the last meeting were read and confirmed.

The Secretary reported an increase in the number of entries for the Certificate and Lower Forms Examinations, as well as in those for the forthcoming Diploma Examination.

He stated what steps had been taken to bring forward amendments to the Education Bill in the interests of secondary schools.

The report of the Literary Committee was adopted.

The draft report of the Council to the General Meeting was considered, and was referred to the President, Vice-Presidents, and Dean for final revision.

The following books had been presented to the Library since the last meeting of the Council:—

By the AUTHORS.—Barbier's *Sténographie Aimé Paris*; Findlay's *Principles of Class-Teaching*; Newsholme's *Hygiene and Public Health*; Leonard's *First Course of Chemistry*.

By E. ARNOLD.—The Australian Commonwealth; Hill's *Physiology for Beginners*; Kirkman and Field's *Arithmetic for Schools*; Wilson's *First Course in Analysis and Grammar*; Wolff's *Français pour les tout Petits*.

By BLACKIE & SON.—Blackie's *Narrative Histories, No. III.A.*; Illustrated *Continental Geography Reader (America)*; Atkins's *Skeleton German Grammar*; Blakener's *Milton's English Sonnets*; Davison's *Easy Mathematical Problem Papers*; Nall's *Xenophon's Anabasis, Book II.*; Schoedelin's *Selections from Chateaubriand's Les Martyrs*; Turnbull's *Racine's Les Plaideurs*.

By C. J. CLAY & SONS.—Ropes' *Erekmann-Chatrian's Madame Thérèse*.

By W. B. CLIVE.—Allcroft and Hayes's *Livy, Book XXI.*

By MACMILLAN & Co.—Andrew's *Greek Prose Composition*; Selby's *Burke's Thoughts on the Cause of the Present Discontents*.

By MATHCEN & Co.—Wilnot-Buxton's *Makers of Europe*.

Calendars of Queen's College, Galway; Aberdeen University; Edinburgh University.

Register of Veterinary Surgeons.

## REVIEWS.

## GERMAN ROMANTICISM.

"Main Currents in Nineteenth Century Literature." Vol. II.—*The Romantic School in Germany.* By George Brandes. (Heinemann.)

The second volume of Dr. Brandes's great work, originally published in 1873, now appears for the first time in an English dress. The date is important. The recent triumph of Bismarck's policy and the foundation of the new German Empire, the transformation of the Hamlet of Nations into the practical Fortinbras, were too fresh in the author's mind to allow him to adopt the strain:

Good night, sweet prince,  
And flights of angels sing thee to thy rest.

In a remarkable passage he points the contrast between realistic Germany, whose watchword is "In Reih' und Glied" (in ordered ranks), and the romantic Germany of the beginning of the century. It is, perhaps, not to be wondered at that he is somewhat unsympathetic in his treatment of the Romantics.

Reaction against the eighteenth century was characteristic of all Europe at the beginning of the nineteenth. In Germany the form that reaction took was determined by several causes. The popular literature, of which Kotzebue is a conspicuous example, was of a distinctly "Philistine" type. It roused the opposition, on the one hand, of Goethe and Schiller; on the other, of the romantic movement. That movement Dr. Brandes traces to a double source—the literary influence of Herder, Goethe, and Schiller, and the philosophical influence of Fichte. Herder's "theory of history excluded the idea of purpose." It was the opposite of

Yet I doubt not through the ages one increasing purpose runs.

Goethe, and less obviously Schiller, had, after the "storm and stress" phase of their youthful work, drifted further and further from the realities of modern life, and devoted themselves to artistic perfection of form. "Distaste for historical and present reality—in other words, subjectivism and idealism"—was in the air. Fichte, building on the foundation laid by Kant, had formulated his solution of the everlasting problem of the respective contributions to our knowledge of subject and object, of the thinking mind, and of external matter, in the "doctrine of a world-positing, world-creating Ego." As Carlyle puts it in his essay on "Novalis":

To a Transcendentalist, Matter has an Existence, but only as a

Phenomenon: were we not there, neither would it be there; it is a mere Relation, or rather the result of a Relation between our Living Souls and the great First Cause; and depends for its apparent qualities on *our* bodily and mental organs; having itself no intrinsic qualities; being, in the common sense of the word, Nothing.

Again, the widening gap between poetry and real life and the philosophical creed which magnified the individual and his intuitions, or what he believed to be his intuitions, tempted the enthusiastic and imaginative to drift back into the precepts of Aristippus:

Et mihi res, non me rebus, subiungere conor.

As in the previous volume, much space is devoted to the analysis and criticism of typical novels of the period. Among these is Fr. von Schlegel's "Lucinde," a book much discussed at the time, and the subject, among other criticisms, of Schlegel's "Briefe über die Lucinde." Dr. Brandes says of it:

Its main idea is to proclaim the unity and harmony of life as revealed to us most clearly and most comprehensibly in the passion of love, which gives a sensual expression to the spiritual emotion, and spiritualizes the sensual pleasure. What it aims at depicting is the transformation of real life into poetry, into art, into Schiller's "play of powers," into a dreamy imaginative existence, with every longing satisfied, a life in which man, acting with no aim, and living for no purpose, is initiated into the mysteries of Nature.

The keynote of the book is: "Industry and utility are the angels of death with the flaming swords, who stand in the way of man's return to Paradise." That, says Dr. Brandes, is the Paradise that lies behind us, and hence the fruitlessness of the whole movement.

The most attractive figure among the Romanticists is Novalis, so lovingly depicted for us by Carlyle, the mystic *par excellence*, who preferred night to day, sickness to health, and whose personal charm and early death combined with the undoubted beauty of his writings to shed a poetic halo round his memory. His unfinished novel, "Heinrich von Ofterdingen," with its famous quest of the "Blue Flower," is intended to be the counterpart and refutation of "Wilhelm Meister." His criticism of that work clearly shows his point of view.

Goethe is an altogether practical poet. His works are what English wares are, simple, neat, suitable to their purpose and durable. . . . He has, like the Englishman, a natural sense of order and economy, and an acquired sense of what is pure and noble. . . . "Wilhelm Meister's Lehrjahre" is, in a way, altogether modern and prosaic. Romance perishes in it, and so does the poetry, the magic quality, of nature. . . . Artistic atheism is the spirit of the book. "Wilhelm Meister" is a "Candide" directed against poetry.

To "Wilhelm Meister" Novalis preferred "Sternbold," written by Tieck, with the help of Wackenroder's posthumous papers. An essay of his, entitled "Christendom in Europe," shows to what lengths he was carried. In it he denounces Protestantism and every form of free thought, and actually applauds the Pope's condemnation of Galileo, on the ground that, if men realized that the earth was but an insignificant planet, "they would lose, along with their respect for their earthly home, respect for their heavenly home and their fellow-men."

A few more points must be very briefly noticed. The long self-discipline which enabled A. W. von Schlegel to naturalize—if one may use the word—Shakespeare in Germany is admirably described. Jean Paul, "in many ways the forerunner of Romanticism," is represented as uplifting, in "Titan," "a warning voice against its futile, demoralizing tendency." There is an interesting chapter on the efforts of the school to merge poetry and music in each other.

They tried to make word-music, much as the prose authors of our own day try, with more or less success, to make word-pictures.

It will be remembered with what care Lessing sought to draw the line between poetry and painting. In this connexion we might, one is disposed to think, have been excused the somewhat truculent criticism:

When the mist is so thick that it can be cut with a knife, the Romanticists cut it into fourteen pieces and call it a sonnet.

Ste. Beuve would have expressed himself differently. Other chapters deal with the unreality of the Romantic treatment of Nature, and with their partiality for *Doppelyüngerer*, or the appearance to a person of an apparition of himself. Further on, Arnim and Brentano are discussed, the compilers of "Des Knaben Wunderhorn," that collection of old German popular poetry which has exercised such a far-reaching influence. Both were thorough-going Romanticists; but Arnim was almost the only one of the school who never dallied with the fascinations of Catholic-

ism, and Brentano proved to be the pioneer of the novel of peasant life, familiar to us in the pages of Immermann and Auerbach. The tragic story of Heinrich von Kleist is used to point the moral of the whole book.

We shall see, says Dr. Brandes, how the clearness, the definiteness, which was the natural quality of his genius, was disturbed and deranged by the poetical insanity of Romanticism.

But he does acknowledge his genius. Kleist is, indeed, reckoned among the Romanticists; but, as Von Treitschke points out, he is too great and too original to be catalogued under any class-name. Lastly is traced the influence of the movement on the War of Liberation, "a war for hearth and home, but waged at the command of the old dynasties."

#### HANDBOOK TO CHAUCER.

*The Language and Metre of Chaucer.* By Ten Brink and Kluge. Translated by M. Bentinck Smith. (Macmillan.)

The original edition of this book was brought out by Prof. Ten Brink in 1884, with the assistance of his friend, Prof. Kluge, and was, as the former says in his preface, the result of several years of study. The second edition appeared in 1899, some years after the death of Ten Brink, and was edited by Prof. Kluge, who introduced very little alteration of any kind. He also took much interest in the present translation made by Miss Bentinck Smith, and assisted her with many helpful suggestions. This translation is particularly valuable, as rendering accessible to a far wider circle of English students the results obtained by patient investigation and indefatigable research of one that was eminent both for his scientific grasp of philology and his masterly appreciation of the works of Chaucer. With this book before us, we realize that in this particular aspect of Chaucer-study the accuracy and thoroughness of the work cannot be surpassed, and that the conclusions reached are, therefore, perfectly trustworthy and reliable.

The main subject of the brief introduction is the influence of Chaucer upon English literature and language, more especially English dialect and metre. The treatise following takes up the three points of phonology, accent, and the structure of verse and stanza.

In the phonology, the vowels are first discussed, with regard to their quality (timbre), quantity (duration), and accent (stress), which are mutually interdependent. Lists are then given of Germanic vowels, which are classed according to quantity: *i.e.*, as short, long, and variable. The sources of each, and the different forms under which they appear in Chaucer, are also fully examined, while notice is further taken of diphthongs. A careful summary of this part traces the history of the Old English vowels, so far as they are represented in Chaucer's dialect. A short account of unaccented vowels is followed by a classification of romance vowels dependent on accent. Of these, three classes are distinguished: those with a tonic, a pre-tonic, and a post-tonic accent. In a similar manner the writer discusses the consonants of Chaucer, under the heading of "Labials, Linguals, Palatals, and Gutturals," first pointing out how a lengthening of the consonant became general in the change from Old to Middle English. Special notice is taken of the voiced and voiceless *s*.

In the accent, the verb is first studied, with regard to its tense-formation, and the characteristic forms of the strong and weak verbs are considered. Other points discussed are the inflexion of the various tenses and the formation and inflexion of the anomalous verbs. In treating of the substantive, the vocalic and consonantal inflexions of Old English nouns are carefully distinguished. With regard to the romance substantives, stress is laid upon the connexion between those used in Chaucer and in Old English. The adjective and pronoun are similarly reviewed.

In the chapter on "The Structure of Verse and Stanza," Section I., on prosody, deals with the treatment of the weak *e*, syncope, apocope, &c. Section II., on accent and stress, discusses the accentuation of Germanic and Romance words. In the section on the various forms of metre and their structure, the normal short line and the heroic couplet are fully analyzed, while the history of the latter and its use prior to Chaucer are given. Finally, the subjects of rime, alliteration, and the stanza are carefully considered. It is hoped that this brief analysis will to some extent indicate the value and scope of a work that ought to be in the hands of every earnest student of Chaucer.

#### METHUEN'S SHAKESPEARE.

*The Tragedy of Julius Cæsar.* Edited by Michael Macmillan. (Methuen.)

Spaciously printed and got-up, and edited with scholarly refinement and discretion, the present addition to Messrs. Methuen's handsome series of "The Works of Shakespeare" will be cordially welcomed. The introduction stands out from the multitudinous editions of this favourite play both in literary appreciation and in analytical keenness. The presentation of the argument for the determination of the date of composition exhibits an educative example in sound method. At first one tends to feel impatient with Mr. Macmillan's detailed consideration of the view that the hero of the play is Brutus; but, after all, one comes to acknowledge that the wisest course is to argue it step by step out of the field. The most distinctively able section, we are inclined to think, is the examination of Shakespeare's handling of the character of Cæsar, in comparison with the general historical facts and with the particular statements that the author found in Plutarch—a luminous contribution to the analysis and to the justification of the dramatist's method. Of similar quality, though on a lower plane of importance, is the discussion of the minor characters, and especially of Brutus and Cassius. Mr. Macmillan, we think, is not so sure-footed when he comes to the criticism of Shakespeare's representation of that "collective personage," the mob. The poet, he says, "deliberately goes out of his way"—that is, departs from Plutarch's account—to add a "touch of wanton injustice to the character of the Roman mob," in the case of the murder of Cinna; but, for all that, the poet need not be dramatically wrong; and what Mr. Macmillan has already said on the subject rather tends to show that the poet is dramatically right.

The blunt monster with uncounted heads,  
The still-discordant wavering multitude—

is not the description perfectly just? There is undoubtedly "unpittiful frankness" in Casca's contempt for "the rabblement," but is it not consonant with the "rudeness" of this "blunt fellow" (i. ii. 300-305)? There does not seem to us to be any unnecessary conflict between Casca's disgust with "the rabblement" and Carlyle's "Two men I honour, and no third." In any case, the deepest sympathy with the lower classes is not inconsistent with revulsion at the gratuitously uncleanly and untidy habits of too many of them. For the rest Mr. Macmillan handles effectively Shakespeare's process of idealization and his re-arrangement of his materials in more effective combinations, and he examines minutely the dramatic compression of events. The reprint of the principal passages from North's "Plutarch," forming the basis of the play, is a useful adjunct, but it had better have been placed under a separate heading. Practically it is no matter, but, in a literary point of view, the introduction is felt to end weakly, tailing off into a string of extracts.

The notes, critical and literary, run mainly at the bottom of the page. They are conspicuously judicious, whether selected or original; and they throw a full and steady light upon the dark and dim places of the text. Fortunately, Mr. Macmillan has "not had the temerity to suggest many new readings"; still less has he had the rashness to make innovations on the text. He is wisely conservative in this respect; his suggestions do not point to success in the difficult enterprise of conjecture. He seems clearly right in placing a dash at the end of iv. iii. 5, thus at once saving the reading of the Folios and illustrating a characteristic of Brutus. We cannot argue the points now, but we do not like any of his half-dozen suggestions, except those on iii. i. 39 and iii. ii. 118. His laudable attempt to explain the usual reading in iii. i. 174-5 is worth further consideration; but the interruption of the easy flow of Brutus's speech by such a ragged boulder does incline one to be content with Capell's emendation. Some good longer notes are relegated to an appendix. One closes the book with real satisfaction, and with the belief that every serious student of the play will be grateful to Mr. Macmillan for his able and discreet guidance.

#### FIGURES MADE CLEAR.

*The Tutorial Arithmetic.* By W. P. Workman, M.A., B.Sc., assisted by R. H. Chope, B.A. (Clive.)

This volume cannot fail to take a good place amongst the best text-books on the subject. It is an excellent addition not only to the "University Tutorial Series," but to arithmetical class books in general. There is undoubted evidence throughout—though, perhaps, even more especially in the non-commercial portion of the book—that the work has been produced by masters of the

subject and able teachers. The clearness of the explanations of the theory, the directness of the language, and the fitness of the definitions are extremely satisfactory. The volume is, perhaps, primarily intended for students enjoying the additional advantages of oral instruction; but it is also very suitable for purposes of private study. The best methods of setting out work are sufficiently indicated in the large number of illustrative examples, and there are frequent and valuable observations bearing on details in the treatment of problems and on the errors that students are specially liable to fall into. In the demonstration of the theory of many of the processes there are placed side by side purely numerical examples and examples with letters as types of number generally; and it may be noted that the gain in generality is obvious, while no knowledge of algebra is required in order that the majority of the latter examples may be thoroughly understood. At the close of the book a short and very interesting chapter on Congruences is introduced, and the principles are then applied to the discussion of portions of the theory of Recurring Decimals. The volume contains a very large number of exercises, and the authors believe that the final series of problems is an exceptionally difficult collection. The text appears to have been very carefully passed through the press, but there is on page 341 (Art. 210, last paragraph but one) an evident and rather important misprint.

## GENERAL NOTICES.

### CLASSICS.

"Murray's Home and School Library."—*Plato's Republic*.

By Lewis Campbell, M.A., LL.D.

A charming introduction and companion to the "Republic." Dr. Campbell writes with fulness of knowledge and thought, and with a mind eagerly attentive to modern aspects of the matters dealt with by Plato. His object, he explains, is twofold: "partly to explain some aspects of the dialogue, in which elucidation seems to be required, at least for beginners; but partly also to indicate some ways in which the spirit of the author of the 'Republic,' when duly 'unsphered,' may without violence be fruitfully applied to modern life, notwithstanding the extreme difference both of real and imaginary circumstances." Education being, in Plato's view, "the pivot article of a standing or falling commonwealth," educational theory occupies about one-third of the whole dialogue; and on this aspect Dr. Campbell brings to bear a prolonged and mature experience, as well as ripe scholarship and knowledge of the world. Referring to two minor principles that Plato insists on—that subjects should be classified and graduated according to the pupils' ages, and that the earliest lessons should be accompanied with enjoyment—he asks: "Have not both these rules been violated by our public-school system—promoting cram and gerund-grinding between eight and twelve, and depriving the more arduous studies of the fresh interest that might else attend them if commenced when the mind has been prepared to profit by them?" The illustrations are interesting and useful. Dr. Campbell writes "Plato" and "Zeno," the "Euthyphro" and the "Meno," but "Glaucou" as well as "Solon," and "Heraclitus," but "Adeimantus." Why not have the courage to call men uniformly by their own names?

"Macmillan's Greek Course."—*Greek Prose Composition*.

By S. O. Andrew, M.A.

Mr. Andrew limits himself to the mature Attic, so as to avoid "Baboo" Greek. Assuming accidence and syntax, he throws his strength upon "analysis and the resulting comparison of idioms," with a view to the study of the language "as rhetoric, as an instrument of expression." The introduction (58 pages) selects a variety of grammatical and rhetorical points for detailed illustration; then come 187 exercises in the different forms of composition, with brief notes of suggestion; and a vocabulary is appended. The remarks introductory to the several divisions might have been extended with advantage; and the two or three specimen translations suggest the prospect of a "key." The exposition, selection, and annotation indicate alike thorough care and competent scholarship. The book will make a place for itself in the crowd.

(1) *Schüler-Kommentar zu H. S. Sedlmayers Ausgewählten Gedichten des P. Ovidius Naso*. Second edition. Von K. A. Schwertassek. (Williams & Norgate, for G. Freytag, Leipzig.) (2) *Wörterverzeichnis zu derselben*. Von H. Jurenka. (Same publishers.)

Dr. Schwertassek has made three essential alterations on his first edition. He has largely extended the practice of indicating the construction; he has thrown out all references to a grammar; and he has necessarily dropped the references to Dr. Sedlmayer's section on poetical peculiarities, which no longer appears in the edition of the text. The notes are quite elementary and very full—overdone, we should say. Dr. Jurenka's "Wörterverzeichnis" is adequate and careful; but why a special dictionary at all?

*A First Latin Course*. By E. H. Scott and F. Jones. (Blackie.)

The reformed methods of modern language teaching have evidently influenced the writers of this course. There is plenty of repetition, and of conversational practice; and oral exercises in supplying terminations, like "Romani insulam vast—," form a considerable part of it. Another feature is the addition to the several lessons of short Latin proverbs in black type intended for learning by heart. There are also a few pieces for reading. The vocabularies are arranged according to the lessons, and an index of English words refers the pupil back to the exercise where each occurs. There are arguments against this plan as well as in favour of it.

### MATHEMATICS.

*Longmans' Complete Arithmetics: Mental and Practical, Course B.—Books IV.—VII.*

The successive books satisfy the requirements of the latest Code of Regulations for the successive standards of day schools, and in some cases the range of the volume is rather wider than that absolutely demanded. The small quantity of text is good; but the task of explanation is practically left to teachers. The sets of exercises are divided into similarly graduated sections with a view to enabling teachers of large classes to ensure among their pupils, at every stage, independent work of an even character. The answers to the exercises contained in each book are issued in a separate companion volume.

*Blackie's Three-Division Arithmetic.*

A good series of three little books, written specifically for the use of "small elementary schools," and covering the whole of the necessary school course. A preliminary page, besides giving other useful hints to teachers, indicates the limits of time within which average pupils should be able to master the contents of the several volumes, and points out how any extension of the school career of an individual pupil may be used with advantage to ensure greater proficiency in arithmetic, and possibly a wider knowledge of it. By far the greater number of exercises deal with questions of a concrete character, and are thus the more likely to awaken the interest of children. There is a minimum of text. The introduction to vulgar fractions is particularly good. In discussing averages, the author notes the curious origin of the word, and apparently implies that the true meaning of it is "loss by sea." The best authority is against that view, and, in any case, where is the good of starting etymological conundrums in such a place? Occasionally a slight want of clearness is noticeable in the wording of a sentence, but such defective expression is exceptional.

### MODERN LANGUAGES.

*Trois Comédies (A. de Musset)*. Edited by K. McKenzie, Ph.D. (Heath.)

A convenient edition of "Fantasio," "On ne badine pas avec l'amour," and "Il faut qu'une porte soit ouverte ou fermée." In a dozen pages Dr. McKenzie summarizes the main events of De Musset's life, and indicates his chief works; and he adds some pages of notes, which are barely sufficient for the purpose of elucidating the text and give the impression of having been written in a hurry.

*La Jeune Sibérienne (Xavier de Maistre)*. Edited by W. G. Etheridge. (Blackie.)

We regret that the editor did not annotate some more novel and interesting and really French tale. His notes on grammar and on subject-matter alike are very good indeed; not so the vocabulary, which is incomplete, and should be overhauled at once.

*Cinq Scènes de la Comédie Humaine (H. de Balzac)*. Edited by B. W. Wells, Ph.D. (Heath.)

To the mature student these scenes will be of interest, as showing some aspects of Balzac's work; for class-reading the book is quite unsuitable. The first *scène* is a tale of madness; the second of murder; the third is tainted by insinuations against the heroine; the fifth introduces the figure of Christ in a highly poetic fashion; and there is only the fourth remaining, which has been edited before, and is fairly well known—the "Episode sous la Terre." The notes are adequate, but it is a little surprising to find no note on *saute, marquis!* in the third line of page 1, nor on *d'honneur* (page 4, line 23); to learn that Swabia is part of Bavaria (page 197); and to find Prosper called Caspar (page 198). It is more than surprising to meet with such a fatuous remark as this: "That a French girl should blush at such lying marks her as a person of exceptionally ingenuous candour."

*Commercial French, Part II*. By W. M. Poole and M. Becker. (Murray.)

With regard to this second part, there is no need to say more than that it is as good as the first, and that any one teaching or learning French for commercial purposes should study it at once. It is the best book of its kind that we have yet seen. Reform method teachers will be particularly grateful for it.

*L'Arrabbiata, and Hochzeit auf Capri (Paul Heyse)*. Both edited by Dr. W. Bernhardt. (Heath.)

Much as we admire Heyse as a writer of short stories, and of "L'Arrabbiata" in particular, we do not think that Dr. Bernhardt was well advised in following the extraordinary suggestion of the New

England Commission on Text-Books for Preparatory Schools, which recommended Heyse's novels as "pre-eminently suitable for students preparing for entrance to college" (i.e., a secondary school). "L'Arrabbiata" is a tale of passion, a tale of Italy; to make it a peg for elementary grammar is sinful. The "Hochzeit auf Capri" also has an Italian scene, about which the editor speaks in fervid terms in his introduction, and a very slight plot, little likely to interest our pupils. The notes are sufficient, but occasionally somewhat pedantic in tone; the vocabularies are practically complete.

## ENGLISH.

*Emerson's Essay on Beauty.* Edited by Susan Cunningham. (Speight.)

Miss Cunningham treats Emerson's essay as "a class study in English composition." One cannot but doubt whether she might not have selected a more fruitful piece, in point both of matter and of style. We suspect this essay is rather beyond the powers of "upper forms in schools," whatever "private students" may make of it. However, it represents a laudable aspiration. Miss Cunningham takes "English composition" in a tolerably wide sense. Among her questions are these: "Where do you find the earliest mention of a treatise on plants and flowers?" "What differences of character might be expected in the residents of (a) Naples; (b) Northwich; (c) Bedford; (d) the hospice of St. Bernard; (e) Tunbridge Wells?" "What are the points which you would observe in a loaf of bread before determining whether it is beautiful?" "What of the 'realistic drama' and the 'Lord Mayor's Show' as satisfying the idea of appropriateness?" We should like to see our leading literary men answer such questions. And "when is 'parallel to,' and when 'parallel with,' correct." Well, when? Miss Cunningham is really more concerned with the thought and the facts than with the "composition," and with the composition in the highest rhetorical sense than with the mechanics of style. "Since it is comparatively easy to mistake fault-finding for criticism, the method of pointing out the author's peculiarities, tricks of style, and 'faults' is purposely avoided." That is to say, one of the most effective means of turning the subject to account for the end in view is deliberately neglected on a mere fancy. You cannot teach "English composition" without a standard and without bringing your subject to the test of that standard. Yet the idea of the "study" is elevating, and the treatment is earnest and suggestive.

*A Text-Book of Applied English Grammar.* By Edwin Herbert Lewis, Ph.D. (Macmillan.)

Prof. Lewis believes "that elementary oral correctness and an elementary sentence-sense should be the first objects of grammar study." By precepts and oral exercises he labours to inculcate correctness, chiefly in the use of verbs. The greatest bugbear is the universal "ain't." "Every grammar class should be an anti-ain't club"—that is, in Chicago and the region round about. Another prominent outsider is *wa'n't* (wasn't). "Brung," we learn, "is a vulgarism"; "I done" is a bad vulgarism; so is "has rose"—we miss the classic "riz." But really there is very little for English schools in this section, except the proper use of "lie" and "lay." The second section of the book is an elaborate inculcation of the main elements of a sentence—simple, complex, and compound, especially with a view to getting the punctuation right. The end does not justify the means. Teach the proper thing at the proper time, and seven-tenths of this appalling drudgery of exercises should be quite unnecessary.

## HISTORY AND GEOGRAPHY.

Pitman's Commercial Series.—*Commercial History.* By J. R. V. Marchant, M.A. (Pitman.)

The first half of this book consists of a very interesting historical sketch of ancient and mediæval commerce. The valleys of the Euphrates, the Tigris, and the Nile have afforded contemporary records of commercial and industrial activity existing nearly six thousand years ago. From the commerce for which rivers form the high road we pass to the commerce of the narrow seas, to the story of the Phœnicians, Greeks, and Romans, and thence to the period of the middle ages, to the story of the Italian, Flemish, and German towns. This is followed by an excellent sketch of English commerce, manufactures, and commercial legislation from the time of the Normans to that of the Tudors. An account of the beginning of oceanic navigation, of the great explorers and discoverers from Columbus to Drake and Hudson, introduces some interesting details about the commencement of trade with Russia, Africa, and the Indies, and the origin of the first trading companies. The latter part of the book is hardly so satisfactory, partly through the greater complexity of the subject in modern times, partly because the division of the matter under a great number of different headings tends rather to interfere with the narrative and change the work into a sort of dictionary of subjects. Many of these subjects are adequately treated, but the exigencies of space have caused others to be unduly curtailed, and in one or two cases not to be brought quite up to date.

*Problems and Exercises in English History (1399-1603): A Revision-Term Course, containing Sixty Typical Questions, . . . with full Answers, &c.* By J. S. Lindsey. (Cambridge: Heffer & Sons.)

This is a *multum in parvo*, calculated to be useful to the historical

student—though the answers to examination questions rather suggest the competitive student. Mr. Lindsey's knowledge is extensive, and his *brochure* is not uninteresting in form if regarded as a practical book for the teaching of history.

## MISCELLANEOUS.

*The College Student and his Problems.* By James H. Canfield, LL.D. (Macmillan.)

Dr. Canfield is Librarian of Columbia University, and he has been in succession Chancellor and President of two other American Universities. He brings to his task, therefore, the ripe wisdom of years and varied experience. We fear, however, that the conditions of University life are so totally different in the States that our English youth is not likely to profit directly by Dr. Canfield's sage counsels. To the general reader the most interesting part in the volume is the appendix on expenses. The estimated cost of a year of college life (excluding clothes and travelling and vacation expenses) varies from a minimum of £22 in the Ohio State University to a maximum of £166 at the Columbia State University. Seeing that the cost of living is generally far higher in the States than in England, the first figures seem almost incredible. It is interesting, also, to learn that the best business firms in the States give the preference to graduates, and that Horace Greeley's jibe ("No college graduate or other horned cattle need apply") is quite out of date. This is borne out by what Mr. Carnegie told us the other day. The managers and superintendents of all the departments of his vast business have, almost without exception, gone through a regular University or polytechnic course.

## FIRST GLANCES.

## MISCELLANEOUS.

- Alger, Edith G.: *A Primer of Work and Play.* 1s. 6d. Heath.  
[Capital illustrations; familiar matter; "Look-and-say" principle; interesting companion book to any principle.]
- Aunt Kate's Handy Book of Personal and Household Information. New and Revised Edition. 1d. Leng (Dundee).  
[48 pages of most useful matter.]
- Broman, Allan: *School Gymnastics on the Swedish System.* 3rd Edition. 3s. 6d. net. John Bale, Sons, & Danielsson.  
[Re-written. 62 illustrations. Thoroughly sensible.]
- City and Guilds of London Institute, Department of Technology: *Programme for 1902-3.* 9d. net. Whittaker.

# BLACKIE & SON'S NEW LIST

WRITE FOR EDUCATIONAL CATALOGUE.

**FRENCH IN PICTURE AND TALK.** Eight Pictorial Conversational Sheets, for the teaching of French to young beginners. Each picture has the names of the objects represented printed in French, and these are to be used as the basis of conversation lessons as fully developed in the handbook below. Boldly printed on strong manilla paper 18×24 inches. Mounted on roller, 6s. per set.

**FRENCH IN PICTURE AND TALK.** A Handbook (for teachers) of Conversational French, corresponding to the sheets. By MARGUERITE NINET. Price 2s. 6d.

## SKELETON FRENCH AND GERMAN GRAMMARS

**A SKELETON GERMAN GRAMMAR.** By Professor H. G. ATKINS, of King's College. Printed in red and black. Cloth, 1s. 6d.

This new book is intended to give the minimum of grammar requisite for reading. It does not profess to contain everything that the pupil ought to know; it does claim that he ought to know everything it contains. It is not intended as a manual for the study of grammar after the old fashion, that is to say, for grammar's sake, but rather as a guide for the beginner who proceeds direct to the translation of a German text, or begins by grappling with the difficulties of real German in a similar way by any direct method.

**A SKELETON FRENCH GRAMMAR.** By Professor H. G. ATKINS, King's College, London. Cloth, 1s. 6d.

## BLACKIE'S LITTLE FRENCH CLASSICS

Interesting Selections from great French Writers, well edited, well printed, well bound. **FOURPENCE** each book.

**SELECTIONS FROM RABELAIS.** Edited by E. C. GOLDBERG, M.A.

**MOLIÈRE—SCENES FROM LE MÉDECIN MALGRÉ LUI.** Edited by W. J. CLARK, M.A., Ph.D.

**LESAGE—SELECTIONS FROM GIL ELAS.** Edited by H. W. ATKINSON, M.A.

**PROSPER MÉRIMÉE—MATEO FALCONE, &c.** Edited by J. E. MICHELL, M.A.

**MADAME DE SÉVIGNÉ—SELECT LETTERS.** Edited by Miss M. F. VERNON HARCOURT.

**BOSSUET—ORAISONS FUNÉBRES.** Edited by the Rev. H. J. CHAYTOR, M.A.

**THEOPHILE GAUTIER—LE PAVILLON SUR L'EAU.** Edited by W. G. HARTOG, M.A.

**LA FONTAINE—LONGER FABLES.** Edited by A. H. WALL, M.A.

**MUSSET—SELECTIONS.** Edited by F. W. B. SMART, M.A.

**CHATEAUBRIAND—LES MARTYRS.** SELECTIONS. Edited by E. T. SCHOEDELIN, M.A.

**BRUEYS AND PALAPRAT—L'AVOCAT PATELIN.** Edited by E. B. LE FRANÇOIS.

**VICTOR HUGO—WATERLOO.** Edited by G. H. CLARKE, M.A.

**CORNEILLE—LE CID.** SELECT SCENES. Edited by LOUIS BARBÉ, B.A.

**RACINE—LES PLAIDEURS.** (Complete.) Edited by D. LOWE TURNBULL, M.A.

**MICHELET—L'INSECTE.** SELECTIONS. Edited by MAURICE GEROTHWOHL.

## THE WARWICK SHAKESPEARE

GENERAL EDITOR—

Prof. C. H. HERFORD, Litt.D.,

Examiner in English to London University,  
Cambridge Local Examination  
Board, &c.

*The Academy* says:—"In brief, here is an edition to be unreservedly recommended."  
(*Midsummer Night's Dream.*)

*The Athenæum* says:—"No better edition could be found, either for the class teacher or for the solitary student."  
(*Henry the Fifth.*)

*The Educational Times* says:—"We have seldom met with a school Shakespeare in which the writer has so completely succeeded in placing himself in the position of the intelligent student his book is designed to guide."  
(*Merchant of Venice.*)

**AS YOU LIKE IT.** Edited by J. C. SMITH, M.A. 1s. 6d.

**CORIOLANUS.** Edited by E. K. CHAMBERS, M.A. 1s. 6d.

**CYMBELINE.** Edited by A. J. WYATT, M.A. 1s. 6d.

**HAMLET.** Edited by E. K. CHAMBERS, M.A. 1s. 6d.

**HENRY THE FIFTH.** Edited by G. C. MOORE SMITH, M.A. 1s. 6d.

**HENRY THE EIGHTH.** Edited by D. NICHOL SMITH, M.A. 1s. 6d.

**JULIUS CESAR.** Edited by ARTHUR D. INNES, M.A. 1s.

**KING JOHN.** Edited by G. C. MOORE SMITH, M.A. 1s. 6d.

**KING LEAR.** Edited by D. NICHOL SMITH, M.A. 1s. 6d.

**MACBETH.** Edited by E. K. CHAMBERS, M.A. 1s.

**MERCHANT OF VENICE, THE.** Edited by H. L. WITHERS M.A. 1s. 6d.

**MIDSUMMER NIGHT'S DREAM, A.** Edited by E. K. CHAMBERS, M.A. 1s. 6d.

**MUCH ADO ABOUT NOTHING.** Edited by J. C. SMITH, M.A. 1s. 6d.

**RICHARD THE SECOND.** Edited by C. H. HERFORD, Litt.D. 1s. 6d.

**RICHARD THE THIRD.** Edited by GEORGE MACDONALD, M.A. 1s. 6d.

**TEMPEST, THE.** Edited by F. S. BOAS, M.A. 1s. 6d.

**TWELFTH NIGHT.** Edited by ARTHUR D. INNES, M.A. 1s. 6d.

## BLACKIE'S ILLUSTRATED GREEK SERIES

General Editor—Prof. TYRRELL, Litt.D.

**ÆSCHYLUS—EUMENIDES.** Edited by LIONEL D. BARNETT, M.A., Litt.D., formerly Scholar of Trinity Coll., Cambridge. 3s. 6d.

**XENOPHON—ANABASIS II.** Edited by the Rev. G. H. NALL, M.A., Assistant Master at Westminster School. 2s.

**HOMER—ODYSSEY, Book I.** Edited by the Rev. E. C. EVERARD OWEN, M.A., Assistant Master at Harrow. 2s.

*The Journal of Education* says:—"The best edition, taking it all round, of a classical text-book that we have seen for many a long day. Mr. Owen gives just the right amount of help that an upper fifth or sixth form boy requires. The illustrations are not only of high artistic merit, but are some of them the best practical commentary, as those of dress and armour, ships and drinking vessels."

LONDON: BLACKIE & SON, LIMITED, 50 OLD BAILEY, E.C.

**MATHEMATICS.**

**15032.** (R. KNOWLES.)—In DE MORGAN'S *Calculus*, p. 257, the following examples are given:—

$$2 \cdot 3 \cdot 4 + 3 \cdot 4 \cdot 5 + 4 \cdot 5 \cdot 6 = \frac{4 \cdot 5 \cdot 6 \cdot 7 - 1 \cdot 2 \cdot 3 \cdot 4}{4} = 204;$$

$$2 \cdot 3 + 3 \cdot 4 + 4 \cdot 5 + 5 \cdot 6 = \frac{5 \cdot 6 \cdot 7 - 1 \cdot 2 \cdot 3}{3 \cdot 1} = 68.$$

Show that these results can be obtained by means of the coefficients in the expansion of  $(1-x)^{-n}$ .

*Solutions* (I.) by J. PRESCOTT, B.A.; (II.) by T. PRELLE, A.I.A., and A. W. POOLE, B.A.

(I.) We have  $(1-x)^{-n} = (1-x)(1-x)^{-(n+1)}$ ,

$$\text{or } 1 + nx + \frac{n(n+1)}{2!}x^2 + \frac{n(n+1)(n+2)}{3!}x^3 + \dots$$

$$= (1-x) \left\{ 1 + (n+1)x + \frac{(n+1)(n+2)}{2!}x^2 + \frac{(n+1)(n+2)(n+3)}{3!}x^3 + \dots \right\}.$$

Hence, equating the sum of the coefficients of the powers of  $x$  up to  $x^r$ ,

$$n + \frac{n(n+1)}{2!} + \frac{n(n+1)(n+2)}{3!} + \dots + \frac{n(n+1)\dots(n+r-1)}{r!} = \frac{(n+1)(n+2)\dots(n+r)}{r!} - 1.$$

By putting  $n = 4, r = 3$ , we get the first result, and by putting  $n = 3, r = 4$ , we get the second.

(II.) Let  $S = \sum_{\beta=0}^{\beta=r-1} (p+\beta)(p+\beta+1)(p+\beta+2)\dots(p+\beta+m-1)$ .

Now, since the coefficient of  $x^m$  in the expansion of  $m!(1-x)^{-n}$  is  $n(n+1)\dots(n+m-1)$ ,

$$S = \text{the coefficient of } x^m \text{ in the expansion of } m! \sum_{n=p}^{n=p+r-1} (1-x)^{-n},$$

$$\text{i.e., in } m!(1-x)^{-(p+r-1)} \frac{1-(1-x)^r}{1-(1-x)}.$$

$$\text{Hence } S = \text{the coefficient of } x^{m+1} \text{ in } m! \left[ \frac{(1-x)^{-(p+r-1)} - (1-x)^{-(p-1)}}{1-(1-x)} \right] = \frac{(p+r-1)(p+r)(p+r+1)\dots(p+r+m-1) - (p-1)p(p+1)\dots(p+m-1)}{m+1}.$$

Putting  $p = 2, m = 3, r = 3$ ,

$$S = 2 \cdot 3 \cdot 4 + 3 \cdot 4 \cdot 5 + 4 \cdot 5 \cdot 6 = \frac{4 \cdot 5 \cdot 6 \cdot 7 - 1 \cdot 2 \cdot 3 \cdot 4}{4} = 204.$$

Putting  $p = 2, m = 2, r = 4$ ,

$$S = 2 \cdot 3 + 3 \cdot 4 + 4 \cdot 5 + 5 \cdot 6 = \frac{5 \cdot 6 \cdot 7 - 1 \cdot 2 \cdot 3}{3} = 68.$$

**14780, 15012, 15062.** 14780.—(Rev. J. CULLEN.)—A given line cuts the circumcircle in P and Q. Prove that (1) the asymptotes of the isogonal transformation of PQ are at right angles to the SIMSON lines of P and Q. (2) If PQ passes through the circumcentre, then the asymptotes are the SIMSON lines. (3) If PQ be  $\Sigma a\lambda = 0$  and  $(p, q, r)$  the trilinear coordinates of P (or Q), then the asymptotes are of the form  $\Sigma \alpha \lambda p^2 = 0$ .

15012. (Professor SANJANA, M.A.)—Let P be any point on the circum-circle of ABC; draw a chord QR of the circle perpendicular to the SIMSON line of P; then PR shall be perpendicular to the SIMSON line of Q, and also PQ to that of R. Prove also that these three lines concur at the point midway between the ortho-centres of the triangles PQR and ABC.

15062. (Professor SANJANA, M.A.)—On the circum-circle of a triangle ABC a fixed point P is taken, and QR is a chord of the circle parallel to the SIMSON line of P: prove that PR is parallel to the SIMSON line of Q, and PQ to that of R. The triangle formed by the three SIMSON lines is homothetic to the triangle PQR: find the locus of the homothetic centre as QR moves parallel to itself.

*Solutions* (I.) by C. E. YOUNGMAN, M.A.; (II., 15012), by R. F. DAVIS, M.A.; (III., 15012), by H. W. WEBSTER, M.D., and S. CONSTABLE.

(I.) For 15012, see Question 14613, Vol. LXXV., p. 107. In the figure for it, take P diametrically opposite to P; its pedal line will be perpendicular to that of P, and therefore parallel to QR; and pQ, pR are perpendicular to PQ, PR—i.e., parallel to the pedals of R and Q; so that the triangle pQR exhibits the properties of Question 15062, first part. For the second, the pedals of p, Q, R bisect Hp, HQ, HR at L, M, N (H being the orthocentre of ABC), and they are parallel to the sides of LMN; therefore they form a triangle p'Q'R' with sides double those of LMN, or equal to those of pQR. Hence the homothetic centre bisects pp'. And when QR moves parallel to itself p' describes the pedal of P; therefore the locus required is the straight line half way between this pedal and p.

Call P', Q' the points isogonal to P, Q; they are at infinity, so that the asymptotes of the hyperbola ABCP'Q' (the isogonal transformation of PQ) are the tangents at P', Q', and are parallel to AP', AQ'.—Now, whatever the position of P, AP' is perpendicular to one of the sides of the pedal triangle of P; hence the first part of 14780. In part (2) the hyperbola is rectangular, passing through H; and its centre O is on the nine-point circle; therefore R, diametrically opposite to H, lies on the circum-circle. Hence the isogonal of R is at infinity and on PQ; therefore the pedal of R is perpendicular to PQ. Consequently (by 15012), since R is the orthocentre of PQR, the pedals of P and Q meet at O; and each, being perpendicular to one asymptote, coincides with the other. Thirdly, the line joining the isogonals of two points  $(\alpha_1\beta_1\gamma_1)$  and  $(\alpha_2\beta_2\gamma_2)$  on  $\Sigma a\lambda = 0$  has evidently the equation  $\Sigma \alpha a_1 \alpha_2 \lambda = 0$ . Hence the equation of the tangent at P' is  $\Sigma \alpha p^2 \lambda = 0$ .

(II.) If Pp be the chord of the circum-circle perpendicular to BC, the SIMSON line of P is parallel to Ap, and bisects the join of P to the ortho-centre H (MILNE and DAVIS, p. 52). Then, since Pp, BC are perpendicular,

$$\begin{aligned} \text{arc BP} + \text{arc Cp} &= \text{semi-circumference,} \\ &= \text{arc AQ} + \text{arc Rp,} \end{aligned}$$

since Ap, QR are perpendicular; hence

$$\text{arc BQ} = \text{arc AP} + \text{arc CR};$$

which it will be similarly found is also the condition for RP being perpendicular to the SIMSON line of Q, &c.

Let K be the orthocentre of PQR. The SIMSON line of P bisects PH and is perpendicular to QR, or parallel to PK. It therefore bisects HK.

(III.) Let pp, the SIMSON line of P, meet qq, the SIMSON line of Q, in F; QR cut pp at right angles in E, and PR cut qq in D. By a well known theorem the SIMSON lines of P and Q must meet at the same angle subtended by the chord PQ on the circumcircle; therefore

$$\angle DFE = \angle PRQ;$$

therefore FERD is a cyclic quadrilateral; therefore

$$\angle FDR = \text{right angle, being supplementary to FER.}$$

Let O' be the orthocentre of PQR. Then QR is perpendicular to PO'. Therefore PO' is parallel to pp. By a well known theorem the SIMSON line of P bisects the line PO, if O be the orthocentre of ABC. Therefore pp bisects OO'. Similar results follow by using the SIMSON line of R in the first theorem, and the SIMSON lines of Q and R in the second.

**15097.** (H. BATEMAN.)—PP', QQ' are two pairs of isogonal conjugate points. PQ, P'Q' meet in R; P'Q, P'Q' meet in R'. Prove that R and R' are isogonal conjugate points.

*Solution* by Professor SANJANA, M.A.

Let P, Q, R have the coordinates  $(a_1b_1c_1), (a_2b_2c_2), (a_3b_3c_3)$  respectively; then their isogonal conjugates P', Q', R' will be  $(a_1^{-1}b_1^{-1}c_1^{-1}), (a_2^{-1}\dots), (a_3^{-1}\dots)$  respectively. Also let PQR, P'Q'R' be straight lines; then the determinants  $(a_1b_2c_3)$  and  $(a_1^{-1}b_2^{-1}c_3^{-1})$  are each zero. It can then be shown that the determinants  $(a_2^{-1}b_3^{-1}c_1)$  and  $(a_3^{-1}b_1^{-1}c_2)$  are each zero; hence the points Q', R', P are in a straight line, and so also are R', P, Q. From which the proposition follows.

**15047.** (Rev. Prebendary W. A. WHITWORTH, M.A.)—Prove that the lowest value of N for which the equation  $x^2 + 3y^2 = N$  has 24 solutions in positive integers, zero excluded, is  $N = 214396$ . [The Proposer desires to withdraw Quest. 14998, as the statement made is true only in a restricted sense.—EDITOR.]

*Solutions* (I.) by R. W. D. CHRISTIE; (II.) by Lt.-Col. ALLAN CUNNINGHAM, R.E.

(I.)  $N = 214396 = 2^2 \cdot 7 \cdot 13 \cdot 19 \cdot 31$ . The primes 7, 13, 19, 31 are each of form  $3M + 1 = a^2 + 3b^2$ . Now, by an extension of EULER'S

theorem, we have  $(a^2 + nb^2)(c^2 + nd^2) = (ac \pm nbd)^2 + n(ad \mp bc)^2$ , and four other forms, making six in all, and  $n = 3$ ; we easily deduce

$$7 \times 13 = 8^2 + 3 \cdot 3^2 = 4^2 + 3 \cdot 5^2 = (\frac{1}{2} \cdot 7)^2 + 3 \cdot (\frac{1}{2} \cdot 3)^2 = (\frac{1}{2} \cdot 13)^2 + 3 \cdot (\frac{1}{2} \cdot 3)^2$$

$$19 \times 31 = 17^2 + 3 \cdot 10^2 = 1^2 + 3 \cdot 14^2 = (\frac{1}{2} \cdot 19)^2 + 3 \cdot (\frac{1}{2} \cdot 10)^2 = (\frac{1}{2} \cdot 31)^2 + 3 \cdot (\frac{1}{2} \cdot 10)^2$$

Therefore  $N =$  the following twenty-four solutions, where, for brevity, 452, 58 means  $N = 452^2 + 3 \cdot 58^2$  :—

- even 452, 58; 92, 262; 436, 90; 164, 250; 268, 218; 236, 230; 428, 102; 412, 122;
- odd 439, 85; 347, 177; 313, 197; 139, 255; 353, 173; 83, 263; 457, 43; 293, 207; 461, 25; 193, 243; 463, 3; 227, 233; 367, 163; 61, 265; 389, 145; 23, 267.

N.B.—All the odds are obtainable from the evens by an obvious rule, and, since every  $P_{3m+1}$  produces the three forms  $3A^2 + B^2$ ,  $[\frac{1}{2}(3A \mp B)]^2 + 3[\frac{1}{2}(A \pm B)]^2$ , one integral and two fractional, it follows immediately that the product of  $n$  similar primes equals  $2^{n-1}$  integral and  $2^n$  fractional values; consequently when  $N$  contains a factor 4 (or  $4^m$ ) the fractions disappear. In this case we get for the primes alone 8 integral and 16 fractional, and, multiplying by 4, we obtain by a second method the above 24 integral values.

(II.) It is known that a number  $N$  which has several partitions of form  $(x^2 + 3y^2)$  must be composite and must consist of a set of factors  $N = Eabcd \dots$ , where  $E = 1$  or 4, and  $a, b, c, d, \dots$  are unequal odd primes of form  $p = 6w + 1$ . The number of such partition  $(x^2 + 3y^2)$  of which  $N$  is capable will be  $2^{r-1}$  if  $E = 1$ , or  $3 \cdot 2^{r-1}$  if  $E = 4$ , where  $r =$  the number of odd primes. Here  $24 = 3 \cdot 8 = 3 \cdot 2^{r-1}$ , giving  $r = 4$ ; so that  $N = 4abcd$ . And  $N$  will be least when  $a, b, c, d$  are the least odd primes of form  $(6w + 1)$ , i.e. 7, 13, 19, 31; therefore

$$N = 4 \cdot 7 \cdot 13 \cdot 17 \cdot 31.$$

10198. (JOHN GRIFFITHS, M.A.)—The coordinates  $x, y, z$  being proportional to the perpendicular distances from the sides of a triangle  $ABC$ , prove that (1) the locus of a point  $(x, y, z)$  such that its pedal circle (i.e., the circle which passes through the feet of the perpendiculars drawn from the point in question upon the sides of the triangle) touches the nine-point circle is the cubic

$$x(y^2 - z^2) \cos A + y(z^2 - x^2) \cos B + z(x^2 - y^2) \cos C = 0;$$

and (2) trace this curve.

The PROPOSER gives the following interesting details as to the origin of the Question :—

The theorem in Question 10198 was derived by me from the following results.

- (1) If  $P, P'; Q, Q'$  denote two pairs of isogonal points, the sides of the triangle of reference and the lines  $PQ, PQ', P'Q, P'Q'$  are all tangents to a conic  $\Sigma$ .
- (2) The director circle of  $\Sigma$  and the pedal circles of  $(P, P'), (Q, Q')$  are coaxial.
- (3) If a conic be drawn through the circum-centre to touch the sides, its director circle will touch the pedal of the circum-centre; i.e., the nine-point circle.

Hence the theorem in question follows, if we suppose  $Q$  to coincide with the circum-centre and  $P, P', Q$  to be collinear.

The asymptotes are parallel to the three lines  $OP_1, OP_2, OP_3$ , the joins of the circum-centre  $O$  with the three points  $P_1, P_2, P_3$  (other than the vertices  $A, B, C$ ) where the cubic intersects the circum-circle.

Note on Question 14975.

By W. H. BLYTHE, M.A.

The cubic required is not  $x(y^2 - z^2) \sin A + \dots = 0$ , as given in note to Question 10198, *Educational Times*, June, 1902, and *Mathematical Reprint*, Series II., Vol. II., p. 111, but

$$bcx(y^2 - z^2) + cay(z^2 - x^2) + abz(a^2 - y^2) = 0.$$

the tangents to the curve at the angular points and at the centre of gravity meet in the LEMOINE point; the tangents at the centres of the inscribed and escribed circles meet in the centre of gravity.

Addition to Mr. Blythe's Note.

By G. N. BATES.

This is the so-called "cubique des dix-sept points."

In addition to the fourteen points given in the question, the curve also passes through the mid-points of the perpendiculars. Vigarié in his *Géométrie du Triangle* gives references to, Koehler "Sur un cubique remarquable du plan du triangle" (*Jour. de Math. Spec.*, 1887); Lemoine, *L'Annuaire de l'Association Française*, 1888; in addition to the reference Thomson, *Educational Times*, 1864.

13967. (R. TUCKER, M.A.)—In the figure,  $ABCD$  is a given square,

$$AE = DF = CG = BH = a,$$

and  $PQRS$  is another square. Find when  $PQRS$  is a maximum ( $\theta$  variable).

[The figure is a common one in bamboo chairs. Mr. TUCKER refers to pp. 633, 637 of CLIFFORD'S *Mathematical Papers* for notes upon this, the Bride's Chair.]

Solution by the late Rev. T. MITCHESON, B.A.

It would appear that  $PQRS$  is a maximum when  $HPEA$  is a minimum; which is so when  $HP$  coincides with  $HE$ . Hence the value required is

$$(a + b)^2 - 2ab = a^2 + b^2.$$

Or, thus: join  $HE$ , and let  $\angle EHP$  be  $\phi$ ; then

$$\text{area of } HPEA = \frac{1}{2} \{ ab + (a^2 + b^2) \sin(\theta - \phi) \cos(\theta - \phi) \}$$

$$= \frac{1}{2} \{ 2ab + (a^2 + b^2) \sin 2(\theta - \phi) \}.$$

This is obviously a minimum when  $\theta = \phi$ , &c.

15021. (ALEXROP.)—Ranger les nombres 1, 2, 3, ..., 8 de manière que la différence entre deux quelconques d'eux ne soit pas égale en valeur absolue à la différence de leurs rangs. (Par ce problème on place sur l'échiquier huit reines en sorte qu'aucune d'elles ne donne échec à aucune autre.)

(I.) Solution by JAMES BLAIRIE, M.A.; (II.) Table of Arithmetical Solutions by H. W. WEBSTER, M.D.

By trial on the chess-board I find six entirely different solutions. These are shown in the diagram as  $A, B, C, D, E, F$ . Each of these solutions except  $E$  leads to eight different arithmetical solutions, as the chess-board may be looked at from four different sides and the columns may be taken either from left to right or vice versa. Thus  $A$  gives the eight solutions 17468253, 35286471, 83162574, 47526138, 64713528, 82531746, 52473861, 13837425. The solution  $E$ , however, only gives

four arithmetical solutions, as, owing to the symmetry of the figure, the configurations seen from opposite sides of the board are identical. If we place to the right of  $A$  a similar chess-board with the same arrangement of queens, and place a similar board below each, and employ a hollow frame enclosing sixty-four squares, we obtain new chess-board solutions except in those cases where two queens on the same diagonal are included. The diagonals which may contain two queens are dotted in the diagram. We now find that diagram  $A$  affords fourteen different chess-board solutions, the corner of the hollow chess-board being placed on the marked points. But seven of these solutions are reflections of the other seven, and thus we only obtain fifty-six arithmetical solutions. Diagrams  $B, C, E, F$  when treated in the same way do not afford any new solution;  $D$  affords two solutions, but, as they are reflections of each other, we have only eight arithmetical solutions. Thus the diagrams lead to ninety-two arithmetical solutions. It will be observed that the eight arithmetical solutions which, in general, correspond to one chess-board solution may be derived from one another by easy arithmetical methods. [Rest in Vol.]

15092. (R. TUCKER, M.A.)— $ABC$  and  $A'B'C'$  are a triangle and its medial triangle.  $\Omega, \Omega'; \Omega_1, \Omega_2$  are the BROCARD points; and  $K, K'$  the symmedian points. Prove that  $\Omega\Omega_1, \Omega\Omega_2$  the join of the BROCARD ellipse centres, and  $KK'$  pass through the common centroid. Also  $\Omega\Omega_2, \Omega'\Omega_1$  intersect in  $a^2\alpha = b^2\beta = c^2\gamma$ . (Cf. MILNE, *Companion*, p. 174, Ex. 11.)

*Solution by the PROPOSER, and Professor SANJANA, M.A.*

The  $\alpha$ -coordinates of  $\Omega, \Omega'$ ;  $\Omega_1, \Omega_2$  are readily found to be proportional to  $a^2, ab^2; b^2c(c^2+a^2), bc^3(a^2+b^2)$ . Hence the equations to  $\Omega\Omega_1, \Omega\Omega_2$  are  $\Sigma ab^2(c^2-a^2)\alpha = 0, \Sigma ac^2(a^2-b^2)\alpha = 0 \dots\dots\dots(i.)$

Again,  $\alpha$ -coordinates of BROCARD ellipse centres of  $ABC, A'B'C'$  are proportional to  $a(b^2+c^2); bc(a^2b^2+b^2c^2+c^2a^2+b^2c^2)$ ; therefore equation to the join of these is  $\Sigma a^2\alpha(b^2-c^2) = 0 \dots\dots\dots(ii.)$

Hence (i.) and (ii.) these lines conintersect in  $G$ , the centroid of the triangles. Again, equations to  $\Omega\Omega_2, \Omega'\Omega_1$  are

$$\Sigma a^3b^2\omega_c\alpha = 0, \Sigma a^3c^2\omega_b\alpha = 0 \dots\dots\dots(iii.)$$

where  $\omega_a = a^4 - b^2c^2$ ; hence these lines meet in

$$a^3\alpha = b^3\beta = c^3\gamma.$$

Again,  $K, K'$  lie on  $\Sigma a\alpha(b^2-c^2) = 0$ , which passes through  $G$ .

**10157.** (R. W. D. CHRISTIE.)—If  $p$  be a prime number  $> 2$ , prove  $\{(2p! / 2 \times p! \times p!) - 1\} = p^2(M)$ , where  $M$  is the sum of  $\frac{1}{2}(p-1)$  integral square numbers.

*Solution by the PROPOSER.*

It is well known that the sum of the squares of the coefficients in the expansion of  $(1+x)^n$ , where  $n$  is a positive integer, is  $2n!/n!n!$ . Putting  $x=1, n=p$  (a prime), then

$$2p! / p! p! = 1 + p^2 + (pq)^2 + \dots + (pq)^2 + p^2 + 1;$$

$$\therefore \frac{2p!}{2p! p!} - 1 = p^2 \left\{ 1 + \binom{p-1}{2!}^2 + \binom{p-1}{3!}^2 + \dots + \binom{p-1}{\frac{p-1}{2}}^2 \right\} \\ = p^2(M) = p^2 \left\{ \frac{2p-1! - p(p-1)!^2}{p^3(p-1)!^2} \right\} \\ = p^3(Q), \text{ by WOLSTENHOLME, when } p > 3.$$

In the *Journal of Pure and Applied Mathematics*, for October, 1861, the late Rev. Dr. WOLSTENHOLME says:—“The method I employed is somewhat laborious, and I should be glad if some of your readers would supply a more direct proof” (v. also *Quarterly Journal*, June, 1899). The theorem gives the connexion between the integral squares and the series

$$\left( \frac{1}{1} + \frac{1}{2} + \dots + \frac{1}{n-1} \right).$$

**QUESTIONS FOR SOLUTION.**

**15145.** (R. CHARTRES.)—Three points are taken at random within a triangle and joined. Find the mean value of the  $n$ th power of the area of the triangle thus formed.

**15146.** (Professor NANSON.)—If  $(A, B, C)$  is the adjugate of the determinant  $(a, b, c)$ , prove that

$$(BC, CA, AB) = -(bc, ca, ab)(a, b, c)^2.$$

**15147.** (Lt.-Col. ALLAN CUNNINGHAM, R.E.) [Suggested by Question 15126.]—Let  $\Sigma(p, a)$  = sum of numbers  $\not\geq X$  containing  $p^a$ , but not  $p^{a+1}$ , where  $X = (p^m + q^m)^n - (p^m + q^m)$ .

Prove that, when  $a+\lambda, b+\lambda$  are both  $\not\geq m$ ,

$$\Sigma(pq, b) / \Sigma(pq, a) = \Sigma(p, b) \cdot \Sigma(q, b) / \Sigma(p, a) \cdot \Sigma(q, a).$$

[All symbols are + integers except  $p, q$ , which may be  $\pm$ .]

**15148.** (ROBERT W. D. CHRISTIE.)—Prove  $(r^{2^a} - 1)^n \equiv 0 \pmod{a_1 a_2 a_3 \dots a_n}$ , where  $\phi(a_1) = \phi(a_2) = \dots = \phi(a_n)$ .

**15149.** (D. BIDDLE.)—If there be  $n$  primes  $\not\geq \sqrt{N}$ , and  $\Sigma$  represent the sum of the integers which result (by disregarding remainders) from division of  $N$  by the several products of those  $n$  primes taken  $r$  at a time, prove that the number of primes  $\not\geq N$  is given by

$$N - 1 + n - \Sigma_1 + \Sigma_2 - \Sigma_3 + \dots \pm \Sigma_n,$$

where  $\rho$  signifies the greatest number of earliest primes whose continued product is  $\not\geq N$ .

Also, knowing that, if  $N$  include one more prime than does  $N-1$ ,  $N$  is that prime, discuss the possibility of discovering such difference with sufficient accuracy without actual division of  $N$  or  $N-1$  by the several primes, as by summation of their reciprocals, or otherwise. [The law above enunciated differs somewhat from that attributed to LEGENDRE, MEISSER, ROGEL, &c.; vide MATHEWS, p. 273.]

**15150.** (Professor LANGHORNE ORCHARD, M.A., B.Sc.)—Find the product of the two series

- (1)  $1 + 3 + 7 + 13 + 21 + 31 + \dots$  to  $n$  terms;
- (2)  $1 + 13 + 73 + 241 + 601 + 1261 + \dots$  to  $n$  terms.

**15151.** (R. KNOWLES.)—Prove that the sum to  $r$  terms of the series

$$1 + 3^2x + 6^2x^2 + \dots + \frac{1}{4}(r+1)^2(r+2)^2x^r$$

is  $\left\{ 1 + 4x + x^2 - \frac{1}{4}(r+1)^2(r+2)^2x^r + (r^4 + 5r^3 + 7r^2 - 4)x^{r+1} - \frac{1}{4}(3r^4 + 12r^3 + 9r^2 - 6r + 2)x^{r+2} + r^2(r^2 + 3r + 1)x^{r+3} - \frac{1}{4}r^2(r+1)^2x^{r+4} \right\} + (1-x)^5$ .

**15152.** (Professor COCHEZ.)—On considère l'équation

$$x^3 - \lambda x^2 + 23x - 1 = 0.$$

Déterminer  $\lambda$  pour que cette équation ait deux racines dont le produit soit égal à 3. Calculer ensuite les trois racines.

**15153.** (R. TUCKER, M.A.)—

In the “ambiguous” case of triangles (see figure), if  $b, \angle C$  are constant, and  $r, r'$  the radii of the in-circles, then, if the circles touch one another,  $rr'$  is constant.

**15154.** (C. E. HILLYER, M.A.)—If the median triangles be formed of the four constituent triangles of a quadrilateral, their sides will intersect four by four in three collinear points, viz., the mid-points of the diagonals of the quadrilateral (see Question 14083); therefore the median triangles are two by two in perspective, and the centres of perspective are collinear in threes, forming a second quadrilateral. It is required to prove that the mid-points of the diagonals of this quadrilateral and the four points of intersection of its sides with the corresponding sides of the original quadrilateral all lie on the same straight line.

**15155.** (W. C. STANHAM, B.A.)— $P$  is a variable point on a conic, foci  $S$  and  $S'$ .  $PS$  and  $PS'$  meet the curve again at  $R$  and  $R'$  respectively. Show that the locus of the intersection of  $SR'$  and  $S'R$  is a conic.

**15156.** (GEORGE SCOTT, M.A.)—Prove that the radius vector of an ellipse which makes with the axis major the eccentric angle corresponding to a point  $(x', y')$  is equal to the central perpendicular on the tangent at that point.

**15157.** (R. KNOWLES.)— $PQ$  is a chord of a parabola, normal at  $P$ ; tangents at  $P, Q$  meet in  $T$ . Prove that  $TP$  is bisected by the directrix.

**15158.** (H. BATEMAN.)— $O$  is a fixed point on a curve,  $P$  a variable point,  $G$  is the centre of gravity of the arc  $OP$ . Prove that the radius of curvature of the locus of  $G$  is  $GP^2 / s \sin \chi$ , where  $s$  = arc  $OP$  and  $\chi$  = angle between  $GP$  and the tangent at  $P$ .

**15159.** (Professor S. SIRCOM.)—The tracing point of a Hatchet Planimeter of length  $c$  traverses a circle of radius  $a$ . Find the curve described by the hatchet, and show that it is algebraic if  $\sqrt{(c^2 - a^2)}$  is commensurable, and that the length of the curve between two successive cusps is  $c \log(c+a)/(c-a)$ .

**15160.** (H. L. TRACHTENBERG.)—A curve has the circles of curvature at  $n$  points on it concurrent in a point  $O$ . The curve is inverted with regard to  $O$ . Prove that, if  $r$  be the degree of the inverse curve,  $3r^2 - 6r - n$  cannot be negative.

**15161.** (A. M. NESBITT, M.A.)—Trace the curves—

- (1)  $y(y-x^2) = x^3$ ;
- (2)  $(y-x^2)^2 = x(x^2+y^2)$ .

**15162.** (Professor NEUBERG.)—Étant donné un tétraèdre  $ABCD$ , soient  $A', B'$  les symétriques des sommets  $A, B$  par rapport à l'arête  $DC$ , et soient  $D', C'$  les symétriques des sommets  $D, C$  par rapport à l'arête  $AB$ . Le rapport des volumes des tétraèdres  $A'B'C'D', ABCD$  est égal à  $3 \sin 3(AB, CD)$ .

**15163.** (REV. T. ROACH, M.A.)—If  $A, B, C$  be the angles of a triangle, show that

$$\begin{vmatrix} \sin A & \cos A & \cos(B-A) \\ \sin B & \cos B & \cos(B-C) \\ \sin C & \cos C & 1 \end{vmatrix} = 0.$$

15164. (Professor SANJANA, M.A.)—Prove that

$$\frac{\cos(2n+1)\theta}{\cos\theta} + 2 \left\{ 2 \cos \frac{2n-1}{2} \theta - 2 \cos \frac{2n-5}{2} \theta + 2 \cos \frac{2n-9}{2} \theta - \dots \right\}^2$$

is a perfect square; and hence show that  $(x^{2n+2}+1)/(x^2+1)$  is the difference of two squares when  $2x$  is a perfect square,  $n$  being a positive integer.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

9081. (Professor WOLSTENHOLME, M.A., Sc.D.)—At each point P of a given equiangular spiral is drawn a curve similar to the curve  $r^n = a^n \sin n\theta$ , having four-point contact with the spiral; S is the pole of the spiral, S' that of the osculating curve; prove that  $SS' = n \cdot SP$ , and that the angle PSS' is double the angle between S'P and the tangent at P. [Thus, if the osculating curve be a parabola or cardioid,  $SS' = \frac{1}{2}SP$ ; if it be a rectangular hyperbola or lemniscate of BERNOULLI,  $SS' = 2SP$ . The theorem is not true if  $n = \pm 1$ , four-point contact being then impossible.]

9143. (A. E. THOMAS.)—A circle described through the origin, and touching the curve  $(x^2 + y^2 - 2ax)^2 (x^2 + y^2 - 5ax) = 4a^2y^3$  at a point Q, cuts the parabola  $y^2 = 4ax$  in three points, the normals at which to the parabola meet in a point W. Find the locus of W as Q varies.

9396. (Professor WOLSTENHOLME, M.A., Sc.D.)—Given the asymptotes of a cuspidal cubic, find the envelope of the straight line (U) joining the three points where the cubic crosses its asymptotes, proving that it is an orthogonal projection of an hypotrochoid, the radius of the rolling circle being one-third that of the fixed circle, and the tracing point bisecting the radius on which it lies. Also prove that, if the tangent at the cusp C touch its envelope in O, and CO be divided in the ratio 1 : 2, the dividing point will be the point of contact of U with its envelope. Find the locus of the inflexion of the cubic, and the envelope of the tangent at the inflexion.

9476. (B. F. FINKEL, M.A.)—If from a point P an evolute of a circle is described at random, find the probability that it will pass through a random point in a circle whose radius is  $r$  and centre P.

9552. (D. EDWARDS.)—Integrate the equation

$$\frac{dy}{\{(y-a)(1-y^2)\}^{\frac{1}{2}} + \frac{2 \cdot y^2 dx}{(x^2 + 2ax^2 + 1)^{\frac{1}{2}}} = 0.$$

9985. (Professor NEUBERG.)—Les points A, B, C, chargés des masses  $\alpha, \beta, \gamma$ , décrivent, simultanément, dans le plan ABC, les lignes AA', BB',

CC', et leur centre de gravité D parcourt une ligne DD'. Si l'on change les masses des points A, B, C, on obtient d'autres lignes DD'. Soit O un point fixe du plan AA'BB'. Démontrer que le lieu d'un point D tel que le secteur ODD' a une aire constante est une conique. (Comparer *Messenger*, 1877 et 1878, articles de MM. LEUBENDORF, KEMPE et ELLIOT.)

10113. (Professor GOB.)—Lorsque la base BC d'un triangle ABC est fixe et que l'angle de BROCARD est constant, les centres des cercles de NEUBERG ( $M_b$ ), ( $N_c$ ) décrivent une circonférence; le cercle ( $N_b$ ) a pour enveloppe un limaçon de PASCAL; la droite de LEMOINE de ABC enveloppe une conique ayant pour foyers les points B, C.

#### NOTICES TO CORRESPONDENTS

It is requested that all Mathematical communications should be sent to the Mathematical Editor,  
Miss CONSTANCE I. MARKS, B.A., 10 Matheson Rd., West Kensington, W.

Vol. I. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price, to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

#### THE LONDON MATHEMATICAL SOCIETY.

Thursday, June 12th, 1902.—Dr. Hobson, President, in the Chair. The President announced that the De Morgan Medal for 1902 had been awarded to Prof. Greenhill. Mr. A. C. Porter was admitted into the Society. The following communications were made to the Society:— Prof. A. W. Conway: "On the Principle of Huygens in a Uniaxial Crystal." Lt.-Col. Cunningham: "The Repetition of the Sum-factor Operation." M. E. Picard: "Sur un théorème fondamental dans la théorie des équations différentielles." Mr. G. H. Hardy: "Some Arithmetical Theorems." Prof. Hill: "On a Geometrical Proposition connected with the Continuation of Power Series." Mr. J. H. Grace: "Types of Perpetuants."

### A SELECTION FROM CASSELL & COMPANY'S PRIZE VOLUMES.

**THE EARTH'S BEGINNING.** By Sir ROBERT BALL, LL.D., &c. With Four Coloured Plates and other Illustrations. 7s. 6d.  
**THE STORY OF THE HEAVENS.** By Sir ROBERT BALL, LL.D., &c. Illustrated by Chromo Plates and Wood Engravings. New Edition, 10s. 6d.  
**STAR-LAND.** By Sir ROBERT BALL, LL.D., &c. With Rembrandt Frontispiece and Ninety-four Illustrations. 7s. 6d.  
**THE STORY OF THE SUN.** By Sir ROBERT BALL, LL.D., &c. With Eight Coloured Plates and other Illustrations. Cloth gilt. Cheap Edition, 10s. 6d.  
**WITH NATURE AND A CAMERA.** By R. KEARTON, F.Z.S. With Frontispiece and One Hundred and Eighty Pictures from Photographs direct from Nature by C. KEARTON. Cheap Edition, cloth gilt, 7s. 6d.  
**OUR BIRD FRIENDS.** By R. KEARTON, F.Z.S. With One Hundred Illustrations from Photographs by CHERRY KEARTON. Crown 8vo, cloth gilt, 5s.  
**STRANGE ADVENTURES IN DICKY-BIRD LAND.** Stories told by Mother Birds to Amuse their Chicks, and overheard by R. KEARTON, F.Z.S. Illustrated from photos taken direct from Nature by C. KEARTON. 3s. 6d.; and cloth gilt, gilt edges, 5s.  
**THE CHILD'S BIBLE.** Illustrated with One Hundred New Full-page Plates, including Twelve in Colours. By W. H. MARGETSON. Reset in New Type. 10s. 6d.  
**MARINE PAINTING IN WATER-COLOUR.** By W. L. WYLLIE, A.R.A. With Twenty-Four Coloured Plates. 5s.  
**LANDSCAPE PAINTING IN WATER-COLOUR.** With Twenty-three Coloured Plates. By J. MACWHIRTER, R.A. 5s.  
**A MASQUE OF DAYS.** From the Last Essays of Elia. Newly Dressed and Decorated. By WALTER CRANE. With Forty Full-Page Designs in Colour. 6s.  
**LITTLE FOLKS MIDSUMMER VOLUME.** With pictures on nearly every page, together with Six Full-page Coloured Plates and numerous Illustrations printed in Colour. 3s. 6d.; cloth, 5s.  
**UNDER THE GREAT BEAR.** By KIRK MUNROE. 3s. 6d.  
**WITH REDSKINS ON THE WARPATH.** By S. WALKER. With Eight Full-Page Illustrations. 3s. 6d.  
**MRS. PEDERSON'S NIBOE.** By ISABEL SCURT ROBSON. With Eight Full-Page Illustrations. 3s. 6d.  
**TOM AND SOME OTHER GIRLS.** By JESSIE MANSERGH. With Eight Illustrations. 3s. 6d.  
**ALFRED SHAW, CRIKETER: HIS CAREER AND REMINISCENCES.** By A. W. PULLIN ("Old Ebor"). With Sixteen Full-page Illustrations. Cloth, 2s. 6d.  
**BLAZING ARROW.** By EDWARD S. ELLIS. With Four Plates. 2s. 6d.  
**CHIEFTAIN AND SCOUT.** By EDWARD S. ELLIS. With Four Plates. Cloth gilt, 2s. 6d.

CASSELL'S ILLUSTRATED PRIZE CATALOGUE, containing a List of Prize Books adopted by the London School Board, &c., and CASSELL'S COMPLETE CATALOGUE, giving particulars of several hundred Books suitable for presentation, will be sent, post free, on application.

CASSELL & COMPANY, LTD., LONDON; AND ALL BOOKSELLERS.

### SEELEY & CO.'S BOOKS FOR PRIZES.

**THE NATURALIST ON THE THAMES.** By C. J. CORNISH. With 38 Illustrations. Demy 8vo, 7s. 6d.  
"A most fascinating book, illustrated in a manner worthy of the text."—*Scotsman*.  
"Mr. Cornish is likely to do for the Thames what Gilbert White did for Selborne."—*Daily Mail*.  
BY THE SAME AUTHOR.  
**Life at the Zoo.** Fifth Edition, 6s.  
**Wild England of To-Day.** Third Edition, 6s.  
**Nights with an Old Gunner.** 6s.  
**PROFESSOR CHURCH'S BOOKS.**  
**Stories from Homer.** 5s.  
**Stories from Virgil.** 5s.  
**Stories from Livy.** 5s.  
**A Young Macedonian.** 5s.  
**Heroes of Chivalry and Romance.** 5s.  
**The Burning of Rome.** 5s.  
**Helmet and Spear.** Stories from the Wars of the Greeks and Romans. 5s.  
**Stories of the East.** 5s.  
**With the King at Oxford.** 5s.  
**The Count of the Saxon Shore.** 5s.  
**The Last Days of Jerusalem.** 3s. 6d.  
**Three Greek Children.** 3s. 6d.  
**FOREST OUTLAWS; or, Saint Hugh and the King.** By the Rev. E. GILLIAT, Author of "In Lincoln Green," &c. With 16 Illustrations. Cheap Edition, 5s.  
"Extremely interesting and admirably told."—*Saturday Review*.  
**MRS. MARSHALL'S HISTORICAL STORIES.**  
**Under the Dome of St. Paul's.** 5s.  
**In Westminster Choir: A Story of Henry Purcell's Days.** 5s.  
**Under Salisbury Spire in the Days of George Herbert.** 5s.  
**Penshurst Castle.** In the Days of Sir Philip Sidney. 5s.  
**Castle Meadow: A Story of Norwich.** 3s. 6d.  
**The White King's Daughter.** 3s. 6d.  
**An Escape from the Tower: A Story of 1715.** 3s. 6d.  
**The Young Queen of Hearts.** 3s. 6d.  
**OLD BLACKFRIARS.** In the Days of Van Dyck. A Story by BEATRICE MARSHALL. With 8 Illustrations. 5s.  
"Full of colour and interest."—*Academy*.  
**CHEAPER EDITIONS.**  
**OXFORD.** Brief Historical and Descriptive Notes. By ANDREW LANG. With many Illustrations. 3s. 6d.  
**CAMBRIDGE.** By J. W. CLARK. With many Illustrations. 3s. 6d.  
**STRATFORD-ON-AVON.** From the Earliest Times to the Death of Shakespeare. By SIDNEY LEE. With many Illustrations. 3s. 6d.  
An Illustrated Catalogue of Books suitable for Prizes will be sent on application.

London: SEELEY & CO., Limited, 38 Great Russell Street.

# MACMILLAN & CO.'S LIST OF BOOKS SUITABLE FOR PRIZES.

## ANTIQUITIES.

- A HANDBOOK OF GREEK SCULPTURE.** By ERNEST A. GARDNER, M.A. Extra crown 8vo. Parts I. and II., 5s. each. Complete in 1 Vol., 10s.  
**CHRISTIAN ART AND ARCHAEOLOGY.** By W. LOWRIE. Extra crown 8vo, 10s. 6d.  
**ROMAN PUBLIC LIFE.** By A. H. J. GREENIDGE. Extra crown 8vo, 10s. 6d.  
**ATLAS OF CLASSICAL ANTIQUITIES.** By TH. SCHREIBER. Edited by Prof. W. C. F. ANDERSON. 4to, 21s. net.  
**A COMPANION TO SCHOOL CLASSICS.** By JAMES GOW, M.A., Litt. D. Illustrated. Third Edition. Crown 8vo, 6s.  
**RAMBLES AND STUDIES IN GREECE.** By Rev. J. P. MAHAFFY, D.D. With Illustrations. New Edition, with a Map. Crown 8vo, 10s. 6d.

## ART.

- A POPULAR HANDBOOK TO THE NATIONAL GALLERY.** Including Notes collected from the works of Mr. Ruskin. By E. T. COOK. 2 Vols. Crown 8vo. Vol. I. *Foreign Schools.* 10s. net. Vol. II. *British Schools.* 10s. net.  
**THOUGHTS ABOUT ART.** By P. G. HAMERTON. Crown 8vo, 8s. 6d.  
**SOME HINTS ON LEARNING TO DRAW.** Containing Examples from Leighton, Watts, Poynter, &c. By G. W. C. HUTCHINSON, Art Master at Clifton College. Super royal 8vo, 8s. 6d.  
**ART ANATOMY OF ANIMALS.** By ERNEST E. S. THOMPSON. Illustrated. 4to, 30s. net.

## BIOGRAPHY.

- OLIVER CROMWELL.** By JOHN MORLEY. With Portrait. 8vo, 10s. net.  
**BOSWELL'S LIFE OF JOHNSON.** Edited, with an Introduction, by MOWBRAY MORRIS. Globe 8vo, 3s. 6d.  
**ST. ANSELM.** By R. W. CHURCH. Globe 8vo, 4s. net.  
**FRANCIS OF ASSISI.** By Mrs. OLIPHANT. Crown 8vo, 6s.  
**ALFRED THE GREAT.** By THOMAS HUGHES. Crown 8vo, 3s. 6d.  
**THE LIFE OF MICHELANGELO BUONARROTI.** By J. A. SYMONDS. 2 Vols. Extra crown 8vo, 12s. net.  
**THE LIFE OF BENVENUTO CELLINI.** Translated by J. A. SYMONDS. Fifth Edition. Extra crown 8vo, 6s. net.

## COLLECTED WORKS. ESSAYS.

### MISCELLANEOUS WORKS.

- ENGLISH PROSE SELECTIONS.** With Critical Introductions by various Writers, and General Introductions to each Period. Edited by Sir HENRY CRAIK, K.C.B., LL.D. In 5 Vols. Crown 8vo. Vol. I.—14th to 16th century, 7s. 6d. Vol. II.—16th century to Restoration, 7s. 6d. Vol. III.—17th century, 7s. 6d. Vol. IV.—18th century, 7s. 6d. Vol. V.—19th century, 8s. 6d.  
**OLIVER GOLDSMITH, THE MISCELLANEOUS WORKS OF.** With Biographical Introduction. Edited by Prof. MASSON. Globe 8vo, 3s. 6d.  
**BACON'S ESSAYS AND COLOURS OF GOOD AND EVIL.** With Notes and Glossarial Index by W. ALDIS WRIGHT, M.A. Pott 8vo, 2s. 6d. net.  
**THE ESSAYS OF ELIA.** By CHARLES LAMB. Edited by Canon AINGER. Globe 8vo, 4s. net.  
**THE CHOICE OF BOOKS.** By FREDERIC HARRISON. Globe 8vo, 4s. net.  
**THE PLEASURES OF LIFE.** By Lord AVEBURY. Globe 8vo, 2s. 6d.  
**THE USE OF LIFE.** By Lord AVEBURY. Globe 8vo, 3s. 6d.  
**ASPECTS OF THE GREEK GENIUS.** By Prof. S. H. BUTCHER, Litt. D. Crown 8vo, 7s. net.  
**GREEK STUDIES.** By WALTER PATER, M.A. 8vo, 10s. 6d.  
**ESSAYS IN CRITICISM.** By MATTHEW ARNOLD. Globe 8vo, 4s. net.  
**ESSAYS IN CRITICISM. Second Series.** By MATTHEW ARNOLD. Globe 8vo, 4s. net.  
**MISCELLANIES.** By JOHN MORLEY. 3 Vols. Globe 8vo, 4s. net each.

## HISTORY.

- A SHORT HISTORY OF THE ENGLISH PEOPLE.** By JOHN RICHARD GREEN, LL.D. With Maps and Tables. Crown 8vo, 8s. 6d. Illustrated Edition in 3 Vols., 40s. net.  
**THE EXPANSION OF ENGLAND.** Two Courses of Lectures. By Sir J. R. SEBLEY, M.A. Globe 8vo, 4s. net.  
**HISTORY OF ROME.** By Dr. MOMMSEN. Abridged. Crown 8vo, 7s. 6d.  
**A HISTORY OF ROME TO THE BATTLE OF ACTIUM.** By E. S. SHUCKBURGH, M.A. Crown 8vo, 8s. 6d.  
**A HISTORY OF GREECE.** By J. B. BURY. Crown 8vo, 8s. 6d.  
**FORTY-ONE YEARS IN INDIA.** By Lord ROBERTS. Extra crown 8vo, 10s. net.  
**A HISTORY OF THE INDIAN MUTINY.** By T. RICE HOLMES, M.A. Second Edition. Extra crown 8vo, 12s. 6d.  
**CAWPORE.** By Sir GEO. OTTO TREVELYAN. Crown 8vo, 6s.  
**THE CHRONICLES OF FROISSART.** Translated by Lord BERNERS. Edited by G. C. MACAULAY, M.A. In extra gilt binding, crown 8vo, 2s. 6d.  
**A SHORT HISTORY OF ENGLISH LITERATURE.** By Prof. G. SAINTSBURY. Crown 8vo, 8s. 6d.  
**A HISTORY OF THE UNIVERSITY OF OXFORD FROM THE EARLIEST TIMES TO THE YEAR 1530.** By Sir H. C. MAXWELL LYTE, M.A., F.S.A. Medium 8vo, 16s.  
**A HISTORY OF ETON COLLEGE, 1440-1875.** By Sir H. C. MAXWELL LYTE, M.A. With Illustrations. Medium 8vo, 21s. net.

## NATURAL HISTORY.

- THE CAMBRIDGE NATURAL HISTORY.** Edited by S. F. HARMER and A. E. SHIPLEY. 8vo. Vol. II. *Worms, Botifers, and Polyzoa.* 17s. net. Vol. III. *Molluscs and Brachiopods.* 17s. net. Vol. V. *Peripatus, Myriapods, Insects.* Part I. 17s. net. Vol. VI. *Insects.* Part II. 17s. net. Vol. VIII. *Amphibia and Reptiles.* 17s. net. Vol. IX. *Birds.* 17s. net. Vol. X. *Mammals.* F. E. BEDDARD. 17s. net.  
**CURIOSITIES OF NATURAL HISTORY.** By FRANCIS T. BUCKLAND. In 4 Vols. Crown 8vo, 2s. 6d. each; cloth gilt, 3s. 6d. each.  
**NATURAL HISTORY AND ANTIQUITIES OF SELBOENE.** By GILBERT WHITE. Edited by FRANK BUCKLAND. Crown 8vo, 6s.  
**A YEAR WITH THE BIRDS.** By W. WARDE FOWLER. Illustrated. Crown 8vo, 3s. 6d.  
**TALES OF THE BIRDS.** By W. WARDE FOWLER. Crown 8vo, Prize Edition, 2s. 6d.; cloth gilt, 3s. 6d.  
**MORE TALES OF THE BIRDS.** By W. WARDE FOWLER. Crown 8vo, 3s. 6d.  
**SUMMER STUDIES OF BIRDS AND BOOKS.** By W. WARDE FOWLER, M.A. Crown 8vo, 3s. 6d.  
**INSECT LIFE.** By M. J. H. FABRE. Translated. With Illustrations. Crown 8vo, 6s.  
**WILD BEASTS AND THEIR WAYS.** By Sir SAMUEL BAKER. Extra crown 8vo, 12s. 6d.  
**THE NATURAL HISTORY OF AQUATIC INSECTS.** By L. C. MIALL, F.R.S. Crown 8vo, 6s.  
**ROUND THE YEAR: Short Nature Studies.** By Prof. L. C. MIALL. Crown 8vo, 5s.

## POETRY.

- ARNOLD.—COMPLETE POETICAL WORKS.** Crown 8vo, 7s. 6d.  
**THE COLLECTED POEMS OF T. E. BROWN.** Crown 8vo, 7s. 6d.  
**CHAUCER.—THE WORKS OF GEOFFREY CHAUCER.** Edited by ALFRED W. POLLARD, H. FRANK HEATH, MARK H. LIDDELL, W. S. MCCORMICK. Crown 8vo, full gilt back and tops, 3s. 6d.  
**COWPER.—POETICAL WORKS.** Edited by Rev. W. BENHAM, B.D. In extra gilt binding, crown 8vo, 3s. 6d.  
**GOLDSMITH.—MISCELLANEOUS WORKS.** Edited by Prof. MASSON. In extra gilt binding, crown 8vo, 3s. 6d.  
**LOWELL.—COMPLETE POETICAL WORKS.** With Introduction by THOMAS HUGHES. Crown 8vo, 7s. 6d.  
**MILTON.—POETICAL WORKS.** With Introductions by DAVID MASSON, M.A., LL.D. In extra gilt binding, crown 8vo, 3s. 6d.  
**SCOTT.—POETICAL WORKS.** Edited by Prof. F. T. PALGRAVE. In extra gilt binding, crown 8vo, 3s. 6d.  
**SHAKESPEARE.—COMPLETE WORKS.** Edited by W. G. CLARK and W. A. WRIGHT. In extra gilt binding, crown 8vo, 3s. 6d.  
**— THE VICTORIA EDITION.** In 3 Vols. Comedies. Histories. Tragedies. Crown 8vo, 3s. 6d. each.  
**SHELLEY.—COMPLETE POETICAL WORKS.** Edited by Prof. DOWDEN. Crown 8vo, 7s. 6d.  
**SPENSER.—COMPLETE WORKS.** Edited by R. MORRIS. With Memoir by J. W. HALES, M.A. In extra gilt binding, crown 8vo, 3s. 6d.  
**TENNYSON.—COMPLETE WORKS.** New and Enlarged Edition. With a Portrait. Crown 8vo, 7s. 6d.  
**THE POETICAL WORKS OF ALFRED, LORD TENNYSON,** Poet Laureate. Crown 8vo, 3s. 6d.; also in extra cloth, gilt edges, crown 8vo, 4s. 6d.  
**WORDSWORTH.—COMPLETE POETICAL WORKS.** With Introduction by JOHN MORLEY. Crown 8vo, 7s. 6d.  
**THE ENGLISH POETS.** Edited by T. H. WARD, M.A. Crown 8vo. Vol. I. *Chaucer to Donne.* 7s. 6d. Vol. II. *Ben Jonson to Dryden.* 7s. 6d. Vol. III. *Addison to Blake.* 7s. 6d. Vol. IV. *Wordsworth to Tennyson.* 8s. 6d.  
**GOLDEN TREASURY POETS.—Arnold, Byron, Cowper, Keats, Longfellow, Shelley, Southey, Wordsworth.** 8 Vols., in Box, 21s. net.

## TRANSLATIONS.

- THE ODYSSEY OF HOMER.** Done into English Prose by S. H. BUTCHER, M.A., and A. LANG, M.A. With a Plate. Crown 8vo, 7s. 6d. net.  
**THE ILIAD OF HOMER.** Done into English Prose by ANDREW LANG, M.A., WALTER LEAF, Litt. D., and ERNEST MYERS, M.A. Crown 8vo, 12s. 6d.  
**CICERO ON OLD AGE AND FRIENDSHIP.** Translated by E. S. SHUCKBURGH, M.A. Pott 8vo, 2s. 6d. net.  
**THE HOUSE OF ATREUS.** Being the Agamemnon Libation Bearers and Furies of Aeschylus. Translated by E. D. A. MORSHEAD. Pott 8vo, 2s. 6d. net.  
**THE REPUBLIC OF PLATO.** Translated into English by J. LEWELYN DAVIES, M.A., and D. J. VAUGHAN, M.A. Pott 8vo, 2s. 6d. net.  
**THE TRIAL AND DEATH OF SOCRATES:** being the Euthyphron, Apology, Crito, and Phaedo of Plato. Translated by F. J. CHURCH. Pott 8vo, 2s. 6d. net.  
**THE PHAEDRUS, LYSIS, AND PROTAGORAS OF PLATO.** A New and Literal Translation. By J. WRIGHT, M.A. Pott 8vo, 2s. 6d. net.  
**THEOCRITUS, BION, AND MOSCHUS.** Rendered into English Prose by ANDREW LANG. Pott 8vo, 2s. 6d. net.  
**MARCUS AURELIUS ANTONINUS TO HIMSELF.** Translated by G. H. RENDALL, M.A. Pott 8vo, 2s. 6d. net.

# OXFORD LOCAL EXAMINATIONS, 1903.

Books set and suitable for Candidates.

OXFORD UNIVERSITY PRESS.

## RELIGIOUS KNOWLEDGE.

- The Oxford Helps to the Study of the Bible**, comprising Introductions to the several Books, the History and Antiquities of the Jews, the results of Modern Discoveries, and the Natural History of Palestine; with copious Tables, Concordance and Indices, and a series of Maps. New, Enlarged, and Illustrated Edition. Pearl 16mo, 1s. net; Nonpareil 8vo, 2s. 6d.; Large-type Edition, 5s.
- Oxford Helps to the Study of the Book of Common Prayer.** By W. R. W. STEPHENS, D.D. 2s. 6d. net.
- Revised Version of the Holy Bible.** Pearl 16mo, 10d.; Ruby 16mo, 3s.
- Revised Version of the New Testament.** Nonpareil 32mo, 3d.; Brevier 16mo, 6d.; Long Primer 8vo, 9d.
- The Greek Testament**, with the Readings of the Revisers, and with Marginal References. 4s. 6d.; on India Paper, 6s.
- Evangelia Sacra Graece.** Feap. 8vo, 1s. 6d.
- A Greek Testament Primer.** An Easy Grammar and Reading Book. By E. MILLER, M.A. Second Edition. 2s. and 3s. 6d.
- Old Testament History for Schools.** By T. H. STOKER, D.D. In Three Parts. With Maps. 2s. 6d. each.
- Manual of the Four Gospels.** By the same. 3s. 6d. Or, separately, Part I, **The Gospel Narrative**, 2s.; Part II, **The Gospel Teaching**, 2s.

## ENGLISH.

- Chaucer.—Prologue to the Canterbury Tales.** Edited by W. W. SKEAT, Litt.D. 1s.
- Shakespeare.—Macbeth.** Edited by W. G. CLARK, M.A., and W. ALDIS WRIGHT, D.C.L. 1s. 6d.
- Shakespeare as a Dramatic Artist.** By R. G. MOULTON, M.A. Third Edition, Enlarged. 7s. 6d.
- Scott.—Talisman.** Edited by H. B. GEORGE, M.A. 2s.
- Addison.—Selections from Papers in the Spectator.** Edited by T. ARNOLD, M.A. 4s. 6d.
- A Primer of Historical English Grammar.** By HENRY SWEET, M.A., Ph.D. 2s.
- A Concise Etymological Dictionary of the English Language.** By W. W. SKEAT, Litt.D. New Edition, Revised and Enlarged. 5s. 6d.
- A Primer of English Etymology.** Second and Revised Edition. By W. W. SKEAT, Litt.D. 1s. 6d.
- Poems of English Country Life.** Selected, with Introduction and Notes, by H. B. GEORGE, M.A., and W. H. HADGWY, M.A. 2s.

## LATIN.

- Cornelius Nepos.** Selected Lives. With Notes, Maps, Vocabularies, and English Exercises. By J. B. ALLEN, M.A. 1s. 6d.
- Caesar.—De Bello Gallico.** Edited by C. E. MOBERLY, M.A. Second Edition. Books III-V, 2s. 6d.; VI-VIII, 3s. 6d.
- Cicero.—Select Orations.** In Verrem Actio Prima. Philippica IX, &c. By J. R. KING, M.A. Second Edition. 2s. 6d.
- Horace.—The Odes, Carmen Seculare, and Epodes.** By E. C. WICKHAM, D.D. Second Edition. 6s.
- Virgil.—Aeneid. Books IV-VI.** Edited by T. L. PAPILLON, M.A., and A. E. HAIGH, M.A. 2s.
- An Elementary Latin Grammar.** By J. BARROW ALLEN, M.A. 2s. 6d.
- A First Latin Exercise Book.** By the same. 2s. 6d.
- A Second Latin Exercise Book.** By the same. 3s. 6d.
- Anglice Reddenda; or, Extracts, Latin and Greek, for Unseen Translation.** By C. S. JERRAM, M.A. Fourth Edition. 2s. 6d.
- **Second and Third Series.** By the same. 3s. each.
- Reddenda Minora; or, Easy Passages, Latin and Greek, for Unseen Translation.** For the use of Lower Forms. Composed and selected by the same Editor. Sixth Edition. 1s. 6d.
- Abridged from Lewis and Short's 4th Edition:—*
- An Elementary Latin Dictionary.** Square 8vo, 7s. 6d.
- An Intermediate Latin Dictionary.** Small 4to, 12s. 6d.

## GREEK.

- Euripides.—Medea.** Edited by C. B. HEEBARDEN, M.A. Second Edition. 2s.
- Homer.—Odyssey. Books VII-XII.** Edited by W. W. MERRY, D.D. 3s.
- Lucian.—Vera Historia.** Edited by C. S. JERRAM, M.A. Second Edition. 1s. 6d.
- Thucydides. Book III.** Edited by H. F. FOX, M.A. 3s. 6d.

## GREEK—continued.

- Xenophon.—Vocabulary to the Anabasis.** By J. MARSHALL, M.A. 1s. 6d.
- Easy Greek Reader.** By E. ABBOTT, M.A. 3s.
- A Primer of Greek Prose Composition.** By J. Y. SARGENT, M.A. 3s. 6d.
- A Greek-English Lexicon**, abridged from LIDDELL and SCOTT'S 4th Edition. Square 12mo, 7s. 6d.
- An Intermediate Greek-English Lexicon**, founded upon the Quarto Edition of LIDDELL and SCOTT'S Greek Lexicon. Small 4to, 12s. 6d.

## GERMAN AND FRENCH.

- Hoffmann.—Heute mir, Morgen dir.** Edited by J. H. MAUDE, M.A. 2s.
- German Passages for Unprepared Translation.** By E. EHREKE. 3s.
- Elementary German Prose Composition.** With Notes, Vocabulary, &c. By E. S. BUCHHEIM. Stiff covers. 1s. 6d.
- A Concise French Grammar.** By A. H. WALL, M.A. Contains the simplifications allowed by the French Minister of Public Instruction in 1901. 4s. 6d.
- A French Primer.** By the same. 2s.

## MATHEMATICS.

- Geometry for Beginners.** An Easy Introduction to Geometry for Young Learners. By G. M. MINCHIN, M.A. 1s. 6d.
- Euclid Revised.** Edited by R. C. J. NIXON, M.A. Third Edition. 6s.
- Book I, 1s. Books I, II, 1s. 6d. Books I-IV, 3s. Books V, VI, 3s. 6d.
- Geometrical Exercises from "Euclid Revised."** By A. LARMOR, M.A. 3s. 6d.
- The "Junior" Euclid.** By S. W. FINN, M.A. Books I and II, 1s. 6d. Books III and IV, 2s.
- Arithmetic.** By R. HARGREAVES, M.A. 4s. 6d.

## NATURAL SCIENCE.

- An Elementary Treatise on Heat.** By BALFOUR STEWART, LL.D., F.R.S. Sixth Edition. 8s. 6d.

## COLLEGE OF PRECEPTORS. (Bloomsbury Square, W.C.)

### LECTURES FOR TEACHERS ON THE SCIENCE AND ART OF EDUCATION.

#### THE PRACTICE OF EDUCATION.

To be delivered by the Rev. Canon EVAN DANIEL, M.A., formerly Principal of the Battersea Training College.

The Second Course of Lectures (Thirtieth Annual Series) will commence on Friday, September 26th, at 7 p.m. The Course is mainly based on criticism lessons actually given before the Lecturer, and will draw attention to the more serious errors that young teachers commit, and to the ways in which they may be avoided. Special pains will be taken to connect the Art with the Science of Education, and to refer success and failure in teaching to the observance and violation respectively of natural laws.

For Syllabus, see p. 315.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

The Lectures will be delivered on Friday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C.

Members of the College have Free Admission to the Course.  
C. R. HODGSON, B.A., Secretary.

## ST. GEORGE'S TRAINING COLLEGE FOR WOMEN TEACHERS, EDINBURGH.

Principal—Miss M. R. WALKER.

This College provides a complete Course of Professional Training for Ladies who desire to become Teachers in Secondary Schools or Governesses in Families. The Course, which lasts for one year, includes attendance at the University Lectures on Education, in addition to Lectures delivered by the College Staff, and the Students have ample opportunities of gaining experience in Class Teaching in good Schools. Students are admitted in January and October. For prospectus and further particulars apply to the PRINCIPAL, 5 Melville Street, Edinburgh.

## ARMY SCHOOLMASTERS.

—There are a number of vacancies in the Corps of Army Schoolmasters. Civilian Schoolmasters only will be accepted who have passed on Second Year's Papers in the First or Second Division, or who hold a Certificate qualifying them to superintend Pupil-Teachers from the Board of Education. Students in Training Colleges will also be accepted under certain conditions. Candidates must not be over twenty-four years of age. Accepted candidates will be required to join as soon as convenient.

Further particulars can be obtained on application (in writing) to the DIRECTOR OF ARMY SCHOOLS, War Office, London, S.W.

ST. THOMAS'S HOSPITAL MEDICAL SCHOOL.

ALBERT EMBANKMENT, LONDON, S.E.

The WINTER SESSION of 1902-1903 will OPEN on Wednesday, October 1st.

St. Thomas's Hospital being one of the Medical Schools of the University of London, provision is made for the courses of study prescribed for the Preliminary Scientific, Intermediate, and Final Examinations in Medicine.

Three Entrance Scholarships will be offered for competition in September, viz., one of 150 guineas and one of £60 in Chemistry and Physics, with either Physiology, Botany, or Zoology, for First Year's Students; one of £50 in Anatomy, Physiology, Chemistry (any two), for Third Year's Students from the Universities.

Scholarships and Money Prizes are awarded at the Sessional Examinations, as well as several Medals.

All Hospital Appointments are open to Students without charge.

Club-rooms and an Athletic Ground are provided for Students.

The School Buildings and the Hospital can be seen on application to the Medical Secretary.

The fees may be paid in one sum or by instalments. Entries may be made separately to Lectures or to Hospital Practice, and special arrangements are made for Students entering from the Universities and for Qualified Practitioners.

A Register of approved lodgings is kept by the Medical Secretary, who also has a list of local Medical Practitioners, Clergymen, and others who receive students into their houses.

For Prospectus and all particulars apply to Mr. G. RENDLE, the Medical Secretary.

H. G. TURNEY, M.A., M.D. Oxon., Dean.

THE ROYAL DENTAL HOSPITAL OF LONDON MEDICAL SCHOOL, LEICESTER SQUARE.

The WINTER SESSION, 1902-3, will commence on Wednesday, Oct. 1st.

MEDICAL SCHOOL.

Dental Anatomy and Physiology (Human and Comparative)—A. HOPEWELL-SMITH, L.R.C.P., M.R.C.S., L.D.S., on Tuesdays and Thursdays at 5.30 p.m. (Summer).

Dental Surgery and Pathology—W. B. PATERSON, F.R.C.S., L.D.S., on Tuesdays and Fridays, at 5.30 p.m. (Summer).

Mechanical Dentistry—E. LLOYD-WILLIAMS, L.R.C.P., M.R.C.S., L.D.S., on Wednesdays at 5.30 p.m. (Winter) (Demonstrator—Mr. W. F. FLORE).

Metalurgy in its Application to Dental Purposes—Dr. FORSTER MORLEY, M.A., F.I.C., F.C.S., on Thursdays at 5.30 p.m. (Winter) (Demonstrator—PERCY RICHARDS, F.I.C., F.C.S.).

Material Medica and its Application to Dental Surgery—HAROLD ACSTEN, M.B., B.S. Lond., L.R.C.P., M.R.C.S., L.D.S., Mondays, 5.30 p.m. (Summer).

Bacteriology and its Application to Dental Surgery—J. HOWARD MUMFORD, M.R.C.S., L.D.S., Wednesdays and Fridays, 5.30 p.m. (Summer).

The new Hospital and School are now open. Students are received for the full Dental portion of the curriculum, including the three years (or any shorter period) of teaching in Dental Mechanics.

The Surgical portion of the curriculum can be received at any General Hospital.

During the Sessions the Surgeons of the day will give demonstrations at stated hours.

The House Surgeons attend daily while the Hospital is open.

The SAUNDERS SCHOLARSHIP, of £20 per annum, and Prizes, are open for competition.

The WALKER SCHOLARSHIP of £20 per annum.—This is an Entrance Scholarship, Examinations for which will take place as follows:—Chemistry and Physics, Thursday, September 25th, 4 to 7 p.m.; Dental Mechanics (Paper), Friday, September 26th, 4 to 7 p.m.; Dental Mechanics (Practical), Monday, September 29th, 9 a.m. to 1.

The STORER BENNETT RESEARCH SCHOLARSHIP, value £50, is awarded triennially.

Fee for two years' Hospital Practice required by the curriculum, including Lectures, £50 in one payment, or 50 guineas in two yearly instalments. The curriculum requires two years to be passed at a General Hospital. The fee for this is about £55. Both Hospitals can be attended simultaneously.

The fee for three years' tuition in Mechanical Dentistry is 150 guineas.

The Calendar and further particulars will be sent on application to MORTON SMALE, Dean.

DANCING, DEPARTMENT, AND PHYSICAL EXERCISES.

Mr. and Mde. MARGERITE ST. CLAIR attend high-class Schools (in London and the Country), for Instruction in all Ball Room and Fancy Dancing.—Greville House, 195 Isledon Road, London, N. Instruction given to Teachers daily at the above Studio.

NORTH-WESTERN EDUCATIONAL TRADING COMPANY, RENSHAW STREET, LIVERPOOL.

Fifty £1 Shares for SALE, with forthcoming Dividend. Last year's Dividend, 5 per cent. Best offer.—H. PADFIELD, 30 Percy Street, Liverpool.

KING'S COLLEGE (UNIVERSITY OF LONDON.)

FEES.

For the Preliminary Scientific Course, 25 guineas. Composition fee for whole University Course, £148. Composition fee for Conjoint Course (M.R.C.S., L.R.C.P.), £135. The fees may also be paid by annual payments.

Fee for University and other students who have passed their Examination in Anatomy and Physiology, 80 guineas.

The next Session begins October 1st, 1902. Advanced classes in Anatomy and Physiology are held for University Students, and special courses have been arranged for the final F.R.C.S. Examinations.

Full particulars and prospectus giving information as to Prizes, Entrance and other Scholarships, of a total value of £900 per annum, may be obtained on application to the undersigned.

W. D. HALLIBURTON, M.D., F.R.S., Dean.

RAYMOND CRAWFORD, M.A., M.D. Oxon., F.R.C.P., Dean of the Hospital.

WALTER SMITH, Secretary.

ST. BARTHOLOMEW'S HOSPITAL AND COLLEGE.

The WINTER SESSION will begin on Tuesday, October 1st, 1902.

Students can reside in the College within the Hospital walls, subject to the Collegiate regulations.

The Hospital contains a service of 750 beds. Scholarships and Prizes of the aggregate value of nearly £900 are awarded annually.

The Medical School contains large Lecture Rooms and well appointed Laboratories for Practical Teaching, as well as Dissecting Rooms, Museum, Library, &c.

The Amalgamated Clubs' Ground (10 acres) is at Winchmore Hill, within easy reach of the Hospital.

For further particulars apply, personally or by letter, to the WARDEN of the College, St. Bartholomew's Hospital, E.C.

A handbook forwarded on application.

UNIVERSITY OF LONDON. THE MIDDLESEX HOSPITAL MEDICAL SCHOOL.

The WINTER SESSION, 1902-1903, will commence on Wednesday, October 1st.

Two Entrance Scholarships (value £100 and £60) will be competed for on September 23rd, 24th, and 25th.

One Entrance Scholarship (value £60), open to Students of the Universities of Oxford and Cambridge, will be competed for on September 23rd and 24th.

Notice in writing to be sent to the Dean on or before September 15th.

There are annually eighteen Resident Hospital Appointments open to Students without extra fee.

Composition Fee for general Students for whole Medical Curriculum, 135 guineas; for Dental Students, 54 guineas.

Special terms in favour of University Students who have commenced their medical studies, and of University of London Students who have passed Prelim. Sci.

The Residential College adjoins the Hospital and provides accommodation for thirty Students.

Prospectuses and all particulars may be obtained from—

J. MURRAY, M.B., F.R.C.S., Dean.

ST. MARY'S HOSPITAL MEDICAL SCHOOL,

PADDINGTON, W.

The WINTER SESSION will commence on October 3rd.

The HOSPITAL is close to Paddington Station (G.W.R.), the Great Central Railway Terminus, Edgware Road and Praed Street (Metropolitan and District Railway), and Lancaster Gate (Central London Electric Railway).

The Clinical appointments are free to all Students, and the Resident Medical Officers (18 annually) are appointed by competitive examination.

The NEW WING, now in process of completion, will provide 81 additional beds, three new Operating Theatres, Clinical Laboratories, and Clinical Theatre, besides the New Out-Patient Department already in use.

UNIVERSITY OF LONDON.

The MEDICAL SCHOOL, as one of the Schools of the University, provides complete courses of instruction for its Medical and Surgical Degrees.

PRELIMINARY SCIENTIFIC COURSE.—Classes will commence on October 6th.

ENTRANCE SCHOLARSHIPS.

FOUR OPEN SCHOLARSHIPS in Natural Science, value £145, £78, 15s., £78, 15s., and £52, 10s.

TWO UNIVERSITY SCHOLARSHIPS, value £63 each (open to Students from Oxford or Cambridge), will be competed for on September 23rd and 24th.

SPECIAL TUITION.

For the Examinations of the Universities of Oxford, Cambridge, and London, and for the Fellowship of the Royal College of Surgeons, without additional fees.

For Calendar of the Medical School, containing all particulars, apply to the DEAN.

THE LONDON HOSPITAL MEDICAL COLLEGE (UNIVERSITY OF LONDON.)

The WINTER SESSION commences on October 1st.

The Annual Dinner will be held in the College Library on Wednesday, October 1st. E. HURRY FESWICK, Esq., F.R.C.S., Eng., is the Chair.

The Hospital is the largest in England; nearly 800 beds are in constant use, and no beds are closed. The only general hospital for East London. In-patients last year, 13,364; out-patients, 169,020; accidents, 28,532; major operations, 2,469.

APPOINTMENTS.—More Appointments, salaried and resident, are open to students than at any other hospital. Seventy qualified Appointments are made annually, and more than 130 Dressers, Clinical Clerks, &c., every three months. All are free to students of the College. Resident appointments have free board.

SCHOLARSHIPS AND PRIZES.—Thirty-four Scholarships and Prizes are given annually. SEVEN ENTRANCE SCHOLARSHIPS will be offered in September.

Special Classes are held for the University of London and other Higher Examinations. Special entries for Medical and Surgical Practice can be made.

Reduced fees to the sons of members of the profession. ENLARGEMENT OF THE COLLEGE.—The New Laboratories and Class Rooms for Bacteriology, Public Health, Operative Surgery, Chemistry, Biology, &c., and the New Clubs Union Rooms are now in full use.

The Clubs Union Athletic Ground is within easy reach.

Luncheons and dinners at moderate charges can be obtained at the Students' Club.

The Metropolitan, Central, and other Railways have stations close to the Hospital and College.

For prospectus and information as to residence, &c., apply, personally or by letter, to

Mile End, E. MUNRO SCOTT, Warden.

ROYAL HOLLOWAY COLLEGE (UNIVERSITY OF LONDON.)

The Michaelmas Term begins on October 2nd, 1902.

The College prepares Students for the London Degrees in Science and Arts, and for the Oxford Honour Examinations.

Ten Entrance Scholarships, from £40 to £75 a year, tenable for three years, will be offered for competition in July, 1903.

For further particulars, apply to the SECRETARY, Royal Holloway College, Englefield Green, Surrey.

ST. BARTHOLOMEW'S GRAMMAR SCHOOL, NEWBURY.

The HEAD MASTERSHIP of this School will become vacant at Christmas, 1902.

Candidates for the position must be Graduates of one of the Universities in the United Kingdom and under forty years of age.

The Salary is £150 a year and a Capitation Fee of £2, 10s., together with a Residence (unfurnished), rent free, and permission to take Boarders.

Candidates should forward applications, with copies of three recent testimonials, not later than August 25th next, to the undersigned, from whom further particulars may be obtained.

F. QUEKETT LOUCH,

Solicitor, Newbury, Berks.

Clerk to the Governors.

EDUCATIONAL AGENCY.

## GINN & COMPANY,

Educational Publishers,

LONDON, BOSTON, AND NEW YORK.

9 St. Martin's Street, Leicester Square, London, W.C.

GINN & COMPANY, the leading Educational Publishers of America, have now established a house of business in London, under the management of Mr. FRED. J. MATHISON.

Some of the specialities among the books published by this firm are the "College Series" of Greek and Latin Authors, the "Latin and Greek School Classics," the "International Modern Language Series," books on Anglo-Saxon, and a large assortment of English Classics, edited respectively for children and for students.

Much attention has been attracted by GINN & COMPANY'S books on Nature Study.

Myers' "General History" has met with great favour in England, since it deals with World History as no book published in England does.

Books sent on approval for inspection.

Catalogues will be sent post free to all applying for them.

## METROPOLITAN SCHOOLS OF MEDICINE.

(UNIVERSITY OF LONDON.)

1901—1902.

All the following Schools of the University provide complete courses of Instruction and all the requirements for obtaining the Degrees in Medicine and Surgery:

ST. BARTHOLOMEW'S HOSPITAL MEDICAL SCHOOL	West Smithfield, E.C.
CHARING CROSS	Charing Cross, W.C.
ST. GEORGE'S	Hyde Park Corner, S.W.
GUY'S	London Bridge, S.E.
KING'S COLLEGE	Strand, W.C.
THE LONDON	Mile End, E.
ST. MARY'S	Paddington, W.
MIDDLESEX	Berners Street, W.
ST. THOMAS'S	Albert Embankment, S.W.
UNIVERSITY COLLEGE	Gower Street, W.C.
WESTMINSTER	Caxton Street, S.W.

For Particulars as to the Courses of Instruction, Fees, Hospital Appointments, and course of Study advised, application should be made to the DEAN of any one of the above mentioned Schools of the University.

For particulars as to the Examinations for Internal Students of the University apply to the ACADEMIC REGISTRAR, University of London, South Kensington, S.W. Date of commencement of Sessions—Winter, October 1st. —Summer, May 1st.

## MASTERS wanted for Public, Grammar, and Preparatory Schools.

Science Masters; Mathematical, Classical, and Modern Languages, French and Elementary German, Drawing, Music, Shorthand, Senior, and Junior Masters.

Messrs. ORELLANA & CO. forward to each candidate a List of suitable Vacancies. No preliminary charge. Please state your age, qualifications, and salary you require to—

44 Old Bond Street, London, W.

## FRENCH VERBS MADE EASY.

By C. PAYNE.

PRICE SIXPENCE.

A strong linen card, only measuring 10 inches by 6½ inches, and when folded 6½ by 3½ inches, yet containing all the Irregular Verbs, as well as the Four Regular Conjugations and everything that has to be known about the Verbs, and so arranged that it can be committed to memory in a few lessons without the slightest difficulty. Thousands of copies have already been sold, and it has been introduced into some of the leading public schools and other educational establishments. To be obtained through all booksellers, or post free at published price from—

C. PAYNE, 42 George Street, Croydon.

The usual discount allowed to Schools.

# CASEY'S EUCLID.

## THE ELEMENTS OF EUCLID,

BOOKS I.—VI., and PROPOSITIONS I.—XXI. of BOOK XI. Together with Appendix on the CYLINDER, SPHERE, CONE, &c., with Copious Annotations and Numerous Exercises. By JOHN CASEY, LL.D., F.R.S., Fellow of the Royal University of Ireland, Vice-President, Royal Irish Academy, &c., &c. Tenth Edition, price 4s. 6d., post free; or in Two Parts, each Half-a-Crown.

## A KEY TO THE EXERCISES

IN THE SIX BOOKS OF CASEY'S "ELEMENTS OF EUCLID." By JOSEPH B. CASEY, Tutor, University College, Dublin. Second Edition. Small 8vo, price 6s.

## A SEQUEL TO THE

FIRST SIX BOOKS OF THE "ELEMENTS OF EUCLID." Sixth Edition, Revised and greatly Enlarged, price 3s. 6d., cloth. Now ready.

Now Ready, Second Edition, Revised and Enlarged, 564 pp., price 12s.

## A TREATISE ON THE

**ANALYTICAL GEOMETRY** OF THE POINT, LINE, CIRCLE, AND THE CONIC SECTIONS. Containing an account of its most recent Extensions, with numerous Examples. New Edition. Crown 8vo.

## A TREATISE ON

**ELEMENTARY TRIGONOMETRY.** With numerous Examples and Questions for Examination. Third Edition. Small 8vo, 148 pp., price 3s.

## KEY TO THE EXERCISES

IN THE TREATISE ON ELEMENTARY TRIGONOMETRY. With numerous Examples and Questions. Second Edition. Price 3s.

## A TREATISE ON

**PLANE TRIGONOMETRY.** Containing an account of Hyperbolic Functions, with numerous Examples. Crown 8vo. Second Edition.

Crown 8vo, price 5s.

## A TREATISE ON

**SPHERICAL TRIGONOMETRY,** AND ITS APPLICATION TO GEODESY AND ASTRONOMY. With numerous Examples.

# SARLL'S EXAM. BOOK-KEEPING.

On application to the AUTHOR, \*Specimen Copies at one-third off, or Parcels containing specimens of all for INSPECTION—retain 21 days—post free.

## SARLL'S PRACTICAL BOOK-KEEPING. 1s.

An **Elementary Text-Book**, illustrating the arrangement of the Bought, Sales, Cash, Bill Books, and Ledger. Consisting of GRADUATED EXERCISES, followed by Examination Papers set by the **College of Preceptors**, accompanied by **fully worked and outline Keys**. 128 pages. Thirteenth Edition. Being the Teacher's Handbook for **New Code**. Stages I. and II.

## SARLL'S DOUBLY-ENTRY BOOK-KEEPING.

Fully illustrating the **Art of Journalising** and advanced practical work, consisting of GRADUATED EXERCISES and numerous Examination Papers set by the **leading Examining Boards**, accompanied by **fully worked and outline Keys**. Eleventh Edition. 256 pages, cloth. 2s. A **School Edition** without Keys. 128 pages, cloth. 1s.

## SARLL'S BOOK-KEEPING FOR NEW CODE.

Stages I., II., and III. Now ready, each 48 pages. Price 4d. each. MS. Books, two at 2d. each. Full or outline Keys. The cheapest course ever issued.

## SARLL'S TWENTIETH CENTURY EXAM. PAPERS

IN **BOOK-KEEPING**. Containing the latest Papers by the **leading Examining Boards**, with Notes and brief Answers, in Two Parts, 6d. each. Part I., **Junior Papers**, College of Preceptors, &c. Part II., **Senior Papers**, Society of Arts, Commercial Exams., &c.

## Supplementary Keys to

## SARLL'S PRACTICAL BOOK-KEEPING.

Containing **full keys** to all in "Practical" and Stages I. and II. 2s.

## SARLL'S DOUBLE-ENTRY BOOK-KEEPING.

Containing **full keys** to all in "Double-Entry" and Stage III. 3s.

## SARLL AND SOCIETY OF ARTS.—NEARLY 1,600 CERTIFICATES AND 2 BRONZE MEDALS.

Results unsurpassed by any teacher in Great Britain.

\* Address—A. SARLL, A.K.C., 62 Oakley Road, Islington, London.

To Teachers, 20 Lessons by Correspondence, Half-a-Guinea.

GEORGE GILL & SONS, WARWICK LANE, LONDON.

# COLLEGE OF PRECEPTORS.

## Lectures for Teachers

ON THE

## SCIENCE, ART, AND HISTORY OF EDUCATION.

## PRACTICAL CRITICISMS AND SUGGESTIONS ON TEACHING.

To be delivered by The Rev. Canon EVAN DANIEL, M.A., F.C.P., Formerly Principal of the Battersea Training College.

The Second Course of Lectures (Thirtieth Annual Series) will commence on Friday, September 26th, at 7 p.m.

The Course is mainly based on criticism lessons actually given before the Lecturer, and will draw attention to the more serious errors that young teachers commit, and to the ways in which they may be avoided. Special pains will be taken to connect the Art with the Science of Education, and to refer success and failure in teaching to the observance and violation respectively of natural laws.

### SYLLABUS.

I. *Preparation of Lessons.*—Need of full and fresh Knowledge—Sources of Information—Need of Arrangement—Notes of Lessons—Limits and Aims of Lessons—Divisions of Lessons—Provision of Apparatus, Illustrations, Maps, &c.—Provision for securing Co-operation of Pupils—Provision for testing Success of Lessons.

II. *Method.*—Not to be selected arbitrarily—Regulated by Interdependence of Knowledge and by Laws of Mind—General Principles—From the Simple to the Complex—From the Indefinite to the Definite—From the Concrete to the Abstract—The Genesis of Knowledge in the Race—From the Empirical to the Rational—Independent Discovery of Truth.

III. *Apparatus, Experiments, and Illustrations.*—Things always more impressive than Words—Need of Appeals to the Senses—Specimens for Individual Examination—Graphic Representations—Enlarged Drawings of Parts—Need of some Indication of Scale—Experiments—Need of Judgment in Selecting—Rehearsal of Experiments—Registration of Results as arrived at—Relative Value of Pictures, Drawings, Blackboard Sketches, Models—Function of Teacher in all Lessons appealing to the Mind through the Senses.

IV. *Questions and Answers.*—Uses that may be made of Questions—Introductory—To secure Co-operation—Disciplinary—Resumptive—Questions directing Observation—appealing to Memory—to Imagination—to Conceptive Faculty—to Judgment—to Reason—Common Faults in Questioning—Language—Length—Form—Order—Treatment of Children's Errors—Answers Wholly Wrong—Partially Wrong—Examinations—Construction of Papers—Modes of Marking—Teacher's Use of Blunders.

V. *The Kindergarten.*—The Senses our first Teachers—Limits to their Training—The Habit of Observation—Nature's Method—Artificial Education—Froebel's Services to Education—Utilization of Childish Instincts—Gifts and Occupations—Principles of the Kindergarten applicable to the later stages of Education—Transition from Kindergarten to Ordinary School too Abrupt—Object Lessons—Elementary Science—Treatment.

VI. *Reading, Writing, and Drawing.*—Analytic and Synthetic Methods of Teaching—Reading—Spelling—Dictation—Lessons—Reading Aloud—Writing—Analysis of Letters—Mulhauser's Method—Locke's—Cowan's—Scientific Criticism of Writing—Drawing—Training of Eye and Hand—Object Drawing—Analysis—Directed Observation—Simultaneous Drawing Lessons.

VII. *Arithmetic and Geometry.*—First Notions of Numbers—Composition and Decomposition of Numbers—Notation—Numeration—Arithmetical Rules to be established by the Method of Discovery—Arithmetical Tables and their Illustration—Rules presenting Special Difficulty—Mental Arithmetic—Paper Work—Excellences to be insisted on—Accuracy and Rapidity—Euclid—Introduction to—Blackboard Work—Deductions.

VIII. *Grammar and Teaching of Languages.*—Grammar contained in Language, and to be sought there—Parts of Speech to be classified and defined by Pupils—Accidence to be collected by Pupils—Syntax to be discovered and formulated by Pupils—Parsing—Analysis of Sentences—Need of Logical Consistency in Grammar—Languages learnt with different Objects in view—for mere Reading—for Speaking and Writing—Methods appropriate to each—Lessons for Young Children—for more Advanced Pupils.

IX. *English Literature.*—Aims of Teacher—Authors and Pieces suitable for different Ages—Method of Teaching English Literature illustrated by Examples—Simple Poems—Romantic Epics—Shakespeare—Milton—Essayists—Preparation by Pupils—Paraphrasing—History of English Literature—Manuals—Examinations in English Literature—Criticism.

X. *Geography.*—Home Surroundings—Maps—Globe—Order of Treatment determined by Interdependence of Physical Facts—Physical Geography—Political Geography—Commercial Geography—Physiography—Sources of Information—Illustrations needed—Models.

XI. *History.*—Starting-point—Order of Time—Regressive Order—Early Lessons—Episodes—General Notions—Detailed Study of Special Periods—Mode of treating Biographies—Illustrations—Pictorial—Literary—Busts—Coins—Facsimiles—Synchronistic Charts—Original Authorities—Use of Text-books at different Stages—Constitutional History—Duties of Citizenship.

XII. *Discipline.*—Attendance—Punctuality—Order—Attention—School-rules—Motives appealed to—The Teacher's Eye—Rewards and Punishments—Emulation—Public Opinion—Characteristics of good Discipline as regard Means and Ends—School Tone—Formation of Habits—Character.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

\* \* The Lectures will be delivered on FRIDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

# NATURE STUDY and VISUAL INSTRUCTION.

Harbutt's Plasticine stands unrivalled for use in the newer methods of education.

It is clean, absolutely safe, and ever plastic.

From all School furnishers. Free Samples.

WM. HARBUTT, A.R.C.A., Bathampton, Bath.

# J. & J. PATON,

143 Cannon Street,  
LONDON, E.C.,

Beg respectfully to inform Head Masters that they insert SCHOLARSHIP EXAMINATION NOTICES and other Advertisements promptly and accurately in all LONDON and PROVINCIAL NEWSPAPERS and PERIODICALS throughout the United Kingdom, also in all Indian, Colonial, and Foreign papers.

The charges are at lowest office rates. Estimates and scheme of insertions forwarded free, on receipt of particulars of proposed expenditure, over given period.

## PATON'S LIST OF SCHOOLS AND TUTORS, 1902,

720 pages, red cloth, post free, 1s. 6d.

## ARE YOU SATISFIED WITH YOUR PRESENT PROSPECTUS ?

It has to travel many miles—all over England, Scotland, Ireland, and Wales, and probably to India, the Colonies, and the Continent—and speak to parents on your behalf.

## DOES IT DO JUSTICE TO YOUR SCHOOL ?

Are the claims of your School amply set forth? Is it finely printed on good paper—and are your blocks the best that can be made? If not, and you will favour us with an enquiry, we shall be pleased to send you suggestions for a new one, and specimens of the Prospectuses we have printed—with estimate of cost—*free of charge.*

**J. & J. PATON,**  
EDUCATIONAL AGENTS,  
143 CANNON STREET, LONDON, E.C.

## WM. BLACKWOOD & SONS' NEW EDUCATIONAL WORKS.

### BLACKWOODS' ILLUSTRATED CLASSICAL TEXTS.

General Editor—H. W. AUDEN, M.A., Assistant Master at Fettes College.

**Cæsar.—Gallic War. I.—III.** By J. M. HARDWICH, M.A., Rugby. 1s. 6d.

**Cæsar.—Gallic War. VI., VII.** By C. A. A. DU PONTET, M.A., Harrow. 1s. 6d.

**Virgil.—Æneid. V., VI.** By ST. J. B. WYNNER-WILLSON, M.A. 1s. 6d.

**Horace.—Odes. I., II.** By J. SARGEANT, M.A. 1s. 6d.

**Arrian.—Anabasis. I., II.** By H. W. AUDEN, M.A. 2s. 6d.

\*.\* Complete List on application.

### BLACKWOODS' ENGLISH CLASSICS.

General Editor—J. H. LOBBAN, M.A., formerly Examiner in English in the University of Aberdeen.

**Scott.—Marmion.** By ALEXANDER MACKIE, M.A. 1s. 6d.

**Pope.—Essay on Criticism, Rape of the Lock, and other Poems.** By G. SOUTAR, M.A., Litt.D. 2s. 6d.

**Hazlitt.—Essays on Poetry.** By D. NICHOL SMITH, M.A. 2s. 6d.

**Wordsworth, Coleridge, and Keats.** By A. D. INNES, M.A. 2s. 6d.

**Lamb.—Select Essays.** By AGNES WILSON. 2s. 6d.

\*.\* Complete List on application.

### Adopted by the London School Board.

#### BLACKWOODS' LITERATURE READERS.

Edited by JOHN ADAMS, M.A., B.Sc., F.C.P., Rector, U.F. Church Training College, Glasgow. **Bk. I.**, 1s.; **Bk. II.**, 1s. 4d.; **Bk. III.**, 1s. 6d.; **Bk. IV.**, 1s. 6d.

#### BLACKWOODS' SCHOOL SHAKESPEARE.

Stiff paper covers, 1s.; cloth, 1s. 6d.

Now ready:—**The Merchant of Venice, Richard II., Julius Cæsar, The Tempest, As You Like It, Henry V.**

\*.\* Others in preparation.

**English Drama.** By J. LOGIE ROBERTSON, M.A., Author of "History of English Literature," "English Verse for Junior Classes," &c. 2s. 6d.

**The George Eliot Reader.** By ELIZABETH LEE. With Introduction and Portrait. 2s.

**Stormonth's Dictionary.** College Edition, 7s. 6d.; School Edition, 1s.

**The School Anthology of English Verse.** From Chaucer to the Present Day. By J. H. LOBBAN, M.A. In 2 Parts, 2s. each; complete in 1 Vol., 4s.; Prize Edition, 5s.

**Lower Latin Prose.** By K. P. WILSON, M.A. 2s. 6d. \*.\* Key, 5s. net.

**Lower Latin Unseens.** By W. LOBBAN, M.A. 2s.

**First Latin Sentences and Prose.** By K. P. WILSON, M.A. 2s. 6d.

**Tales of Ancient Thessaly.** By J. W. E. PEARCE, M.A. 1s.

**Lower Greek Prose.** By K. P. WILSON, M.A. 2s. 6d. \*.\* Key, 5s. net.

**Greek Accidence.** By T. C. WEATHERHEAD, M.A. 1s. 6d.

**All French Verbs in Twelve Hours** (except Defective Verbs). By A. J. WYATT. 1s.

**French Test Papers.** For Civil Service and University Students. By EMILE B. LE FRANÇOIS. 2s.

**Progressive German Composition.** By LOUIS LUBOVICUS, Ph.D. 3s. 6d. In Two Parts: **Composition**, 2s. 6d.; **Philology**, 1s. 6d.

**Lower Grade German.** By the same Author. 2s. 6d. \*.\* Key, 5s. net.

**A Spanish Grammar.** By WILLIAM A. KESSEN. 3s. 6d.]

**Arithmetic.** By A. V. LOTHIAN, M.A., B.Sc. With Answers, 3s. 6d.

**Modern Geometry of the Point, Straight Line, and Circle.** An Elementary Treatise. By J. A. THIRD, M.A. 3s.

The Educational Times.

*The Education Bill in Committee.*

WE have never laid any great practical stress upon the principle of a single Authority, but the first three clauses of the Education Bill, as passed in Committee, offer food for reflection to those that do. The country was promised one Authority; it has, so far, got six classes of Authorities, totalling together 1,183 separate Local Authorities. Instead of simplicity, there is an ingeniously bewildering complexity. Two classes—the county boroughs (67) and the administrative counties (62)—control both their elementary and their higher education, the former without rating limit, the latter within the limits of a rate of 2d. in the £. Two more—municipal boroughs (140) with a population of over 10,000 and urban districts (61) with a population of over 20,000—also control their elementary education and may levy a rate up to 1d. in the £ to spend on their higher education; but at the same time they are subject to the County Council rate up to 2d. in the £, without any control of the higher education to which it is applied. These varied arrangements, then, establish 330 Local Authorities. But nearly three times as many (853) were added by an amendment on Clause 3—an amendment that can hardly stand on Report. Two more classes—municipal boroughs (108) up to 10,000 and urban districts (745) up to 20,000—while not entrusted with the control of their elementary education, are authorized to levy and spend a rate not exceeding 1d. in the £ for higher education, being at the same time subject to the County Council's rate of 2d. The arrangement wears a preposterous look in the light of the very general opinion that for higher education the Authority ought to be much wider than for elementary. But probably it regards evening classes and technical education on the new understanding of the limits of elementary instruction. In any case, it seems impossible to avoid a clash of jurisdictions. Such, then, is the principle of One Authority.

Clause 4, as dealing with religious instruction, invited delicate handling, notwithstanding the tolerably plain intention of the terms. The first subsection originally ran: "A Council in the application of money under this part of the Act shall not require that any particular form of religious

instruction or worship shall or shall not be taught or practised in any school or college." The discussion turned mainly on the training colleges, and it was marked by calm and reasonable argument, except for an outburst of a few extremists. The subsection at last stood in these terms:

A Council, in the application of money under this Part of this Act, shall not require that any particular form of religious instruction or worship, or any religious catechism or formulary which is distinctive of any particular denomination, shall or shall not be taught or practised in any school or college aided, but not provided, by the Council; and no pupil shall be excluded from or placed in any inferior position in any school or college provided by the Council on the ground of religious belief, and no catechism or formulary distinctive of any particular religious denomination shall be taught or used in any school, college, or hostel so provided.

Thus all the new higher institutions must be undenominational, and in all existing higher institutions aided by the public Authority there will operate a conscience clause; and, though the Government would not admit a conscience clause in the existing denominational colleges, they still conceded, in respect of students of such colleges living at hostels, the payment of the same contribution as is now paid to students in residential colleges. This seems to be a fairly reasonable accommodation. The second subsection, being full and explicit, was passed without alteration.

As was fully anticipated, the option of Clause 5 was decisively rejected, though it was discussed at great length, and led to considerable cross voting. The consequences of the rejection are in the future; but, at all events, it limits the complexity of Authorities to the six classes of 1,183. Clause 6, abolishing School Boards and School Attendance Committees and transferring their powers and duties to the Local Education Authority, was at length allowed to pass with small verbal amendments, in reliance on official assurances that no lowering of the standard of education would be permitted, and on Mr. Balfour's statement of intentions respecting the management of schools. These intentions were embodied in a long and complex amendment to Clause 7, constituting the board of management and introducing a "minor Local Authority," by which is meant "the Council of any borough or urban district, or the Parish Council or parish meeting of any parish, which appears to the County Council to be served by the school." In the case of all public elementary schools not provided by the Local Education Authority, that Authority appoints but two managers out of six. In spite of considerable feeling on the point as

much on business grounds as on religious grounds, the clause seems likely, at the moment of writing, to be forced through. The temper of parties hardly bodes well for permanent peace. North Leeds gives an impressive warning.

The restricted Councils have still to go to the Local Government Board for sanction to exceed the 2d. rate for higher education. The apparatus of Provisional Orders is swept away, but the requirement seems to be little more than a formality, by no means likely to exercise a real restraint. The Local Government Board, as we have already indicated, does not seem to be adequately qualified to pronounce upon any given case. Like Mr. Kelland, we should have much wished the Bill to contain "clauses similar to 4(2) and 5(1) of the Bill of 1900, safeguarding the interests of existing schools and granting them the right of appeal to the Board of Education." We can only hope that the new clauses placed on the notice paper by Mr. McArthur and Mr. Hobhouse will be accepted, in justice to the interests of private enterprise in the field of secondary education. All the private schools claim is that they should have the same rights as are accorded to other schools, and the claim is just.

**THE Nature-Study Exhibition at the Nature Study.** Royal Botanic Gardens now in progress, together with the Conference of five days just concluded, cannot fail to impart both impetus and direction to a form of early education that has already developed possibilities of far-reaching importance. While the Exhibition is of the most varied and instructive character, the Conference addresses and speeches have touched the main points of the subject with the light of experience and practical suggestion—though we should have liked to see working teachers in greater force at the front. They have dealt with the relation of both child and teacher to Nature, the attitude of the teacher to the child, the prosecution of the study both in rural and in urban schools, and in colleges and higher schools as well as in elementary schools, materials and methods of the study, the training of teachers, the relation of the study to the school and to the home, its operation as an element of culture, and the action of the County Councils in promotion of it. The proceedings have, no doubt, been fully reported, and will, we should anticipate, presently be available to the profession and to the public in a convenient form for study and reference.

The idea of Nature study has taken a firm hold of the minds of all persons that cherish a living interest in the education of the young. In the United States and Canada, in Australia, in the more advanced countries of Continental Europe, the appreciation of its value and the enthusiasm for its development are certainly not less than here. In the United States, especially, a wide and keen activity has been manifested in all the bearings of the subject. Naturally the scoff of idle trifling has been flung at the enthusiasts from careless observers and from minds arrested within the limits of an older order of things. Naturally, too, the scope and the methods of the study are as yet undetermined; and the results have not had time to be presented in such forms as to silence the off-hand disparagement of unthinking or uninstructed objectors. But the key of the

situation has evidently been mastered by the promoters of the study, and time is on their side. No one that looks at the process intelligently, whether in point of theory or in the light of actual practice, can doubt for a moment that its fundamental principles are fraught with results of incalculable value for the future of the people. Without underestimating the direct and immediate outcome, one may readily trace the indirect and eventual issues to a development of highest consequence for the nation and for the race.

With awakened consciousness and restless activity, the child wants to do things and to know things. To the uninstructed parent or nurse such enterprise and inquisitiveness are simply so much bother; and at a later stage the paternal power is apt to stave off an invasion of curiosity by arbitrary acts of summary repression. It is the part of intelligent supervision to utilize the spontaneous energies of body and mind by turning them into channels that shall distribute them so as to foster a full and equable development. By the time that the child comes into the hands of the teacher—even of the Kindergarten teacher—not a little of the original force will have been misdirected or perverted or left to expend itself in uncontrolled forms, and ideas and habits little consonant with discipline on a far-seeing outlook will have established a certain hold; so that in many, if not in most, cases there will be something to be unlearned, new channels to be opened, old channels to be closed up. It may be somewhat depressing to feel that several generations will be needed to bring the general parental mind to the idea and the practice of considered utilization of the activities of children; but the depression may be mitigated by the certainty that the educationalist is on the right road to success. At the same time, so far as concerns the years up to school age, the road had better be at once recognized as a tolerably long road.

As regards method, all the authorities appear to entertain a most judicious hesitation to lay down any rigid rules. The very materials available prescribe different courses for different localities; and the qualifications, aptitudes, and tastes of different teachers must necessarily, in the mean time at least, be very liberally considered. On both points the tendency will be towards a gradual reduction of differences. But, in any case, the training must proceed upon the materials at hand and according to the capacity and discretion of the trainers. For one thing, it seems fairly clear that the children should be put in the way of making their own observations—that the study should be made a real process of independent research; the teacher exercising a general direction and indicating the bearings and correlation of results. By-and-by, and in no long time, there will be accumulated a vast and varied mass of experience, which will form the safest, if not the only sure, ground for generalizations leading to specific rules and regulations. In the meantime, therefore, it would seem that the authorities will do well to content themselves with very general directions and to allow the spontaneous activity of teachers and taught to strike out in multifarious directions. For it is only the teachers and the children in common work that can develop a system—or, probably, rather systems—that will operate most fruitfully.

The results that may legitimately be expected will, no

doubt, manifest themselves in the most varied forms. The first thing will be a notable discipline in observation—a most fundamental and useful outcome; and one cannot keep up a habit of observation without increasing knowledge and seeking a means of co-ordinating facts in generalizations. Thus a solid foundation for scientific work and for general accuracy of thought is laid; and, at any rate, “such teaching and learning will transform education from a deadly mechanical grind to a living process.” The American boy may find it practically useful to detect and exterminate the San José scale, or the Hessian fly, or the gypsy moth, in preservation of the fruit, or the wheat crops, or the forest trees; and an English boy will be none the worse to be able to discriminate against insect pests, weed seeds, and destructive fungus spores. The economic side of the study widens out as one considers it attentively. Again, if children be habituated to cultivation of flowers, the tendance of home or school gardens, interest in leaves and buds, they are little likely to perpetrate thoughtless damage or cruelty. The æsthetic and the ethical instincts will enjoy simultaneous cultivation. It does not seem unduly sanguine, even on actual results, to expect a gradual elevation of character, personal and civic. We are looking down a long vista of anticipation, no doubt; but the known grounds of promise encourage a large hopefulness.

### NOTES.

THE Report of the Rev. Dr. Woods and Dr. Hill on the University Colleges, just issued as a Blue Book (No. 252), contains a very full account of these institutions, with much judicious and instructive criticism. It covers five years, the previous inspection having taken place in 1896. The Report is very favourable on the whole, acknowledging immense progress. The Commissioners, however, comment adversely on some lecture-rooms and laboratories as out of date and ill-equipped, and on the tendency of most colleges to lay out a large portion of their capital in buildings that cannot readily be adapted to changing needs. They also find a want of suitable common rooms and reading rooms for quiet study. They emphasize justly the waste of professorial energy, the professor too often “muffling his intellect in the multiplied classes of elementary students.” The professor ought to have more leisure for original work, so as to preserve the colleges from sinking into mere finishing academies. There is also revealed a wasteful overlapping and rivalry, not unknown in London. Worst of all, and cause of most of the mischief, is the plentiful lack of money.

WE need only draw attention to the notice issued by the Teachers' Registration Council, printed in another column. The difficulties involved in determining the status of certain classes of teachers are obviously great; and the labour will be materially lightened by “a careful study on the part of applicants themselves of the exact wording of the Order.”

THE Danish Government, too, has its new Education Bill on hand—a measure for a thorough reorganization of the

school system from top to bottom. It treats the Universities, the secondary schools, and the elementary schools as branches of one organic system. That might have been fully anticipated. But the method of realizing the object in view is more sensible than might have been expected. “The Danish Government,” we learn, “has not been content to rely upon political wisdom alone in the elaboration of the new Bill, but has submitted it, clause by clause, to the examination and criticism of a special committee of educational experts, and to representatives of all the parties, classes, professions, and trades interested in the improvement of national education.”

ELSEWHERE we refer to Sir Joshua Fitch's article on “Education” in the latest of the new volumes of the “Encyclopædia Britannica.” All educationists will peruse it with interest. Here we content ourselves with quoting two or three sentences that will not blunt the edge of expectation. With regard to the “unique history” of the public provision for the education of the people, Sir Joshua writes:

That provision is not the product of any theory or plan formulated beforehand by statesmen or philosophers. It has come into existence through a long course of experiments, compromises, traditions, successes, failures, and religious controversies. What has been done in this department of public policy is the resultant of many diverse forces and of slow evolution and growth rather than of clear purpose and well-defined national aims. It has been effected in different degrees by philanthropy, by private enterprise, by religious zeal, by ancient Universities and endowed foundations, by municipal and local effort, and only to a small extent by legislation.

Sir Joshua thinks that “the tendency to distrust theorists and to be afraid of legislation has in England been strongly reinforced, and indeed largely justified, by the fact that most of the legal enactments of the past were negative and restrictive only.” But probably the facts are open to a more incisive criticism. Even yet, as Sir Joshua acknowledges, the country has not accepted in all its fulness Matthew Arnold's view “that, if once an enlightened democracy were animated by a progressive spirit and noble ideals, it would be the part of wisdom to invoke the collective power of the State to give effect to those ideals.” The democracy needs still more light.

SIR JOSHUA concludes his review of the higher education with this sharp sentence:

Notwithstanding all the recent additions to her academic resources, England is still far behind other countries in the provision she makes for University education.

As to the training of teachers, “it is to the Universities chiefly that the public has a right to look for at least a partial solution of this difficult problem.” And the conditions appear to be these three—not one or two of them, but all three together:

(1) That the function of the teacher shall be recognized as one of the learned professions, and take honourable rank in Law, Medicine, and Theology.

(2) That the University shall provide a Professor of Didactics or Pedagogy, whose duty it shall be, by means of post-graduate courses of study and by requiring systematic practice of the art of teaching under due supervision and criticism, to give to the future schoolmaster both a practical and a theoretical acquaintance with the principles of his profession.

(3) That the University shall institute an examination for all students who may have passed through the prescribed course, and that this examination shall set up a high standard of qualification in regard to the practice and the history of education, and to so much of mental and moral philosophy as stands in the closest relation to teaching, whether considered as an art or as a science.

Here one and there another of these requirements have been fulfilled; but until they have all been fulfilled "the British Universities will fail to exercise their legitimate influence on public education, and will neglect a great opportunity of ennobling and liberalizing the teacher's profession."

AMONG the associations for educational purposes Sir Joshua gives some prominence to the College of Preceptors, which we observe with satisfaction. He writes:

The College of Preceptors, a chartered society chiefly composed of private teachers, was incorporated in 1849, and was one of the first professional bodies to institute regular courses of pedagogic lectures, and to award after due examination the titles of [Fellow and] Licentiate and Associate to teachers. It has also, by means of its system of examining pupils, given a valuable stimulus to educational progress, especially in many schools which, while distinctly above the rank of elementary, have not availed themselves of the Oxford and Cambridge Local examinations. The conferences and discussions which are held at the College during each session have proved of considerable value, both as a help to the members and other teachers in dealing with professional problems, and also as a means of enlisting the attention and sympathy of the general public in relation to these problems.

THE Carnegie Trust has disbursed in payment of fees during the first year of operation the sum of £34,916. 7s. 6d.—that is to say, £22,941. 16s. 6d. on behalf of 2,441 students during the winter session, and £11,947. 11s. on behalf of 1,595 students during the summer session—about £8. 15s. a head. It is scarcely surprising that the trustees at their recent meeting in Edinburgh decided to look a little more closely at the qualifications of applicants for profiting by Dr. Carnegie's beneficence. Clause B of the trust deed originally ran thus:

The other half of the income . . . shall be devoted to the payment of the whole or part of the ordinary class fees exigible by the Universities from students or scholars who have given two years' attendance after the age of fourteen years at such schools or institutions as are under inspection by the Scotch Education Department. They must have passed in the subject-matter of the class for which payment of fees is to be made the examination qualifying for admission to the study of that subject at the Universities, with a view to graduation.

The latter sentence has now been omitted, and in its place the following words are inserted:—

And, that they (the students or scholars) may be recognized as deserving and qualified, they must also have passed in the Leaving Certificate Examination of the Scotch Education Department or the Scottish Universities Preliminary Examinations or other examinations recognized by the Scottish Universities Joint Board of Examiners in such subjects and grades and under such conditions as the Executive Committee may from time to time determine.

The alteration, which is no doubt based on experience gained during the year, seems to be entirely reasonable. The beneficiaries will not be permitted to waste the money.

THE first clause of the trust deed—Clause A—is just on the point of being brought into operation. Under it one half of the net annual income of the Trust is to be applied towards the improvement and expansion of the Universities in the Faculties of Science and Medicine and towards the improvement and extension of the opportunities for scientific study and research. A few months back the authorities of the Universities, on the invitation of the trustees, drew up statements of their more urgent needs in the departments referred to. Of course, these needs far outrun the funds in the hands of the trustees to meet them; and the Universities are awaiting with lively expectancy the scheme that the trustees have just adopted and will "publish shortly." In

any case, each of the institutions will be immensely benefited, and local generosity ought to be stimulated to fill up any gap in the programme of their development. There is some fear, we understand, that the trustees may specify in detail how the money is to be spent. We have no doubt, however, that the University authorities will be left as much freedom as is good for the purposes of the benefaction.

In another column we quote certain statements reported to have been made by Prof. Flinders Petrie regarding the Egyptian treasures he has found and missed. Is it credible that the French Government should carelessly permit a French subject, under a concession, to plunder and destroy, with crass vandalism, the invaluable materials for the reconstruction of ancient Egyptian history and civilization? If so, then surely the British Government is bound to intervene. We cannot believe that anything more would be necessary than a simple statement of the facts. It is hardly less painful to find that the antiquities discovered by Prof. Petrie "will all go to American museums, perhaps, as hitherto." Especially ridiculous is it to say that there is no accommodation for them in this country. If the British Museum authorities can house their newspapers at Enfield, why can they not similarly house these priceless Egyptian antiquities, were it even on some uninhabited island, or on some deserted farm in one of the near counties? If the country cannot do so much for the higher studies, it is about time to put up the shutters finally.

THE working of the system of affiliation of the provincial colleges is interestingly illustrated by the case of Mr. Benjamin Davies, B.A. of St. David's College, Lampeter, who has just gained a First Class in Mathematical Moderations at Oxford. This, we learn, is the first occasion on which a student of an affiliated college has obtained this distinction without previous residence or training at Oxford. Mr. Davies was a pupil-teacher in an elementary school at Dowlais, in Glamorganshire, before he went to Lampeter; and his father is a miner. The result is most creditable all round. No fear of Lampeter, with fair play and reasonable encouragement. And there must be many more Davises in these parts. Happily we are at last beginning to see how to find them out, and how to enable them to show what is in them.

## SUMMARY OF THE MONTH.

THE alterations, amendments, or concessions in the Education Bill have in no way mollified the temper of its opponents. The Nonconformist spokesmen still maintain an attitude of uncompromising hostility. The progress of the measure in Committee of the House of Commons is outlined in our first leading article.

CARDINAL VAUGHAN writes to the *Times* as follows:—

Allow me to point out the hidden meaning of an amendment which I see from the columns of the *Times*, certain members of Parliament are anxious to introduce into the Education Bill. In days when people are so caught by phrases, the words "broad and popular control" go for a great deal. The inner value of the amendment I allude to is this, that it contains a device for capturing denominational schools. The process is a specious one. Begin by weakening the strength of the clerical managers of the denominational school—on the plea that laymen are better men of business and know less about doctrine; say, stoutly, that the clergy represent a sect, not the interests of the parents. Then call on the parents to elect their own representative to the board

of management, and let the Local Authority do the same. In other words, take care that the official, trained, and trusted representatives of the religion in which parents desire their children to be educated be placed by Act of Parliament in a helpless minority on the board. You will thus have established by law within every denominational school the desired possibility for disintegration and disruption—for the school is to be open to all comers, irrespective of their creed. The result of the Bill, if passed into law with such an amendment, will be to place every religious school in the country on a basis of permanent uncertainty and unrest. But the secularist and the Nonconformist parties will have scored. They will have secured from Parliament a chance and a right to harass, to weaken, and, if they can in the end, to capture the denominational schools. Better remain as we are, poor but free, than put our heads into such a noose.

THE BISHOP OF ROCHESTER, addressing his Diocesan Board of Education (July 3), dealt with three main points in the Education Bill. As to religious teaching, he said:

Speaking roughly, there are, it seems to me, two systems possible: (1) The system of the Church school, with all such safeguards, qualifications, and concessions as may go all the length that we can go to meet the conscientious feelings of others and to satisfy their requirements; (2) the system of a school managed by a mixed committee—we have often heard it talked of as the Board school in every parish. . . . Now, what I want to ask is, which of these two schools, from the point of view of the Nonconformist as well as the Churchman, is likely to give the best practical education in a religious sense? I do not myself feel any doubt about the matter. I feel very sure that, though there are, no doubt, cases—there are bad cases in every system—where the thing works ill, on the whole, it is a system which works, and is felt to work, for the religious good of the children generally. A mixed committee on any subject is always inclined to arrive at a *modus vivendi* by setting aside difficulties and getting along upon what everybody can agree to on the line of least resistance.

As to public control where there is public support, the Bishop remarked:

First, there is the public control from Whitehall as before . . . a powerful central public control. Second, the schools, as regards secular education, pass under the control of a powerful Local Authority, and when that Authority has prescribed what it cares to prescribe, and inspected as much as it cares to inspect, to see that its prescriptions are applied, I think you will find that the amount of local option within the walls of the schools will have been reduced to a comparatively small quantity. Then we find it is said that the influence of those whom I will call public nominees is an entirely illusory safeguard. Really, I think that can only be said under the stress of controversy. . . . It shows an extraordinarily small amount of trust in the influence of opinion, in the influence of open and often recorded debate, in the influence of the spirit of justice on the part of all members of these bodies, if the presence of one-third of the public nominees does not very largely influence the action of the body which they form.

On the subject of the religious opinions of teachers, the Bishop continued:

I know an instance with which I had to do in Yorkshire of a very efficient Church school where a leading assistant teacher was a Wesleyan. I was never aware of any ill result which followed in that case. We have got to look at this kind of instance, the instance of a school where a large number of the children are the children of Nonconformists. It would not seem at all an unreasonable thing if we have, as I think we have, in this part of the field the position of vantage, if we have the full opportunity of giving our teaching to our children in our schools, that we should have on the staff a teacher who could give what teaching they may desire to the children of Nonconformists. I know, of course, the arguments against this; I know how much it would put on many of our own people; I know they would say: You ask us to admit into our schools the teaching of what we consider to be error. Yes! there is a certain considerable force in this argument—not one of us but feels it. But I return again to the whole look of the matter. . . . I ask whether, perhaps, fairness and sympathy are not better than a strict insistence upon the full measure of our claims. Whether it would be possible to put anything of that kind into the Bill I should feel doubtful; but the Bill may give power to a managing committee to employ a Nonconformist teacher or teachers wherever there are a certain number of Nonconformist children.

THE REV. DR. CLIFFORD, writing to the *Daily News* (July 17), acknowledges that "it is a good thing (1) that the 'whisky money' must be spent on secondary education; (2) that the two-penny rate limit in county boroughs is abolished; (3) that the Local Education Authority must inquire into the educational

needs of the area over which it rules; and (4) take the training of teachers in hand." But he goes on to say:

Let us remember the "concessions" have not removed the injustice of the existing training colleges. There are still over three-fourths of these colleges, supported, to the extent of more than three-fourths of their cost, from the public funds, and yet exclusively managed by Anglicans and for Anglicans, the doors of admission being rigorously locked against the best King's Scholars if they refuse to conform to the Anglican denomination. In the mildest language, that is described as a "grievance": if looked at as it really is, it is one of the gravest wrongs inflicted upon the nation by Parliament. It is a wrong to the teaching profession, since it puts a premium upon hypocrisy and rewards incapacity; it is a wrong to the children, for it robs them of the opportunity of being served by the best trained and best drilled teachers; and it is a wrong to the State, because it tends to slacken the fibre and deprave the quality of its citizens. An educational measure that perpetuates that injustice is an affront to the intelligence, to the conscience, and to the patriotism of the people. Let the Colonial Secretary propose it to New Zealand or Victoria, and see how they will treat it. Tell an American of it, and he marvels at British stupidity, and says his countrymen would reject it with ineffable scorn.

"If this Bill passes into law as it is now shaped by the Committee of the House of Commons," says Dr. Clifford, "it will be the most reactionary measure of the last half century, as the mere attempt to carry it is the most pathetic sign of our national decadence."

A ROUND-TABLE Conference on the Education Bill, initiated by the Bishop of London, and attended by representative Churchmen and Nonconformists, was held at Fulham Palace. The discussion was carried on through two prolonged meetings, but, we understand, it issued in no definite agreement. The Churchmen are said to have held firmly to two-thirds representation on the board of management, and the Nonconformists to have been equally determined against it. But they all lunched together very amicably.

THE Nature-Study Exhibition and Conference at the Royal Botanical Gardens have proved a gratifying success. Certificates of merit were awarded for various home-made apparatus suitable for Nature-study instruction, for descriptive accounts of the best organization of a school museum as a district centre of Nature study, for school museums exhibited in whole or in part, and for other exhibits of exceptional merit.

THE DUKE OF DEVONSHIRE opened the proceedings, expressing the warmest sympathy of the Board of Education with the movement. Referring to the fear of the country gentry and farmers that efficient education might take the agricultural labourer off to town, the Duke said:

The Board of Education, being conscious of this difficulty, were anxious to provide some means of bringing education into closer relationship with rural aims and interests, and to show that there was no necessary antagonism between sound elementary education and the cultivation of the land. Within the last three years, the Board had received much necessary and valuable outside assistance, and an influential Committee had been formed to adapt rural school teaching more nearly to modern requirements. The Board had approved their suggestions, and had taken some practical steps in connexion with the changes proposed. The general idea had been to foster interest in rural schools and promote intelligent knowledge of common things. The Board now required that Nature studies should be taken as one of the subjects in teachers' examinations, and had received most cordial assistance from the great majority of training colleges and from County Councils. The Board hoped that the new departure would awaken increased interest in rural schools from parents and employers. They had not supposed for a moment that Nature study should be restricted to country schools. With certain modifications, the subject might, with great advantage, be introduced into all schools. The idea underlying the movement was that, while they recognized the vast store of knowledge to be gained from books, they yet felt that there was much to be learned from the actual facts of Nature themselves. And, while the study of books might too often be an exercise only of the faculty of memory, and might leave almost untouched the other faculties of the human mind, on the other hand the intelligent study of Nature's facts was a mental discipline which could not fail to develop those powers of the mind which it was the object of all true education to discover, to cultivate, and to strengthen.

At the first Conference meeting (July 24) Mr. R. W. Hanbury, M.P., President of the Board of Agriculture, took the Chair, and Lord Avebury delivered an admirably appreciative and stimulating address on "The Study of Nature."

Before a child is carried far in any one subject, said his lordship, it should be explained to him that our earth is one of several planets revolving round the sun; that the sun is a star, that the solar system is one of many millions occupying the infinite depths of space; he should be taught the general distribution of land and sea, the continents and oceans, the position of England and of his own parish, the elements of physics, including the use and construction of the thermometer and barometer, the elements of geology and biology. . . . With these subjects Lord Avebury would teach arithmetic, some knowledge of language, drawing (almost, if not quite, as important as writing), and, perhaps, music. . . . But specialization should not begin before the age of seventeen, or sixteen at the earliest. . . . Lord Avebury said he often grieved to think how much happiness his fellow-countrymen lost from their ignorance of science. No one with any knowledge of science could ever be dull. No one would sit and drink in a public-house if he knew how delightful it was to sit and think in a field; no one would seek excitement in gambling and betting if he knew how much more interesting science was. Science never ruined any one, but was a sort of fairy godmother, ready to shower on us all manner of good gifts if we would only let her. The study of Nature was not only most important from a practical and material point of view, and most interesting, but it would also do much to lift us above the petty troubles, and help us to bear the greater sorrows of life.

On July 25 Lord Strathcona took the Chair, and Prof. Lloyd Morgan gave an address on "Nature Study in Elementary Schools." On July 29, Lord Balfour of Burleigh in the Chair, Prof. Bickmore, of the Natural History Museum, New York, spoke on "Visual Instruction" (with illustrations). On July 31, Sir George Kekewich in the Chair, Prof. Miall discussed "Nature Study in Colleges and Higher Schools." And on August 1 (to-day) Sir W. Hart-Dyke, Bart., M.P., in the Chair, the Rev. Canon Steward, Principal of the Training College, Salisbury, addresses the Conference on "The Training of Teachers in Nature Study." On each day selected speakers also dealt with three or four different aspects of the subject. The Conference-room was crowded, and on some days many were unable to get within hearing. We refer to the meeting and the subject in our leader columns.

An Educational Conference (with closed doors) was held at the Colonial Office, we understand, on July 10, under the presidency of the Earl of Onslow, the Under-Secretary for the Colonies. It was initiated by the Oxford University authorities, and was attended also by many colonial representatives, political and educational. The subjects on the card were, we believe, (1) the present status and privileges of students from the colonies; (2) the special requirements of students from the colonies; and (3) the provision, actual or possible, for meeting such requirements. The Oxford representatives entered upon the discussion on the understanding that the exchange of views was a purely informal one, and that the object was merely to supply and obtain information. As to the present position of colonial students, it was pointed out that to obtain a degree in Arts a student must reside in Oxford for three years, and pass three examinations—Entrance, Intermediate, and Final; while to obtain a degree in Science a two years' residence and the performance of some original research are required. The University at present gets annually from twenty to thirty-five colonial students that have little or no prior University training, and about five from one or other of the colonial Universities—the Cape, Sydney, Adelaide, Melbourne, New Zealand, Toronto, the McGill University (Montreal), Tasmania, and New Brunswick. These candidates may be excused a year's residence under certain circumstances, or else one of the examinations. In addition about six students from the colonies annually enter at Oxford at from twenty-two to twenty-five years of age for special study in letters, science, or law. The University authorities sought to know if special educational needs existed in the colonies in regard to those students aiming at political careers, learned professions, commercial careers, or the Civil Service. At present the University has special courses in philosophy, psychology, history, theology, physical research, law, economics, and history and practice of education. It was suggested that additional courses could be arranged if a demand were shown to exist. It is understood that these matters have long engaged the attention of the college authorities, and that the Rhodes scheme has helped to bring the question to a head. The conclusions of the Conference, if any, are not yet disclosed. It is stated, however, that Oxford will formulate a scheme embracing the conditions under which Colonial students will be

admitted to the full advantages of the University, and that this will be officially published in the course of the next few months.

At University College, London, there was opened on July 1 a most interesting exhibition of antiquities recently found by Prof. Flinders Petrie at Abydos, and by Dr. B. P. Grenfell and Dr. A. S. Hunt in the Fayum and El Hibe, under the auspices of the Egypt Exploration Fund. A representative of the *Daily News* asked Prof. Petrie where the specimens would be permanently preserved.

"Where, indeed!" he answered, bitterly. "They will all go to American museums, perhaps, as hitherto. We have no accommodation in this country—at least, it would be ungrateful to forget that the Horniman Museum people have come forward and offered to take one tomb. . . . But, as for the British Museum, they have no space. Oh; why won't they act upon my suggestion and erect a storehouse outside London to contain what I call the 'study material,' while keeping the British Museum itself for what might be called show specimens? A huge range of premises on cheap land outside London might be provided for five years' expenditure on the growth of the Bloomsbury institution."

ANOTHER point brought out in the interview was the incredible vandalism that has been going on in Egypt. Prof. Petrie is reported as follows:—

"Every year," said he, "the plunderers work more and more havoc, so that in another decade all will be obliterated. It is ingrained in the mind of the natives that the country benefits by their depredations. In vain we pay them for assisting in our orderly researches more than they would receive from the sale of their haphazard booty. You see, it is all in the hands of the French, and they look on without protesting, regardless of the spoliation." "But why is it in the hands of the French?" "Because," was the Professor's bitter answer, "fifteen years ago Lord Cromer handed over the Department of Antiquities entirely to the French, the consideration being the completion of the Debt Conversion. What is the result? The whole of the ground I have recently covered had previously been looted, all the tombs of fifteen kings being mixed together, and no record being kept. All this indistinguishable mass of material is now on sale in Paris, but no one is permitted to see it who cannot prove that he is a possible purchaser. This is an outcome of a five years' concession made to M. Amelineau, who was given a free hand to plunder the place; so that, in attempting to work out the history, I had nothing to go by but the scraps his workmen had left behind out of sheer carelessness, for their orders had been to destroy all that they did not remove. In these matters political considerations control the situation, and the French are actuated merely by an idea of aggrandizement. They have now secured a concession of all the antiquities of Persia, and already I hear of beautiful Persian objects in the Parisian market."

It will be remembered that in January last the Drapers' Company offered the handsome sum of £30,000 for the extinction of the debt on University College, "provided that the Senate of the University and the Corporation of University College can, before February 28, 1903, agree upon a scheme for the incorporation of the College in the University, and such scheme be approved by the Company." The Senate of the University have considered the proposal in all its bearings, administrative and financial, and have approved the outlines of a scheme that had been drafted in conference with the Council of the College as a preliminary step towards its realization. Further negotiations are in progress between the University and the College with respect to certain details, and it is hoped that by the date specified a complete scheme for the incorporation of the College with the University will be agreed upon. The realization of the scheme will depend upon whether it is possible to raise the necessary money.

PRINCIPAL HOPKINSON, speaking on Degree Day at Victoria University (July 3), referred to the relation of secondary schools to the University as follows:—

It is important to notice how the Preliminary Examination of the University is becoming recognized as one for which the pupils in the secondary schools of the districts are to be regularly prepared, and on the results of which awards are to be made. Already the Councils of the city of Manchester and the county of Cheshire have arranged to award their science scholarships on the results of this examination, and it is to be hoped that other Local Authorities may adopt the same policy, thus securing the great advantage to the schools of preventing multiplication of examinations, and enabling them to prepare for an examination which will have a tendency to prevent too early specialization, and which will also make it possible for them on entering the

University to proceed to higher work in any Faculty, and to have the advantage of the certificate which exempts from the preliminary examinations of the various professions. The recognition by the Board of Education under the recent Act, and the fact that so many representatives of the University are, under schemes of the Charity Commissioners, placed on the governing bodies of secondary schools, are further indications of the growth of the close connexion between our University and the secondary schools, a connexion upon which the success of both so largely depends.

A SCHOOL of Modern Languages has been founded in the University of Birmingham. The course will extend over three years, and will be of an advanced and comprehensive character, including lectures not only on the philology and literature of modern languages, but also on the history and institutions of foreign nations and on the methods of modern language teaching. Only students that have obtained a first class in the Intermediate Examination in French, German, Latin, English, Mathematics, or Logic will be allowed to enter the school with a view to graduation in it. Candidates may, however, take the Intermediate Examination at entrance to the University in lieu of the Matriculation Examination. A special Intermediate Examination will be held for this purpose in September, 1902. After completing their course of study, and passing two examinations (one at the end of the first year, and another at the end of the third, this latter being equal in standard to the ordinary M.A. Examination) students of the school may be admitted to the degree of "Bachelor of Arts in the School of Modern Languages," and after one year of further study in this or a foreign University they may be admitted to the degree of "Master of Arts in the School of Modern Languages" on presentation of a thesis. The main purpose of the school is to train teachers of modern languages for English secondary schools. (For the scholarships, see under "Current Events.")

LAST June the Technical Education Board instructed their Higher Education Sub-Committee to inquire and report as to the need and present provision for special training of an advanced kind in connexion with the application of science (especially chemistry and electricity) to industry. The members of the sub-committee came, without a dissentient voice, to the conclusions (1) that England—and London in particular—has suffered the loss of certain industries, and that others are in danger; (2) that this loss has been largely due to defective education, especially in the higher grades; and (3) that London is still seriously behind other cities, notably Berlin, in the provision for the higher grades of scientific training and research. "We have considered the report of our sub-committee," say the Board, "and concur in the conclusions arrived at."

It was with exceptionally good reason that the Master of the Brewers' Company congratulated (July 16) Mr. Easterbrook, Head Master of Owen's School, Islington, on the success of the school during the past year. He could claim the Senior Wrangler and a good many more—for example, Mr. E. V. Goodall, head of his year at the Royal Engineering College, who had taken all the prizes open to him. Among other successes were ten London County Council scholarships of the annual value of from £30 to £40. Owen's had gained sixty of these scholarships since they had been instituted, by far the largest number awarded to any one school during the past seven years. They had also secured three out of the five Middlesex Intermediate Scholarships. In the Cambridge Local examinations they had again the largest number of honours, first classes, and distinctions in the country, as well as the largest number of certificates awarded to any one school. They had gained the largest number of honours in these examinations for eleven years in succession. Successes had also been obtained at the University of London examinations. During the year a number of Owen Scholarships and Exhibitions had been awarded.

The Bishop of London presided at the annual distribution of prizes at the North London Collegiate School for Girls (July 4). The honoured name of Buss, known to him already in East London, he now found, he said, to be no less honoured in North London. This was one reason of the great pleasure it gave him to come to the school; another was that it was a pioneer school: common as high schools are to-day, it was this school that began the whole movement. He then spoke of the influence for good

such a great school possessed—an influence affecting the home life of wives, mothers, and sisters, as well as that more public life now open to women in so many capacities. The prizes were given away by the Countess Grosvenor.

### THE NEW PROFESSORS OF EDUCATION.

MR. JOHN ADAMS, Rector of the United Free Church Training College, Glasgow, and Lecturer on Education in Glasgow University, has been appointed Professor of Education in the University of London.

Prof. Adams is M.A. and B.Sc. of Glasgow University, and he gained the first place in the Fellowship Examination of the College of Preceptors. Before going to the Glasgow Training College he was Rector of the Free Church Training College, Aberdeen. He was a candidate for the Chair of Education at St. Andrews, but withdrew his application before the election.

At a meeting of the University Court held at St. Andrews on July 17, Mr. Andrew Carnegie, LL.D., Lord Rector, presiding, Mr. John Edgar, M.A., classical master, Royal High School, Edinburgh, was elected to the Chair of Education, rendered vacant by the death of Prof. Meiklejohn.

Mr. Edgar received his school education at Dumfries Academy, where he was *dux* in both classics and mathematics. At the University of Glasgow he graduated with First Class Honours in Classics, and was awarded the Snell Exhibition. After studying for four years at Balliol College, Oxford, he graduated with Honours in Classical Moderations, and in the Final School of Literæ Humaniores (1882). At Oxford Mr. Edgar spent much time on the study of modern languages and the theory of education. As a practical teacher Mr. Edgar has had long experience. For a short time he taught English and classics in Dumfries Academy, but the chief part of his professional experience has been obtained in the Royal High School of Edinburgh. There he has not only done a large part of the advanced classical work, but has from time to time taught classes in most of the other subjects included in secondary education. For a time Mr. Edgar acted as Secretary of the Secondary Schoolmasters' Association in Scotland. He has devoted a large part of his leisure to literary work on educational lines. He has written and published "A History of Early Scottish Education" (1893); translations of the "Homeric Hymns" and of "Æschines in Ctesiphontem," with introductory essays; a book on "Latin Unseens," with essay on "Method in Translation"; and various articles and reviews on educational subjects. Mr. Edgar takes up his duties at St. Andrews on the opening of the winter session in October.

### REGISTRATION OF TEACHERS.

#### DIRECTIONS BY THE REGISTRATION COUNCIL.

THE following communication has been issued by the Teachers' Registration Council:—

"Applicants for admission to Column B of the Register of Teachers, instituted by the Order in Council of March 6, 1902, may obtain the necessary forms from the Registrar, Mr. G. W. Rundall, 49 and 50 Parliament Street, London, S.W. Before filling up the forms applicants are recommended to study the precise terms of the Order, which is to be obtained, price 1½d., from Messrs. Eyre & Spottiswoode, East Harding Street, Fleet Street, E.C. The head master or head mistress of a 'recognized school' who has held office for not less than one year may be put upon Column B of the Register at any time during the three years following March 6, 1902, without further qualification.

"No announcement that a school has been recognized for the purposes of Section 4 of the Schedule to the Order in Council of March 6, 1902, will, as a rule, be made until recognition is required for purposes of registration. The authorities, therefore, of any school desiring to obtain recognition for it, under the terms of the Order, should submit an application for registration on behalf of one or more of its teachers who appear to fulfil the requirements of the Order.

"The application in each case should state clearly under which provision of the Order in Council recognition of the school is required. The Registration Council will then submit the name of the school for recognition by the Board of Education. The difficulties involved in determining the status of certain classes of teachers are so great that the work of registration must inevitably be slow, to begin with. It will be much accelerated if there is a careful study on the part of applicants themselves of the exact wording of the Order."

# UNIVERSITY OF LONDON.

Faculty of Economics and Political Science, including Commerce and Industry.

**Mr. Murray begs to call the attention of Students to the following Works suited to the Examinations in the Faculty.**

**WORKS BY SIR HENRY S. MAINE, K.C.S.I.**  
**ANCIENT LAW**; its Connections with the Early History of Society, and its Relations to Modern Ideas. Sixteenth Edition. 8vo, 9s.

**POPULAR GOVERNMENT.** Four Essays. I. Prospects of Popular Government.—II. Nature of Democracy.—III. Age of Progress.—IV. Constitution of the United States. Fifth Edition. 8vo, 7s. 6d.

**INTERNATIONAL LAW.** The Whewell Lectures delivered at Cambridge in 1887. 8vo, 7s. 6d.

**CHINA: Her History, Diplomacy, and Commerce,** from the Earliest Times to the Present Day. By E. H. PARKER, Professor of Chinese at the Owens College; Acting Consul-General in Corea, Nov., 1886—Jan., 1887; Consul in Hainan, 1891—2, 1893—4; and in 1892—3 Adviser in Chinese Affairs to the Burma Government. With 19 Maps, &c. Large crown 8vo, 8s. net.

"Mr E. H. Parker brings to bear upon his subject an experience, an amount of personal insight, and a capacity for criticism so unusual, as to endow his pages with an intrinsic merit practically unequalled. . . . Mr. Parker has produced a book which will be of value both on account of its wealth of information and independent criticism and for the additional light it sheds on Chinese topics treated of in other standard works."—*Pall Mall Gazette*.

**ENGLISH COLONIZATION AND EMPIRE.** By A. CALDECOTT, M.A. (Camb. and Lond.), sometime Fellow and Dean of St. John's College, Cambridge; University Extension Lecturer under the Cambridge Syndicate; Professor of Logic and Philosophy at King's College, London. With Maps and Plans. Crown 8vo, 3s. 6d. New Edition. With a new chapter, bringing the work entirely up to date, by F. A. KIRKPATRICK, M.A., University Extension Lecturer.

**AN HISTORICAL REVIEW OF THE DEVELOPMENT OF GREATER BRITAIN. THE GROWTH OF THE EMPIRE.** By A. W. JOSE. With many Coloured and other Maps and Diagrams. Crown 8vo, 6s.

"... an eminently useful book . . . as serviceable as it is readable. It is systematic in method and accurate in statement."—*Globe*.  
"... this excellent manual . . . That the colonial history of Great Britain should be worthily told was a crying need, and we congratulate Australia upon producing the historian, and the historian upon the production of an admirable book."—*Daily Chronicle*.

**COMMERCIAL KNOWLEDGE.** A Manual of Business Methods and Transactions. By ALGERNON WARREN. Crown 8vo, 2s. 6d.

This text-book of *Handelswissenschaft* is designed for the use of students who intend to enter the higher branches of commercial life. It includes chapters on Supply and Demand; Free Trade and Protection; Partnership; Companies, Syndicates, and Trusts; Principal and Agent; Contracts; Banking; Transit; Insurance; Tariffs; Employers' Liability; Commercial Travellers; Consuls, &c.

"The book should be used in every senior class both of our Board and private schools, and as an introduction to business life it should prove of great value."—*Statist*.

**THE USE AND ABUSE OF MONEY.** By W. CUNNINGHAM, D.D., Fellow of Trinity College, Cambridge; Professor of Economic Science, King's College, London. Crown 8vo, 3s.  
CONTENTS:—Part I., Social Problems; Part II., Practical Questions; Part III., Personal Duty.

"To bring political economy down from the region of abstraction as Dr. Cunningham does, and to make it applicable to individual conduct, is not only perfectly legitimate, but a most fruitful and useful form of study. The whole book is worth reading, but especially the last chapters."—*British Weekly*.

\*. Mr. Murray's Educational Catalogue, containing—

SIR WM. SMITH'S FAMOUS SERIES OF PRINCIPALS,  
SMALLER MANUALS, and DICTIONARIES;  
THE STUDENT'S MANUALS;

**A SHORT HISTORY OF COINS AND CURRENCY.**  
By Lord AVEBURY, F.R.S., &c. With many Illustrations. Fcap. 8vo, 2s.

"... a treatise as fascinating as a romance."—*Outlook*.  
"... a valuable and charmingly instructive member of Mr. Murray's excellent library."—*Glasgow Herald*.

**A GENERAL HISTORY OF EUROPE, 350-1900.**  
By OLIVER J. THATCHER and FERDINAND SCHWILL, Authors of "Europe in the Middle Ages." Revised and adapted to the requirements of English Colleges and Schools, by ARTHUR HASSALL, M.A., Christ Church, Oxford. With Bibliographies at the end of each section. With Maps and Genealogical Tables. Crown 8vo, 9s.

"... a model of condensation, omitting no essential facts. . . . the volume is greatly enhanced by a wealth of maps and chronological and genealogical tables. Among general histories this will take a leading place."—*Dundee Advertiser*.

**STUDENT'S HISTORY OF MODERN EUROPE.**  
From the Capture of Constantinople by the Turks, 1453, to the Treaty of Berlin, 1878. By RICHARD LODGE, M.A., Fellow and Tutor of Brasenose College, Oxford. Fourth Edition, thoroughly Revised. Crown 8vo, 7s. 6d.

"This is a work of sterling merit. It is an exhaustive compendium of the facts of the last four centuries, and at the same time an *histoire raisonnée* of the development of the modern European State system. It is characterized throughout by great clearness and masculine common sense."—*Oxford Magazine*.

**STUDENT'S CONSTITUTIONAL HISTORY OF ENGLAND.** From the Accession of Henry VII. to the Death of George II. By HENRY HALLAM, LL.D. Crown 8vo, 7s. 6d.

**HALLAM'S CONSTITUTIONAL HISTORY OF ENGLAND, Chapters I. to IX.** Bound together in One Volume for the special use of Candidates for the LONDON UNIVERSITY EXAMINATIONS. Crown 8vo, 5s.

**NATIONAL EDUCATION. Essays towards a Constructive Policy.** Edited by LAURIE MAGNUS, M.A., Magdalen College, Oxford. 8vo, 7s. 6d. net.

- 1.—Aims and Methods. By the EDITOR.
- 2.—Church Schools and Religious Education. By the Rev. BERNARD REYNOLDS, M.A.
- 3.—Registration and Training of Teachers. By FRANCIS STORR, B.A.
- 4.—The Inspection of Secondary Schools. By Sir JOSHUA G. FITCH.
- 5.—Science in Education.—The Need of Practical Studies. By Prof. H. E. ARMSTRONG, LL.D., Ph.D., F.R.S.

"Some of the leading experts of the day describe the need of reform and the lines it should take. . . . Professor Armstrong writes vigorously on the need for drastic reform in the schools in which our governing classes are educated, as the most important feature in the re-organization of a national educational programme. Messrs. Provand and Organ and Professor Hewins deal with the application of education to practical life in regard to industrial needs, and commercial education."—*Times*.

**ELEMENTS OF POLITICAL ECONOMY.** By JAMES BONAR, M.A., LL.D., Author of "Malthus and his Work," "Philosophy and Political Economy," &c. Crown 8vo. [Shortly.]

## CURRENT EVENTS.

THE first annual conference of persons in Fixtures. the North of England concerned in primary, secondary (including technical), and other forms of higher education will be held at Manchester on January 2 and 3, 1903. It will proceed on the lines of the conferences established by the Technical Education Board of the London County Council and held in London during the Christmas vacation for some years past. The subjects of discussion will be: "(1) The Curriculum in different types of Schools, showing the proportionate time which should be allotted respectively to Mathematics and Science on the one hand and to Literary and other Subjects on the other; (2) The Co-ordination and Delimitation of Science teaching in various grades of Schools; (3) The Methods of teaching Experimental Science (Physics and Chemistry) in its early stages; and (4) The Methods of Nature Study."

THE University Extension Summer Meeting at Cambridge, we may remind our readers, runs on from August 1 to August 26. Dr. M. E. Sadler opens the Educational Conference to-morrow (August 2) with a consideration of the question: "In what sense can, and ought, schools (primary or secondary) to prepare boys and girls for life?" Prof. Sir Richard Jebb takes the chair.

THE Sixth Annual Conference of the British Child-Study Association will be held at Edinburgh during the first fortnight of May, 1903.

MR. J. K. CAIRD, manufacturer, Dundee, has Endowments. offered to the Council of Dundee University College £13,000 to provide and equip a new laboratory for the Chair of Physics. A few months ago Mr. Caird gave £18,500 towards the erection of a hospital for the treatment of cancer, with £1,000 a year for five years, to facilitate investigation into the cause and cure of the disease. Some years ago Mr. Caird provided £5,000 for the erection of a maternity hospital.

AN anonymous donor has given £1,000 towards the fund for extinguishing the mortgage on Aberdare Hall, Cardiff. Lord Tredegar adds £500; Lord and Lady Aberdare, £200; Mr. John Cory, £200; and there are numerous smaller yet substantial contributions.

MR. FREDERICK W. VANDERBILT has given real estate and a building valued at half a million dollars to Yale University for the purpose of establishing a dormitory for the Sheffield Scientific School, from which he graduated in 1876.

PRINCIPAL REICHEL announces that the University of North Wales will soon receive £2,500 for scientific and technical scholarships to perpetuate the memory of the late Sir G. Osborne Morgan.

THE honorary degree of D.C.L. has been conferred by the University of Oxford upon Sir Edmund Barton, G.C.M.G., Prime Minister of Australia.

THE University of Aberdeen has conferred its honorary D.D. on the Rev. William MacGregor, M.A., Principal of the Theological College, Amoy.

PROF. ASHLEY has most appropriately been made the first M.Co. (Master of Commerce) of the University of Birmingham.

THE Board of Education learn, through the Foreign Office, that, in accordance with the terms of the legacy bequeathed to the city of Barcelona by Señor Don Francisco Martorell y Pena, a prize of 20,000 pesetas will be offered for the best original work on Spanish Archaeology. The essays may be written in Latin, Spanish, Catalan, French, Italian, or Portuguese, and must reach the Municipal Offices at Barcelona not later than noon on October 23, 1906. It is suggested that British competitors should send in their works through the British Consulate in that town. A copy of the regulations under which this competition will be held may be seen at the Board of Education Library, St. Stephen's House, Cannon Row, London, S.W.

MR. AND MRS. CHARLES HARDING have founded some valuable scholarships in connexion with the new School of Modern Languages in the University of Birmingham (see "Summary"). Four of £50 a year each, tenable by students of German for three years, may be awarded—two in 1902, and two in 1903. At the close of the third year travelling scholarships of £100 each, tenable for one year at a German University, may be awarded to scholars that have taken the B.A. degree in the Birmingham School of Modern Languages.

THE London School of Economics and Political Science again offer six studentships for competition in the session 1902-3 among University Extension students. The awards will be made at the end of the session to those students that are recommended by the lecturers and examiners in economics and political science as most likely to profit by more advanced or more specialized work in the subject. Holders will be entitled to free admission to the lectures and classes of the school for one year, renewable for a second and a third year if the reports on their diligence are satisfactory. Further particulars from the Director of the School, 10 Adelphi Terrace, W.C.

BEDFORD COLLEGE FOR WOMEN (University of London) offers six open Pfeiffer Scholarships, fifteen guineas each, to candidates holding a degree (or equivalent) in arts or science and wishing to train as secondary teachers. Apply to Miss H. Robertson, Head of the Training Department, by December 13.

SIR ALFRED L. JONES gives five scholarships, £30 a year each, for three years, at Aberystwyth University College, to encourage technical education.

THE Board of Education have approved the appointment by the Teachers' Registration Council of Mr. G. W. Rundall as their Registrar. Mr. G. W. Rundall, who is an M.A. of New College, Oxford, was a Master at Marlborough from 1877 to 1891, and Head Master of the High School, Newcastle-under-Lyme, Staffordshire, from 1891 to 1900. He is a member of the Head Masters' Conference and of the Incorporated Association of Head Masters, and Chairman of the West Midland Divisional Committee of that Association. He is also a member of the Political Committee and of the

Educational and Library Committee of the Teachers' Guild. During the past year Mr. Rundall has been an occasional inspector of secondary schools for the Board of Education. He has also acted as an examiner for the Oxford and Cambridge Joint Board and for the Civil Service Commission.

THE Vice-President of the Committee of Council on Education has appointed Mr. E. Hackforth as his private secretary, in place of Mr. R. L. Morant, resigned.

MR. R. L. MORANT has been appointed additional private secretary to the President of the Board of Education.

SIR HENRY ROSCOE, ex-Vice-Chancellor of the University of London, has been elected a member of the Academic Council, the Council for External Students, and the Board to promote the Extension of University Teaching, in the room of the Rev. Principal Robertson, who vacated these positions on election to the Vice-Chancellorship.

THE Senate of London University have appointed Dr. Samuel Smiles Assistant Teacher in Organic Chemistry at University College; Dr. F. G. Donnan, Assistant Teacher in General Chemistry at University College; Mr. J. W. Hayward, Principal Laboratory Assistant in Civil and Mechanical Engineering at the Central Technical College. Dr. E. H. Turpin has been elected Dean of the Faculty of Music, in place of Dr. James Higgs, deceased.

THE Board of Advisors for the Chair of Education in the University of London was constituted as follows:—The Vice-Chancellor; Miss H. Robertson and Miss Alice Woods (recognized teachers); Mrs. Bryant, Sir Philip Magnus, the Rev. T. W. Sharpe, C.B., and Mr. Sidney Webb (not recognized teachers).

THE new Professors of Education in the Universities of London and St. Andrews are specially mentioned in another column.

MR. LAWRENCE R. DICKSEE, Fellow of the Institute of Chartered Accountants, has been appointed Professor of Accounting in the Faculty of Commerce in Birmingham University.

THE Cambridge University Local Examinations and Lectures Syndicate have appointed Mr. D. H. S. Crange, M.A., of King's College, to be their secretary for lectures, in succession to Dr. R. D. Roberts.

MR. C. T. PREECE, B.A., has been appointed Lecturer in Mathematics in Birmingham University.

MISS M. PORTER, B.A. (R.U.I.), has been appointed science-mistress, and Miss E. MacGiffen, B.A., language mistress, at the Cork High School for Girls.

THE Technical Education Board of the London County Council have appointed Mr. A. H. Christie, teacher of design at the Council's Central School of Arts and Crafts, to be Inspector of Art Schools and Classes; Mr. A. J. Newton, chief assistant at the Bolt Court School, to be Principal of the School of Photo-engraving and Lithography; Mr. D. R. Harris, assistant master of mathematics and Lecturer on Education at Aberystwyth University College, to be Normal Master at the London Day Training College; and Miss Margaret Punnett, Principal of the Cambridge Day Training College, to be Normal Mistress at the London Day Training College.

DR. W. H. WILLCOX, M.D., D.P.H., has been appointed Lecturer in Hygiene at Bedford College for Women.

MR. JAMES CLARK, M.A. (Aberd.), B.A. (Oxon.), Rector of Dumfries Academy, has been appointed one of His Majesty's Inspectors of Schools.

THE REV. ARCHIBALD RICHARD FRITH HYSLOP, M.A., for the past ten years an assistant master at Harrow, has been elected Warden of Trinity College, Glenalmond, in succession to the Rev. Canon Skrine.

MISS CHARLOTTE E. AINSLIE, B.A. (Lond.), L.L.A. (St. Andrews), Senior Lecturer in the Cambridge Training College, has been appointed Head Mistress of George Watson's Ladies' College, Edinburgh.

MISS M. GERTRUDE FRODSHAM, B.A. (Lond.), Resident Lecturer at the Cambridge Training College, has been appointed Head Mistress of the New St. Saviour's and St. Olave's Grammar School for Girls, New Kent Road, Southwark, which will probably be opened in January next.

MR. A. M. ABRAHAMS, one of the senior teachers of the Jews' Free School, has been appointed Head Master of the Jewish School at Johannesburg.

THE Head Mastership of the Whitgift Grammar School, Croydon, will become vacant at Christmas. Applications to be lodged by September 25.

Literary Items. THE first volume of "The Cambridge Modern History" will appear on November 1; the last—the twelfth—six years hence. The general scheme of the work was drawn up by the late Prof. Lord Acton, and the editors are Dr. Ward, Dr. Prothero, and Mr. Stanley Leathes. The first volume, which is to treat of the Renaissance, will contain, as preface, a general statement of the plan and scope of the entire work. "By a universal modern history," say the editors, "we mean something distinct from the combined history of all countries; in other words, we mean a narrative which is not a mere string of episodes, but displays a continuous development. It moves in a succession to which the nations are subsidiary." For each of the twelve volumes of the History some historical fact of signal importance has been chosen as the central idea "round which individual developments are grouped, not accidentally, but of reasoned purpose."

THE lectures delivered by the late Lord Acton as Regius Professor of Modern History at Cambridge have been arranged for publication by his son, and will be issued by Messrs. Macmillan. Lord Acton delivered two courses—one on the French Revolution and the other on the General History of Modern Times. They are to appear in two volumes, with Lord Acton's inaugural lecture. It is hoped that a volume or two of his essays may be issued at a later date. The forthcoming volumes have been edited by Mr. R. Vere Laurence, Fellow of Trinity College, Cambridge.

MESSRS. FUNK & WAGNALLS, of New York and London, have the second volume of their great "Jewish Encyclopædia" ready for publication. It contains the articles from "Apocrypha" to "Benash." The head of the publishing company, Dr. I. K. Funk, is an ex-Lutheran minister. It has been the subject of remark that the greatest of Jewish literary enterprises "since the Talmud" should have been taken up by a Christian firm. The publishers of the "Encyclopædia" are also the publishers of the well known "Standard Dictionary."

MR. FISHER UNWIN has just published in the "Climbers'

Guide" series the first volume of a detailed guide to the Bernese Oberland, by Mr. Hasler, a well known climber in that region. It comprises the portion lying between the Gemmi Pass and the Mönch-Joch. A second volume (on to the Grimsel Pass) is in preparation for issue next summer. Other volumes are in contemplation.

THE Walter Scott Publishing Company announce a work on "Tolstoy: his Life and Works," by Mr. John C. Kenworthy, an intimate friend of the great Russian writer; and a new illustrated series of "The Makers of British Art," edited by Mr. James A. Manson.

THE second of the Rev. Dr. Stokoe's "Manuals of the New Testament"—"Life and Letters of St. Paul"—is promised by the Clarendon Press for September 1. The third volume—"Early Days and Letters of the Church"—will appear "shortly."

THE *Athenæum* of July 5 contains a useful series of articles reviewing the literature of the Continent during the last twelve months.

MR. FISHER UNWIN has in the press a translation of M. Emile Boutmy's "Essai d'une Psychologie Politique du Peuple Anglais au XIX<sup>e</sup> Siècle"—a study of the English nation of the present day in its political, social, and moral aspects, and of the causes that have led to the formation of the British character.

RECENT Parliamentary Papers include a Report of the Historical MSS. Commission on Manuscripts in the Welsh Language, Vol. II., Part I. (1s. 9d.); Education, Scotland, Report by the Accountant-General (6d.); Report of the Proceedings of the Charity Commissioners for England and Wales under the Endowed Schools Act for the Year 1902 (1d.); Board of Education, Draft Order in Council modifying regulations contained in the Order of March 6, 1902 (1d.); Supplementary Regulations for Secondary Day Schools and for Evening Schools (4d.); and a Blue-book, containing Lists of Associations constituted under the Voluntary Schools Act, 1897, Associated Schools and Amounts of Aid Grant paid, and Unassociated Schools and Amounts of Aid Grant paid (8½d.).

THE following Further Regulation for the Intermediate Examinations of Internal Students of the University of London has been approved:—"A student who fails in one subject only at a Special Intermediate Examination may take that subject alone at the next Special Intermediate Examination at the same school."

WESTFIELD COLLEGE has been admitted a school of the University of London in the Faculty of Arts.

WE cut the following instructive paragraph from the June number of the *Educational Review* (St. John, N.B.):—

Prof. Jeffrey, Toronto University, who has shown ability for research work (in botany), was enjoying a salary of 1,800 dols. Harvard wanted him, and made the inducement much larger. Toronto responded by meeting the figure of Harvard. The latter bid again, more than doubling the first salary. The professor goes to Harvard.

What public institution in this country can select the man it wants after this businesslike fashion?

THE *Schoolmaster* (July 19) very properly gibbets two educational enormities. (1) The Llandinam School Board in February last appointed a lady "assistant teacher, under Article 68, at a salary of £8 per annum, the appointment to date from April 1 next." "Three shillings per week for one whose duty and privilege it is to develop the faculties and mould the characters of the little ones in their most plastic stage!"

The date, at any rate, is strictly appropriate. (2) "The Norwood (Middlesex) School Board, known commonly as the Southall Board, not only retains the stupid C.P. rules in its Code, but has inflicted a novel task on its teachers, as undignified as it is unnecessary. Belfries have been erected on all the schools of the Board, and to the teachers has been delegated the delightful duty of ringing the school bells six times a day. We are positively informed that the teachers are not allowed to avail themselves of the assistance of a boy, but must personally pull the rope for the space of three minutes!"

THE British Child Study Association has published in a convenient pamphlet (G. Street & Co., 164 Piccadilly) the proceedings at the Conference on Child Study held at Normansfield, Hampton Wick, on June 24.

THE Board of Education have decided that there shall in future be one continuous course of study at the training colleges, lasting for two years, with periodical inspection during the period, and an examination at the end of it sufficient to test the efficiency of each student, and invite the training colleges to submit for approval their proposed two years' course for 1902-3, "complying generally with the requirements of the outline curriculum" suggested by the Board.

BEDFORD COLLEGE FOR WOMEN (University of London) is giving special attention to its course of scientific hygiene, theoretical and practical, which is recognized by all qualifying authorities, and, indeed, far exceeds their requirements. The course extends from October to June.

THE Johns Hopkins programme for next session provides, in the Oriental Seminary, three courses on Philippine dialects—two on Tagalog and one on Visayan.

THE University question is contested in the North with unabated warmth. Liverpool is backed up by Chester; Owens is supported by Salford. Yorkshire is engaging counsel "to oppose all proposals for breaking up the Victoria University."

THE Council for the Extension of Higher Education in the Potteries are calculating the cost of a projected college in North Staffordshire. "It is hoped that the school of pottery, in addition to training men, will act as a central advisory and analytical department for the manufacturers."

*Vanity Fair's* July cartoon effectively hits off "Marlborough College" (Rev. G. C. Bell).

THE Royal University (Ireland) Graduates' Association unanimously adopted (June 29) this resolution:—"That we, as citizens of Ireland, have been convinced by the evidence already given before the Royal Commission, by public correspondence, and from various other sources of information, that both primary and secondary education are in a deplorably inefficient condition, notwithstanding the lavish expenditure by the State, and that an impartial Royal Commission to investigate the relation of the State, the Local Authorities, and the various Churches to primary and secondary education is urgently required."

HARTLEY COLLEGE (Southampton) and Reading College have been recognized by the Board of Education as University colleges.

BEDFORD COLLEGE FOR WOMEN is following the example of University College and King's College in making a public appeal for funds "to enable it to extend its premises and to endow some of its lectureships."

## COLLEGE OF PRECEPTORS.—HALF-YEARLY GENERAL MEETING.

THE ordinary half-yearly General Meeting of the Members of the Corporation was held at the College, on Saturday, July 19. The Secretary having read the notice convening the Meeting, Dr. WORMELL was appointed Chairman.

The Report of the Council was laid before the Meeting, and was taken as read; a copy having previously been sent to every member of the College. It was as follows:—

### REPORT OF THE COUNCIL.

THE Council beg to lay the following Report of their proceedings for the past half-year before the Members of the College:—

1. They have to report that the number of candidates entered for the Midsummer Examination for Certificates is about 3,950, while the number of entries for the Lower Forms Examination is about 1,300. These figures show a slight increase as compared with last year's returns.

2. The Professional Preliminary Examination for intending medical students and others was held as usual in the second week in March, and was attended by 217 candidates. This is a considerable increase as compared with the last Examination held at the same period of the year.

3. For the Midsummer Examination of Teachers for the College Diplomas 3,640 candidates have entered (including 18 who enter for the practical examination for Certificates of Ability to Teach). This number shows an increase of 30 as compared with the number of teachers who presented themselves for the corresponding Examination last year, and is larger than at any previous Diploma Examination conducted by the College at the same period of the year. The forthcoming Examination will be held in London and at the following Local centres:—Birmingham, Bristol, Leeds, Manchester, Arbury (I. of Man), Boston, Burton-on-Trent, Dorchester, Hereford, Jersey, Liskeard, Lowestoft, Spalding, Truro, Cowdenbeath (Scotland), and Calcutta.

4. In addition to their own Examinations of pupils and teachers, the Council have conducted during the past half-year the Examination of a number of Schools by Visiting Examiners.

5. The Thirty-first Annual Series of Lectures to Teachers on "The Science and Art of Education" commenced on the 21st of February, with a Course of Twelve Lectures on "Intellectual Education" by Professor James Sully, M.A.; and a Course of Twelve Lectures on "The Practice of Education" will be delivered in the autumn by the Rev. Canon Daniel, M.A.

6. The usual Monthly Evening Meetings of the Members have been held, at which the following lectures have been delivered:—"Histories of Literature, and their use in the Earlier Stages of Literary Study," by H. C. Bowen, M.A.; "Impending Reforms in the Teaching of Elementary Mathematics," by J. J. Findlay, M.A., Ph.D.; "The Feelings as a Factor in School Training," by J. L. Paton, M.A.; "Some Notes on American Universities," by Professor W. Knight, LL.D. (in conjunction with the Assistant Masters' Association). The lectures and the discussions on them have been reported, as usual, in the *Educational Times*.

7. The Council have carefully considered the provisions of the Order in Council relating to the Registration of Teachers, and they regret that they are unable to regard these provisions as likely to secure the objects aimed at by those who have for many years striven to have the principle of professional registration embodied in a legislative act. The non-recognition of teaching certificates which have for many years been accepted as evidence of the possession of adequate knowledge and the capacity to impart it is calculated to inflict a grave injustice on many deserving teachers who do not possess University degrees. The defects of the regulations in this regard have been brought under the notice of the Board of Education, but the Council regret that up to the present no steps have been taken to remedy the anomalies which have been pointed out. Although several questions on the subject have been put in the House of Commons, and answers given by the official representative of the Board of Education, there still remain ambiguities as regards the conditions of registration. The uncertainty as to these conditions must, the Council fear, seriously hamper the work of the Registration Council, who have no power to do more than make recommendations for amendment to the Board of Education, and it is not improbable that the impediments placed in the way of those who possess the necessary academic qualifications may have the effect of seriously restricting applications for registration.

8. The Education Bill which was introduced by the Government before Easter has now reached the Committee stage. In view of the great diversity of opinion of the subject, the Council abstain from pronouncing any opinion on its merits. They note with satisfaction that the Bill does not repeat the restrictions to the action of the Local Authority in aiding secondary education out of public funds which were contained in the Bill of last year, to the prejudice of voluntary enterprise.

9. During the past half-year, the Diploma of Fellow has been conferred on 2 candidates, that of Licentiate on 7, and that of Associate on 110, who had passed the required examinations. Eleven new members have been elected, and notice have been received of the withdrawal of one, while thirty-one names have been struck off the list on account of non-

payment of subscriptions. The Council regret to have to report the deaths of the following members:—Mr. S. Chester; Miss M. C. Crombie; Sir Richard Temple; Professor Meiklejohn; Mr. J. Newton; Mr. A. Paul, L.C.P.; Rev. W. J. Savell; Mr. L. Sergeant; and Mr. D. Slater, F.C.P.

Mr. RADFORD said it was high time that the Council should take active and vigorous measures for restoring the prosperity and influence of the College. A survey of the records of the exertions made by former Councils showed, in his opinion, the incompetency of the present directorate to deal with present emergencies. He thought the Council would do well to imitate the methods of commercial firms in extending their business. The members of the College had a right to demand that measures should be taken and a vigorous policy pursued in order to secure an extension of the College examinations. He referred to the way in which the diplomas of the College had been ignored in framing the regulations for admission to the Teachers' Register, and urged the Council to take energetic measures to have this matter rectified.

Mr. KING asked if any steps had been taken by the Council to secure more adequate recognition of the College Diplomas in connexion with the registration of teachers.

The DEAN said this matter had been most carefully considered by the Council, and very strong representations on the matter had been made to the Board of Education. He was in hopes that the efforts of the Council would eventually result in justice being done to the work of the College in this department. With regard to Mr. Radford's recommendation that they should imitate the methods of commercial firms in extending their operations, he did not think that the suggestion would commend itself to the majority of the members of a body like theirs. It was well known that the falling off in the numbers of candidates at the pupils' examinations was due to the setting up, some years ago, of the Oxford and Cambridge Preliminary Examinations. The recent reports of the Council, however, showed that the effects of the competition had practically subsided, and that they were beginning to make up a little of the lost ground.

Mr. PINCHES said, with regard to the Associateship and Licentiatehip, he hoped they would succeed in getting these diplomas recognized in an amended Order in Council. After what had fallen from the Dean he did not think there was much to answer in Mr. Radford's remarks. He had now been a member of the Council for forty years, and he was convinced that never had they men who were more able and zealous than those on the Council at the present time in devoting themselves to extend the influence and good work that the College had been doing. As Treasurer he could not be indifferent to anything that concerned the financial prosperity of the College, but he certainly could not approve the adoption of commercial methods for extending their examination work. He might, indeed, mention that the Council had recently resolved to spend money in improving their educational machinery without considering whether or not they would get a corresponding pecuniary return.

Mr. BEDWELL asked whether some steps could not be taken with regard to the training of teachers in connexion with the College.

The DEAN said they had already spent a good deal of money in this direction; but their difficulties had been that they could not get students to come forward to be trained. Whether they would renew the attempt must depend on circumstances.

Mr. PINCHES observed that paragraph 5 of the Report showed that for twenty-eight years past systematic courses of lectures to teachers had been given which had been largely attended by probationers and others.

Mr. BEDWELL said he had attended some of these lectures, and was perfectly satisfied with them; but comparatively few students availed themselves of the opportunity. Merely giving two series of lectures during the year could hardly be regarded as doing very much in the way of training.

Mr. ORCHARD said he noticed in paragraph 8 that, in view of the great diversity of opinion on the subject of the Education Bill, the Council abstained from pronouncing any opinion on its merits. There were two points on which no great diversity of opinion existed. One was that, since the education was to be paid for out of the rates, there ought to be popular control. Secondly, the education given ought to be efficient, and there could be no satisfactory test of efficiency of school teaching unless there was inspection. Inspection should be compulsory. The great majority of the schools would be either Church of England or Nonconformist, and, as the Church of England claimed to represent the majority of the Protestant population, they would

not object to popular control; if they did object, it would be a confession that they did not represent the majority. The Non-conformists did not object to popular control. The only people who would object would be a small minority, who ought to give way to the majority.

Mr. SOUTHEE said what Mr. Orchard suggested was already being carried out to some extent in the case of secondary schools. The Board of Education had inspected his own school more than a year ago. He had some difficulty, however, in ascertaining from the Board what was implied by the elaborate report they had sent in, and he could not even learn whether the inspection was sufficient for the purposes of registration.

The Report of the Council was then adopted.

The DEAN then presented his Report, which had been printed and distributed among the members present. He stated that the statistics, which were incomplete, would be supplied when the Report was published in the *Educational Times*.

THE DEAN'S REPORT.

In addition to the general statement of the examination work of the College during the past half-year, which has been embodied in the Report of the Council, I have now to submit to you, in detail, the statistics and results of the various examinations.

The Midsummer Examination of candidates for Certificates took place on the 1st to the 5th July at 155 Local Centres and Schools. In the United Kingdom the Examination was held at the following places:—Abingdon, Alvechurch, Anerley, Aylesbury, Banagher, Barnstaple, Bath, Belfast, Bentham, Birmingham, Blackburn, Blackpool, Borden, Boston Spa, Bournemouth, Brewood, Brighton, Bristol, Broxbourne, Bruff, Camelford, Cardiff, Carlisle, Carnarvon, Cheltenham, Coleraine, Croydon, Douglas (Isle of Man), Dublin, Dumfries, Dundalk, Durham, Ealing, Eccles, Edgbaston, Ely, Epsom, Erith, Exeter, Eye (Suffolk), Falmouth, Faversham, Felixstowe, Forest Gate, Forest Hill, Glasgow, Goudhurst, Greenwich, Grimsargh (Preston), Hartlepool, Hastings, Hatfield, Hawkhurst, Hereford, Herne Bay, Horsham, Huddersfield, Hunstanton, Hutton (Preston), Hythe, Ipswich, Iron Bridge, Jersey, Kirkby Stephen, Kirkwall (Orkney), Leeds, Leytonstone, Liskeard, Liverpool, London, Ludlow, Lymm, Manchester, Margate, Market Bosworth, Market Harborough, Melksham, Merthyr Tydfil, Midhurst, Newcastle Emlyn, Newcastle-on-Tyne, Northwich, Norwood, Nottigham, Oswestry, Pencader, Plymouth, Pontefract, Portmadoc, Portsea, Portsmouth, Ramsgate, Richmond (Surrey), Richmond (Yorks), Ripley (Surrey), Rochester, Ruabon, Ruthin, Rye, St. Leonards-on-Sea, Seaford, Shebbear, Sheffield, Snettisham, Southampton, Southend, Southport, Stroud, Sunderland, Taplow, Taunton, Tavistock, Tenby, Thirsk, Tunbridge, Tunbridge Wells, Uckfield, West Lavington, Weybridge, Wimsalov, Winslow, Wirksworth, Worcester, York. The Examination was also held at Colombo (Ceylon), Grenada, Lagos, Gibraltar, Constantinople, and Ghistelles (Belgium).

The total number of candidates examined (not including 72 examined at Foreign and Colonial Centres) was 3831—2638 boys and 1193 girls.

Taking the Christmas and Midsummer Examinations together, the total number of candidates examined during the year ending Midsummer, 1902 (not including those who attended the supplementary examinations in March and September) has been 9542.

The following table shows the proportion of the candidates at the recent Midsummer Examination who passed in the class for which they were entered:—

	Examined.	Passed.	Percentage.
First Class [or Senior] .....	359 .....	171 .....	48
Second Class [or Junior] ...	1402 .....	685 .....	49
Third Class .....	1819 .....	1341 .....	74

The above table does not take account of those candidates who obtained Certificates of a lower class than that for which they were entered, nor of those (251 in number) who entered for certain subjects required for professional preliminary purposes.

The number of candidates entered for the Lower Forms Examination (not including 7 examined at Foreign and Colonial Centres) was 1242—725 boys and 517 girls. Of these 973 passed, or 78 per cent.

At the Professional Preliminary Examination for First and Second Class Certificates, which was held on the 4th to 6th of March, in London and at seven Provincial Centres, viz, Birmingham, Bristol, Edinburgh, Glasgow, Inverness, Leeds, and Liverpool, 216 candidates presented themselves.

The Examination of Teachers for the College Diplomas took place on the 8th of July and four following days in London and at the following Local Centres:—Arbory (Isle of Man), Birmingham, Boston, Bristol, Burton-on-Trent, Cowdenbeath (Fifehire), Dorchester, Jersey, Leeds, Liskeard, Manchester, Newcastle-on-Tyne, Rugby, Scarborough, Spalding, Truro, and at Calcutta, Hay (N.S.W.), and Namur. It was attended by 327 candidates—199 men and 128 women. In addition to these, 20 candidates (11 men and 9 women) were examined for Certificates of Ability to Teach. On the results of this Examination, 6 candidates have obtained the Diploma of Licentiate, and 117 that

of Associate, while 17 candidates have obtained Certificates of Ability to Teach.

The Report was adopted.

The Rev. J. O. BEVAN moved the following resolution, of which due notice had been given :—

Recognizing the fact that the present Government is pledged to pass a measure for the organization and co-ordination of the various educational agencies at work in our midst, this meeting welcomes the introduction of an Education Bill, approves of the principle of one Authority for the supervision of elementary, technical, and secondary education, and considers that such Authority should be mainly derived from the County and County Borough Councils.

He said he would invite the members to confine themselves to the terms of the resolution. They were dealing at the present time with a very practical question. They were not met together to consider whether an Education Bill should be prepared and brought in and presented to Parliament on the lines on which such a measure should be developed, but to deal with an existing state of things. A Bill had been prepared and submitted to the judgment of the nation and to Parliament, and it seemed to him that, as a body engaged in secondary education, it was their bounden duty to express some judgment on the form that that Bill had assumed up to the present time. They would all be prepared to agree with the statement that there had been for many years past a tendency on the part of the Government to assume a larger measure of control than formerly in reference to all classes of education except perhaps the highest; and since the Royal Commission's Report some few years ago it was inevitable that a Government measure should have been brought in for the organization of the different classes of education. That being so, seeing that the measure was inevitable, that it had been brought in by the Government, that it had been accepted more or less by a certain number of educational associations, that it had been sustained in Parliament, on the second reading, by a considerable majority, it was incumbent upon them in their turn to say whether they accepted the position and approved the leading principles of the Bill; and, if so, to consider what modifications they would suggest whereby the principles of the Bill might be the better adapted to carry out the objects for which they as an institution existed. He asked the meeting to say that they welcomed the introduction of the Bill. If they were not prepared to say that, the alternative had to be considered, namely, that there must be a prolonged delay in the organization of all classes of education. Now, were they prepared to submit to that delay, or did they not think the time had arrived when the many controversies that surrounded this question should be laid? If there were further delay, could they suppose that in ten or twenty years, when a new order was introduced and a new party in power, they would have a Bill that they would like better than the one before them? He asked them to assent to the principle that, if there was to be an Authority under Government for the settlement of this question, that Authority should be one; that they should have one Authority dealing with primary, secondary, and technical education. As to the constitution of that Authority opinions of course differed. Some, no doubt, would desire that there should be an absolutely new Authority, constituted *ad hoc* for dealing with the question; but he believed that the members of the College were not prepared to assent to that principle. Others might desire that the bodies which existed over a certain part of the kingdom for taking charge of elementary and technical education should have the duty devolved upon them of supervising secondary education also. That, again, was a proposition against which many very cogent reasons might be urged. In the first place, the School Boards in their operations only covered part of the kingdom; they took the greater number of the large towns and a certain proportion of the country districts; but, so far as area was concerned, they did not cover more than a third part of England and Wales. Again, he did not think the members of the College would desire themselves and their schools to be supervised by the existing School Boards. Then they came to the third proposition, which was embodied more or less in the Bill before Parliament, according to which the County Councils and County Boroughs had been selected to have charge of this duty, and there were various reasons why this policy should be supported by the members of the College. In the first place, these bodies were already in existence; and, in the second place, they were uniform, and covered the whole ground. They possessed certain powers, and very important powers, with

respect to rating; and, furthermore, they had had put upon them during the past few years certain educational functions which in many cases had been carried out with great assiduity and success. But the proposal of the Government was not that these County Councils should stand alone or appoint their own Committees exclusively to deal with this subject; it was suggested that the Committees should be strengthened by the presence of educational experts. He would say nothing about the mode of electing these experts; he simply said they were to be added to the members of the Council in order that the requisite special knowledge should be supplied in cases where it was lacking. In a measure of this kind, which was in some degree novel, and in all respects complex, one was prepared to allow that certain objections would naturally arise in the minds of most men who had studied the Bill; but, because there was a diversity of opinion in a body like theirs, it was almost ridiculous to say that no judgment should be expressed on a measure of this kind in which they were all so extremely interested. If they did not take the line which he ventured to suggest, they would fall out of touch with other educational bodies who were actively dealing with this matter in the interests of those whom they represented, and it would be a serious misfortune for the members of the College that the Council should elect to stand aside and put altogether out of their power the possibility of making such changes in the Bill as seemed desirable. There was an educational problem before them. They had to deal with that as educationists. Mr. Orchard seemed to think that the main interest in the Bill was that which had reference to elementary education; but he ventured to say that was not so. They were not so much concerned with elementary education as other bodies, in whose hands they could leave that portion of the Bill. They were secondary teachers, and were concerned with the important element which dealt with the organization of secondary and technical education. He ventured to hope that he had adduced arguments which would receive favourable consideration, and lead, he hoped, to the adoption of the resolution.

Mr. KING, in seconding the resolution, said that most of them had read the statement about the Council abstaining from pronouncing an expression of opinion on the Bill as a confession of weakness. It was of great importance for associations that wished to get their views considered in Parliament to devote a good deal of time to interviewing members, and this was no doubt the reason why the National Union of Teachers had attained to the position and influence they now held. He was inclined to think that the College had adopted a *laissez faire* policy which was not suited to the present emergency. He thought it would have been better if the Council had come forward, with its experience of past years, and had endeavoured to lead the country into a proper course; but, as they had not thought fit to bring forward some such resolution as this, he had much pleasure in seconding the motion.

The DEAN, while acknowledging the temperate character of the resolution and the temperate way in which it had been proposed, thought it would be a great pity if Mr. Bevan pressed the question to a division. The institution of one Authority really meant in plain language the extinction of School Boards, and that was a burning political question on which there was the utmost diversity of opinion. It was not merely an educational question, but one on which sides were taken with the greatest enthusiasm. On one side they had the supporters of His Majesty's Government, the Irish Nationalists, and the majority of the clergy of the Established Church, while on the other they had the great bulk of the Nonconformist denominations, with the exception of the Roman Catholics, and the whole of the Liberal Party, with one or two exceptions. If the Council had expressed a definite opinion on such a political question, they would have been very likely to give offence to many of the members. That was why he was very anxious that the question should not be pressed to a division, as it would put many of them in an embarrassing position. He thought there was a tendency to exaggerate the importance of a single Authority. In past times they had been very anxious for the solution of the delimitation question, but he thought that might have been effected in a simpler way. It was not necessary to burn down a house to roast a pig. Had the motion been limited to an approval of making the County Councils the Authorities for Secondary and Technical Education, he should most heartily have supported it. His own feeling about it had been that, whatever the ultimate result was to be, they should at once have been made the Secondary Education Authority, and given time to organize their work before any

further steps were taken. He appealed to the meeting not to take a step which would alienate many of their friends.

The CHAIRMAN said he was not sure that Mr. Bevan had not done a good thing in bringing forward the resolution, but he would counsel him to accept the suggestion of the Dean for reasons which he would point out. The College was an unsectarian institution, and was, fortunately, free from many of those embittered controversies which concerned other sections of the community. They were also free from some of those political considerations which prevailed in the House of Commons. He would try to show the members that they could not trust too implicitly to politicians, and he would prove that the politician was as a rule a sorry educationist. Last year there was a Secondary Education Bill introduced, and on the second reading the Opposition proposed the rejection of the Bill because it did not include elementary education. The same Opposition very early complained of the present Bill because it included elementary education. And if the action on these two occasions was compared it would be seen that there was a want of consistency on the part of politicians in dealing with the question. Teachers in secondary schools had reason to be nervous at the present moment in view of the dangers which were contained in the Bill. He should be inclined to adopt a view approving the principle that all forms of education—elementary, secondary, and technical—should be put under one duly elected and representative Authority, though he was not so sure it would be wise of the Council of the College, in the present critical position of matters, to put down a definite statement to that effect in their Report. The object of the College was to improve secondary education, public and private, and they had this charge in particular, to safeguard the liberty of private enterprise in education. They could not very well make up their mind to agree to the one Authority unless they knew the powers which were to be given to it. If they complained afterwards that the new Authority would put an end to private schools, or injure the interests of private schools, they must expect the retort: "Why did you say beforehand in your own Report that you approved of the new Authority?" For the co-ordination of the different branches of education it was advisable to have one Authority; but he wanted an Authority with powers which would enable it to look after the interests of all kinds of education impartially. Although he had had no hand in the framing of the Report, he thought it was wise on the part of the Council not to condemn the Bill. In fact, it would be absolutely wrong to do so, because they still hoped it would go through in such a form as would be to the advantage of the country and also to the advantage of those who were associated with the College. Approving, as he did, the principle that underlay the words of Mr. Bevan's resolution, he nevertheless thought it would be wise of him to withdraw it, and to leave the matter in the somewhat indefinite language of the Report; because they knew there was still the possibility that it might be necessary for the Council to rouse all their energies and to spend all the money at their command to defend the interests of private schools against the establishment of an Authority with power to swallow them up and to sweep them off the face of the earth. He might just refer to one other subject which was now engaging public attention. In France a so-called Association Law had recently been passed. The Government at the time of its passing intimated that it might lead to the closing of 130 schools. The law was passed, and the Government so interpreted the law now that they had determined to close 2,500 schools, employing 6,000 teachers, and providing education for 150,000 pupils. The same thing might be done in England, if they were not very watchful with regard to the last stages of the Bill.

Mr. SOUTHER said that private secondary schools had either to sink or swim, and therefore he felt that at such a time as the present the body that represented these schools should have an opinion and maintain it. It was important that the College should encourage its members to take an active interest in seeing that proper persons were put upon the local Councils and Education Committees. The Council might also advocate the desirability of having as large an area as possible for the Local Authorities; for if they got little Borough Councils they would be at the mercy of corporations who might not be over-anxious to preserve private enterprise. If the Act came into force, it would be the bounden duty of the College to get its members to apply for representation on the bodies which were to carry out its provisions.

Mr. KELLAND rose to move the previous question.

The CHAIRMAN said this was in the nature of an amendment, and the by-laws did not allow him to receive it, as previous

notice had not been given. Unless the resolution was withdrawn a vote must be taken upon it.

Mr. KELLAND said he regretted that the by-laws did not allow of the resolution being amended, or of the previous question being put, because there was much in the resolution with which he cordially agreed, and he should have been only too glad if the meeting had had the opportunity, with the full facts before them, of pronouncing an opinion upon the Education Bill. He did not so much refer to what was included in the resolution as to what was omitted. What he would have liked to propose was to add the following words:—"and prays the Government to introduce into the Bill clauses similar to 4 (2) and 5 (1), (2) of the Bill of 1900 safeguarding the interests of existing schools and granting them the right of appeal to the Board of Education." Had it been possible to add these words to the resolution, he should have voted for it. If they voted for the resolution, it would go forth to the world that the College approved of the Education Bill as it stood, when in fact it was clear they did not do so. He did not think that even Mr. Bevan approved of it, and yet the resolution was tantamount to a full approval.

Mr. BEVAN observed that the resolution stated "*an* Education Bill," not "*the* Education Bill."

Mr. KELLAND said, if the resolution went forth as it stood, every one would suppose they were referring to the Education Bill before the country. It could not be otherwise. It might be that "*an* Education Bill" did not mean "*the* Education Bill in Committee," but ninety-nine people out of every hundred would certainly read it as approving of "*the* Education Bill." That was the reason he could not vote for the resolution, much as he regretted opposing it. As the Bill now stood, they could hardly pronounce on its merits or demerits, for it was being changed from day to day. The part with which they were more immediately concerned had been passed, and they knew pretty well what the Bill would be in regard to secondary education. It began by saying that there should be one Authority, and then amendment after amendment increased the number of Authorities until now there were no less than 1,183 Authorities. Then it provided that a certain rating limit should not be exceeded, that the County Council should have the power of rating up to 2d. for secondary education, and the urban districts an additional 1d. limit—that was stated distinctly by Mr. Bevan—but now an amendment had been accepted according to which the County Boroughs had the power of unlimited rating for secondary education, and the sixty-seven County Boroughs could levy any rate they pleased. It was evident that this would be accepted as a precedent, and as soon as ever the County Councils came forward and applied for further rating powers the Government would be bound to grant their request. Then the Boroughs and Urban Districts would come forward and ask for the same thing, so that there would be 1,183 Authorities with unlimited power to raise rates for secondary education. It might be that this would be altered on the third reading, but at present they were asked to support a Bill giving power to raise an unlimited rate for secondary education, while, at the same time, there were no safeguards whatever for existing schools. The clauses put forward in the Bill of 1900, to which he referred in his amendment, were most moderate, and, at the same time, thoroughly practicable; they would protect all existing efficient schools. Quite recently the Duke of Devonshire had told the representatives of the County Councils that he approved of the preservation of private schools, and asked why they wished to destroy them, and they had no answer to make except that they thought that to allow them to be aided would increase jobbery and canvassing. A more ridiculous reason to allege it was impossible to conceive. He did not wish private schools to be separated from others and made into a class apart. The Bill, as it stood at present, separated them, and created a division between schools in secondary education analogous to that of Voluntary and Board schools in elementary education which the Bill was abolishing. This he desired to avoid in the interest of education, and in the interest of justice he claimed that private schools, so long as they were proved by public tests to be efficient, should have exactly the same rights as all other schools.

Dr. MOODY appealed strongly to Mr. Bevan to withdraw his resolution. He ventured to think that, instead of showing weakness, the eighth paragraph of the Report showed that the Council were possessed of great business tact and judgment; and, in his opinion, it would be a great misfortune for the College if any resolution were passed which was in any sense a vote of censure on the Council. The Council was representative, and the members ought to accord their strongest support to them.

Mr. ORCHARD suggested that the resolution could the more easily be withdrawn as the object of it had already been affirmed by Parliament. As the resolution would accomplish practically nothing, the mover might well be satisfied with the discussion which had taken place.

Mr. BAUMANN was exceedingly sorry to have to oppose the motion; the resolution appeared to him to be either too short or too long. Mr. Bevan had not been explicit enough in explaining the ground on which he welcomed the Bill. Different views had been put forward by the speakers, but no one had suggested how the private schools would be benefited by its provisions. In Germany the State had done all that was possible for the organization of education, but it had certainly crushed private schools out of existence. Would the new Authorities who would be created by the Bill act in the same manner? There was, in fact, in Germany at the present time a reaction in favour of private schools, as every child was not fitted to be sent to a State school. Every one would sympathize with the aim which Mr. Bevan had in view, but he could not welcome without reservation a Bill which in its scope included elements dangerous to the existing order.

Mr. GUTTERIDGE strongly disapproved of the policy of sitting on the fence, and he congratulated the mover of the resolution on his energy and also on his courage in bringing forward this motion. In dealing with it many side issues had been introduced into the discussion. No doubt Mr. Bevan had fully considered his action in all its bearings, and was therefore deaf to all the appeals that had been made to him to withdraw the resolution.

Mr. BEVAN, in reply, said that very much of what had been said by the speakers was *ad rem*. For instance, Mr. Kelland referred to certain modifications which he wished in the Bill. There was nothing in the resolution which would prevent such modification, and, as Mr. Kelland was a member of the Council, he could bring forward his amendments, which would be duly considered. He regretted that he could not accede to the appeals that had been made to him to withdraw the resolution. By voting against the resolution they would not destroy the Bill. The Bill was certain to pass, and, if the resolution were passed, the members of the College would be in a better position to suggest amendments that ought to be made in it.

The Chairman then put the resolution to the meeting, when it was negatived by a large majority.

A vote of thanks to the Chairman concluded the proceedings.

#### ADJOURNED MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

AN Adjourned Meeting of the Council was held on July 19. Present: Mr. Eve, in the Chair; Mr. Baumann, Rev. J. O. Bevan, Dr. Breul, Mr. Butler, Miss Crookshank, Rev. Dr. Hiron, Mr. Holland, Mr. Kelland, Mr. Pinches, Mr. Storr, and Dr. Wormell.

The Report of the Examination Committee was adopted, and Prof. T. Gregory Foster and Mr. A. J. Ashton, M.A., were added to the list of Examiners in English Language and Literature.

Diplomas were awarded to the successful candidates at the Midsummer Examination for Diplomas as follows:—

<i>Licentiate-ship :</i>		
Abbott, W.	Longstaff, J. L.	Stansfield, S.
Horsely, E. P.	Shuard, W. D.	Ternent, W. H.
<i>Associate-ship :</i>		
Armitage, L.	Dirken, J. A.	Lambourne, Miss A.
Bailey, C. J.	Edwards, J. J.	Lancaster, J.
Baillie, Miss H. J. M.	Emery, E. J.	Leather, H.

## REVIEWS.

### THE "ENCYCLOPEDIA BRITANNICA."

*The New Volumes of the Encyclopædia Britannica*, Vol. III. (being Vol. XXVII. of the complete work). (A. & C. Black and the Times.)

The present volume runs from "Chicago" to "Elduayen," and it is marked by the same care and ability as its predecessors. It is introduced by a comprehensive and suggestive prefatory essay on "The Influence of Modern Research on the scope of World History," from the pen of Dr. H. S. Williams, who lays special stress on the development of archaeology, and points to the effects of "such discoveries as have led to broad historical generalizations regarding such subjects as the antiquity of man, the antiquity of culture, the chronology of ancient history, the status of Bible history, the credibility of early classical history, the origin and development of the art of writing, and the evolution of the fine arts." The article on the King includes his recent illness, and leaves him "progressing favourably" on July 1—a *tour de force* of endeavour to be up to date. "Education" is fully and capably handled by Sir Joshua Fitch for Great Britain and Ireland (with France, Belgium, Holland, and Germany in small type), and by President Butler of Columbia for the United States. We refer to points in Sir Joshua's article elsewhere (see "Notes"). Theological interests are represented by important articles on "The Christian Church," "Biblical Chronology," "Codex Bezae," "Congregationalism," "Creeds," &c.; science by such various matters as "Chronograph," "Cholera," "Colours of Animals," "Combinatorial Analysis," "Comets," "Earthquakes," "Eclipse," "Egyptology," &c.; business, public and private, by "Civil Service," "Commercial Treaties," "Coaling Stations," "Co-operative Societies," "Dockyards," "Economics," and many notable articles on legal subjects—contract, conveyancing, copyright, divorce, &c. Naturally a considerable number of countries and great cities fall to be described; and among men of eminence are Darwin, Edison, Lord Derby, Lord Randolph Churchill, George Eliot, Jefferson Davis, Du Bois Reymond, Du Maurier, and several judges (the sketch of Sir Alexander Cockburn, by Mr. E. A. Armstrong, being notably discriminating and characteristic). These are only chance indications; but they may serve to suggest the remarkable variety and the wide and immediate importance of the subjects. At the same time the minor matters are not to be forgotten; they will be found to be treated with as much care as those that run into pages and are signed by acknowledged experts. The illustrations are abundant, appropriate, and effective.

### NATURE STUDY.

*Nature Study and Life*. By Clifton F. Hodge, Ph.D., Assistant Professor in Clark University. (7s. Ginn.)

Dr. Hodge's book comes with an introductory commendation from Dr. Stanley Hall, the President of his University. That will certainly do him no harm over here; but it is not necessary. The book will commend itself, and will at least go some considerable way to fulfil President Hall's prediction that it will exercise "a most wholesome, widespread, and immediate influence upon the primary and grammar school grades of education." The purpose of Nature study, which, as Dr. Hodge says, we need to have clearly before us at every step, he expresses in these terms: "Learning those things in Nature that are best worth knowing, to the end of doing those things that make life most worth living." This looks like a special application of Huxley's saying: "To learn what is true in order to do what is right is the summing up of the whole duty of man for

all who are not able to satisfy their mental hunger with the east wind of authority." Dr. Hodge refuses to be cramped by an arrangement of his matter according to the seasons and the terms of the school-year. His purpose is "to bring Nature into relation to child life, rather than to school life—to make it a continuous source of delight, profit, and highest education, rather than a formal school task." He has pondered the phenomenon that progress in learning is most rapid in the first three or four years of life, and he thinks he has found the secret of this in the fact that "touch with Nature at first hand—original research, if you please—is the very breath of mental life." The problem before him for solution, then, is this: "How may this splendid growth process of infancy be prolonged through life?"

While "the paramount value to be aimed at is character, will to do good, power to create happiness," Dr. Hodge expounds the economic, æsthetic, educational, ethical, and religious "values of Nature study," laying special stress on the economic value, "because all other plans of Nature study ignore them almost completely." He gives emphatic prominence to life forms over inanimate forms of material on the ground of earlier interest. His first chapter of exposition (after general preliminaries) deals with children's animals and pets—"the child's natural introduction to animal life"; then, in natural order, insects of the household, lessons with plants (for "the love of a flower in the heart of a child is the highest thing that Nature study can hope to develop"), garden studies, propagation of plants, garden insects (beneficial and otherwise), insectivorous animals, common frogs and salamanders, common birds (domestication, taming, and feeding), elementary forestry, aquaria, miscellaneous animals, and flowerless plants. Finally Dr. Hodge suggests a "grade plan" for graded schools, "by which progression and co-ordination of subjects may be secured, and confusion and repetition may be avoided." The subject-matter, then, is at once seen to be rich and varied, as well as adapted to the early instincts and activities of children, girls as well as boys. But one has to follow the deft handling of the materials in order to appreciate the efficiency of the system. The tone is elevating and inspiring. Dr. Hodge is a born naturalist, as well as a trained biologist; and, as President Stanley Hall says, "his love of Nature and children, which is infectious, is not less, but more, because he does not forget Nature's uses to man." The whole of the book, we should add, has been thoroughly tested in actual school work.

#### A DISCIPLE OF FROEBEL.

*The Life of the Baroness von Marenholtz-Bülów.* By her Niece, Baroness von Bülów. 2 vols. (The American School and College Text-Book Agency, for W. B. Harison, New York.)

Apart from the personal interest, which is great and sustained, these volumes furnish a striking commentary on Froebel's thoughts and aspirations. "That all children should be protected from what her own child had had to suffer," says the Baroness's biographer, "was the task to which my aunt had pledged to devote herself over the body of her Alfred, and an unbroken apostleship of forty years for the new theory of education was the fulfilment of her vow." Dr. W. T. Harris calls the Baroness von Marenholtz-Bülów "the most gifted of Froebel's commentators." Here are revealed from her diaries (*Gedankenbücher*), in much more helpful detail than in her published works, her "intellectual struggles to seize in its full depths the meaning of the educational ideas of the founder of the Kindergarten." The volumes also exhibit the ways of thinking and acting prevalent in wide circles, German and other, and thus incidentally present an instructive picture of the obstacles that lie across the path of the educational reformer. Dr. Wichard Lange, Froebel's editor, wrote (1867):

This woman achieved what ten men could not have brought about. She alone is to be thanked for the removal of the prohibition which a Prussian Ministry had enacted against the kindergartens. It was she who carried the ideas which lie at the foundation of these institutions into France, England, Holland, Belgium, Russia, Switzerland, Italy, Austria; indeed, it almost seemed as if the German work was to be transplanted into foreign soil, there first to be developed, and thence to return once more to Germany. However, the Fatherland was not left behind, and the Baroness had a greater share in the work achieved on native soil than all other votaries of the Froebel cause.

The biography naturally takes the reader over all the ground. The Baroness von Bülów-Wendhausen has commemorated her famous aunt with affectionate devotion, in fine harmony with the spirit of her noble and beautiful missionary life; and no educational library will henceforth be complete without these most interesting and instructive memorial volumes.

#### SCOTT-LAND.

*The Scott Country.* By W. S. Crockett. (6s. Black.)

Mr. Crockett knows the Border and its literature as well as any living man. He was born and bred and has passed his life under the spell of its associations. There could thus have been found no writer more fully furnished with the facts or more capable of presenting them in the spirit of the genius of the place. With deft pen he has woven into a charming volume the ever-fascinating story of the Borderland, and especially the associations of it with its greatest son, Sir Walter Scott. In fact, he makes his description follow the events of Scott's life. He commences with Smailholm, Sandyknowe, and Kelso, where Scott spent his early years. From Hawick it is easy to reach Harden, the seat of Auld Wat, prince of Border reivers, who wedded "the Flower o' Yarrow," ancestress of Scott, and Brauxholme, the Branksome of the "Lay." The lore of Liddesdale runs through the novels, and is more specially concentrated in the "Minstrelsy." Scott's first Border home was Ashestiel; and the proudest of his titles was "Sheriff of Ettrick Forest." Traquair (the most likely or the main original of Tully-veolan), Innerleithen (St. Ronan's, with the Cleikum Inn), picturesque Peebles (with Neidpath and the Black Dwarf), and the Tweed uplands (with Oliver, Drummelzier, Timis, Stobo, and Drochil Castles, and Merlin's grave) recall most interesting historical and literary associations. Then there is Abbotsford, the making of which deserves and obtains a chapter to itself. Melrose may be taken as the capital of the Scott country; "the personality of Scott is seen most of all about Melrose." "No one knew the Abbey better or bore a truer regard towards it than Scott, and its architecture is nowhere more faithfully described than in the magnificent setting of the 'Lay.'" There is no need but to mention Yarrow and Ettrick, and to cast a glance out to the East Border, with reminiscences of "Marmion" and Flodden Field. Last scene of all is, of course, St. Mary's aisle in Dryburgh Abbey. In connexion with Ettrick, much attention is naturally devoted to the Shepherd; at Ednam; to the poet of "The Seasons"; at Deulholm, to John Leyden; at Yetholm, to the gypsies; and at Earlston (primitive Erclidoune), to the dim figure of Thomas the Rhymer. There are no fewer than 162 excellent illustrations. The volume is an admirable companion and guide to the Scott country, whether in fact or in spirit.

#### LORE OF A HIGHLAND LOCH.

*The Lake of Menteith: its Islands and Vicinity, with historical accounts of the Priory of Inchmahome and the Earldom of Menteith.* By A. F. Hutchison, M.A. (Stirling: Mackay.)

Many are the tourists and other visitors that are attracted to the lovely Lake of Menteith—the only sheet of water in Scotland, we believe, that is designated a "lake," the change from "loch" being later than Sir Walter Scott's time and due not to local but to literary influences. Mr. Hutchison first describes the region of Menteith in the narrower sense of the term, the region lying more immediately around the lake—its topography, history, and traditions. Within one of the two distinct masses of the hilly backbone of the district we are scarcely surprised to chance upon "the fine Loch Drunkie, of old times held by wild Macfarlanes and Macphersons." Near the middle of the lake lies the largest of the islands (about five acres), Inchmahome, which derives its name by elaborate processes of corruption from St. Colman or Colmóc, believed to be an Irish saint of the sixth century, who established a religious settlement on it. The ruins of the priory afford scope for interesting description and illustration; and the account of the priors and commendators from the foundation of the priory (Augustinian) in 1238 down to the abolition of the "monastery and superstitions thereof" early in the seventeenth century, with the subsequent history of the priory lands, which were annexed to the Crown, embraces much curious lore, political and social as well as ecclesiastical. King Robert the Bruce visited the island several times; and Mary Queen of Scots sought shelter in it for some three weeks after the disaster of Pinkie. The Commendators (with one exception) were Erskines, and so a good deal of the family history is involved. Then "almost the whole surface of the island, Inchtalla, is covered with the ruins of the old castle buildings and their central court-yard"—the principal residence of the Earls of Menteith after Doune Castle was taken into the King's hands (1427). Mr. Hutchison gives a plan of the buildings, and an inventory of the last earl's belongings—the "haill Household Stuffe and Plenishing"—"enables us to obtain glimpses of the mode of living in this island mansion at the time" (May 22, 1694). The history of the earldom is traced

from the twelfth century in the families of Menteith, Comyn, Stewart, and Graham, a special chapter being devoted to "the fause (false) Menteith," Sir John, who captured Sir William Wallace. The local legends are not very prolific, but the local mode of catching pike in the lake "is somewhat novel and diverting." The volume is a handsome quarto, beautifully printed (at the *Sentinel* Press, Stirling), and liberally illustrated with pen and ink drawings by Mr. Walter Bain. It is not merely a book of local descriptions, but essentially a work of serious and competent research, historical and archaeological. It raises high expectations of Mr. Hutchison's forthcoming history of his old school, the High School of Stirling.

## GENERAL NOTICES.

### CLASSICS.

"Blackie's Illustrated Latin Series."—*The Odes of Horace*. Edited by Stephen Gwynn.

The introduction sets out compactly and admirably the life of Horace, with references at the bottom of the page. We are not so sure as Mr. Gwynn, indeed, that Horace's recommendation to keep a poem nine years before publication is based on the idea that a man capable of doing good work does not know when he has done it. The notes are very full (about 200 pages out of 350) and thoughtful. A good few of them might have been dispensed with, and it may be that in this number are some of those that point out the order of construction of the text. There are also occasional repetitions, as *pietas* (pages 217 and 282) and *Tibur* (pages 172 and 224), and, curiously enough, there is a discrepancy between the last pair of notes as to the foundation of *Tibur*. We very much doubt Mr. Gwynn's amended punctuation in I. ii. 40, but rather agree with him in I. xii. 21, and in I. xxviii. The *male pertinaci* of I. ix. 24 does not seem easy, but we cannot think "faintly resisting" hits it off, though it is an improvement on "haughtily stubborn," which is sufficiently bad. Is not *male* simply "wickedly," "mischievously," "coquettishly"? Mr. Gwynn has evidently laboured hard at his translations, and yet they very often sound strangely wooden. For example, in IV. xi. 31-36, "hereafter I will burn (*calebo*) for no other woman . . . song shall diminish dark anxieties" (*minuentur atrae carmine curae*). At the same time this is a very useful edition, and it is capably got up and effectively illustrated.

*Homers Ilias*: Schulausgabe von Paul Cauer. (Price 3s. net. Williams & Norgate, for G. Freytag, Leipzig.)

In preparing a second edition, Dr. Cauer has corrected some blunders in the text and added some useful matter in appendices. The text shows a good number of variations from the Oxford text elaborated by Messrs. Monro and Allen. In I. 5 it gives *οἰωνοῖσι τε δαῖτα* (not *οἰωνοῖσι τε πᾶσι*), after Zenodotos; in I. 27, *δηθύνοντα ἦ*, as compared with *δηθύνοντ' ἦ*; I. 92, *ἠῦδαε*, against *ἠῦδα*; I. 153, *μαχεσόμενος*, against *μαχησόμενος* ("nobis compertum est," say Monro and Allen, "futurum μαχίσσεται vel μαχέσεται . . . apud Homerum fuisse"); VI. 6, *φῶος*, against *φῶος*; VI. 61, *ἀδελφεόο*, against *ἀδελφείου*. Both editions read *Ἀργεῖοι*, but, while the Oxford gives *Ἀργεῖων*, Dr. Cauer gives *Ἀργεῖων*. The Oxford reads *ἔδ* only (we think) before a vowel, Dr. Cauer seems to read *ἔδ* generally, but not always (for example, I. 164, *ἔδ ναῖόμενον*). Forms like *ἀντιόωσαν* (I. 31), *λαμπετόντι* (I. 104); *τηλεθόουσα* (VI. 148), are opposed to the Oxford *ἀντιόωσαν*, *λαμπετόντι*, &c. And there are slighter variations here and there. We are not inclined to lay stress on this, however; a text that is good enough for *Prima* in German *Gymnasien* cannot be far amiss for wider use. An interesting appendix contains "Stimmen des Altertums über Homer"; another, "die Handlung der *Ilias* nach Tagen geordnet"; a third, a full list of the contents of the various "Gesänge." The indexes of proper names and of subjects are most serviceable, especially the latter. The text is admirably printed—a pleasure to read; and the volume is well bound.

### MODERN LANGUAGES.

"Siepmann's Elementary French Series."—*Napoléon*. Par Alexandre Dumas. Adapted and Edited by W. W. Vaughan, M.A. (Macmillan.)

The text has been freely adapted to suit the length proposed for the series; and Dumas's account of the battle of Waterloo has been excluded by reason of its many small inaccuracies, Léon Meyniel's brief description being substituted. The life of Napoleon is sketched by way of historical introduction, and a useful map illustrates the Waterloo campaign. The notes are sufficient, though the St. Helena episode might have borne somewhat fuller and more pointed historical remark. The alphabetical list of irregular verbs occurring in the text might have been dispensed with. The vocabulary leaves some thinking to be done by the pupils. There are appended (1) words and phrases for *viva voce* drill, (2) sentences on syntax and idioms for *viva voce* practice, and (3) continuous passages for translation into French—all of them profitable devices for utilization of the material of the text.

A key to the three appendices is published separately; and so also is a key to the "words and phrases" alone. The reading-book has been thoughtfully conceived and carefully and judiciously executed; and it is well printed on toned paper and strongly bound.

"Siepmann's Elementary German Series."—(1) *Friedrich der Grosse und der Siebenjährige Krieg*. Von Ferdinand Schrader. Adapted and edited by R. H. Allpress, M.A. (2) *Wilhelm der Siegreiche: ein Kaiser und Heldenbild aus der Neuzeit*. Von Karl Zastrow. Edited by E. P. Ash, M.A. (Macmillan.)

The German series is laid out on the same plan as the French series, with similar appendices and word- and phrase-books. Both these sets of the German series are furnished with all the aids necessary to the student; the text is simple and interesting; and generally our remarks on the treatment of the "Napoléon" are equally applicable to them. Both series are thoroughly practical and likely to be effective.

### HISTORY AND GEOGRAPHY.

*The Harmony of the Empire*: being a Series of Sketches in Pictorial Geography of the British Possessions and Spheres of Influence. (Manchester: Abel Heywood & Son.)

The author, who is already favourably known by other works on similar lines, veils his identity under the designation "Nemo." His design now is "to stimulate the cultivation of the delightful study of geography"; and his work "is not intended as a substitute for, but as supplementary to, the ordinary text-book." A general introduction treats broadly of such matters as sea-power, trade routes, steam as a motor power, coals, coaling stations, and naval head-quarters. Then the various extra-colonial dependencies of Great Britain are reviewed in groups in historical order. Incidentally, the author throws in freely remarks of various kinds—historical, political, economic, &c.—"to induce reflection and independent thought": remarks that enhance materially the vividness and practicality of the descriptions, and that certainly need no apology. This is a valuable book for the school library, and for general reading as well. The treatment is well informed and businesslike, and the critical interpolations are always piquant and suggestive, whether the reader accept them or not. Boys and girls will read a book like this with avidity when they turn away from a regular text-book.

*Grammar School Geography*. By Alexis Everett Frye, former Superintendent of Schools of Cuba. General Edition. (12½ × 10¼ in.; pp. 200. Price 6s. Ginn.)

A very elaborate work, most carefully compiled and handsomely printed and got up. "Every line of type, every picture, every map, has been prepared," says the author, "with a single purpose, namely, to present the earth as the home of man—to describe and locate the natural features, climates, and products that largely determine his industries and commerce, as well as his civic and other relations." Commerce and industry are kept well in front; and the originals of the illustrative maps "were prepared expressly for this series of geographies by Mr. Henry Gannett, Chief Geographer of the United States." The illustrations—maps (full-page, sectional, coloured, sketches, reliefs) and pictures—are abundant, excellent, and arranged with great judgment. The description is very simple and clear; the topics are presented "in such order as will enable pupils to reason from one step to another"; and questions are placed at the end of the various lessons. We do not remember any other book in English that reminds us so much of MM. Dubois and Guy's "Album Géographique."

### ENGLISH LITERATURE.

*Englische und Französische Schriftsteller der neueren Zeit für Schule und Haus*.—Band XII.: *Macbeth*. Edited by Prof. Dr. K. Deutschbein. (Glogau: Carl Flemming.)

Prof. Klapprich's admirable series, which now counts a dozen volumes, aims at providing the "höheren Knaben- und Mädchenschulen, Lehrerseminaren, Lehrerinnen-Bildungsanstalten, Handelsschulen und ähnlichen Anstalten" with examples of the best English and French literature, combining variety and excellence of style with illustration of the "Leben, Sitten, Gebräuche, Einrichtungen und Geistesbestrebungen" of the two nations. Care and judgment in the selection and treatment of the subjects are conspicuously manifest. Prof. Deutschbein has selected "Macbeth" as "belonging undoubtedly to those compositions of the poet which attract the special interest of more advanced German pupils on account of the impressive power of its events and the profundity of its thoughts." He has taken the text of the "Globe" edition, without criticism, holding that "textual criticism is a matter out of place in school," prefixed an introduction (on the history of the English drama before Shakespeare, the works of Shakespeare, and the metre and language of the play), and added brief and pointed notes—all in English, with an occasional German word of explanation in brackets. The remarks appended to the notes on each scene briefly indicate the development of the characters and the structure of the drama. Here and there the German idiom crops up, but the work is marked by constant care, competent knowledge, sober judgment, and great ability.

**14955.** (ALETROP.)—Donner la règle pour trouver tous les termes de nombres consécutifs chacun desquels soit une somme de deux carrés entiers; e.g.:  $72 = 6^2 + 6^2$ ,  $73 = 8^2 + 3^2$ ,  $75 = 7^2 + 3^2$ .

Solutions (I.) by H. M. TAYLOR, M.A., F.R.S.; (II.) by J. H. TAYLOR, M.A.; (III.) by Lt.-Col. ALLAN CUNNINGHAM, R.E.

(I.) As every square number is of one of the forms  $4n$ ,  $4n+1$ , or  $4n+2$ , it follows that, if each of three consecutive integers be the sum of two squares, the integers in ascending order of magnitude must be of the form  $4n$ ,  $4n+1$ , and  $4n+2$ .

Let the three integers be  $4x^2+4y^2$ ,  $(2x+a)^2+(2y+b)^2$ , and  $(2x+c)^2+(2y+d)^2$ . Then

$$4ax+4by+a^2+b^2=1 \text{ and } 4cx+4dy+c^2+d^2=2.$$

Hence we see that the integers  $a$  and  $b$  are one even and one odd, of opposite sign, and prime to one another; that the integers  $c$  and  $d$  are both odd, of opposite sign, and prime to one another; and that the integers  $x$  and  $y$  are both even or both odd.

If any combination of numbers  $a, b, c, d$ , satisfying the relations just stated, be such that the above equations admit of an integral solution in  $x$  and  $y$ , then we obtain a set of three consecutive integers such as is required.

This is the case for all combinations of the numbers  $a, b, c, d$  which make  $ad-bc = \pm 1$ .

To find solutions, take  $b$  and  $c$  any two odd integers; take one of the two even integers  $bc \pm 1$ ; then any pair of even and odd complementary factors of the number last selected may be chosen for  $a$  and  $d$ .

If the letters  $a, b, c, d$  receive the values 7, 4, 5, 3, respectively, we are led to the following solutions:—

$$32^2+48^2=3328, \quad 25^2+52^2=3329, \quad 27^2+51^2=3330;$$

$$\text{and } 160^2+272^2=99584, \quad 153^2+276^2=99585, \quad 165^2+269^2=99586.$$

If  $c=1$  and  $d=-1$ , then  $x=y$ .

This case leads to a series of solutions which may be written  $2(n^2+n)^2$ ,  $(n^2+2n)^2+(n^2-1)^2$ ,  $(n^2+n+1)^2+(n^2+n-1)^2$ , where  $n$  is any integer. The example given in the question is a particular case of this solution.

[Rest in Vol.]

**9309.** (Professor HUDSON, M.A.)—A cage, mass  $M$ , is drawn up a mine by an engine, at first with uniform acceleration, then with uniform velocity  $v$ , and then for a distance equal to the first portion with uniform retardation; the whole time of ascent is  $t$ , and the greatest horse-power at which the engine is worked is  $H$ . Prove that the depth of the mine is

$$\frac{550Hgt - Mv^2(gt+v)}{(550H - Mr)g}$$

Solution by Professor SIRCOM.

Let  $t_1$  be the time of the accelerated motion; then, by the question,

$$x = \frac{1}{2}vt_1 + v(t-2t_1) + \frac{1}{2}vt_1,$$

and  $vt_1 = vt - x$ .

Let the mass of the cage be  $M$  pounds. The greatest horse-power will be exerted when the velocity is on the point of reaching  $v$ . Then the power is equal to the tension of the chain multiplied by the velocity, or  $Tv = 550Hg$ , in absolute units, and  $T = 550Hg/v$ , and the work done during the period of acceleration is  $550Hg/v \cdot \frac{1}{2}vt_1$ ; this is equal to the work done in raising the weight together with that done in communicating the velocity  $v$ . Hence

$$550Hg/v \cdot \frac{1}{2}(vt-x) = Mg \cdot \frac{1}{2}(vt-x) + \frac{1}{2}Mv^2,$$

whence 
$$x = \frac{550Hgt - Mv^2(gt+v)}{(550H - Mv)g}$$

**14987.** (T. MUIR, M.A., F.R.S.)—Given

$$u \equiv (a, b, c, d) \begin{vmatrix} x & y \\ y & x \end{vmatrix}^3 + e = 0,$$

show that 
$$\left(\frac{d^2y}{dx^2}\right) \left(\frac{du}{dx}\right)^3 = 2e \begin{vmatrix} a & b & c \\ b & c & d \\ y^2 & -xy & x^2 \end{vmatrix},$$

and generalize.

Solution by Professor NANSON.

Denoting the determinant in the question by  $\Delta$ , we have, using SALMON'S notation,

$$\left(\frac{d^2y}{dx^2}\right) \left(\frac{du}{dy}\right)^3 = \left(\frac{u}{y}\right) = \frac{3e}{2} H = 54e\Delta,$$

since  $H$  is the Jacobian of the quadrics  $u_x, u_y$ , and therefore equal to  $36\Delta$ .

**14999.** (R. CHARTRES.)—If the in-circle of a triangle passes through the centroid, (1) show that  $5\Sigma(a^2) = 6\Sigma(ab)$  (Question 12641); (2) give an

easy method of writing down in integers the sides of any number of such triangles; and (3) find the mean value of the in-radius as the smallest side takes all possible values between 1 and 2 units.

Solution by the PROPOSER.

(1) This easily follows since  $r$  = the distance between the two points, the in-centre and centroid.

(2) It is satisfied by  $a = n^2+1$ ,  $b = (n+1)^2+1$ ,  $c = n^2+(n+1)^2$ ,  $n$  being different from zero.

If  $n = 1, 2, 3, \dots$ , the sides are (2, 5, 5), (5, 10, 13), (10, 17, 25), ... If  $n$  be fractional, we get other series of values.

$$(3) \quad r = \frac{\Delta}{s} = \frac{n(n+1)}{\sqrt{2}\sqrt{(n^2+n+1)}};$$

therefore mean value of  $r$ , when the smallest side lies between 1 and 2,

$$= \frac{1}{\sqrt{2}} \int_0^1 \left( \sqrt{(n^2+n+1)} - \frac{1}{\sqrt{(n^2+n+1)}} \right) dn$$

$$= \frac{1}{\sqrt{2}} \left\{ \frac{3\sqrt{3}-1}{4} - \frac{1}{2} \log \left( \frac{3+2\sqrt{3}}{3} \right) \right\}.$$

Note by Professor SANJANA, M.A.

In Question 12641 I first drew attention to the analytical condition given above. It is readily obtained by taking the in-circle in trilinear coordinates,  $\Sigma \sqrt{(a \cos^2 \frac{1}{2}A)} = 0$ , and making the centroid fall upon it; we obtain  $\Sigma \sqrt{(\cos^2 \frac{1}{2}A + a)} = 0$ , which gives  $\Sigma \sqrt{(s-a)} = 0$ . On rationalization this becomes  $5s^2 = 4(ab+bc+ca)$ , i.e.,  $5\Sigma(a^2) = 6\Sigma(ab)$ .

An easy way, and the most natural one, of obtaining such triangles is to give one side a numerical value; an indeterminate equation of the second degree between the remaining sides results, which can be solved by ordinary algebraical methods. Without loss of generality, we can take

$$a = 1; \text{ then } b = \frac{1}{2} \{ 3(c+1) \pm 4\sqrt{(3c-c^2-1)} \}.$$

If the value of  $b$  is fractional, multiply out by its denominator, and the sides may be written down in integers. The process thus depends on solving the diophantine equation  $c^2-3c+1+\square=0$ . The only isosceles solutions are the line-triangle 1, 1, 2 and the triangle 2, 5, 5; and by various artifices all other triangles may be made to depend on these, or rather on the first. Thus among many series of such triangles I have found those in the margin. They are obtained thus: Write down the line-triangle 1, 2, 1; take 2 for the smallest side of the next, and the other sides of this are the remaining sides of the first increased by 4; taking this triangle, make 5 the smallest side of the next, and the other sides of this third are the remaining sides of the second increased by 8; and so on. The increments are seen to be the terms of 4, 8, 12, 16, 20, ..., for the several derivative triangles. It will be found that the excess of any two sides of a triangle of this series over the third is of the form  $2p^2$  (a theorem generally true); and these excesses are in order  $2(1^2, 0^2, 1^2)$ ;  $2(1^2, 1^2, 2^2)$ ;  $2(1^2, 2^2, 3^2)$ ; ...  $2(1^2, 3^2, 4^2)$ ; and so on.

[Rest in Vol.]

**15087.** (Professor E. B. ESCOTT.)—In *Nature* for May 6, 1897, we have the following "Sieve for Primes" given:—"In order that a number  $n$  be prime, it is necessary and sufficient that the  $\frac{1}{2}(n+1)$ -th term of the following recurrent series give a remainder 1 when divided by  $n$ :-

$$1, 4, 11, 29, 76, 199, 521, \dots,$$

where the scale of relation is  $u^n = 3u_{n-1} - u_{n-2}$ ." Show, by a numerical example, that this condition is not sufficient.

Solution by the PROPOSER.

If we consider the recurring series 1, 3, 4, 7, 11, 18, 29, ..., where the scale of relation is  $V_n = V_{n-1} + V_{n-2}$ , the  $(2n+1)$ -th term of this series will be the  $(n+1)$ -th of the series considered by Mr. ESCOTT, and the theorem will be that  $V_n$  gives a remainder 1 when divided by  $n$ .

It is easily proved by taking residues of the terms to the moduli 3, 5, 7, ... that  $V_n \equiv 1 \pmod{3}$ , when  $n \equiv 1, 3, \text{ or } 4 \pmod{8}$ ;  
 $V_n \equiv 1 \pmod{5}$ , when  $n \equiv 1 \pmod{4}$ ;  
 $V_n \equiv 1 \pmod{47}$ , when  $n \equiv 1, 15 \pmod{32}$ .

If we let  $n = 3 \times 5 \times 47 = 705$ , since  $705 \equiv 1 \pmod{32}$ , and therefore  $\pmod{4}$  and  $\pmod{8}$ ,  $V_{705} \equiv 1 \pmod{705}$ , which disproves the theorem, since 705 is not a prime number.

A test somewhat like this was proposed in Question 1484, *J'Intermédiaire des Mathématiciens*, 1899, p. 76. Although it seems probable that the test is not sufficient, it has not been disproved. In the series

$$0, 2, 3, 2, 5, 5, 7, 10, 12, 17, 22, 29, 39, \dots,$$

where the law of recurrence is  $W_n = W_{n-2} + W_{n-3}$ , in order that  $n$  be a prime number, it is necessary and sufficient that  $W_n \equiv 0 \pmod{n}$ .

Remarks by R. W. D. CHRISTIE.

The "sieve" was discovered many years ago in the course of some

investigations into the properties of the roots of  $x^2 \pm 1 = 0$ . I soon found that the "continuant" series was the real prime series, e.g. :

$$\frac{(\omega_4 + \omega_3)^n - (\omega_2 + \omega_1)^n}{(\omega_4 + \omega_2) - (\omega_2 + \omega_1)} = 1, 1, 2, 3, 5, \dots$$

There are other series besides from which the primes are recoverable.

Let  $a, b$  be any two consecutive elements of the series; then it is not difficult to establish  $a^2 - b^2 + 4ab - 1 = P(Q)$ , where  $P$  is any prime; and, since  $a^2 - b^2 - ab = \pm 1$ , it follows that  $5ab = P(Q)$  if  $P$  be of form  $4m + 1$ , and  $5ab - 2 = P(Q)$  when of form  $4m - 1$ . Consequently,  $P_{4m+1}$  is a factor of either  $a$  or  $b$ , e.g. :

$$a_n = 1, 1, 2, 3, 5, 8, 13, 21, 34, 55, \dots;$$

$$\text{primes} = 1, 3, 5, 7, (9), 11, 13, (15), 17, 19, \dots$$

Here for 13 we have  $8, 13 = b, a$ ;  
therefore  $5ab = P(Q)$ , since  $13 = 4m + 1$ ;  
and for 11 we have  $5, 8 = b, a$ ;  
therefore  $5ab - 2 = P(Q)$ , since  $11 = 4m - 1$ .

Another series of the same kind as given by me in *Nature* is

$$a_n = 1, 7, 41, 239, 1393, 8119, 47321, 275807, 1607521, 9369319, \dots;$$

$$\text{primes} = 1, 3, 5, 7, (9), 11, 13, (15), 17, 19, \dots$$

Of course, in the example mentioned, we should not, in practice, think of using the "sieve" for any number ending in 5. It is, I find, a complete exception which apparently acts as a quasi-prime and does not vitiate the theorem.

Incidentally, I may mention the integral primitive roots of every prime have their origin in the above "continuant" series, and can be proved to be composite.

**15130.** (Professor LANGHORNE ORCHARD, M.A., B.Sc.)—An equilateral triangle, of side-length =  $a$ , is thrown "at random," from a height =  $na$ , upon an indefinite horizontal plane which is ruled with equidistant horizontal lines, crossed with equidistant vertical lines, so as to form a number of squares, each of side-length  $2a$ . Find the "probability" that a side of the triangle will cut one of the lines.

*Solution by D. BIDDLE*

Assuming the height from which the triangle falls to be sufficient to render the position of the triangle, as it lies on the floor, "random," it would appear that, if  $p$  = the chance that the figure lies between two parallels of one set,  $p^2$  = the chance that it will lie wholly within a square, and  $1 - p^2$  = the chance that it will lie across a line of one or both sets. The last-mentioned chance may be broken up as follows:— $p - p^2$  = the chance that it lies across one side only, and that belonging to a particular set of parallels;  $2(p - p^2)$  = the chance that it lies across one side only, and that irrespective of the set of parallels to which it belongs;  $1 - 2p + p^2$  = the chance that it lies across two lines (one of each set). The sum of the two last chances exactly makes  $1 - p^2$ .

By reference to Question 10219 (Professor SYLVESTER) and the italicized portion of my solution of it on p. 98, Vol. LII., the following law will be found enunciated (not for the first time):—"The ratio borne to the periphery of the given circle (touching two adjacent parallels) by the length of a string drawn tightly round any plane figure whatsoever (capable of lying in all positions between the parallels) is invariably the probability that such figure will be cut by a parallel, if disposed at random on a ruled floor." Consequently,

$$1 - p = 3/(2\pi) \text{ and } P = 1 - p^2 = (12\pi - 9)/(4\pi^2) = P_1 + P_2,$$

where  $P_1 = 2(p - p^2) = (6\pi - 9)/(2\pi^2)$  and  $P_2 = 1 - 2p + p^2 = 9/(4\pi^2)$ .

Numerically, the values are nearly as follows:—

$$P_1 = .498984, \quad P_2 = .227973, \quad P = .726957.$$

The chance that the triangle shall lie wholly within a square is .273043.

**15103.** (J. S. LAWSON, M.A.)—Show that the sum of the harmonic series  $\frac{1}{a} + \frac{1}{a+b} + \frac{1}{a+2b} + \dots$  to  $n$  terms  $> \frac{2n}{2a + (n-1)b}$ .

*Solutions (I.) by Professor SANJANA, M.A., A. M. NESBITT, M.A., and A. W. POOLE, B.A.; (II.) by CONSTANCE I. MARKS, B.A.*

(I.)  $a$  and  $\beta$  being real and positive,  $(a + \beta)^2 > 4a\beta$ , and hence we have  $1/a + 1/\beta > 4/(a + \beta)$ .

Hence, when  $n$  is even, and  $a$  and  $b$  real and positive,

$$\frac{1}{a} + \frac{1}{a+(n-1)b} > \frac{4}{2a+(n-1)b}, \quad \frac{1}{a+b} + \frac{1}{a+(n-2)b} > \frac{4}{2a+(n-1)b}, \dots$$

$$\text{Thus } \frac{1}{a} + \frac{1}{a+b} + \frac{1}{a+2b} \dots \text{ to } n \text{ terms} > \frac{4 \times \frac{1}{2}n}{2a+(n-1)b} > \frac{2n}{2a+(n-1)b}.$$

When  $n$  is odd the middle term will be  $\frac{1}{a + \frac{1}{2}(n-1)b}$  or  $\frac{2}{2a + (n-1)b}$ ; the remaining  $n-1$  terms may be shown greater than  $\frac{2(n-1)}{2a + (n-1)b}$ .

(II.) All the terms of the series being first considered not only real but positive, if  $n = 2$ , the theorem to be proved is

$$\frac{1}{a} + \frac{1}{a+b} > \frac{4}{2a+b}, \quad (2a+b)^2 > 4a(a+b), \quad b^2 > 0 \text{ (which is true).}$$

If  $n = 3$ , the theorem to be proved is

$$\frac{1}{a} + \frac{1}{a+b} + \frac{1}{a+2b} > \frac{6}{2(a+b)} \text{ or } \frac{3}{a+b},$$

that is  $(a+b)(a+2b) + a(a+2b) + a(a+b) > 3a(a+2b)$ ,  $2b^2 > 0$

(which is true). Suppose the law holds for all integral values of  $n$  from 2 up to  $r$  inclusive, so that

$$\sum_{k=0}^{r-1} \frac{1}{a+kb} > \frac{2r}{2a+(r-1)b}.$$

Then  $\sum_{k=0}^r \frac{1}{a+kb}$  is certainly greater than  $\frac{2(r+1)}{2a+rb}$ , if

$$\frac{2r}{2a+(r-1)b} + \frac{1}{a+rb} > \frac{2(r+1)}{2a+rb},$$

if  $2(a+rb)(2a+rb) + \{2a+(r-1)b\}(2a+rb) > 2(r+1)(a+rb)\{2a+(r-1)b\}$ , which readily reduces to the condition  $r(r+1)b^2 > 0$  (which is true).

Hence, if the theorem holds up to  $n = r$ , it will also hold for the next value of  $n$ . But it does hold when  $n = 2$  and when  $n = 3$ ; therefore it is true when  $n = 4$ , and so on universally.

If the terms of the series are all negative, the sign of the inequality must be reversed. The case in which at some point in the given series the sign of the constituent terms changes may be regarded as compound, the above results applying to the two portions considered separately.

**15110.** (Professor SANJANA, M.A.)—Prove that the solution in rational numbers (integral or fractional) of the equation  $M^2 - 2xN^2 = x^2 - 1$  will serve to factorise quantities of the form  $N_1^4 + N_2^4$ ; and show that  $x$ , supposed a positive integer, will always be of the form  $4q^2 + 1$ .

*Solution by Lt.-Col. ALLAN CUNNINGHAM, R.E.*

Let  $F = N_1^4 + N_2^4$  be the number to be factorised. Assume

$$F = (N_1^2 + x \cdot N_2^2)^2 - (N_2 \cdot z)^2 \dots \dots \dots (A),$$

a difference of squares, and therefore directly factorisable. This requires

$$z^2 = 2x \cdot N_1^2 + (x^2 - 1) N_2^2 \dots \dots \dots (B).$$

Writing  $z/N_2 = M$ ,  $N_1/N_2 = M$ , and rearranging, reduces this to the proposed equation  $M^2 - 2x \cdot N^2 = x^2 - 1 \dots \dots \dots (B')$ .

Evidently every integer solution of (B), or every integral or fractional solution of (B'), yields values of  $F$  along with their reduction to a difference of squares.

This method of factorisation was introduced by the present writer to the London Mathematical Society (see *Proceedings*, Vol. XXXII., p. 1) in a verbal communication. It was then shown that every number  $F$  of above form yields several (at least four) values of  $x$ , which may be + or - , and integral or fractional. Each such value of  $x$  leads to an easily solvable diophantine equation of type (B) or (B'), termed the *factorisant*, which has an infinite number of integral solutions. Each such solution ( $N_1, N_2$ ) gives a factorisable number of form  $F$ , with the value of  $z$  needed for its factorisation.

Ex.—Take  $F = 17 = 1^4 + 2^4 = 9^2 - 8^2 = n_1^4 + n_2^4$ .

Here (1),  $n_1 = 1, n_2 = 2$ ; then, by (A),  $n_1^2 + x \cdot n_2^2 = \pm 9$ , whence

$$x = \frac{1}{4}(\pm 9 - 1) = 2 \text{ or } -\frac{3}{4},$$

or (2),  $n_1 = 2, n_2 = 1$ ; then, by (A),  $n_1^2 + x \cdot n_2^2 = \pm 9$ , whence

$$x = \pm 9 - 4 = 5 \text{ or } -13.$$

Thus the prime  $F = 17$  has yielded four suitable values of  $x$ , each of which will yield a solvable factorisant (B).

Thus, selecting the value  $x = 2$ , the factorisant (B) is  $(2N_1)^2 + 3N_2^2 = z^2$ . An interesting train of solutions is obtainable with  $N_1 = \text{constant} = 1$ ; then, by known methods,

$$N_2 = 2, \quad 8, \quad 30, \quad 418, \quad 1560, \quad \&c.;$$

$$z = 4, \quad 14, \quad 112, \quad 724, \quad 2702, \quad \&c.$$

Thus  $F = 1^4 + 1560^4 = (1^2 + 2 \cdot 1560^2)^2 - (1560 \cdot 2702)^2 = 652081 (313.29017)$ .

Note that the base number ( $F = 17$ ) above, being prime, has yielded only four suitable values of  $x$ . A composite base number ( $F$ ) would yield four values of  $x$  for every way in which it could be expressed as a difference of squares.

[The above example shows that, even if  $x$  be a positive integer, it is not necessarily of form  $x = 4q^2 + 1$ , as stated in the Question; but, to give the full advantage of the method (which is really one of considerable power),  $x$  should not be limited to being either positive or integral. For another

application of the same process see the present writer's Solution of Question 14971. The present writer has further used this method with great success for factorisation of other quartic forms, e.g.,

$$F = N_1^4 - N_1^2 N_2^2 + N_2^4, \text{ \&c.}$$

**15017.** (Professor COCHEZ.)—On donne une circonférence O et un point fixe A. On joint A à un point B de la circonférence, et sur AB on construit un triangle ABM semblable à un triangle donné. Lieu de M quand B décrit la courbe.

Solutions (I.) by J. PRESCOTT, B.A., H. L. TRACHTENBERG, and others; (II.) by LIONEL E. REAY, B.A., and A. W. POOLE, B.A.

(I.) Since ABM is similar to a given triangle,  $AM/AB = a$  constant; Also  $\angle BAM$  is constant. Take a point P along AM, making  $AP = AB$ . Then as B describes the given curve P describes a similar and equal curve, which could be obtained by rigidly connecting the given curve with A and then rotating it about A through an angle  $= \angle BAM$ .

Now, since  $AM/AP = a$  constant, M describes a curve similar to the one described by P, and therefore similar to the given curve. Hence, if the given curve is a circle, M describes a circle.

(II.) If  $AO = c, OB = a, AB = r, BAO = \theta, BAM = \beta, MBA = \alpha$ , then  $a^2 = r^2 + c^2 - 2cr \cos \theta$ . If  $AM = \rho, MAO = \beta + \theta = \phi$ , say, then  $\rho \sin(\beta + \alpha) = r \sin \alpha$ ; therefore

$$a^2 = \rho^2 [\sin^2(\beta + \alpha) \sin^2 \alpha] + c^2 - 2c\rho [\sin(\beta + \alpha) \sin \alpha] \cos(\phi - \beta),$$

or  $a^2 \lambda^2 = \rho^2 + c^2 \lambda^2 - 2c\rho \cos(\phi - \beta)$ , where  $\lambda = \sin \alpha \operatorname{cosec}(\alpha + \beta)$ ; therefore locus of M is a circle whose centre is the point  $(c\lambda, \beta)$  and radius  $a\lambda$ .

**15055.** (Rev. T. ROACH, M.A.)—If two ellipses have equal major axes and a common vertex, show that they meet in only one other point.

Solution by the PROPOSER.

Let  $Aa, AA_1$  be axes. Then every chord AP of the lower curve is  $< AA_1$ ; therefore  $< Aa$ ; therefore above  $Aa$  the lower curve lies inside the upper, and, since  $AA_1 > AP$ , it crosses between  $a$  and  $A_1$ . Similarly, below  $A_1$  the upper curve lies inside the lower; therefore the curves cut in only one other point.

**15002.** (R. KNOWLES, B.A.)—From a point T ( $h, k$ ), tangents TP, TQ are drawn to meet the parabola  $y^2 = 4ax$  in P and Q. Prove that (1) the coordinates of the symmedian point of the triangle TPQ are

$$[(a+h)(k^2+2ah), k(k^2+2ah+6a^2)]/2(k^2-ah+3a^2);$$

(2) if PQ be a focal chord, this point is on the tangent at the vertex.

Solutions (I.) by R. TUCKER, M.A.; (II.) by LIONEL E. REAY, B.A.

(I.) (1) The following results are easily got, if we suppose the parabola to be  $y^2 = 4x$ . Equation to PQ,

$$ky - 2x - 2h = 0 \dots\dots\dots(i.);$$

therefore perpendicular from T is  $(k^2 - 4h)/\sqrt{k^2 + 4}$ , and

$$PQ = \sqrt{(k^2 + 4)(k^2 - 4h)};$$

hence

$$2\Delta = (k^2 - 4h)^{3/2},$$

also

$$\Sigma(PQ)^2 = 2(k^2 - 4h)(k^2 - h + 3);$$

therefore perpendicular from symmedian point on PQ

$$= \frac{\sqrt{(k^2 + 4)(k^2 - 4h)}}{2(k^2 - h + 3)} \dots\dots\dots(ii.).$$

But this point lies on ST  $\dots\dots\dots(A).$

therefore, if (X, Y) are its coordinates, we have perpendicular from it on

$$PQ = (kY - 2X - 2h)/\sqrt{k^2 + 4} \dots\dots\dots(iii.).$$

From (ii.) and (iii.) after reduction, we get

$$kY - 2X = \frac{k^4 + 2k^2 - 4h - 4h^2}{2(k^2 - h + 3)} \dots\dots\dots(iv.),$$

also, from (A),

$$kX - (h - 1)Y = k \dots\dots\dots(v.);$$

hence

$$(k^2 - 2h + 2)X = \frac{k^4 + 2k^2h + 2k^2 + k^4h + 4h - 4h^3}{2(k^2 - h + 3)},$$

i.e.,

$$X = (k^2 + 2h)(1 + h)/2(k^2 - h + 3),$$

i.e.,

$$X = (k^2 + 2ah)(a + h)/2(k^2 - ah + 3a^2) \text{ for } y^2 = 4ax.$$

Hence Y can be verified.

(2) is obvious, since  $\angle T$  is in this case a right angle.

From the above result we can at once answer my Question 14774 (August, 1901), of which a solution is given on p. 325.

[Rest in Vol.

QUESTIONS FOR SOLUTION.

**15153.** (R. TUCKER, M.A.)—Mr. TUCKER restates this question as follows:—In the "ambiguous" case of triangles, if the projection of  $b$  on BC is constant, and  $r, r'$  are the radii of the in-circles, then, if the circles touch one another,  $rr'$  is constant.

**15165.** (Professor SANJANA, M.A.)—Show that, when  $6n + 3$  is not a power of 3,  $(x^{6n+3} + 1)/(x^3 + 1)$  has three factors at least,  $n$  being a positive integer and  $3x$  a perfect square.

**15166.** (Professor NANSON.)—Prove that the sum of the quadratic residues of a prime of the form  $4m + 1$  is equal to the sum of the quadratic non-residues.

**15167.** (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Let

$$N = (x^{\eta} - 1)(x - 1)/(x^{\eta} - 1)(x^3 - 1)$$

and

$$N' = (x^{\eta} + 1)(x + 1)/(x^{\eta} + 1)(x^3 + 1),$$

where  $\eta$  is odd in  $N$ , and  $\eta$  is odd or even in  $N'$ ; and let  $a, b, c, \dots$  be the incongruous roots ( $< p$  or  $p^2$ ) of  $N \equiv 0 \pmod{p}$  or  $p^2$ ; and  $a', b', c', \dots$  the incongruous roots ( $< p$  or  $p^2$ ) of  $N' \equiv 0 \pmod{p}$  or  $p^2$ . Show that the roots may be arranged in triads such that

$$(1) \text{ } \eta \text{ odd; } a + b + c \equiv 0, \quad a' - b' + c' \equiv 0;$$

$$(2) \text{ } \eta \text{ even; } a' + b' + c' \equiv 0, \quad a_1' - b_1' + c_1' \equiv 0,$$

the same modulus ( $p$  or  $p^2$ ) being used throughout. Give examples when

$$\eta = 1, 2, 3, 5.$$

**15168.** (ROBERT W. D. CHRISTIE.)—Prove the following theorems:—

$$(1) \text{ } a^3 + b^2 = 0 \pmod{p_{4m-1}}; \quad (3) \text{ } a^m + b^2 = 0 \pmod{p_{6m+1}} \text{ (} m \text{ even)};$$

$$(2) \text{ } a^2 + b^2 = 0 \pmod{p_{4m+1}}; \quad (4) \text{ } a^2 + b^2 = 0 \pmod{p_{8m+1}}.$$

E.g., (3)  $109 = 8^2 + 46^2 = 1^2 + (\frac{1}{2} \cdot 9)^2 + 10^2 + (\frac{1}{2} \cdot 9)^2 = 10^2 + (\frac{1}{2} \cdot 9)^2 = 10^2 + 3^2$ .

**15169.** (A. M. NESBITT, M.A.)—A man tosses a coin; he scores 1 for each head that turns up and 2 for each tail. Find the chance of his scoring exactly  $n$ .

**15170.** (V. DANIEL, B.Sc.)—A curve such that the rectangular axes intercept equal lengths on tangent and normal is the logarithmic spiral whose angle is  $\frac{1}{2}\pi$ .

**15171.** (A. M. NESBITT, M.A.)—Discuss the curves—

$$(1) (y - x^2)^2 = xy^4, \quad (2) (y - x^2)^2 = x(x^4 - y^4).$$

**15172.** (Professor NANSON.)—Sum to infinity the series

$$\frac{1}{1.2} - \frac{1}{3.4} + \frac{1}{6.7} - \frac{1}{8.9} + \frac{1}{11.12} - \dots$$

**15173.** (Professor NEUBERG.)—Si  $\tan \alpha, \tan \beta, \tan \gamma$  sont les racines de l'équation  $ax^3 + 3bx^2 + 3cx + d = 0$ , former l'équation qui a pour racines  $\tan \alpha \tan(\beta + \gamma), \tan \beta \tan(\gamma + \alpha), \tan \gamma \tan(\alpha + \beta)$ .

**15174.** (W. H. BLYTHE, M.A.)—(Suggested by Question 10198.)—A rectangular hyperbola passes through the centres of the inscribed, escribed, and nine-point circles of a triangle ABC. Any point upon the hyperbola is the centre of a conic touching the lines AB, BC, CA, the auxiliary circle of which touches the nine-point circle. Let a rectangular hyperbola be described through the centres of the inscribed and escribed circles and through F a focus of one of the above conics. The polar with regard to this rectangular hyperbola of the circum-centre of the triangle passes through F.

**15175.** (R. KNOWLES.)—PQ is a chord of a conic at right angles to the transverse axis; the diameter through Q meets the normal at P in R. A circle is described with centre R and radius RP, cutting the conic in MM'. Prove that MM' (1) is a diameter of the circle; (2) is parallel to the tangent at Q.

**15176.** (Professor COCHEZ.)—On donne une ellipse et une droite  $\Delta$ . Un point M décrit la droite. Par M on mène les tangentes MT, MT' à la courbe. On prend sur TT' un point P tel que  $TP = \frac{1}{3}TT'$ , et l'on abaisse MH perpendiculaire sur TT'. (1) Lieu de P; (2) lieu de H; (3) lieu du milieu K de TT'; (4) lieu du pied D de la bissectrice de l'angle TMT'.

**15177.** (R. TUCKER, M.A.)—In the "ambiguous" case  $AC = AC'$ : AL, AL' are the respective symmedians (through A) of the triangles ABC, ABC', cutting BC in L, L' respectively. Find (i.) LL', (ii.) the value of BC when AC' is the symmedian of ABC.

**15178.** (C. A. LAISANT.)—(Suggérée par la Question 9946.)—Soient un quadrilatère convexe; O le point de rencontre de ses diagonales; OA, OB, OC, OD les perpendiculaires abaissées sur les quatre côtés. Si O est situé sur l'une quelconque des bissectrices intérieures du quadrilatère ABCD, ce dernier est circonscriptible à un cercle qui a précisément le point O pour centre.

**15179.** (C. E. YOUNGMAN, M.A.)—Three given circles have a common tangent. Show how to draw across them a straight line on which they will intercept equal chords.

**15180.** (Professor SANJANA, M.A.)—Given one angle of a triangle and the sums of the sides containing the other two angles, to construct the triangle. (The construction and proof are required to be strictly Euclidean.)

**15181.** (D. BIDDLE.)—In a section perpendicular to the axis of a hollow cylinder, whose inner surface is a perfect reflector, are two points A, B, the one of observation, the other of illumination, and these subtend an angle  $\theta$  at O, the centre of the circle. A series of images appears. Find the curve on which the apparent positions lie, and consider the case in which A and B are supposed to coincide.

**15182.** (G. HEPPEL, M.A.)—The three forces represented by the perpendiculars from the symmedian point to the sides of a triangle are in equilibrium.

**15183.** (A. F. VAN DER HEYDEN, M.A.)—If a mass  $m$  be placed at the centre of a sphere S, the potential due to  $m$ , at any point external to S, will be equal to that due to a distribution over S, equal in sum to  $m$ . Hence deduce that, if a surface S include any number of particles, and if N be the change in the normal force due to these particles on crossing the surface, a distribution over S of density  $N/4\pi$  will produce the same potential throughout all space external to S as the masses referred to.

**15184.** (H. BATEMAN.)—O is a fixed point on a curve, P a variable point, G the centre of gravity of the arc OP for multiples  $(du/ds)ds$  on an element of arc  $ds$ ,  $u$  being function of position which has the value zero at O. OQ is drawn parallel to GP and equal to  $u$ . GP. Prove that the tangent at Q to the locus of Q is parallel to the tangent at P, and that the radius of curvature of the locus of Q is  $\rho u$  ( $\rho$  being the radius of curvature at P). Consider the cases  $u = s/\rho$ ,  $du/ds = p$ .

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

**4763.** (Professor GENESE, M.A.)—An ellipse turns about its centre; find the envelope of the chords of intersection with the initial position. Also, if the ellipse move parallel to its major axis, find the envelope of the chords of intersection with the initial position of the axes.

**8871.** (Professor MAHENDRA NATH RAY, M.A., LL.B.)—If  $S_r = \frac{1}{2r+1} - \frac{1}{2n+2r+1} + \frac{1}{4n+2r+1} - \frac{1}{6n+2r+1} + \dots$  to  $\infty$ ,  $n$  being a positive integer, show that  $S_0 - kS_1 + \frac{k(k-1)}{2!}S_2 - \frac{k(k-1)(k-2)}{3!}S_3 + \dots$  to  $k+1$  terms  $= \int_0^{\pi} \frac{x \sin^{2k+1} x dx}{\pi(1 + \cos^{2n} x)}$ .

**9193.** (A. GORDON.)—Show how to inscribe a polygon (pentagon, for example) similar to a given polygon (pentagon) in another given polygon, having one of its angular points at a given point in one of the sides of the latter (see extension of Prob. 21 in CATALAN's *Géométrie*, p. 152).

**12072.** (H. J. WOODALL, A.R.C.S.)—Prove that  $1^n + 2^n + \dots + (p-1)^n$  is divisible by  $p$  when  $p$  is prime. [The Proposer thinks that a direct proof may be obtained, also that the problem may be attacked, indirectly, in several ways.]

**12143.** (Major P. A. MACMAHON, R.A., F.R.S.)—Show that the number of permutations of the quantities in the product  $x_1^{\xi_1} x_2^{\xi_2} \dots x_n^{\xi_n}$  which possess the property that no quantity is in a place originally occupied by a like quantity, is the coefficient of  $x_1^{\xi_1} x_2^{\xi_2} \dots x_n^{\xi_n}$  in the development of the fraction  $1 / \{1 - \sum x_1 x_2 - 2 \sum x_1 x_2 x_3 - 3 \sum x_1 x_2 x_3 x_4 - \dots - (n-1) x_1 x_2 \dots x_n\}$ .

**12193.** (Professor MATHEWS, M.A., F.R.S.)—The focus of a parabola is S, and its vertex is A; on SA produced points B and C are taken, so that SA . SC = SB<sup>2</sup>, and through B a straight line BD is drawn perpendicular to SB. Prove that, if P is any point on the parabola, and the bisector of the angle ASP meets BD in Q, the triangles SPQ and SQC are similar. Employ this theorem to show that the oblique trajectory of a system of confocal parabolas is another system of confocal parabolas.

# EDUCATIONAL REVIEW.

Edited by NICHOLAS MURRAY BUTLER.

"We find the 'Educational Review' absolutely indispensable at every turn."—MICHAEL E. SADLER, Director of Special Inquiries and Reports, Board of Education, London, England. September 13, 1901.

"I wish I could tell you how much of stimulus and inspiration I get from reading the 'Educational Review.' The educational world can never repay you for the work you have put into that richly stored magazine. I have just gone through the entire twenty-one volumes in order to get some things that I especially desired, and I am simply amazed at what I find in those volumes."—WILBUR P. GORDY, High School, Hartford, Conn. September, 1901.

"To men like myself it is a sort of working library. Its volumes stand always at my elbow."—Prof. PAUL H. HANUS, Harvard University.

"The broadest and most able of the American periodicals devoted to education."—*New York Times*.

"An educational magazine of which the teaching profession may well be proud. There is nothing better in educational journalism in any country. And it has an editor who has convictions, and the courage of them."—*School and Home Education*, Bloomington, Ill.

"The 'Review' has from the first issue taken its place at the head of American periodicals devoted to education. It is, indeed, the first educational paper in America to win for our country the respect of educationalists abroad."—*Journal of Pedagogy*, Ypsilanti, Mich.

14s. 6d. a Year, 1s. 10d. a Copy. Ten Numbers, none being issued for July and August. Current numbers kept in stock.

Crown 8vo, cloth. Price One Shilling.

## FRENCH WORDS AND PHRASES.

By J. G. ANDERSON and F. STORR,

ASSISTANT MASTERS IN MERCHANT TAYLORS' SCHOOL.

"The words and phrases in this book are well chosen."—*Educational News*, October 13, 1900.

"Extremely valuable."—*Guardian*, September 12, 1900.

"A convenient series of lists of words with the French and English in parallel columns arranged under such headings as 'Relationships,' 'Class-Room Objects,' 'Colours,' &c."—*School World*, August, 1900.

"The book . . . supplies a real want. The idioms and proverbs in the concluding chapters are well selected."—*Educational Times*, August, 1900.

Post 8vo, cloth, price 7s.

THE STATIONERS' COMPANY, STATIONERS' HALL, LONDON.

# APPROVED SCHOOL BOOKS BY DR. CORNWELL, F.R.G.S.

"We are qualified by ample trial of the books in our own classes to speak to their great efficiency and value. We have never known so much interest evinced or so much progress made as since we have employed these as our school-books."—*EDUCATIONAL TIMES.*

**A School Geography.** 89th Edition; 3s. 6d., or, with 30 Maps, 5s. 6d.

"Very superior to the common run of such books. It contains a good deal of useful matter of a more practical kind than usual, which the exercises are likely to impress on the mind more deeply than by the parrot system."—*Athenæum.*

**A School Atlas.** Consisting of Thirty Small Maps. A Companion Atlas to the Author's "School Geography." 2s. 6d., or 4s. coloured.

**Geography for Beginners.** 69th Edition; 1s., or, with 48 pp. of Questions, 1s. 4d. Questions, 6d.

"A very useful series of Educational Works, of which Dr. Cornwell is either author or editor. It ('The Geography for Beginners') is an admirable introduction. There is a vast difficulty in writing a good elementary book, and Dr. Cornwell has shown himself possessed of that rare combination of faculties which is required for the task."—*John Bull.*

**Allen and Cornwell's School Grammar.** 65th Edition; 2s. red leather, or 1s. 9d. cloth.

"The excellence of the Grammar published by the late Dr. Allen and Dr. Cornwell makes us almost despair of witnessing any decided improvement in this department."—*Athenæum.*

**Grammar for Beginners.** An Introduction to Allen and Cornwell's "School Grammar." 88th Edition; 1s. cloth, 9d. sewed.

"This simple introduction is as good a book as can be used."—*Spectator.*

 *The Book is enlarged by a Section on Word-Building, with Exercises for Young Children.*

**The Young Composer: Progressive Exercises in English Composition.** 48th Edition, 1s. 6d. **Key, 3s.**

"The plan of the work is very superior. We are persuaded this little book will be found valuable to the intelligent instructor."—*Westminster Review.*

**Spelling for Beginners.** A Method of Teaching Reading and Spelling at the same time. 4th Edition, 1s.

**Poetry for Beginners: A Selection of Short and Easy Poems for Reading and Recitation.** 13th Edition, 1s.

**A Science of Arithmetic.** A Systematic Course of Numerical Reasoning and Computations; with very numerous Exercises. By JAMES CORNWELL, Ph.D., and Sir JOSHUA G. FIRCH, LL.D. 26th Edition. 4s. 6d.

"The best work on arithmetic which has yet appeared. It is both scientific and practical in the best and fullest sense."—*London Quarterly.*

**Key to Science of Arithmetic.** With the Method of Solution to every Question. **KEY, 4s. 6d.**

**School Arithmetic.** 18th Edition. 1s. 6d. **KEY, 4s. 6d.**  
"Eminently practical, well stored with examples of wider range and more varied character than are usually given in such books, and, its method of treatment being thoroughly *inductive*, it is pre-eminently the book for general use."—*Journal of Education.*

**Arithmetic for Beginners.** Combines simplicity and fullness in teaching the First Four Rules and Elementary Fractions. 9th Edition. 1s.

London: Simpkin, Marshall, Hamilton, Kent, & Co., Limited.—Edinburgh: Oliver & Boyd.

- Man and his Markets.** By LIONEL W. LYDE. Illustrated. 2s.

### ARITHMETIC.

- Elementary Practical Mathematics.** By F. CASTLE, M.I.M.E. 3s. 6d.
- Practical Mathematics for Beginners.** By FRANK CASTLE, M.I.M.E. 2s. 6d.
- An Elementary Course of Mathematics, comprising Arithmetic, Algebra, and Euclid.** BOOK I. By H. S. HALL, M.A., and F. H. STEVENS, M.A. 2s. 6d.

### ARITHMETIC--(Continued).

- A First Step in Arithmetic.** Consisting of Examples in the First Four Rules, Simple and Compound, and of Explanations and Hints on Methods. By J. G. BRADSHAW, B.A. With Answers, 2s. Without Answers, 1s. 6d.
- Easy Arithmetical Exercises for Beginners.** By J. G. BRADSHAW, B.A. 2s. With Answers, 2s. 6d.
- A School Arithmetic.** By R. F. MACDONALD. 2s. 6d.
- Arithmetic in Theory and Practice.** By J. BROOKSMITH, LL.D. 4s. 6d. KEY, 10s. 6d.
- Arithmetical Exercises for Beginners.** By J. and E. J. BROOKSMITH. 1s. 6d. KEY, 6s. 6d.
- Arithmetic for Schools.** By S. L. LONEY, M.A. With and without Answers. 4s. 6d. Examples, 3s. Answers, 6d.
- Arithmetic for Schools.** By Rev. BARNARD SMITH, M.A. 4s. 6d. KEY, 8s. 6d. \* \* \* *The same, Revised by Prof. W. H. Hudson, 4s. 6d.*
- Arithmetic for Schools.** By Rev. J. B. LOCK, M.A. New Edition, Revised and Enlarged. 4s. 6d. Examples, 3s. Answers, 6d. KEY, 10s. 6d.
- Arithmetic for Beginners.** By the Rev. J. B. LOCK, M.A. 2s. 6d. KEY, 8s. 6d.
- Arithmetical Exercises and Examination Papers.** By H. S. HALL, M.A., and S. R. KNIGHT, B.A. 2s. 6d.

### ALGEBRA.

- Algebra for Beginners.** By H. S. HALL, M.A., and S. R. KNIGHT, B.A. 2s. With Answers, 2s. 6d.
- Elementary Algebra for Schools.** By H. S. HALL, M.A., and S. R. KNIGHT, B.A. Seventh Edition. 3s. 6d. With Answers, 4s. 6d. Answers, 1s. KEY, 8s. 6d.
- Algebraical Exercises and Examination Papers.** By the Same. 2s. 6d.
- Higher Algebra.** By the Same. 7s. 6d. KEY, 10s. 6d.
- Algebraical Examples** supplementary to Hall and Knight's Algebra for Beginners and Elementary Algebra (Chaps. I.-XXVII.). By H. S. HALL, M.A. With or without Answers. 2s.
- Elementary Algebra.** By C. SMITH, M.A. 4s. 6d. KEY, 10s. 6d.
- A Treatise on Algebra.** By C. SMITH, M.A. 7s. 6d. KEY, 10s. 6d.
- Algebra for Beginners.** By I. TODHUNTER. New Edition, thoroughly Revised by S. L. LONEY, M.A. 3s. 6d. With Answers, 4s. 6d. KEY, 8s. 6d.
- Algebra for Beginners.** By I. TODHUNTER, F.R.S. 2s. 6d. KEY, 6s. 6d.

### EUCLID AND GEOMETRY.

- A Text-Book of Euclid's Elements.** By H. S. HALL, M.A., and F. H. STEVENS, M.A. Book I., 1s. Books I. and II., 1s. 6d. Books I.-III., 2s. 6d. Books II. and III., 2s. Books I.-IV., 3s. Books III. and IV., 2s. Books III.-VI., 3s. Books IV.-VI., 2s. 6d. Books V. and VI., XI., and XII., Props. 1, 3, 2s. 6d. Books I.-VI., XI., and XII., Props. 1, 3, 4s. 6d. Book XI., 1s. KEY to Books I.-IV., 6s. 6d. KEY to VI. and XI., 3s. 6d. KEY to I.-VI. and XII., 8s. 6d.
- The First Book of Euclid's Elements arranged for Beginners.** By the Rev. J. B. LOCK, M.A. 1s. 6d.
- A First Step in Euclid,** consisting of the First Twelve Propositions. By J. G. BRADSHAW, B.A. 1s. 6d.
- Euclid's Elements of Geometry.** By CHARLES SMITH, M.A., and SOPHIE BRYANT, D.Sc. Book I., 1s. Books I. and II., 1s. 6d. Books III. and IV., 2s. Books I.-IV., 3s. Books I.-IV., VI., and XI., 4s. 6d. Books VI. and XI., 1s. 6d. KEY, 8s. 6d.
- Exercises in Euclid, Graduated and Systematized.** By W. WEEKS. 3s. Or separately:—Book I., 1s.; Book II., 9d.; Books I.-III., 1s. 9d.; Books I.-VI., 1s. 9d. Complete, 3s.
- The Elements of Euclid.** By I. TODHUNTER, F.R.S. New Edition. Revised by S. L. LONEY, M.A. 4s. 6d. Book I., 1s.; Books I. and II., 1s. 6d.; Books I.-IV., 3s.
- The Elements of Euclid.** By I. TODHUNTER, F.R.S. 3s. 6d. Books I. and II., 1s. KEY, 6s. 6d.
- Practical Plane and Solid Geometry.** By J. HARRISON, M.Inst.M.E., and G. A. BAXANDALL. Elementary. 2s. 6d.
- Twenty-four Test Papers in Practical Plane and Solid Geometry.** By G. GRACE, B.Sc. Printed on cartridge paper, 6d.
- Primer of Geometry.** Comprising the Subject-Matter of Euclid I.-IV., treated by the Methods of Pure Geometry. By H. W. CROOME SMITH, B.A. 2s.

### BOOK-KEEPING.

- First Lessons in Book-keeping.** By J. THORNTON. 2s. 6d. KEY, 10s. 6d.
- Exercise Books to First Lessons in Book-keeping.** No. 1, for Lessons I.-IX., 9d. No. 2, for Test Exercises, 9d. No. 3, for Test Exercises, 1s. 6d. No. 4, for Lessons XIII. and XIV., 1s. 6d. Case to contain all the above, 6d. Complete Set with Case, 5s. No. 5, Condensed Edition for Working out a Selection on all the Lessons, 2s. No. 6, Journal, 6d. Examination Papers in Book-keeping, 9d. KEY to Examination Papers, 2s.
- Primer of Book-keeping.** By the Same. 1s. KEY, 2s. 6d.
- Exercise Books to Primer of Book-keeping.** Part I., Ledger. Part II., Journal. The Set, 1s.
- Easy Exercises in Book-keeping.** By J. THORNTON. 1s. KEY, 10s. 6d.
- A Manual of Book-keeping.** By J. THORNTON. 7s. 6d.
- Advanced Examination Papers in Book-keeping.** By J. THORNTON. 1s. KEY, 2s. 6d.

- Lessons in French.** By H. COURTHOPE BOWEN, M.A. 1s.
- The Study of French according to the Best and Newest Systems.** By A. F. EUGÈNE and H. E. DURIAUX. 3s. 6d. Exercise Books, in Eight Books, 6d. each.
- Macmillan's Progressive French Course.** By G. E. FASNACHT. **FIRST YEAR**, 1s. Supplementary Exercises to First Year, 1s. **SECOND YEAR**, 2s. **THIRD YEAR**, 2s. 6d. KEYS, 4s. 6d. net each.
- Macmillan's Progressive French Readers.** By the Same. **FIRST YEAR**, 2s. 6d. **SECOND YEAR**, 2s. 6d.
- Macmillan's French Composition.** By the Same. Part I., 2s. 6d. KEY, 4s. 6d. net. Part II., 5s. KEY, 5s. net.
- Selection of French Idioms for English Readers.** By Madame PH. PLAN. With a Preface by F. F. ROGET. 3s. 6d.
- Abridged French Grammar.** By G. E. FASNACHT. 2s. 6d.
- An Elementary French Grammar.** By G. E. FASNACHT. 1s. 6d.
- A Compendious Dictionary of the French Language.** By Prof. ALFRED ELWALL and GUSTAVE MASSON. 3s. 6d.

## GERMAN.

- A German Primer.** By OTTO SIEPMANN. 3s. 6d. KEY, 3s. 6d. net.
- Macmillan's Progressive German Course.** By G. E. FASNACHT. **FIRST YEAR**, 1s. 6d. **SECOND YEAR**, 3s. 6d. KEYS, 4s. 6d. net each.
- Macmillan's Progressive German Readers.** By the Same. **FIRST YEAR**, 2s. 6d.
- Macmillan's German Composition.** By the Same. Part I., 2s. 6d. KEY, 4s. 6d. net.
- A Compendious German and English Dictionary.** By Prof. WHITNEY and A. H. EDGREN. 5s. **German-English**, 3s. 6d.
- Macmillan's German Idioms.** A Selection of German Idioms. Prepared and Translated by MYRA TAKER, under the direction of F. F. ROGET. 3s. 6d.

## SCIENCE.

- Introduction to Chemistry and Physics.** By Prof. W. H. PERKIN, Jr., Ph.D., F.R.S., and BEVAN LEAN, D.Sc., B.A. (Lond.). In 2 Vols. 2s. each.
- Elementary Physics and Chemistry.** By R. A. GREGORY and A. T. SIMMONS. 1s. 6d.
- Exercises in Practical Physics.** By R. A. GREGORY and A. T. SIMMONS. In Two Parts, 2s. each.
- Elementary General Science.** By A. T. SIMMONS and L. M. JONES. 3s. 6d.
- Elementary Practical Physics.** By R. A. GREGORY. 2s. 6d.
- An Introduction to Practical Physics.** By D. RINTOUL, M.A. 2s. 6d.
- Heat, Light, and Sound.** By D. E. JONES. 2s. 6d.
- Heat for Advanced Students.** By E. EDSE. 4s. 6d.
- Electricity and Magnetism for Beginners.** By F. W. SANDERSON, M.A. 2s. 6d.
- Magnetism and Electricity for Beginners.** By H. E. HADLEY. 2s. 6d.
- Practical Exercises in Magnetism and Electricity.** Being a Laboratory Course for Schools of Science. By H. E. HADLEY, B.Sc. (Lond.). 2s. 6d.
- Chemistry for Organised Schools of Science.** By S. PARRISH. 2s. 6d.
- Inorganic Chemistry for Beginners.** By Sir H. E. ROSCOE and J. LUNT. 2s. 6d.
- Inorganic Chemistry for Advanced Students.** By Sir H. E. ROSCOE and A. HARDEN. 4s. 6d.
- Physiology for Beginners.** By Sir M. FOSTER, K.C.B., and L. E. SHORE. 2s. 6d.
- Botany for Beginners.** By E. EVANS. Second Edition. 2s. 6d.
- Practical Botany for Beginners.** By Professor F. O. BOWER, Sc.D., F.R.S., and D. T. GWYNNE VAUGHAN, M.A. Second Edition. 3s. 6d.
- Experimental Science (PHYSIOGRAPHY, Section I.).** By Prof. R. A. GREGORY and A. T. SIMMONS, B.Sc. 2s. 6d.
- Physiography for Beginners.** By A. T. SIMMONS, B.Sc. 2s. 6d.
- Geology for Beginners.** By W. W. WATTS, M.A. 2s. 6d.

MACMILLAN &amp; CO., LIMITED, ST. MARTIN'S STREET, LONDON, W.C.

# EDUCATIONAL WORKS BY A. K. ISBISTER, M.A., LL.B.

(LATE DEAN OF THE COLLEGE OF PRECEPTORS.)

## LATIN AND GREEK.

Sixteenth Edition, with Map. 12mo.

### CÆSAR'S COMMENTARIES on the GALLIC WAR.

BOOKS I.-V. With Notes Critical and Explanatory, a Vocabulary of all the Words in the Text, and Easy Reading Lessons for Beginners ..... price 3s. 6d.

BOOKS I.-VII. do. do. 4s. 6d.  
Do. (without the Reading Lessons) ..... 4s. 0d.

Twenty-fifth Edition.

BOOK I. (with Vocabulary, Reading Lessons, &c.) ..... 1s. 6d.

Fourteenth Edition. 12mo, price 3s. 6d.

**KENOPHON'S ANABASIS, Books I. to III.** With Notes, Vocabulary of all the Words in the Text, and a Series of Easy Reading Lessons for Beginners. Designed as a First Greek Reading Book in Schools.

## ELOCUTION.

Tenth Edition. 12mo, price 3s. 6d.

### THE ILLUSTRATED PUBLIC SCHOOL SPEAKER

AND READER, based on Grammatical Analysis, comprising a choice Selection of pieces for Reading and Recitation, annotated for Expression, Emphasis, and Pauses, and illustrated by Diagrams and Figures exhibiting to the eye the appropriate gestures and positions; to which is added a selection of Greek, Latin, French, and German Extracts, suitable for "Speech Days" at Public Schools.

New Edition. 12mo, price 1s. 6d.

### LESSONS IN ELOCUTION AND EXPRESSIVE

READING FOR BOYS, based on Grammatical Analysis; with a choice selection of Extracts for Reading and Repetition, classified, of Goldsmith's "Deserted Village," set out into Principal and Subordinate Sentences, illustrating the theory of Emphasis and Pauses.

New Edition. 12mo, price 1s. 6d.

### LESSONS IN ELOCUTION AND EXPRESSIVE

READING FOR GIRLS, based on Grammatical Analysis; with a choice selection of Extracts for Reading and Repetition, classified, under heads for practice in various styles of Reading, and annotated for Expression, Emphasis, and Pauses, and the Analysis of Sentences, with the figure [of a Girl] showing the proper attitude in Reading.

## ENGLISH GRAMMAR.

Nineteenth Edition. 16mo, 1s. 6d.; or in Two Parts, price 9d. each.

**THE ELEMENTS OF ENGLISH GRAMMAR AND COMPOSITION**, including the Analysis of Sentences, simplified for Beginners.

Tenth Edition. 12mo, price 6d.

**A FIRST BOOK OF ENGLISH GRAMMAR, GEOGRAPHY, AND ENGLISH HISTORY.** With Arithmetical Tables, Dates, &c.

Eleventh Edition. 12mo, price 1s. 6d.

### FIRST STEPS IN READING AND LEARNING:

a Reading-Book for Beginners, designed to utilize the time of those learning to read, by presenting, in a series of Easy Reading and Writing Lessons, a First Course of Scripture and English History, Geography, English Grammar, Spelling, and Arithmetic, interspersed with Moral Lessons and Simple Poetry for Repetition.

## GEOMETRY.

Sixth Edition. 12mo, price 3s. 6d.

**THE COLLEGE EUCLID:** Comprising the First Six and portions of the Eleventh and Twelfth Books read at the Universities. Chiefly from the Text of Dr. SIMSON. With a new arrangement of the Figures and Demonstrations; the Enunciations of the Propositions separately for Self-Examination, apart from the Text; Notes and Questions on each Book; and a Series of Geometrical Problems for Solution, from the most recent University Examination Papers.

Fifteenth Edition. 12mo, price 2s. 6d.

**THE SCHOOL EUCLID:** Comprising the First Four Books.

With Questions, Geometrical Exercises, &c.

THE SCHOOL EUCLID, Books I. & II. With Questions, Exercises, &c. 12mo, price 1s. 6d.

THE SCHOOL EUCLID, Book I. With Questions, &c. 12mo, price 1s.

New Edition. 12mo, price 9d.

### THE COLLEGE AND SCHOOL EXAMINER IN

EUCLID, containing the Enunciations of all the Propositions in the College and School Editions, Questions on the Definitions, Arithmetical and Algebraical Demonstrations of the Propositions in Books II. and V., and a large collection of Geometrical Problems for Solution. Designed for Class and Self-Examination, and adapted to all Editions of Euclid.

Third Edition. 12mo, price 1s. 6d.

**FIRST STEPS TO EUCLID:** Comprising the Propositions of Book I., prepared for writing out, with a recapitulation of the steps of the Demonstration appended to each. Forming a Text-book for the above.

Fifth Edition. Two Quarto Copy Books, price 6d. each.

**THE GEOMETRICAL COPY-BOOK.** Arranged for writing out the Propositions of Euclid in the Abbreviated and Symbolical Form adopted in the Universities and Public Schools.

## ARITHMETIC.

Ninth Edition. 12mo, price 1s.; or, with Answers, 1s. 6d.

**UNITARY ARITHMETIC.** Embodying the First Book of Arithmetic of the Irish National Board. With numerous additional Examples, and selections from recent Examination Papers; and a full exposition of the "Unitary" System, or Method of Working Arithmetic without rules.

\*\* In this Edition, Questions in Proportion, Practice, Interest, Stocks, Partnership, Profit and Loss, &c., are, by the "Unitary" Method, solved by a single rule.

## BOOK-KEEPING.

New Edition. 18mo, price 9d.

**THE ELEMENTS OF BOOK-KEEPING**, by SINGLE and DOUBLE ENTRY; with Practical Explanations and Exercises on the most useful Forms for Business.

4to, 1s. each.

**ENGRAVED ACCOUNT BOOKS.** Ruled and Interleaved for Copying, adapted to the above.

No. I. Business Forms. 1. Bills of Parcels and Book Debts. 2. Invoices. 3. Account Sales. 4. Receipts. 5. Promissory Notes and Drafts. 6. Bills of Exchange.

No. II. Day-Book and Cash-Book.

No. III. Ledger, Index, and Balance Sheet.

# CAMBRIDGE UNIVERSITY PRESS.

## BOOKS SUITABLE FOR COLLEGE OF PRECEPTORS' EXAMINATIONS, JULY and DECEMBER, 1903.

### PITT PRESS SHAKESPEARE.

**MACBETH.** Edited, with Introduction, Notes, and Glossary, by A. W. VERITY, M.A., sometime Scholar of Trinity College, Cambridge. 1s. 6d.

*Guardian.*—"Undoubtedly the best school edition extant of this particular play, and possibly the best that has ever been produced of any play of Shakespeare's. We will, moreover, go further, and add that it is a mine of wealth for all students of Shakespeare, whatever may be their object in studying him."

### PITT PRESS SERIES.

AUTHOR.	WORK.	EDITOR.	PRICE. s. d.
<b>CAESAR</b> .....	{ De Bello Gallico, Books IV.-V. } (Subject, Book IV.)	A. G. Peskett..	1 6
<b>HORACE</b> .....	Odes, Book III. ....	J. Gow .....	2 0
<b>LIVY</b> .....	Book XXI.....	M. S. Dimsdale	2 6
<b>VERGIL</b> .....	Aeneid, Book VI.....	A. Sidgwick... 1 6	
<b>EURIPIDES</b>	Medea .....	C.E.S. Headlam	2 6
<b>XENOPHON</b>	Anabasis, Book V. ....	A. Pretor .....	2 0

### CAMBRIDGE BIBLE FOR SCHOOLS AND COLLEGES.

**FIRST BOOK OF KINGS.** By Prof. LUMBY, D.D. 2s. net.

**GOSPEL ACCORDING TO ST. LUKE.** By Very Rev. F. W. FARRAR, D.D. 3s. net.

**ACTS OF THE APOSTLES.** By Prof. LUMBY, D.D. 3s. net.

The same in the **SMALLER CAMBRIDGE BIBLE FOR SCHOOLS**, 1s. each.

### ENGLISH GRAMMAR.

**THE ELEMENTS OF ENGLISH GRAMMAR.** By A. S. WEST, M.A., Trinity College, Cambridge. New and Enlarged Edition. Forty-sixth to Fifty-fifth thousand. Extra fcap. 8vo, 2s. 6d.

*Guardian.*—"It is far and away the best of its class hitherto published for boys of thirteen to sixteen years of age, and, if we mistake not, will soon become a standard text in secondary schools, and mark a new epoch in the teaching of English grammar."

**AN ENGLISH GRAMMAR FOR BEGINNERS.** By A. S. WEST, M.A. Fifty-fifth to Seventy-fifth thousand. 1s.

*Schoolmaster.*—"It is a capital little work, which we can heartily recommend."  
*Educational Review.*—"A marvellous shillingsworth."

**A KEY TO THE QUESTIONS CONTAINED IN WEST'S ELEMENTS OF ENGLISH GRAMMAR AND ENGLISH GRAMMAR FOR BEGINNERS.** By A. S. WEST, M.A. 3s. 6d. net.

*School World.*—"This Key will supply a real want to the majority of teachers. . . . It is well arranged, and the answers are carefully drawn up."

**BILINGUAL TEACHING IN BELGIAN SCHOOLS.** Being the Report on a Visit to Belgian Schools as Gilchrist Travelling Student, presented to the Court of the University of Wales by T. R. DAWES, M.A. Lond., Head Master of the Pembroke Dock County School. Crown 8vo, 2s.

**THE GOSPEL ACCORDING TO ST. MARK.** The Greek Text edited, with Introduction and Notes, for the use of Schools, by Sir A. F. HORT, Bart., M.A., Assistant Master at Harrow School. With 2 Maps. 2s. 6d. net.

### CAMBRIDGE BIBLE FOR SCHOOLS AND COLLEGES.—New Volume.

General Editor for the Old Testament and Apocrypha. A. F. KIRKPATRICK, D.D., Regius Professor of Hebrew in the University of Cambridge.

**THE SONG OF SONGS.** Edited by the Rev. ANDREW HARPER, B.D. (Edinburgh), Professor of Hebrew, Ormond College, within the University of Melbourne. 1s. 6d. net.

### CAMBRIDGE SERIES FOR SCHOOLS AND TRAINING COLLEGES.

*School Guardian.*—"We can imagine nothing better for a first acquaintance with any of these authors than such simple and complete editions as the Cambridge Series offers to the student. . . . We heartily commend these books to the notice of teachers of elementary classics in whatever kind of school. It will be a long time before any more suitable edition will appear."

The following editions have Complete Vocabularies:—

AUTHOR.	WORK.	EDITOR.	PRICE. s. d.
<b>CAESAR</b>	De Bello Gallico, Book IV. . . . .	E. S. Shuckburgh. . . . .	1 6
<b>VERGIL</b>	Aeneid, Book VI. . . . .	A. Sidgwick . . . . .	1 6
<b>XENOPHON</b>	Anabasis, Book V. . . . .	G. M. Edwards. . . . .	1 6

\*.\* *Cambridge Editions of Caesar, Vergil, and Xenophon.*—The attention of Schoolmasters is called to the fact that there are now two editions of some of the works of these authors in the *Pitt Press Series* and the *Cambridge Series for Schools and Training Colleges*. The Editions in the *Cambridge Series for Schools and Training Colleges* have *Complete Vocabularies*. If, in ordering, the Edition required is not specified, the *Pitt Press Edition*, without Vocabulary, will be sent.

### THE PITT PRESS MATHEMATICAL SERIES.

**ARITHMETIC FOR SCHOOLS.** By C. SMITH, M.A., Master of Sidney Sussex College, Cambridge. With or without Answers. Stereotyped Edition. 3s. 6d. Or in Two Parts:—

PART I.—Chaps. i.-viii. Elementary. With or without Answers. 2s.

PART II.—Chaps. ix.-xx. With or without Answers. 2s.

**ELEMENTARY ALGEBRA.** By W. W. ROUSE BALL, M.A. 4s. 6d.

**ELEMENTARY PLANE TRIGONOMETRY.** By E. W. HOBSON, Sc.D., F.R.S., and C. M. JESSOP, M.A. 4s. 6d.

**EUCLID.—ELEMENTS OF GEOMETRY.** Edited by H. M. TAYLOR, M.A., Trinity College, Cambridge.

BOOKS I., II. 1s. 6d. BOOKS III., IV. 1s. 6d.

BOOKS V., VI. 1s. 6d. BOOKS XI., XII. 1s. 6d.

BOOKS I.-IV. 3s. BOOKS I.-VI. 4s.

BOOKS I.-VI. and XI., XII. In One Vol. complete, 5s.

**THE ELEMENTS OF HYDROSTATICS.** By S. L. LONEY, M.A., Professor of Mathematics at the Royal Holloway College, sometime Fellow of Sidney Sussex College, Cambridge. Crown 8vo, 4s. 6d.

*Educational Times.*—"This work equals its predecessors in clearness and simplicity."

By the same Author.

**ELEMENTS OF STATICS AND DYNAMICS.** Seventh Edition. 7s. 6d., or in separate parts:—

PART I.—**Elements of Statics.** 4s. 6d.

PART II.—**Elements of Dynamics.** 3s. 6d.

**Solutions of the Examples.** Second Edition. 7s. 6d.

**MECHANICS AND HYDROSTATICS** for Beginners. Sixth Edition. 4s. 6d.

### PITT PRESS SERIES.—NEW VOLUMES.

**XENOPHON. CYROPAEDEIA.** Book I. With Introduction and Notes founded on those of H. A. HOLDEN, LL.D., and complete Vocabulary, by E. S. SHUCKBURGH, M.A., late Fellow of Emmanuel College, Cambridge. 2s. 6d.

**OVID. METAMORPHOSES, BOOK VIII.** Edited, with Notes and Vocabulary, by W. C. SUMMERS, M.A., Assistant Lecturer in Latin in the Owens College, Manchester. 1s. 6d.

**ERCKMANN-CHATRIAN. MADAME THÉRÈSE.** Edited, with Introduction and Notes, by A. R. ROPES, M.A. 3s.

BY THE SAME EDITOR.

**ERCKMANN-CHATRIAN. WATERLOO.** 3s.

**ERCKMANN-CHATRIAN. LE BLOCUS.** 3s.

London: C. J. CLAY & SONS. Cambridge University Press Warehouse, Ave Maria Lane.

# CLASS LIST

## OF CANDIDATES WHO HAVE PASSED THE CERTIFICATE EXAMINATION OF THE COLLEGE OF PRECEPTORS.—MIDSUMMER, 1902.

[Throughout the following List, bracketing of names implies equality.]

### PRIZES.

#### General Proficiency.\*

##### FIRST CLASS [or SENIOR].

- |   |  |
|---|--|
| 1. Goldsmith, A. O.<br><i>(Isbister Prize.)</i> | Mr. Rymer, Douglas Higher Grade School, Isle of Man.   |
| 2. Storer, F.<br><i>(Pinches Prize.)</i>        | Rev. L. H. Pearson, Market Bosworth Grammar School.  |
| 3. May, P.<br>(Elliott, C. W.)                  | Messrs. Butler and Brown, Tollington Schools, N.   |
| 4. Uttley, W. W.                                | Mr. Ellis, Rutherford College, Newcastle-on-Tyne.<br>Rev. T. J. Cunningham, Hutton Grammar School, near Preston. |

##### SECOND CLASS [or JUNIOR].

- |                    |  |
|--------------------|--|
| 1. Loseby, Miss D. | Rev. L. H. Pearson, Market Bosworth Grammar School.      |
| 2. Carritt, H. W.  | Messrs. Champness and Stuart, Northgate School, Ipswich. |
| 3. Peace, S. M.    | Mr. Norton, Yorkshire Society's School, S.E.             |
| 4. Adair, E. E.    | Messrs. Butler and Brown, Tollington Schools, N.         |

##### THIRD CLASS.

- |                        |   |
|------------------------|---|
| 1. Loseby, Miss E. M.  | Rev. L. H. Pearson, Market Bosworth Grammar School. |
| 2. Heywood, Miss D. M. | Miss Carter, The Laurels, Herne Bay.                |
| 3. Mee, W.             | Mr. Francis, People's College, Nottingham.          |
| 4. Powell, A. D.       | Mr. Francis, People's College, Nottingham.          |

#### English Subjects.

- |                    |   |
|--------------------|---|
| 1. Hurst, A. W.    | Rev. L. H. Pearson, Market Bosworth Grammar School. |
| 2. Craddock, G. J. | Mr. Ruddle, Bible Christian College, Shebbear.      |

#### Classics.

- |                  |  |
|------------------|--|
| 1. Grundy, G. F. | Mr. Hammond, Market Harborough Grammar School. |
| 2. Craigs, G. S. | Private tuition.                               |

#### Mathematics.\*

- |                     |  |
|---------------------|--|
| 1. Goldsmith, A. O. | Mr. Rymer, Douglas Higher Grade School, Isle of Man. |
| 2. Elliott, C. W.   | Mr. Ellis, Rutherford College, Newcastle-on-Tyne.    |

#### Modern Foreign Languages.

- |                        |   |
|------------------------|---|
| 1. Daye, Miss R. V. G. | Private tuition.  |
| 2. Burgino, J.         | Rev. Brother Attale, St. Joseph's College, Denmark Hill, S.E. |

#### Natural Sciences.

- |                     |  |
|---------------------|--|
| 1. Hurst, A. W.     | Rev. L. H. Pearson, Market Bosworth Grammar School.  |
| 2. Goldsmith, A. O. | Mr. Rymer, Douglas Higher Grade School, Isle of Man. |

#### Taylor-Jones Prize for Scripture History.†

- |                |  |
|----------------|--|
| Roberts, E. H. | Rev. W. P. Whittington, Ruthin Grammar School. |
|----------------|--|

#### Pitman Medals for Shorthand.

- |                                       |   |
|---------------------------------------|---|
| Jemmett, V.<br><i>(Silver Medal.)</i> | Mr. Teller, Wright's School, Faversham. |
|---------------------------------------|---|

- |  |   |
|--|---|
| (Pearce, C. T.)<br><i>(Bronze Medals.)</i> | Mr. Alexander, Tavistock Grammar School.<br>Mr. Teller, Wright's School, Faversham. |
|--|---|

#### Scholarships for Intending Teachers.

- |                    |   |
|--------------------|---|
| Melvin, Miss J. I. | Miss Parkes, Wincham Hall College, Northwich.   |
| Wall, Miss A.      | Mrs. Hiatt, Ladies' College, Wellington, Salop. |

\* Hurst, A. W., Market Bosworth Grammar School, was disqualified for the First Prize for General Proficiency in consequence of having obtained it at a previous Examination; and for the Second Prize for Mathematics in consequence of having obtained the First Prize at a previous Examination.

† E. T. Dyson, Ruthin Grammar School, was disqualified for the Taylor-Jones Prize for Scripture History in consequence of having obtained it at a previous Examination.

### List of the Candidates who were FIRST and SECOND in each Subject of Examination.

<p><i>Scripture History.</i></p> <p>1. Dyson, E. T. Rev. W. P. Whittington, Ruthin Grammar School.</p> <p>(Roberts, E. H.) Rev. W. P. Whittington, Ruthin Grammar School.</p> <p>2. Wall, Miss A. Mrs. Hiatt, Ladies' College, Wellington, Salop.</p> <p><i>English Language.</i></p> <p>1. Wall, Miss A. Mrs. Hiatt, Ladies' College, Wellington, Salop.</p> <p>2. Melvin, Miss J. I. Miss Parkes, Wincham Hall College, Northwich.</p> <p><i>English History.</i></p> <p>1. Wall, Miss A. Mrs. Hiatt, Ladies' College, Wellington, Salop.</p> <p>2. Dyson E. T. Rev. W. P. Whittington, Ruthin Grammar School.</p> <p><i>Geography.</i></p> <p>1. Hurst, A. W. Rev. L. H. Pearson, Market Bosworth Grammar School.</p> <p>(Craddock, G. J.) Mr. Ruddle, Bible Christian College, Shebbear.</p> <p>Lee, A. J. Mr. Ruddle, Bible Christian College, Shebbear.</p> <p>2. May, P. Messrs. Butler and Brown, Tollington Schools, N.</p> <p>Slater, W. P. Dr. Isherwood, University School, Southport.</p> <p><i>Arithmetic.</i></p> <p>1. Grundy, G. F. Mr. Hammond, Market Harborough Grammar School.</p> <p>(Peace, S. M.) BORLAND, L.C.P. (Science and Math. Prizeman), Victoria College, 87 Buckingham Palace Road, S.W., and Stalheim, Brunswick Road, Sutton, Surrey. Schools visited and Examinations conducted.

## COLLEGE OF PRECEPTORS. (Bloomsbury Square, W.C.)

### LECTURES FOR TEACHERS ON THE SCIENCE AND ART OF EDUCATION.

#### THE PRACTICE OF EDUCATION.

To be delivered by the Rev. Canon EVAN DANIEL, M.A., formerly Principal of the Battersea Training College.

The Second Course of Lectures (Thirtieth Annual Series) will commence on Friday, September 26th, at 7 p.m.

The Course is mainly based on criticism lessons actually given before the Lecturer, and will draw attention to the more serious errors that young teachers commit, and to the ways in which they may be avoided. Special points will be taken to connect the Art with the Science of Education, and to refer success and failure in teaching to the observance and violation respectively of natural laws.

For Syllabus, see p. 391.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

The Lectures will be delivered on Friday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C.

Members of the College have Free Admission to the Course.

C. R. HODGSON, B.A., Secretary.

## BIRKBECK INSTITUTION, BREAMS BUILDINGS, CHANCERY LANE, E.C.

Principal—G. ARMITAGE-SMITH, M.A.

**SCIENCE CLASSES** in every Branch, with Practical Work. Well equipped Laboratories for Chemistry, Experimental Physics, Biology (Zoology and Botany), and Metallurgy.

**LECTURES** on Political Economy, Commercial Geography, Common Law, Bankruptcy, Equity and Conveyancing, Logic, Psychology and Ethics, French, German, and Italian Literature.

**CLASSES** in Classics, Modern Languages (including Russian), English and Commercial Subjects, and for Civil Service.

**SCHOOL OF ART.**—Drawing, Painting, Designing, Modelling, Life Classes, Wood Carving, &c.

Prospectus free on application to SECRETARY. Calendar, 6d. (by post, 8d.).

## LONDON COLLEGE OF MUSIC. (Incorporated.)

GREAT MARLBOROUGH STREET, LONDON, W.

Patron: HIS GRACE THE DUKE OF LEEDS.

Dr. F. J. KARN, Mus. Bac. Cantab., Principal.

G. AUGUSTUS HOLMES, Esq., Director of Examinations.

**EXAMINATIONS** in PIANO-FORTE PLAYING, SINGING, THEORY, and all branches of Music will be held in London and 350 Provincial Centres in December, when certificates will be granted to all successful candidates.

The Higher Examinations in Practical and Theoretical Music for Diplomas of Associate (A.L.C.M.), Licentiate (L.L.C.M.), the Teachers' Diploma (L.C.M.), and Fellowship (F.L.C.M.), also take place in December.

**SYLLABUS** for 1902 containing particulars of (1) The Teachers' Diploma (L.C.M.), (2) The new Cumulative Certificate, and (3) Four Exhibitions value £6. 6s. each, may be had of the SECRETARY.

In the Educational Department students are received and thoroughly trained under the best professors at moderate fees. Day and Evening Classes are held.

The WINTER TERM commences Monday, September 22nd.

A VACATION COURSE of Instruction in Special Subjects for Teachers and others is held at Easter, August, and Christmas.

T. WEEKES HOLMES, Secretary.

## THE ASSOCIATED BOARD OF THE

### ROYAL ACADEMY OF MUSIC AND THE ROYAL COLLEGE OF MUSIC FOR LOCAL EXAMINATIONS IN MUSIC.

Patron—HIS MAJESTY THE KING.

President—H.R.H. THE PRINCE OF WALES, K.G.

**LOCAL CENTRE EXAMINATIONS** held annually in March and April at all Centres. In London and a few Suburban Centres they are held in November and December as well as March and April. (See Syllabus A.)

**SCHOOL EXAMINATIONS**, held three times a year—viz., March and April, June and July, and October and November. (See Syllabus B.) Entries for the October-November Examination will be received on or before October 8th, 1902.

Specimen Theory Papers set in the Local Centre and School Examinations of 1896 to 1901, inclusive, can be obtained on application to the Central Office. Price 3d. per set, per year, post free.

Copies of Syllabuses A and B, and all information, will be sent on application to

JAMES MUIR, Secretary.

14 Hanover Square, London, W.

Telegraphic address: "Associa, London."

## ARMY SCHOOLMASTERS.—

There are a number of vacancies in the Corps of Army Schoolmasters. Civilian Schoolmasters only will be accepted who have passed on Second Year's Papers in the First or Second Division, or who hold a Certificate qualifying them to superintend Pupils Teachers from the Board of Education. Students in Training Colleges will also be accepted under certain conditions. Candidates must not be over twenty-four years of age. Accepted candidates will be required to join as soon as convenient.

Further particulars can be obtained on application (in writing) to the DIRECTOR OF ARMY SCHOOLS, War Office, London, S.W.

Composition Fee for the Session (including Lectures and Practice) £10.

Men Students reside in registered lodgings in the town, or at the Hostel for Men Students, *Warden*—Prof. J. W. MARSHALL, M.A.

Women Students reside in the Hall of Residence for Women Students.

For General Prospectus of Science and Art Departments, also for Special Prospectuses of the Law, Normal and Agricultural Departments, and all other particulars, apply to

T. MORTIMER GREEN,  
*Registrar.*

**DACHELOR TRAINING COLLEGE FOR TEACHERS.**

CAMBERWELL GROVE, S.E.  
Principal—Miss RIGA.  
Mistress of Method—Miss CARPENTER.  
Other Teachers and Lecturers.

Provides a practical course of professional training for Teachers in Secondary Schools, with abundant opportunity for class teaching in the Dachelor (400 pupils) and other Schools.

Students prepared for the Cambridge Teachers' Certificate and London Teaching Diploma.

Free Studentship awarded annually to a University Graduate in September or January, when the College courses begin.

Also a Kindergarten Division preparing for the Examinations of the National Froebel Union. Also a Preparatory Division preparing for Inter. Arts. or Cambridge Higher Local Examination.

Fees £15 to £20 a year for Non-residents.  
A comfortable Hall of Residence. Terms moderate.

**BEDFORD COLLEGE FOR WOMEN**

(UNIVERSITY OF LONDON),  
YORK PLACE, BAKER STREET, W.  
Principal—Miss ETHEL HURLBATT.

The Session 1902-3 will open on Thursday, October 2nd.

Students are requested to enter their names on Wednesday, October 1st.

Lectures are given in all branches of General and Higher Education.

Taken systematically they form a connected and progressive Course, but a single Course of Lectures in any subject may be attended.

Courses are held in preparation for all Examinations of the University of London in Arts and Science, for the Teachers' Diploma (London), and for the Teachers' Certificate (Cambridge), and also a Special Course of Scientific Instruction in Hygiene. Six Laboratories are open to Students for Practical Work. Four Entrance Scholarships will be awarded in June, 1903. A Gladstone Memorial Prize and the Early English Text Society's Prize will be awarded to Students in June, 1903.

Students can reside in the College.  
Full particulars on application to the PRINCIPAL.

**BEDFORD COLLEGE FOR WOMEN**

(UNIVERSITY OF LONDON),  
YORK PLACE, BAKER STREET, W.  
DEPARTMENT FOR PROFESSIONAL TRAINING IN TEACHING.

(Recognized by the Cambridge Syndicate.)  
*Head of the Department*—Miss H. ROBERTSON, B.A.

The Third Term of the Session 1902 begins on Thursday, October 2nd.

The Course includes full preparation for the Examinations for the Teaching Diplomas granted by the Universities of London and Cambridge, held annually in December.

Six open Pfeiffer Scholarships, each of the value of 15 guineas, will be awarded in January, 1903. Candidates must hold a Degree or an equivalent in Arts or Science. Application to be made to Miss ROBERTSON not later than December 13th, 1902.

**THE MARIA GREY TRAINING COLLEGE FOR WOMEN TEACHERS**

offer a full Course of Professional Training to Ladies who desire to become Teachers in Secondary Schools, or in Kindergartens.

For all particulars as to qualifications for Entrance, Terms, Scholarships, Hall of Residence, &c., apply to the Principal, Miss ALICE WOODS, at the College, Salisbury Road, Brondesbury, London, N.W.

**THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN TEACHERS.**

As the post of Principal has become vacant, owing to the appointment of Miss Punnett as Normal Mistress in the New Day Training College under the London County Council, Miss MARGARET S. YOUNG, B.A. Lond., Assistant Mistress of the North London Collegiate School for Girls and formerly Resident Lecturer at the Training College (1892-7), has, with the consent of the Governors and Head Mistress of the above School, kindly undertaken to act as Principal of the College during the Michaelmas Term, pending the appointment of a new Principal.

A residential College providing a year's professional training for Secondary Teachers.

The course includes preparation for the Cambridge Teacher's Certificate (Theory and Practice), and for the Teachers' Diploma of the London University. The Students attend the Cambridge University Lectures on Teaching, in addition to those of the Resident and Visiting Lecturers. Ample opportunity is given for practice in teaching science, languages, mathematics, and other subjects in various schools in Cambridge.

Students are admitted in January and in September. Full particulars as to qualifications for admission, scholarships, and bursaries may be obtained on application to Miss M. S. YOUNG, Cambridge Training College, Wollaston Road, Cambridge.

**THE INCORPORATED FROEBEL EDUCATIONAL INSTITUTE,**

TALGARTH ROAD, WEST KENSINGTON, LONDON, W.  
*Chairman of the Committee*—Sir W. MATHER, M.P.  
*Treasurer*—Mr. C. G. MONTEFIORE, M.A.  
*Secretary*—Mr. ARTHUR G. SYMONDS, M.A.

TRAINING COLLEGE FOR TEACHERS.  
Principal—Miss E. E. LAWRENCE.  
KINDERGARTEN AND SCHOOL.

*Headmistress*—Miss A. YELLAND.

Students are prepared for the Examinations of the National Froebel Union, and for the University of Cambridge Teachers' Examination.

Prospectuses and all particulars may be obtained on application to the PRINCIPAL at the Institute.

**UNIVERSITY COLLEGE, LONDON.**

(UNIVERSITY OF LONDON.)  
Principal—G. CAREY FOSTER, F.R.S.  
ENGINEERING AND ARCHITECTURAL DEPARTMENTS.  
Assisted by the Carpenters' Company.

The Laboratories are fitted with all the best appliances for practical work, and for research work of the most advanced character.

T. GREGORY FOSTER, Ph.D., *Secretary.*

**UNIVERSITY COLLEGE, LONDON.**

(UNIVERSITY OF LONDON.)  
Principal—G. CAREY FOSTER, LL.D., D.Sc., F.R.S.  
FACULTIES OF ARTS AND OF SCIENCE,  
INCLUDING THE DEPARTMENTS OF ENGINEERING AND OF ARCHITECTURE.

The Session 1902-3 will be opened on Tuesday, September 30th. Introductory Lecture at 3 p.m. by Prof. J. D. CORMACK, B.Sc., Assoc. M.Inst.C.E., M.I.Mech.E., M.I.E.E.

The Principal and Deans will attend on September 30th and October 1st, from 10 a.m. to 1 p.m. for the admission of Students. The Department of Fine Art (Slade School) will open on Monday, October 6th.

The courses in the Department of Laws will begin on Monday, October 20th.

Courses of Instruction are provided for Students desiring to graduate at the University of London in any of the following Faculties:—Arts, Laws, Medicine, Science, Engineering, and Economics and Political Science.

FEES.—Composition Fee for 3 years' course in the Faculty of Arts, 60 guineas; Composition Fee for 3 years' course in the Faculty of Engineering, 115 guineas; Composition Fee for Preliminary Scientific Course, 25 guineas; Composition Fee for complete M.B. Course, 140 guineas.

Fees in the Faculty of Science vary, according to the course taken, from 30 to 40 guineas a year.

Students are admitted to courses of instruction in any one subject, provided there be room.

Special provision is made for Post-Graduate and Research work in the various subjects taught at the College.

For Prospectuses and full particulars, apply to

T. GREGORY FOSTER, Ph.D., *Secretary.*

**ABERDARE HALL, CARDIFF.**

RESIDENCE FOR WOMEN STUDENTS OF THE UNIVERSITY COLLEGE OF SOUTH WALES AND MONMOUTHSHIRE.

Principal—Miss KATE HURLBATT.

Fees £42. 10s., £36, and £32 per annum. College tuition fees £10 per annum. Scholarships of £30, £25, and Exhibitions of £10, will be obtainable on result of Scholarship Examination to be held September 15th. A Medical School and Department for Secondary and Elementary and Kindergarten Training are attached to the College. Apply to the PRINCIPAL.

**ST. GEORGE'S TRAINING COLLEGE FOR WOMEN TEACHERS,**

EDINBURGH.  
Principal—Miss M. R. WALKER.

This College provides a complete Course of Professional Training for Ladies who desire to become Teachers in Secondary Schools or Governesses in Families. The Course, which lasts for one year, includes attendance at the University Lectures on Education, in addition to Lectures delivered by the College Staff, and the Students have ample opportunities of gaining experience in Class Teaching in good Schools. Students are admitted in January and October. For prospectus and further particulars apply to the PRINCIPAL, 5 Melville Street, Edinburgh.

London University.

Matriculation.

Annually, for the last six years, nearly 100 Students of University Tutorial College have passed London Matriculation.

Day Classes.

Morning and Afternoon Classes in preparation for the Matriculation Examination of the University of London commence Monday, September 15th, for the January Examination, and terminate Friday, December 19th.

The whole of the ground required for the Examination is covered, including both theoretical and practical work in General Elementary Science.

The Morning Class is divided into a Senior and a Junior Section in each of the following subjects:— Mathematics, Latin, English, and Science. These Sections work simultaneously, so that a student who attends the Senior Section in his stronger subjects may at another time pay special attention to a weak subject in the Junior Section.

FEES (January Examination).—Full Course, terminating December 19th—

Morning Class	£11 11 0
Ladies' Class	9 19 6
Afternoon Class	9 19 6

Full Prospectus, giving particulars of Day and Evening Classes for Matriculation, Inter. Arts and Law, Prelim. Sci. (M.B.) and Inter. Science, B.A., B.Sc., and LL.B., may be had, POST FREE, on application to

THE VICE-PRINCIPAL, University Tutorial College, 32 Red Lion Square, Holborn, W.C.

NORMAL CORR. COLLEGE,

47 MELFORD ROAD, EAST DULWICH, S.E., and 110 AVONDALE SQUARE, LONDON, S.E.

LONDON UNIVERSITY.

THE MIDDLESEX HOSPITAL MEDICAL SCHOOL.

The WINTER SESSION 1902-1903 will open on Wednesday, October 1st, at 3 p.m. Mr. STEPHEN PAGET, M.A., F.R.C.S., will give an Introductory Address...

The ANNUAL DINNER of the past and present Students and their friends will take place the same evening at the Trocadero, at 7 o'clock, Dr. W. CAYLEY, in the Chair.

HOSPITAL STAFF AND LECTURERS.

- Consulting Physicians—Dr. Cayley, Dr. S. Coupland, Sir R. Douglas Powell, Bart., M.D. Physicians—Dr. J. K. Fowler, Dr. W. Pasteur, Dr. W. E. Wynter. Assistant Physicians—Dr. A. F. Voelcker, Dr. F. J. Wethered, Dr. H. C. Thomson, Dr. R. A. Young. Obstetric Physician—Dr. W. Duncan. Assistant Obstetric Physician—Dr. H. Boxall. Consulting Physician to the Skin Department—Dr. Robert Livens.

The Hospital contains 340 beds. There are Special Departments for Cancer, Syphilis, Diseases of Women and Children, Diseases of the Eye, Skin, Throat, and Ear, and for cases requiring Electrical treatment.

There are eighteen Resident Clinical Appointments open to Students of the Hospital annually.

Two open Entrance Scholarships, value £100 and £60, will be competed for on September 23rd, 24th, and 25th, and one Entrance Scholarship (value £60) in Anatomy and Physiology open to Oxford and Cambridge Students only, on September 23rd and 24th.

Composition Fee 135 guineas, or by three yearly instalments of 60 guineas, 50 guineas, and 35 guineas.

Special terms are made in favour of University and other Students who have already commenced their medical studies, and of University of London Students who have passed the Preliminary Scientific Examination.

The Hospital and Medical School are fully equipped for the theoretical and practical teaching of all the subjects included in the Examinations in Medicine and Surgery in the United Kingdom, and for the Diplomas in Public Health; and ample laboratory and class-room accommodation is provided for the teaching of the various subjects of the Curriculum, and for original research in Medicine, Pathology, or Bacteriology.

The Residential College adjoining the Hospital provides accommodation for thirty students.

For further information apply to

J. MURRAY, M.B., F.R.C.S., Dean.

ST. THOMAS'S HOSPITAL MEDICAL SCHOOL.

ALBERT EMBANKMENT, LONDON, S.E.

The WINTER SESSION of 1902-1903 will OPEN on Wednesday, October 1st.

St. Thomas's Hospital being one of the Medical Schools of the University of London, provision is made for the courses of study prescribed for the Preliminary Scientific, Intermediate, and Final Examinations in Medicine.

Three Entrance Scholarships will be offered for competition in September, viz., one of 150 guineas and one of £60 in Chemistry and Physics, with either Physiology, Botany, or Zoology, for First Year's Students; one of £50 in Anatomy, Physiology, Chemistry (any two), for Third Year's Students from the Universities.

Scholarships and Money Prizes are awarded at the Sessional Examinations, as well as several Medals.

All Hospital Appointments are open to Students without charge.

Club-rooms and an Athletic Ground are provided for Students.

The School Buildings and the Hospital can be seen on application to the Medical Secretary.

The fees may be paid in one sum or by instalments. Entries may be made separately to Lectures or to Hospital Practice, and special arrangements are made for Students entering from the Universities and for Qualified Practitioners.

A Register of approved lodgings is kept by the Medical Secretary, who also has a list of local Medical Practitioners, Clergymen, and others who receive students into their houses.

For Prospectus and all particulars apply to Mr. G. RENDLE, the Medical Secretary.

H. G. TURNEY, M.A., M.D. Oxon., Dean.

... .. With Answers, 1s. 6d.
- A SCHOOL ALGEBRA.** By F. OSCAR LANE, B.Sc. (Lond.), Assistant Master, King Edward's School, Birmingham. Crown 8vo, 232 pp. ... .. 1s. 6d.  
... .. With Answers, 2s.
- THE BOOK OF THE FRENCH VERB.** By J. DE CUSANCE. 107 pp. + viii. ... .. 1s.  
This little book contains perfectly clear and open Tables of the Irregular French Verbs, each displayed across two pages. The chief Idioms connected with the Verbs are also given.
- A FIRST FRENCH BOOK.** By J. DE CUSANCE. With a Preface by J. M. D. MEIKLEJOHN. Crown 8vo, 120 pp. ... .. 1s.

COLLEGE OF  
PRECEPTORS  
CERTIFICATE AND  
LOWER FORMS  
EXAMINATIONS.

# J. & J. PATON,

143 Cannon Street,  
LONDON, E.C.,

Beg respectfully to inform Head Masters that they insert SCHOLARSHIP EXAMINATION NOTICES and other Advertisements promptly and accurately in all LONDON and PROVINCIAL NEWSPAPERS and PERIODICALS throughout the United Kingdom, also in all Indian, Colonial, and Foreign papers.

The charges are at lowest office rates. Estimates and scheme of insertions forwarded free, on receipt of particulars of proposed expenditure, over given period.

## PATON'S LIST OF SCHOOLS

(BOYS' AND GIRLS')

### AND TUTORS.

(An Aid to Parents in the Selection of Schools and Tutors.)

720 pages. Crown 8vo. Red Cloth. Gilt Lettered.

PRICE 1s. Post free, 1s. 6d.

**LARGEST CIRCULATION of any SCHOLASTIC GUIDE OR DIRECTORY.**

BEST MEDIUM FOR OBTAINING PUPILS.

**SIXTH ANNUAL EDITION NOW PREPARING.**

Every British Consul abroad, and every Foreign Consul in England, will receive a copy of this edition.

The large sum we expend each year in advertising "List of Schools" in the best newspapers ensures the largest circulation of any such work, and brings applications from parents all over the United Kingdom, India, the Colonies, and the Continent. Copies are also placed in the best Clubs, Libraries, Hotels, Boarding Houses, &c., in London and the Provinces. Hundreds of Pupils have been obtained through the medium of Paton's "List of Schools."

Specimen Copy sent free on receipt of application with copy of Prospectus.

**J. & J. PATON,**  
EDUCATIONAL AGENTS,  
143 CANNON STREET, LONDON, E.C.

## OXFORD LOCAL EXAMINATIONS, 1903.

### RELIGIOUS KNOWLEDGE.

- SCRIPTURE MANUALS.** By GEORGE CARTER, M.A.  
Kings I. [*In preparation.*] Each containing Introduction, Notes, and Comments on the Authorised Acts of the Apostles. and Revised Versions.  
Crown 8vo, cloth, 1s. 6d. each.
- \***PUBLIC EXAMINATION SCRIPTURE MANUALS.** By A. RICHES, F.R.G.S.  
St. Luke. 1s. 6d. Acts of the Apostles. 1s. 6d.
- \***THE CHURCH CATECHISM.** By A. RICHES, F.R.G.S. 9d.  
\* Specially prepared for Teacher's use, or private instruction.

### FRENCH (Preliminary).

- PIERRE ET CAMILLE.** By A. DE MUSSET. With Full Notes, Vocabulary, and Table of Irregular Verbs, by the Rev. J. HEWERTSON, M.A. Cloth, 9d.

### ENGLISH (Preliminary).

- LONGFELLOW'S HIAWATHA AND EVANGELINE.** With Notes by R. G. MCKINLAY. Cloth, 1s.

### ENGLISH HISTORY.

- FOR PRELIMINARY STUDENTS.*
- A SHORT SYNOPSIS OF ENGLISH HISTORY.** By J. C. WRIGHT. Cloth back, 6d.
- SUMMARY OF ENGLISH HISTORY.** By ARTHUR WOOD. A most complete book. Contains a large number of Questions set at various Public Examinations. Crown 8vo, 1s.
- JUNIOR AND SENIOR STUDENTS.*
- OUTLINES OF ENGLISH HISTORY. From B.C. 55 to A.D. 1901.** Containing Genealogical Tables, Short Biographical Sketches, and Index. Compiled and arranged by GEORGE CARTER, M.A. Thirteenth Edition. Crown 8vo, cloth, 1s. 6d.
- CARTER'S HISTORY. Part II., 1485-1689. Part III., 1689-1897.** Compiled for use with "Outlines." A most comprehensive work in simple language, and arranged in an attractive form. Crown 8vo, cloth, 2s. each.

### ARITHMETIC AND ALGEBRA.

- A FIRST ARITHMETIC.** By Dr. W. T. KNIGHT, Author of "Algebraic Factors," &c. Contains copious and carefully Graduated Examples on the different Rules up to and including Simple Proportion. The Exercises on each Rule are followed by Questions and Problems from Examination Papers. Crown 8vo, cloth, 8d. Answers separately, 6d.
- By same Author.*
- A SECOND ARITHMETIC.** Containing Examples on all the Higher Rules, with special attention to Commercial Arithmetic. Crown 8vo, cloth, 8d. Answers separately, 6d.
- BOWICK'S EXERCISES IN ARITHMETIC.** Part I. (to Compound Proportion). Part II. (Percentages, Stocks, Square and Cube Root, &c., &c.). Part II. also contains Papers set at various Local Examinations. 9d. each. Answers, 6d. net.
- RELFE BROTHERS' BASY INTERMEDIATE TESTS IN ARITHMETIC.** Suitable for Third Class College of Preceptors and the Oxford and Cambridge Preliminary. 4d. Answers, 6d.
- ELEMENTARY ALGEBRA FOR CLASS USE.** By R. P. SCOTT, M.A., LL.D., and J. MONTGOMERY. Cloth, 1s.; or with Answers, 1s. 3d.
- A FIRST ALGEBRA.** Containing copious and varied Original Exercises and Miscellaneous Examples. By Dr. KNIGHT, Author of "Algebraic Factors," &c. Second Edition. Cloth, 6d.

### GEOGRAPHY.

- RELFE BROTHERS' CHARTERHOUSE ATLAS.** 32 Maps. New Edition. Thoroughly up to date. Cloth, 1s.
- RELFE BROTHERS' NEW PREPARATORY ATLAS.** Very clear and up to date. 6d.
- RELFE BROTHERS' ALDERSGATE ATLAS.** Containing 72 4to coloured Maps (Political, Physical, and Classical, Commercial Chart, showing the Steamer Routes, &c.). With Index. Second Edition. Thoroughly up to date. Cloth, 3s.
- RELFE BROTHERS' SCHOOL GEOGRAPHY AND ATLAS.** By G. CARTER, M.A., Author of "The Outlines of History," &c. The main features of this book are the clear and not overcrowded Maps on one side, and the Geography necessary to learn facing the Map. The Book will be found a complete Geography and Atlas, and is highly recommended for pupils preparing for the Local Examinations. Crown 4to. 32 Maps (mostly coloured). Sixth Edition. 2s. 6d.

### GRAMMAR.

- RICHES' PUBLIC EXAMINATION GRAMMAR.** 2s. 6d.
- BROOKINGTON'S LOCAL EXAMINATION GRAMMAR.** 1s.
- + **CHARTERHOUSE ANALYSIS EXERCISE BOOK.** 3s. dozen net.
- + **CHARTERHOUSE PARSING EXERCISE BOOK.** 3s. dozen net.
- + Specially drawn up to meet the requirements of this Examination.

# Bell's Illustrated Classics.

Edited by **E. C. MARCHANT, M.A.**, Fellow of Lincoln College, Oxford;  
late Classical Master at St. Paul's School.

*Full Illustrated Prospectus of this Series post free on application.*

## ELEMENTARY SERIES.

THE special aim of the Series is to make the editions as interesting and helpful as possible to the intelligent learner; and, with this object, numerous ILLUSTRATIONS have been introduced. These are gathered from the best sources, and are chosen with a view to explaining the text, and making the reader more familiar with Greek and Roman Life.

MAPS and PLANS are also inserted wherever they are required.

The volumes are equipped with Introductions, Notes, Grammatical Appendices, Vocabularies, and, in the prose authors, Exercises on the Text. Vocabularies are also given, but the volumes may be had without the Vocabularies, if preferred.

"The introductions and explanatory matter are to the full as good and satisfactory as in rival editions, while the illustrations are well fitted to give youth more vivid conceptions of ancient life and thought than can be gathered from any amount of literary description—at least such description they will very usefully supplement. The photographic camera and all the museums of Europe have contributed their quota to these illustrations, which have the additional merit of really beautiful execution. The books, moreover, are handy in form, and for the higher schoolboy or the undergraduate they are hard to beat."—*Glasgow Herald*.

"The master of junior forms and preparatory schools should make the acquaintance of this Series of Illustrated Classics; it surpasses all else we have seen."—*School Guardian*.

"The illustrations are excellent, and no expense has been spared to make the Series a success. The notes are mostly simple and to the point. The introductions are clear and not 'too full.'"—*Cambridge Review*.

"The editors know their business, and the publishers have seconded their efforts in a most spirited fashion. The Series is sure to receive a welcome."—*Educational Times*.

*Price, with or without Vocabularies, 1s. 6d. each.*

**Caesar.—De Bello Gallico. Book I.** Edited by A. C. LIDDELL, M.A., Assistant Master at the High School, Nottingham.

**Caesar.—De Bello Gallico. Book II.** Edited by A. C. LIDDELL, M.A.

**Caesar.—De Bello Gallico. Book III.** Edited by F. H. COLSON, M.A., Head Master of Plymouth College, and G. M. GWYTHYR, M.A., Assistant Master.

**Caesar.—De Bello Gallico. Book IV.** Edited by the Rev. A. W. UPCOTT, M.A., Head Master of Christ's Hospital.

**Caesar.—De Bello Gallico. Book V.** Edited by A. REYNOLDS, M.A., Assistant Master at Merchant Taylors' School.

**Caesar.—De Bello Gallico. Book VI.** Edited by J. T. PHILLIPSON, M.A., Head Master of Christ's College, Finchley.

**Cicero.—Speeches against Catiline, I. and II.** Edited by F. HERRING, M.A., Assistant Master at Blundell's School, Tiverton.

**Selections from Cicero.** Edited by J. F. CHARLES, B.A., Assistant Master at the City of London School.

**Cicero.—De Senectute.** Edited by A. S. WARMAN, B.A., Assistant Master at the Grammar School, Manchester.

**Cicero.—De Amicitia.** Edited by H. J. L. J. MASSÉ, M.A., Assistant Master at St. Paul's Preparatory School.

**Cornelius Nepos.—Epaminondas, Hannibal, Cato.** Edited by H. L. EARL, M.A., Assistant Master at the Grammar School, Manchester.

**Eutroplus.—Books I. and II.** Edited by J. G. SPENCER, B.A., Assistant Master at St. Paul's Preparatory School.

**Horace.—Odes. Book I.** Edited by C. G. BOTTING, B.A., Assistant Master at St. Paul's School.

**Horace.—Odes. Book II.** Edited by C. G. BOTTING, B.A.

**Horace.—Odes. Book III.** Edited by H. LATTER, M.A., Assistant Master at Cheltenham College.

**Horace.—Odes. Book IV.** Edited by H. LATTER, M.A.

**Livy. Book IX., cc. 1.-xix.** Edited by W. C. FLAMSTEAD WALTERS, M.A., Professor of Classics at King's College.

**Hannibal's First Campaign in Italy.** Selected from Livy Book XXI., and edited by F. E. A. TRAVES, M.A., Assistant Master at St. Paul's School.

**Ovid.—Metamorphoses. Book I.** Edited by G. H. WELLS, M.A., Assistant Master at Merchant Taylors' School.

**Selections from Ovid's Metamorphoses.** Edited, with Introduction and Notes, by J. W. E. PEARCE, M.A., Merton Court Preparatory School, Sidcup.

**Ovid.—Elegiac Selections.** By F. COVERLEY SMITH, B.A., High School, Nottingham.

**Ovid.—Tristia. Book I.** Edited by A. E. ROGERS, M.A.

**Ovid.—Tristia. Book III.** Edited by H. R. WOOLRVCH, M.A., Head Master of Blackheath School.

**Phaedrus.—A Selection.** Edited by the Rev. R. H. CHAMBERS, M.A., Head Master of Christ's College, Brecon.

**Stories of Great Men.** Edited by the Rev. F. CONWAY, M.A., Assistant Master at Merchant Taylors' School.

**Vergil.—Aeneid. Book I.** Edited by the Rev. E. H. ESCOTT, M.A., Assistant Master at Dulwich College.

**Vergil.—Aeneid. Book II.** Edited by L. D. WAINWRIGHT, M.A., Assistant Master at St. Paul's School.

**Vergil.—Aeneid. Book III.** Edited by L. D. WAINWRIGHT, M.A.

**Vergil.—Aeneid. Book IV.** Edited by A. S. WARMAN, B.A., Assistant Master at the Grammar School, Manchester.

**Vergil.—Aeneid. Book V.** Edited by J. T. PHILLIPSON, M.A., Head Master of Christ's College, Finchley.

**Vergil.—Aeneid. Book VI.** Edited by J. T. PHILLIPSON, M.A.

**Vergil.—Selection from Aeneid, Books VII.-XII.** Edited by W. G. COANT, B.A., Assistant Master at Fettes College.

**Xenophon.—Anabasis. Book I.** Edited by E. C. MARCHANT, M.A.

**Xenophon.—Anabasis. Book II.** Edited by E. C. MARCHANT, M.A.

**Xenophon.—Anabasis. Book III.** Edited by E. C. MARCHANT, M.A. [*In the press.*]

## GREEK PLAYS.

*Price 2s. each, with or without Vocabularies.*

**Aeschylus.—Prometheus Vincetus.** By C. E. LAURENCE, M.A., Assistant Master at Blackheath School.

**Euripides.—Alcestis.** By E. H. BLAKENEY, M.A., Head Master of Sir W. Borlase School, Great Marlow.

**Euripides.—Bacchae.** By G. M. GWYTHYR, M.A., Assistant Master at Plymouth College.

**Euripides.—Hecuba.** By the Rev. A. W. UPCOTT, M.A., Head Master of Christ's Hospital.

**Euripides.—Medea.** By the Rev. T. NICKLIN, M.A., Assistant Master at Rossall School.

## BELL'S ILLUSTRATED CLASSICS.

*Intermediate Series. With numerous Illustrations and Maps. Crown 8vo.*

**Caesar.—Seventh Campaign in Gaul, B.C. 52.** DE BELLO GALlico, Lib. VII. Edited by the Rev. W. COOKWORTHY COMPTON, M.A., Head Master of Dover College. Fourth Edition. 2s. 6d. net.

**Tacitus.—Agricola.** Edited by J. W. E. PEARCE, M.A., late Assistant Master at University College School. With numerous Illustrations and Maps. 2s.

**Livy.—Book XXI.** Edited by F. E. A. TRAVES, M.A., Assistant Master at St. Paul's School. With numerous Illustrations and Maps. 2s. 6d. net.

**Homer.—Odyssey. Book I.** Edited by E. C. MARCHANT, M.A. With numerous Illustrations. 2s.

**Sophocles.—Antigone.** Edited by G. H. WELLS, M.A., Assistant Master at Merchant Taylors' School. With numerous Illustrations. 3s. 6d.

**The Athenians in Sicily.** Being portions of Thucydides, Books VI. and VII. Edited by the Rev. W. COOKWORTHY COMPTON, M.A., Head Master of Dover College. With numerous Illustrations and Maps. 3s. 6d.

*Specimen Copy sent to Head Masters with a view to Introduction.*

LONDON: GEORGE BELL & SONS, YORK STREET, COVENT GARDEN.

# MESSRS. BELL'S EDUCATIONAL BOOKS.

Complete Educational Catalogue post free on application.

## NEW VOLUMES OF THE CAMBRIDGE MATHEMATICAL SERIES.

**DIFFERENTIAL CALCULUS FOR BEGINNERS.** By ALFRED LODGE, M.A., late Fereday Fellow of St. John's College, Oxford, Professor of Pure Mathematics at the Royal Indian Engineering College, Coopers Hill. With an Introduction by Sir OLIVER LODGE, D.Sc., F.R.S., LL.D., Principal of the University of Birmingham. Crown 8vo, 4s. 6d.

**ELEMENTARY GEOMETRY.** Comprising the substance of Euclid, Book I., 1-48; Book III., 1-34; and Book IV., 1-5. By W. M. BAKER, M.A., Head Master of the Military and Civil Department at Cheltenham College, and A. A. BOURNE, M.A., Senior Mathematical Master at the same College. Crown 8vo, 2s. 6d. Also Book I., separately, 1s. [Immediately.]

This volume is written on the lines recommended by a Committee of the Mathematical Association which was formed at the suggestion of the British Association for the purpose of making reforms in the teaching of Elementary Mathematics.

**EXAMPLES IN ALGEBRA.** By C. O. TUCKEY, B.A., Assistant Master at Charterhouse, late Scholar of Trinity College, Cambridge. Crown 8vo, 3s.

This volume also follows the suggestions of the Committee of the Mathematical Association referred to above.

## NEW VOLUME OF BELL'S SCIENCE SERIES.

**INJURIOUS AND USEFUL INSECTS.** An Introduction to the Study of Economic Entomology. By Prof. L. C. MIALI, F.R.S. With 100 Illustrations. 3s. 6d.

"Professor Miall has been happily inspired; he has given us just the book which was wanted, just the book which we might expect from him."—*Pilot*.

"An admirable elementary text-book of its subject."—*Scotsman*.

Crown 8vo, 2s.

**AN INTRODUCTION TO CHEMISTRY.** By D. S. MACMAIR, Ph.D., (Wurzburg), B.Sc. (London), late Lecturer in Chemistry at the East London Technical College and the Glasgow and West of Scotland Technical College.

Crown 8vo, 7s. 6d.

**A SPANISH GRAMMAR, with Exercises.** By M. MONTROSE RAMSEY, Professor in Johns Hopkins University.

Crown 8vo, 6s. 6d.

**THE PRINCIPLES OF LOGIC.** By HERBERT AUSTIN AIKINS, Leffingwell Professor of Philosophy in the College for Women of Western Reserve University.

## WORKS BY CHARLES PENDLEBURY, M.A.,

Chief Mathematical Master at St. Paul's School.

**ARITHMETIC FOR SCHOOLS.** Fifteenth Edition. Complete, with or without Answers, 4s. 6d.; or in Two Parts, 2s. 6d. each. Key to Part II., 7s. 6d. net.

**EXAMPLES IN ARITHMETIC.** 8,000 Examples extracted from the above Arithmetic. Eleventh Edition, with or without Answers, 3s.; or in Two Parts, 1s. 6d. and 2s.

**A SHILLING ARITHMETIC.** Fifth Edition. Small crown 8vo, 192 pages, cloth, 1s.; or, with Answers, 1s. 4d. The Answers may be had separately, 4d. net.

**ELEMENTARY ARITHMETIC.** Fifth Edition. Crown 8vo, 1s. 6d. With or without Answers.

**COMMERCIAL ARITHMETIC.** Second Edition. Crown 8vo, 250 pages, 2s. 6d.

**COMMERCIAL ARITHMETIC.** Part I. Crown 8vo, 1s.

**GRADUATED ARITHMETIC.** For Private and Junior Schools. In cloth. Parts I., II., and III., 3d. each; IV., V., and VI., 4d. each; VII., 6d. Answers to Parts I. and II., 4d.; III., IV., V., VI., and VII., 4d. each.

**EXAMINATION PAPERS IN ARITHMETIC.** Fifth Edition. Crown 8vo, 2s. 6d. Key, 5s. net.

**ELEMENTARY TRIGONOMETRY.** Second Edition, Revised. Crown 8vo, 4s. 6d.

**A SHORT COURSE OF ELEMENTARY PLANE TRIGONOMETRY.** Crown 8vo, 2s. 6d.

Crown 8vo, with Thirty Illustrations. 1s. 6d.

## KAIMAE ΠΡΩΤΗ.

A FIRST GREEK READER.

In Two Progressive Parts. With Hints and Vocabulary. By E. C. MARCHANT, M.A., late Fellow of Peterhouse and Classical Master at St. Paul's School.

"This attractive little book is the analogue of the same publishers' 'Scalae Primae. Mr. Marchant rightly takes his young pupils at a faster rate than is possible in Latin. With the illustrations in the text the budding Grecians who are lucky enough to use this booklet should find their first year in Greek pleasant going."—*Athenaeum*.

With Coloured Plates and numerous other Illustrations. Crown 8vo. Price 1s. 6d. each.

## BELL'S LATIN COURSE

FOR THE FIRST YEAR. In Three Parts.

By E. C. MARCHANT, M.A., and J. C. SPENCER, B.A.

"If learning the elements of Latin can be made attractive to small boys, Messrs. Marchant and Spencer have discovered the method. . . . We commend the Course to the attention of all who are teaching the young idea to shoot. A book so simple, so natural, and so attractive is sure to catch on. Latin at last becomes a delight. Four coloured plates and twenty-seven other illustrations adorn the volume. Other characteristics of the compilation are: rules following (instead of preceding) the exercises, so as to sum up what has been learnt in the exercise; and learning by means of picture and type, the vocabulary being picked up by picture practice."—*School Guardian*.

"We hope that no one will suppose that because an attractive appearance is given, and much use is made of pictures, therefore the work may be called childish. It is a genuine attempt to teach Latin *secundum naturam*, and as such merits our strongest approval. As the authors say, '*Kidentem dicere verum quid vetat?*' is a question to which in teaching children it is safe and right at times to answer, *Nihil!* They justifiably add: 'We determined to admit nothing into this book that is not real Latin.'"—*Secondary Education*.

## BELL'S ILLUSTRATED LATIN READERS.

Edited by E. C. MARCHANT, M.A.

**SCALAE PRIMAE.** Simple Stories for Translation, with Notes and Vocabulary. By J. G. SPENCER, B.A., St. Paul's Preparatory School. With 29 Illustrations. Second Edition. 1s.

**SCALAE MEDIAE.** Extracts from Eutropius and Caesar. With Notes and Vocabulary. By PERCY A. UNDERHILL, M.A. With 20 Illustrations. 1s.

**SCALAE TERTIAE.** Graduated Extracts in Verse and Prose from Phaedrus, Ovid, Nepos, and Cicero. With Notes and Vocabulary. By E. C. MARCHANT, M.A. With 28 Illustrations. 1s.

## BELL'S ENGLISH CLASSICS.

Edited for use in Schools, with Introduction and Notes. Crown 8vo.

**BROWNING, SELECTIONS FROM.** Edited by F. RYLAND, M.A. 2s. 6d.

**BROWNING'S STRAFFORD.** Edited by E. H. HICKEY. 2s. 6d.

**BYRON'S CHILDE HAROLD.** Edited by H. G. KEENE, M.A., C.I.E. 3s. 6d. Also Cantos I. and II. separately; sewed, 1s. 9d.

**SIEGE OF CORINTH.** Edited by P. HORDERN. 1s. 6d.; sewed, 1s.

**BURKE'S LETTERS ON A REGICIDE PEACE.** I. and II. Edited by H. G. KEENE, M.A., C.I.E. 3s.; sewed, 2s.

**CARLYLE'S HERO AS MAN OF LETTERS and HERO AS DIVINITY.** Edited by MARK HUNTER, M.A. Each 2s.; sewed, 1s. 6d.

**CHAUCER'S MINOR POEMS.** Edited by J. B. EILDERIECK, M.A. 2s. 6d.; sewed, 1s. 9d.

**DE QUINCEY'S REVOLT OF THE TARTARS and THE ENGLISH MAIL COACH.** Edited by CECIL M. BARROW, M.A., and MARK HUNTER. 3s.; sewed, 2s.

**OPIUM WATER.** Edited by MARK HUNTER, M.A. 4s. 6d.; sewed 3s. 6d.

**GOLDSMITH'S GOOD-NATURED MAN and SHE STOOPS TO CONQUER.** Edited by K. DEIGHTON. 2s. each; sewed, 1s. 6d. each. Or together, sewed, 2s. 6d.

**GOLDSMITH'S TRAVELLER and DESERTED VILLAGE.** Edited by the Rev. E. A. WOODWARD, M.A. 2s.

**JOHNSON'S LIVES OF THE POETS.** Edited by F. RYLAND, M.A., &c. Life of Addison, 2s. 6d. Life of Swift, 2s. Life of Pope, 2s. 6d. Life of Milton, 2s. 6d. Life of Dryden, 2s. 6d. Lives of Prior and Congreve, 2s.

**LAMB'S ESSAYS.** Selected and edited by K. DEIGHTON. 3s.; sewed, 1s. 6d.

**MACAULAY'S ESSAY ON OLIVE.** Edited by CECIL M. BARROW, M.A. 2s.; sewed, 1s. 6d.

**MACAULAY'S LAYS OF ANCIENT ROME.** Edited by P. HORDERN. 2s. 6d.; sewed, 1s. 9d.

**MASSINGER'S A NEW WAY TO PAY OLD DEBTS.** Edited by K. DEIGHTON. 3s.; sewed, 2s.

**MILTON'S PARADISE LOST.** Books III. and IV. Edited by R. G. OXENHAM, M.A. 2s.; sewed, 1s. 6d. Or separately, sewed, 10d. each.

**MILTON'S PARADISE REGAINED.** Edited by K. DEIGHTON. 2s. 6d.; sewed, 1s. 9d.

**POPE'S ESSAY ON MAN.** Edited by F. RYLAND, M.A. 2s.

**SCOTT'S LADY OF THE LAKE.** Edited by the Rev. A. E. WOODWARD, M.A. 3s. 6d.; or the Six Cantos, sewed, 8d. each.

**SELECTIONS FROM POPE.** Edited by K. DEIGHTON. 2s. 6d.; sewed, 1s. 9d.

**SHAKESPEARE'S TEMPEST.** Edited by T. DUFF BARNETT. 2s.

**JULIUS CAESAR.** Edited by T. DUFF BARNETT. 2s.

**MERCHANT OF VENICE.** Edited by T. DUFF BARNETT. 2s.

**WORDSWORTH'S EXCURSION.** Book I. Edited by M. T. QUINN, M.A. Sewed, 1s. 3d.

LONDON: GEORGE BELL & SONS,

YORK STREET, COVENT GARDEN.

# APPROVED SCHOOL BOOKS BY DR. CORNWELL, F.R.G.S.

"We are qualified by ample trial of the books in our own classes to speak to their great efficiency and value. We have never known so much interest evinced or so much progress made as since we have employed these as our school-books."—**EDUCATIONAL TIMES.**

**A School Geography.** 89th Edition; 3s. 6d., or, with 30 Maps, 5s. 6d.

"Very superior to the common run of such books. It contains a good deal of useful matter of a more practical kind than usual, which the exercises are likely to impress on the mind more deeply than by the parrot system."—*Athenæum.*

**A School Atlas.** Consisting of Thirty Small Maps. A Companion Atlas to the Author's "School Geography." 2s. 6d., or 4s. coloured.

**Geography for Beginners.** 69th Edition; 1s., or, with 48 pp. of Questions, 1s. 4d. Questions, 6d.

"A very useful series of Educational Works, of which Dr. Cornwell is either author or editor. It ('The Geography for Beginners') is an admirable introduction. There is a vast difficulty in writing a good elementary book, and Dr. Cornwell has shown himself possessed of that rare combination of faculties which is required for the task."—*John Bull.*

**Allen and Cornwell's School Grammar.** 65th Edition; 2s. red leather, or 1s. 9d. cloth.

"The excellence of the Grammar published by the late Dr. Allen and Dr. Cornwell makes us almost despair of witnessing any decided improvement in this department."—*Athenæum.*

**Grammar for Beginners.** An Introduction to Allen and Cornwell's "School Grammar." 88th Edition; 1s. cloth, 9d. sewed.

"This simple introduction is as good a book as can be used."—*Spectator.*

*The Book is enlarged by a Section on Word-Building, with Exercises for Young Children.*

**The Young Composer: Progressive Exercises in English Composition.** 48th Edition, 1s. 6d. **Key,** 3s.

"The plan of the work is very superior. We are persuaded this little book will be found valuable to the intelligent instructor."—*Westminster Review.*

**Spelling for Beginners.** A Method of Teaching Reading and Spelling at the same time. 4th Edition, 1s.

**Poetry for Beginners: A Selection of Short and Easy Poems for Reading and Recitation.** 13th Edition, 1s.

**A Science of Arithmetic.** A Systematic Course of Numerical Reasoning and Computations; with very numerous Exercises. By JAMES CORNWELL, Ph.D., and Sir JOSHUA G. FITCH, LL.D. 26th Edition. 4s. 6d.

"The best work on arithmetic which has yet appeared. It is both scientific and practical in the best and fullest sense."—*London Quarterly.*

**Key to Science of Arithmetic.** With the Method of Solution to every Question. **Key,** 4s. 6d.

**School Arithmetic.** 18th Edition. 1s. 6d. **Key,** 4s. 6d.

"Eminently practical, well stored with examples of wider range and more varied character than are usually given in such books, and, its method of treatment being thoroughly *inductive*, it is pre-eminently the book for general use."—*Journal of Education.*

**Arithmetic for Beginners.** Combines simplicity and fullness in teaching the First Four Rules and Elementary Fractions. 10th Edition. 1s.

London: Simpkin, Marshall, Hamilton, Kent, & Co., Limited.—Edinburgh: Oliver & Boyd.

ESMOND HOTEL,  
"TRUSLOVE, LONDON."

*ON AN ENTIRELY NEW PRINCIPLE.*

THE  
**GRAPHIC MARK BOOK**  
AND REDUCING SCALE.

Invented and designed by

**C. MARSH, M.A., and H. W. ORD, M.A.,***Assistant Masters at Blackheath School.*

Every MARK BOOK is complete in itself and contains a Reducing Scale, printed on good paper, bound in stiff boards with cloth sides.

Published price, 1s. 4d. each.

All Masters in charge of the Marks will find their **labour simplified and reduced**, as the periodical laborious **addition of the daily marks is obviated** and the relative position of each Pupil shown automatically.

**A simple mechanical process dispenses with the proportion sums** usually employed to reduce the marks to a given standard.

For sample book, sent post free on receipt of 1s. in stamps, apply to—

**IMPORTANT NOTICE.****TEXT-BOOKS FOR HIGHER SCHOOLS.**

Edited by Rev. G. S. DAWE, late of St. Mark's College, Chelsea.

These books are specially prepared for the Oxford and Cambridge Preliminary and Junior Local Examinations, and Candidates for Minor Scholarships, &c. The Series consists of the following books:—

**ARITHMETIC.**

Small amount of **Theory**, large amount of **Practice**. Worked-out **Examples** for each step. Prominence given to the **Metric System**. **Laboratory Exercises** in a Special Section.

**GEOGRAPHY.**

**Physical facts** made the basis of **Political**. **Commercial** aspects kept constantly in view. **British Empire** fully treated.  
**Many Coloured Maps and Diagrams.**

**ENGLISH GRAMMAR.**

Example made the basis of instruction. **Analysis** introduced **early**. Aids to **correct speaking** a prominent feature. Plenty of scope given for "practice."

**ENGLISH HISTORY.**

Contains landmarks of our national history. More than usual attention given to the last three centuries.  
The **Growth** and **Greatness** of the **Empire** specially considered.

**PUBLISHED AT ONE SHILLING EACH.**

The *Schoolmaster* says: "We can speak well of all. Each book will be found just the kind to place in the hands of pupils beginning a systematic course of study in these subjects. The Arithmetic strikes us as being especially good; in fact, the writer of this review has decided to introduce it into his own school. We feel compelled to add a word of commendation to the publishers, who have produced the books in a most pleasant and serviceable form."

*Specimens and particulars sent free to Head Teachers.***The Educational Supply Association, Ltd.,**

## NEW FRENCH AND GERMAN BOOKS

- A SKELETON GERMAN GRAMMAR.** By Professor H. G. ATKINS, of King's College. Cloth, 1s. 6d.  
 Gives the "irreducible minimum" of grammar requisite for reading German texts. It is not intended as a manual for the study of grammar after the old fashion, that is to say, for grammar's sake, but rather as a guide for the beginner who proceeds direct to the translation of a German text, or begins by grappling with the difficulties of *real* German in a similar way by any direct method. A feature of the book is the use of red ink to emphasize points of special importance.
- A SKELETON FRENCH GRAMMAR.** By Professor H. G. ATKINS, King's College, London. 1s. 6d.  
 Similar in scope and arrangement to the "Skeleton German Grammar." [In the press.]
- FIRST STEPS IN GERMAN.** By W. SCHOLLE, Ph.D., and GEORGE SMITH, M.A. 1s. 6d.  
 This book is based throughout on the New Method. The lessons are conversational, and are intended to be used with Hölzel's pictures, which are given in the book. An interesting section consists of German songs with music, the authors rightly holding that these facilitate and lend interest to the acquirement of German pronunciation.
- A GERMAN GRAMMAR.** By W. SCHOLLE, Ph.D., and GEORGE SMITH, M.A. 1s. 6d.  
 A systematic companion to "First Steps in German."
- SCHILLER—SELECT BALLADS.** Edited by Mrs. WEEKLEY. Cloth, 6d.  
 New Volume in "Blackie's Little German Classics." Complete List of the Series post free on application.
- A PRIMER OF OLD FRENCH.** By G. H. CLARKE, M.A., and C. J. MURRAY, B.A. [To be ready in September.]

## NEW LATIN AND GREEK BOOKS

- BLACKIE'S ILLUSTRATED LATIN SERIES.** A List of the new Volumes and General Prospectus of the Series (16 pages) printed in colours, post free on application.
- A FIRST LATIN COURSE.** By ERNEST H. SCOTT, B.A., and FRANK JONES, B.A. Crown 8vo, cloth, 1s. 6d.
- BLACKIE'S ILLUSTRATED GREEK SERIES.** The following are the new volumes:—
- XENOPHON—ANABASIS I.** Edited by C. E. BROWNRIGG, M.A. 2s.  
**XENOPHON—ANABASIS II.** Edited by the Rev. G. H. NALL, M.A. 2s. [Book IV. in the press.]
- A FIRST GREEK READER.** By R. A. A. BERESFORD, M.A., of Lydgate House Preparatory School, and R. N. DOUGLAS, M.A., of Uppingham School.  
 The Reader consists of two parts: in the first part each lesson consists of one page, containing an illustration explained by eight or nine simple sentences; the second part consists of stories and anecdotes of greater length, carefully graduated, and freely illustrated with full-page plates and photographs of famous statues and busts.

## NEW ENGLISH BOOKS

- MILTON—LYCIDAS.** Edited by H. B. COTTERILL, M.A. Crown 8vo, cloth, 1s. 6d.  
**SPENSER'S FAERIE QUEENE. Book I.** Edited by W. KEITH LEASK, M.A. [In the press.]  
**SHELLEY AND KEATS—SELECT ODES.** Edited by E. H. BLAKENEY, M.A.  
**HAMLET.** Edited, with Introduction and Notes, in "The Picture Shakespeare." Cloth, 1s.

The Educational Times.

*The Country and the Bill.*

THE House of Commons has gone on holiday, but the members have taken their lessons with them. The Education Bill breaks in upon their rest. Last month we pointed to the significance of the election in North Leeds, which was fought in the main upon the Bill. Mr. Balfour, however, persisted in forcing through Committee the amended management provisions of the 7th Clause, refusing any compromise. Now comes the Sevenoaks election, also fought in the main upon the Bill, and upon these very provisions of the Bill, and ending far more disastrously to the Government than even North Leeds. When all just allowances are made for other causes, the educational cause still stands out prominent. Moreover, while Leeds is a great industrial centre, Sevenoaks is a rural constituency, and that too in the midst of strong Conservative influences. We refrain from drawing a sweeping inference, but this much at least is plain enough: that the management clause is sufficiently unpopular, if not to imperil the passing of the Bill, yet to render the smooth working of the Act a somewhat improbable contingency.

If some of the Liberal canvassers asserted at Sevenoaks that the Bill would hand over the education of the country to "the clerical party," that would, of course, as Mr. Balfour has pointed out, be "a perversion of the facts." It would still be a less "crude misrepresentation" than Mr. Chamberlain's ignoble "Little Englander" argument, to say nothing of certain of the methods of electioneering that turned the General Election. But it would be far too wide: it would be wholly wrong in so far as concerns the schools now under the School Board system, and it would require not a little qualification in reference to the voluntary schools. But Mr. Balfour does not meet the real point. He says that "the whole secular education will for the first time pass under the complete control of a popularly elected body, in which 'one-man management' will disappear, and the laity will constitute an immense majority of the local managers." We will not inquire too closely whether "one-man management" will disappear in fact, as it will in form; but we must point out that the "popularly elected body" will not, so far as yet appears, exercise "complete control." If it will,

what is all the worry about? The local committees of management will have the right, for example, to appoint the teachers—a very important exception to the "complete control" of the Local Education Authority. Mr. Balfour seems to be about as inaccurate as the opposition canvassers, and the misfortune is that he fails to meet the essential point of objection.

The difficulty is stated quite clearly and fairly by a Unionist journal in the following terms:—

The objection of the Nonconformists to the Churchman—be he clergyman or layman—as school manager derives its validity from the fact that he is not to be "popularly elected," but nominated by the clerical party, and that he and his brethren are always to be in a majority. Were the elections to be really popular and the managers to be chosen by the free votes of the local electors, and were the Nonconformists to have the right to elect a majority of their own complexion if able to command a sufficiency of votes, all ground of complaint would disappear. The sting of the whole grievance lies in the fact of the "clerical party" being put by the Education Bill into a position of privilege. It is to have the right to appoint a majority of the school managers, while the cost of maintaining the schools is thrown upon the taxes and the local rates.

That is the argument to be faced, and Mr. Balfour does not face it. Whatever one's private leanings may be, there is the open public argument, and it is quite clear that the country is in no mood to be put off with an evasion, however honest; and it ought not to be so put off. The Bill, if it is to go through, ought to rest on a sound and stable basis; if it has "a taint fatal to its efficiency, and to its permanence" (to use Sir H. Campbell-Bannerman's expression), that "taint" had better be recognized at once. It is quite true, and it has been too little recognized, that the voluntary schools will bring a considerable contribution in the shape of buildings and the maintenance of buildings; but, after all, the basis of this serious constitutional objection remains unaffected. There is no possible answer to Mr. Asquith's statement: "to place funds derived from public contributions under the practically uncontrolled management of non-representative and irresponsible bodies is an offence against the fundamental conditions both of educational efficiency and of democratic government"; or to Mr. Bryce's way of putting the point: "it is a measure which violates the first principles of British constitutional Government by throwing the charge for elementary schools upon the rates and giving the ratepayers no effective control." If Mr. Asquith and Mr. Bryce be mistaken in their reading of the Bill, it will be easy for Mr. Balfour to provide language that will place

"the complete control" of the Education Authorities beyond all possible dispute. If they are not mistaken, then Mr. Balfour is mistaken, and a distinct inroad of a very formidable character is made upon a fundamental principle of the Constitution. In any case, it is unwise not to recognize the facts of the situation.

Even if we put aside the threats of influential Nonconformists to refuse payment of rates—threats that are no doubt perfectly honest and grounded on principle—it is no light matter to look forward to the operation of the Act in the midst of bitter discontent and active hostility. We hear a great deal about the pressure of foreign competition, and Mr. Asquith is not alone in declaring that "national education is the greatest and most urgent of our national needs." Is it not possible, then, to unite all parties in this fundamental national cause, without prejudice to the interests of religion? Surely an opportune lesson may be learnt from Canada, Australia, India, Scotland—not to go outside the limits of the Empire. The difficulty, we must say, is largely augmented by the amazing lack of positive suggestion from the front benches of the Opposition. Now, if ever, is a time when party contention might be patriotically subordinated to the larger interest of finding a common basis whereon to establish a solid and enduring structure of national education—solid and enduring because conformable to the thought and feeling of the mass of the people.

### NOTES.

THE Ministerial re-arrangements have touched the Department of Education somewhat surprisingly. The Duke of Devonshire lays down the Presidency of the Committee of Council, much to his own comfort, one would imagine. The deposition of Sir John Gorst from the pilotage of the Education Bill, though explicable on grounds of high policy, is now seen to have foreshadowed his disappearance together with the Vice-Presidency of the Council; and, unfortunately, for all Sir John's early promise and for all his good work, one cannot say that the event has excited any wide or deep regret. Lord Londonderry, the new President of the Board of Education, has had a couple of years' experience of the Chairmanship of the London School Board; and he brings a fair mind and considerable industry to his work, though he has not always been fortunate as an administrator. Sir William Anson, the new Parliamentary Secretary to the Board of Education, is moderate, judicious, and practical; and both his administration of an Oxford college and the qualities of his writings on important special subjects of the higher education give substantial grounds of promise for his official future.

THE University Extension Summer Meeting at Cambridge, ambitious as was its programme, has scored a success proportioned to its ambition. The range of the lectures and demonstrations we have indicated elsewhere, and the quality was generally of the first order. In the History department, indeed, it is necessary to signalize a very remarkable omission, and all the more so because of the elaborate detail of the programme. There is the Near East, and there is the

Far East, "with special reference to Japan," but not a single reference to the British Empire in India, where the greatest and most urgent of all Imperial problems are calling for solution. It is not to be expected that the visitors have received much specific indoctrination, but they must have had their ideas widened and quickened; and there will have been not a little stimulation in the social intercourse of the occasion. We are glad to observe that "the Syndics of the University Press propose to publish in the Michaelmas term a volume containing the full text of all, or nearly all, the lectures dealing with international history." Another volume, we should imagine, might usefully be selected from the lectures in other branches.

A NEW "British Academy for the promotion of Historical, Philosophical, and Philological Studies" has received a Royal Charter of Incorporation (August 8). Let us hope that the forty-nine members will devise and execute projects leading to the intended results. This odd number of gentlemen are nearly all distinguished in their several ways; but there are many other gentlemen equally distinguished, and not a few more distinguished. The number of members, we dare say, will be enlarged at no distant date; otherwise, the institution will have too much of the semblance of a mere clique. Science is supposed to be honoured by the Royal Society, and Art by the Royal Academy. Science and Art, accordingly, are left out. Literature is supposed to have been excluded by the ticklishness of the task of selection and dread of the irritability of the race of literary geniuses; but these may now adventure on an Academy of their own. Then, possibly, the various Academies may be brought into some formal co-ordination, as in the French Institute. The French analogue to this British Academy, by the way, is not L'Académie Française, but L'Académie des Sciences Morales et Politiques and L'Académie des Inscriptions et Belles-lettres together.

WE are all agreed that the promotion of knowledge is one of the main objects to be kept in view by institutions of University rank. But it is necessary to be on guard against estimates that may mislead. Take a recent example: The Principal of London University, in his report (May 14), stated that, in response to his inquiries, "nearly 600 memoirs, papers, and minor communications to scientific and literary journals" had been reported to him by the recognized teachers of the University as "the publications of themselves, their assistants, and students during the past twelve months." The Principal himself commented on these returns with praiseworthy discretion. Still, a word of caution will not be superfluous. Even if such a list were complete, it evidently requires a careful qualitative analysis; and there are external considerations, such as those indicated by the Rev. Dr. Woods and Dr. Hill in their recent report on the University Colleges. Thus:—

We recognize that a summary of each Professor's own work would have greatly increased the value of our report. For several reasons, however, we have not felt ourselves at liberty to attempt this. In the first place, the leisure, and therefore, the opportunities for research, which the professors enjoy, vary immensely. In the majority of cases we should say that the professor's duties are far too arduous and incessant to allow him to do much work of this kind. In the second place, we find that certain professors hold that it is the duty of the head of a depart-

ment to work through his students. To them he conveys his ideas and affords constant assistance in carrying them out. A teacher who adopts this point of view may publish nothing under his own name, although all the work which emanates from his laboratory is really inspired by him. To these points should be added the depressing and hampering lack of endowments. But, in any case, numerical lists of publications may easily lead to very wrong impressions as to the activities of individual teachers or departments.

NATURE study has taken hold of the Australians also. At the annual Conference of the Victorian State School Teachers' Union in Melbourne, Mr. Frank Tate, M.A., the Director of Education, explained the new educational and administrative policy of the Minister of Public Instruction in an admirable address, reported in the *Australian Schoolmaster*. He laid emphasis upon what he called "the keynote of the new programme." Thus :

The best syllabus is that which recognizes that the best work can be done in a school when the school interests of the child and his life interests are brought very close together. That does not mean the same kind of syllabus for the boy in Mildura and in Collingwood, for the boy in Croajingolong and in Warrumbool. It means this, that, so far as possible, the subject-matter with which the teacher works shall be taken from the ground on which the child stands. You will find when you see the programme of the first class that, instead of giving a child in the Mallee lessons on glue or rope or candles (they're all very interesting to teachers), the kind of object-lesson work he will do will be the Nature study of the plants and animals that he has been familiar with ever since he picked his first flower as a toddler of two years, and you will be asked to give him eyes and ears so that he can respond to what is about him. You will recognize the pedagogic rule to "take the child from his own ground and lead him out from that," and, instead of having two or three boys under every jacket, you will only have one if you make education a real thing. At present there are two boys under every jacket—the active healthy boy, the tree-climbing boy, who explores nests, and who could be interested so vitally in all Nature craft, but he is generally left outside the school; and inside you have the smug young lesson-learner and examination-passer, who doesn't know anything at all about these things, but who is the joy of his teacher and the best boy in the school. You often find the God-given naturalist of the next twenty or thirty years the phenomenally dull boy of the school. One reason is that he is left outside. The key of the new programme will be found in this, that there may be an attempt to link together, as far as possible, the school interests of the child with his life interests. As Kipling says "Let a fellow sing of the little things he cares about"; and let us bring these into the school. From the one subject, Nature study, I expect to see great consequences. It will be possible to make the work of the first class centre round this subject, and the subject-matter of the reading, writing, composition, and (possibly) poetry and singing, may all be suggested by the observation work done by the eager, interested children.

PROBABLY enough the study will soon go a good way beyond the first class. However, we need not dwell on that point now. "You may ask," Mr. Tate went on, "what is the plan the Department is going to follow in trying to introduce this work?" Well, "before we can have reformation we must have formation."

This is what is proposed. First, there will be a flexible and varied syllabus. I will promise you that the syllabus will not be stereotyped at all. If you prove three years hence that changes in the syllabus are necessary, the changes will come. If a teacher says he is able to teach this or that particular branch of science rather than the one the Department puts forward, let him demonstrate it, and he will have full liberty to teach it. Even in the reading of the first class there is an alternative syllabus. If a teacher feels that he can do certain work in a certain way, and can demonstrate that it is a good way, not only will he be allowed to do it, but we will adopt it also.

As to what is called freedom in teaching, "the best result of teaching consists in bringing a class close to the personality of a fine teacher."

But to justify freedom of teaching there must be a thorough system of training teachers. We have not that at present. We must have these three things: a syllabus that is flexible and contains alternative subjects, freedom to teach, and also some provision whereby young teachers are

taught their business and sent to their work with a light in their eyes and a desire to do their work in a fine way.

Mr. Tate expects much from the Summer School. And what may not be expected from the fine spirit of the Director of Victorian Education?

THE *Labour Leader*, commenting on the recent conferment of the Edinburgh honorary LL.D. upon Mr. Seddon, remarks that "this honour seems to be somewhat misplaced." It recalls the shabby treatment of Prof. W. Steadman Aldis, the Senior Wrangler of 1861, whose salary at University College, Auckland, was suddenly cut down by the authorities—that is to say, by the New Zealand Government—to little more than half the figure that induced him to go out. Mr. Aldis at once resigned and came home. The case evoked bitter indignation here; the Rev. Dr. Abbott, then head of the City of London School, publicly and most properly suggested that no scholar in this country should accept the vacant post. As Mr. Seddon was honoured in a representative capacity, our contemporary's reminder and criticism seem to be neither inopportune nor unreasonable.

A PLEASANT little romance has gathered round the late Lord Acton's library. Like most intellectual men of wide and thorough scholarship, Lord Acton had industriously collected an enormous private library, and, having no time to make money, found difficulty in keeping it going, and at last offered it for sale. Sold it was—to an unknown purchaser, who promptly vested the life use of it in the seller. On Lord Acton's death the owner—who was Mr. Carnegie, of course—passed it on to Mr. John Morley. This double stroke is really a very delicate and handsome manifestation of Mr. Carnegie's genius for donation and for the cultivation of libraries. The quidnuncs are already wondering what Mr. Morley will do with it, and volunteering suggestions that he may distribute portions of it here and there. But this is the officious helpfulness of advisers that do not understand. Mr. Morley, if any man, may be trusted to know very clearly what to do with his own library, and in any case it is his own affair and nobody else's.

LIEUT.-COL. JAMES BAKER, writing to the *Times* (August 19), urges that the Universities should be "utilized as the main channel of entrance to the Army by military candidates." Sandhurst has been shown to be very unsatisfactory: it gives 170 officers to the Army annually at a cost of over £51,000, and now the proposal is to get 240 a year out of it at something like double the public cost. Join Woolwich, at another £100,000 a year, and you get some 450 officers. The rest—about 1,000 are required—are to be looked for at the Militia back door. To Col. Baker, and probably to others, the system appears "ridiculous and comical." He would look to the Universities. The Report of the Committee on Military Education "proves conclusively that officers who have passed their University course are more intelligent than those from Sandhurst and the Militia, and that they are equally amenable to discipline"; and, on the other side, it shows that, "if a certain and sufficient supply of military candidates can be assured, the University will be

prepared to grant a special degree after three years' residence and to fix the curriculum for that degree after intelligent consultation with the Government." The Government's £200,000 a year would provide some 200 open scholarships of £150 a year each—the competition for which, open to the whole Empire, "would give an immense stimulus to military education"—and leave a large sum for application "to technical education at the University and to camp instruction of the military candidates, or to still further increasing the number of military scholarships."

ALL educationists that read German—perhaps we ought to say simply all educationists—should be interested in the "Generalregister zu Heft 1-70" of the "Lehrproben und Lehrgänge aus der Praxis der Gymnasien und Realschulen" (Williams & Norgate, for the Verlag der Buchhandlung des Waisenhauses, Halle a/S.). Here is a quarterly educational magazine ably conducted and written by the most eminent German practical teachers since 1884. Yet, under the head of "Englisch," in this index to the articles of seventeen and a half years, we find only five entries; and among the names of contributors we do not see a single English patronymic. Surely this is not as it should be. The editors expressly invite co-operation from all quarters; and they are open to contributions on all aspects of education—"Principielle Fragen," "Praktische Pädagogik," "Theoretische Pädagogik" (in any subject), and "Verschiedenes." If German writers fail to represent adequately the English movements in education, one may hope that some English writers will patriotically step in and supply the deficiency. And on our side there is much to learn from this able periodical.

It may be of some interest to recall the existence of three old foundations in Paris that long served, as in a restricted sense they continue to serve, the educational interests of certain British subjects in France. They date back at least as far as the Reformation struggles, when the action of pious founders led to the endowment of three separate colleges in Paris to train English, Scotch, and Irish students for the priesthood. The revenues by which the first two were supported have been diverted from the original intention, and now go to enrich the treasuries of some French diocesan seminaries. The Irish still enjoy the benefits of the endowment, and the Collège des Irlandais—situated on the south side of the Seine behind the Panthéon—at the present time educates and maintains some sixty students, most of whom are *boursiers*. In the earlier years of the last decade the numbers reached one hundred. The Superior and the members of the teaching staff are appointed by the Minister of Public Instruction. The Scotch College was also situated on the south side of the Seine, near the Ecole Polytechnique. Associated as it had been from very early days with Scotch Continental learning, it became in the seventeenth and the eighteenth centuries a centre of Jacobite influence; and some curious Stuart memorials are preserved in the chapel. On an outside wall of the building then occupied—now the Institution Chevallier, an *école libre* preparing for the *baccalauréat*—may still be seen a marble tablet bearing the inscription: "Collège des Ecossois."

## SUMMARY OF THE MONTH.

THE agitation against the Education Bill continues with unabated vigour, supported by the notable reduction of the majority at Sevenoaks. We refer to the subject elsewhere.

THE new clause with reference to school managers which Mr. Balfour proposes to add to the Education Bill after Clause 15 runs as follows:—

(1) The trust managers of the school shall be managers appointed under the provisions of the trust deed of the school; but, if it is shown to the satisfaction of the Board of Education that the provisions of the trust deed as to the appointment of managers are in any respect inconsistent with the provisions of this Act, or insufficient or inapplicable for the purpose, or that there is no such trust deed available, the Board of Education shall make an order under this section for the purpose of meeting the case.

(2) Any such order may be made on the application of the existing managers of the school, made within a period of three months after the passing of this Act, and, after that period, on the application of the Local Education Authority or any other person interested in the management of the school, and any such order where it modifies the trust deed shall have effect as part of the trust deed, and where there is no trust deed shall have effect as if it were contained in a trust deed. In making an order under this section with regard to any school, the Board of Education shall have regard to the principles on which the education given in the school has been conducted in the past.

(3) Notwithstanding anything in any trust deed, the body of managers appointed under this Act for a public elementary school not provided by the Local Authority shall be the managers of that school both for the purposes of the Elementary Education Acts, 1870 to 1900, and this Act, and, so far as respects the management of the school as a public elementary school, for the purpose of the trust deed.

MR. BALFOUR, writing (August 18) to Mr. H. W. Forster, the Conservative candidate in the Sevenoaks Division of Kent, as to alleged misrepresentations of the Education Bill, said:

The Education Bill finds a state of things which, so far as voluntary schools are concerned, may, perhaps, be described as one in which, through no fault of theirs, both secular and religious education is largely administered by the clergy. This is the system which exists. This is the system which, if the Bill be defeated, will continue. If, on the other hand, the Bill pass in its present shape, a new system will come into operation under which the whole of secular education will, for the first time, pass under the complete control of a popularly elected body, in which "one-man management" will disappear, and the laity will constitute an immense majority of the local managers.

It is worth while now to recall Archdeacon Pelham's opinion that, if the Education Bill passes in its present form, it will leave behind it a sense of injustice in some quarters, and will not offer a final settlement to the education problem. He considers that the Church of England cannot hope, if the State undertakes the whole cost of maintaining the present voluntary schools, to retain all its old privileges. Personally, he would be content if two points were secured to the present voluntary schools: (1) a guarantee that religious instruction should always be given as a necessary and essential part of the school curriculum; and (2) that a parish clergyman should have a right to enter a parish school and take his share in the religious teaching. The Archdeacon does not wish to close any longer the doors of the present voluntary schools to teachers that are not members of the Church of England. He is prepared to adopt a suggestion of the late Bishop of Durham, that in all schools a simple syllabus of religious teaching should be arranged—a syllabus based on the Holy Scriptures, and embracing the Creed, the Ten Commandments, and the Lord's Prayer.

DURING the month Cambridge has been occupied by an invasion of Extensionist lecturers, students, and sight-seers, including a large contingent of foreigners, especially from North-Western Europe. Among the lecturers have been several men of distinction from the Continent—notably Prof. Vinogradoff, of Moscow; Prof. Erich Marcks, of Heidelberg; and Prof. Paul Mantoux, of Paris. The scope of the work has been tolerably ambitious—nothing less than "Some Aspects of Life and Thought in Europe and America in the Nineteenth Century."

THE inaugural lecture was delivered in the Senate House by Dr. A. W. Ward, the Vice-Chancellor, on August 1. It was

a comprehensive introduction to the History department of the proceedings, and treated of "Some Aims and Aspirations of European Politics in the Nineteenth Century." Prof. Westlake next day took a similarly wide view in his "Introduction to the International History of Europe." Subsequent lecturers dealt with national movements, episodes, and conspicuous statesmen in France, Austria, Germany, Italy, Russia, America, and the East, as well as in England; and sectional meetings discussed points in search of "the solution of the political problems of the present day" at home.

ART, Literature, and Music were joined in a second department; indeed, Dr. Waldstein insisted that the term "Art" includes the other two—which is true in a way, no doubt. Mr. Gilbert, R.A., lectured on "Sculpture; Mr. Jackson, R.A., on "English Architecture of the Past Century"; Mr. East, A.R.A., on "Landscape Painting"; and decoration and furniture were not neglected. Language, poetry, romance, and the drama were illuminated on many sides; and Dr. Sidney Lee again expounded the principles of national biography. Adventurous researchers even essayed to lay bare the mysteries of heraldry and Wagner.

IN spite of Dr. Waldstein's warning against the "current fallacy that the nineteenth century is an age of science," the neighbouring department was devoted to Physical and Natural Science. Prof. Darwin amazed his hearers with glimpses of modern astronomical speculation; Mr. Shaw discoursed on "Meteorology," distinguishing "prognostics" from "forecasts," but failing to control the perversities of the weather; Prof. Sims Woodhead spoke admirably on Pasteur and microbes; and, if the audiences did not learn a vast deal about geology, botany, colour-photography, and electro-chemistry, it was not the fault of the lecturers.

ECONOMICS was to the fore, of course, with a department of its very own. Dr. Bonar reviewed modern socialism and its rivals; Sir M. Grant Duff reminded us of Bagehot, a great force and a very distinctive writer; Prof. Foxwell handled that most interesting article, the British pound sterling; there was an elaborate survey of Ruskin's economic excursions; and so we came down to the housing problem and the facts and the philosophy of poverty in provincial towns.

At last we reach Education, the fifth department of the syllabus. The Dean of Ely placed education in conjunction with poetry, and asked: "What is the use of a poet?" Happily he found an answer, and worked the poet's products into education somehow, occupying himself with ideals, which, if rather difficult to achieve, are good to entertain and aim at. Certain educational reformers were duly honoured—Arnold, Mann, Barnard, Pestalozzi, and Herbart; the "Reform Method" of teaching modern languages had an innings; secondary education in France was exhaustively expounded; and Miss Ravenhill saw to it that there was no neglect of hygiene.

LAST comes Theology. The relegation of the Queen of the Sciences to the last department invites explanation, if not apology. Prof. Barnes discussed the Old Testament in the light of the Higher Criticism, and assessed its "present value" in terms of hope, confidence, and faith. Dr. Bethune-Baker considered the origin of Christian doctrines and their relation to Christian ethics. Dr. Moulton dealt with Bible revision. Dr. Cunningham applied himself, in four practical lectures, to different aspects of "work."

Now, it will be understood that these departments of study were not gone through in succession, but that the subjects were judiciously arranged so as to furnish a pleasing variety for every day. But we have yet to notice the new-comer, "Nature Study," which neither had a department of its own nor was taken in by Education, but was stowed away in an "appendix" to the syllabus. Prof. Geddes gave half a dozen lectures, by way of "introductory course," and conducted some rambles in illustration. Four college dons gave a practical course daily for three weeks in the University laboratories, and one of them put in a comprehensive special lecture on "Geography in its Physical Aspects," while Miss Von Wyss gave three illustrative lessons. So Nature-study, after all, was well cared for.

On the subject of the Colonial Office Education Conference, the following official statement has been issued:—

With reference to certain notices which have appeared in the Press as to the recent educational conference held at the Colonial Office, under the chairmanship of Lord Onslow, it is necessary to state that the meeting was informal, and of a purely tentative character. It was called together at the request of the representatives of the University of Oxford in order that they might inform themselves of the requirements and wishes of the representatives of the Colonies. They showed themselves most willing to meet the views of the Colonial representatives, and they expressly disclaimed any intention of in any way conflicting with the work or the claims of other Universities. It is fully expected that the friendly interchange of views which took place at the conference will lead to satisfactory results.

MR. J. E. KING, High Master of Manchester Grammar School, on the occasion of the annual speech-day, remarked that Latin and Greek had always taken a leading place in the system of instruction of the school, and said that, in a day when many critics seemed impatient of the survival of classical education, it was worth noticing that classics were still the backbone of the chief secondary schools of Germany, and were advancing by leaps and bounds in America's favour. A few years ago they sent more scholars in natural science to the older Universities, but now there were so many valuable scholarships offered by the County Councils that some of the pupils that would formerly have gone to Oxford and Cambridge preferred to go to Owens College. Complaint was often made of the character of the teaching of modern languages in England. One great reason for the want of improvement—at any rate, in Manchester—was the short amount of time many boys spent at the school. In the German *Realschule*, to which the modern side corresponds, a six years' course was gone through, as compared with ours of three years.

PRINCIPAL HOPKINSON, distributing prizes at Macclesfield Grammar School, said he, for one, felt it was impossible to carry on the work in the Universities with anything like success unless they were in very close relationship with secondary schools. They wanted their Universities to be influenced by the experience and knowledge of those who had been directly engaged in secondary education, in training the boys some of whom would pass on to the Universities; and, on the other hand, the Universities would be glad if they could exert an influence on the secondary schools, whose methods had to be tested by the work their students did in the Universities. He thought sometimes the Universities might give valuable hints to the secondary schools on the subject of teaching and preparing for the Universities. He believed there was a serious risk, under pressure from Universities, from parents, from popular speakers, and from writers in newspapers, of attempting in our schools too early specialization. He warned his hearers against this danger, and urged that a man was all the better, whatever his vocation, for having had a good classical training as a foundation. While recognizing the utilitarian side of education, he urged the desirableness of inculcating in the minds of the young students a real love of intellectual pursuits for their own sake.

THE BISHOP OF HEREFORD, speaking at the prize distribution at Hereford High School, and praising the results, pointed out that all the good work he had referred to was done at small cost in the way of salaries to the teachers. He hoped as the school grew more prosperous they might see the salaries to the Head Mistress and other resident teachers grow year by year into a larger item, because they knew when they talked of the success of the school and the good work which was being done they must never forget it was primarily and really due to the Head Mistress and her assistants. Certain gentlemen were privileged to be on the Council of the school, but they did not make it what it was. It was the staff that made it, and they must have the credit for it, and he hoped they might get a larger share of the substantial rewards of it.

It has been resolved to extend the accommodation of Aberdare Hall, Cardiff, at a cost of some £7,000. There are sixty-one students, of whom nineteen are lodged outside. The increase has been steady since the opening of the hostel in 1885, and house after house has had to be added. The Cardiff University College was the first in Wales to open its classes to women on equal terms with men.

THE natural—indeed, inevitable—result of the now final decision that the University College of North Wales shall be permanently located at Bangor has been, says the *Liverpool Mercury*, that

the associated institutions which have, as it were, grown around the national college should themselves have been encouraged to make arrangements, not, as in the past, for the near, but rather for the distant, future. Plans for new buildings, or for structural alterations in existing edifices, which had been pigeon-holed while the great "battle of the sites" was proceeding, have once more seen the daylight. The experience of the past has gone to show that the location of the University College must be an important factor in determining the location of theological institutions. The Baptists were compelled to sell Pontypool in order to enable their students to reside at Cardiff. The Congregationalists surrendered Bodiwan at Bala that their students might go to Bangor. It is an open secret that the Memorial College at Brecon has been, in a sense, a white elephant since the establishment of the national colleges. The existence of permanent buildings at Trevecca and Bala has undoubtedly handicapped the Welsh Calvinistic Methodists in making their arrangements for the training of their ministerial students. It is but natural, therefore, that the new lease of life which has been given to the University College at Bangor should have materially influenced the fortunes of other educational institutions in the town.

THE *Manchester Guardian* (August 18) remarks upon the educational generosity and activity of Welshmen as follows:—

The authorities of the University College of South Wales and Monmouthshire are evidently determined at last to make a supreme effort to carry their great building scheme to a successful issue. It is certainly remarkable that in the great commercial district of which Cardiff is the centre not more than sixty thousand pounds should have been raised or promised since the first appeal for funds was made. But the Council of the college has come to the conclusion that even with sixty thousand pounds it is possible to make a respectable beginning, although quite two hundred thousand pounds will be ultimately required. The acquisition of a free site in the Cathays Park has induced the college authorities to proceed at once to the work of building, and, challenged to high aims by the fine municipal buildings now in course of erection in the Park, they have sought counsel of some of the best architectural talent in the country. The building which it is proposed to put up immediately will only afford partial accommodation for the college, the intention being to transfer the arts departments, the library, and the administrative offices to the new building, while the science departments will have to remain where they are until sufficient money has been raised to complete the entire group of college buildings. The activity of the Cardiff College authorities comes as a reminder, and, in some respects, a reproach, to the Governors of the University College of North Wales. The gift of a free site by the Bangor City Council, coincident as it was with the visit of the Prince of Wales to the college in May, appeared to many to afford an excellent opportunity for making an appeal to the country for contributions towards the new building fund. That opportunity has been lost, but it is to be hoped that, with the commencement of a new session in October, the Bangor College authorities will seriously rouse themselves to a sense of their responsibility in this matter.

THE Carnegie Trust has now intimated to the Universities of Scotland its intentions in regard to the immediate application of its funds other than those devoted to fees. In the meantime the Trustees recognize that the pressing need of the Scottish Universities lies in the direction of new buildings and better equipment and teaching. Under buildings and permanent equipment Glasgow receives £3,000 per annum for the period of five years; Aberdeen (which has recently greatly extended its buildings), £1,000 a year for apparatus; St. Andrews, £3,000 a year; and Edinburgh, £3,000 a year. The grants for teaching, which are partly only for present expenditure, and mainly to establish a fund which at the end of the five years period will constitute the nucleus of a permanent endowment in each case, are as follows:—Glasgow, £2,000 a year; Aberdeen, £7,000 a year; St. Andrews, £4,500 a year; Edinburgh, £2,500 a year. To each of the University libraries an annual sum of £1,000 is given, with the proviso that one-half of it shall be devoted to the purchase of books available for all students. Edinburgh receives £11,500; Glasgow, £11,000; Aberdeen, £9,000; and St. Andrews, £8,500. Collectively, these grants over the five years period amount to a gift to Scottish education of £200,000. And the scheme is so arranged that it is only a beginning of a process of subvention and encouragement that is destined to continue.

IN the July number of the *Record*, Mr. William Hewitt, B.Sc., Director of Technical Instruction, Liverpool, sets out the results of a preliminary inquiry into the provision of secondary education in that city, drawing freely upon the report of the Board

of Education inspection last year. Liverpool is "practically without any educational endowments": buildings, staff, and administration are very inadequate; and, "owing to the great and rapid extension of the city, it is probable that the old schools in the central portions are not conveniently situated for the large masses of population in the more distant parts." "According to English expert opinion," says the Board of Education report, "there ought to be 13,700 children receiving secondary education in Liverpool; according to the statistics of Hamburg there ought to be at least 18,000 to 20,000 children in that position: in fact, there are only 6,550, and, of these, (1) many are receiving education at unrecognized, and possibly unsuitable, schools; (2) others are non-residents; and (3) an unduly small percentage are over twelve years of age."

THE Court of Appeal has dismissed the appeal of the London School Board against the injunction granted by Mr. Justice Farwell restraining them from spending any portion of the rates on the erection of a pupil-teachers' centre in Islington. The expenditure had been disallowed by Mr. Cockerton because (1) the said sum was not paid in respect of the erection of a public elementary school within the meaning of the Elementary Education Acts; (2) School Boards are not legally entitled to erect at the cost of the school fund schools or other buildings for the instruction of pupil-teachers exclusively; (3) the said sum was not expended in the provision of accommodation in public elementary schools for the district of the said School Board within the meaning of Section 5 of the Elementary Education Act, 1870, or any of the Acts amending the same; (4) the said sum was paid in respect of the erection of a building for the provision of education in subjects not allowed, provided for, or recognized by the Education Code; (5) the said sum was paid in reference to the erection of a building for the provision of instruction of teachers, pupil-teachers, or other persons who do not form part of the educational staff of a public elementary school within the meaning of the Elementary Education Acts; (6) the said School Board had not any authority in law to pay the said sum and to charge the same in their accounts as aforesaid. The Board had, however, gone on with the erection of the centre, and Mr. Justice Farwell had granted an injunction on the ground that such expenditure was *ultra vires* until the auditor's decision had been set aside. The Court now dismissed the appeal.

REFERRING to the arguments of Mr. Jenkins, K.C., for the Board, Lord Justice Vaughan Williams said he was not disposed to quarrel with the proposition that in a public elementary school an education might be given to pupil-teachers, under the agreements with them, which could not properly be described itself as being merely elementary, but he saw nothing to lead him to the supposition that that education should not be given in the public elementary school itself. To hold that the School Board had power to establish a separate school for the instruction of pupil-teachers, and to charge the cost of carrying out that separate school and of the necessary building for that school upon the local rates, would be entirely inconsistent with the judgment in the Cockerton case. The force of what he had said was very much increased when one came to consider what was being done at this school. It was a school at which the average age of the scholars ranged from fifteen to twenty-four. It was a school to which scholars might come in from any district, from any part from which they chose to come, for education—higher education, and not elementary. In giving judgment to the same effect, Lord Justice Romer said an argument had been based on the Confirmation Act of 1900, under which the Board had acquired the site, among others; but that Act could not concern itself with a question of the expenditure of the rates upon any valid or invalid purpose at all. Lord Justice Mathew concurred, and the injunction was made perpetual.

THE writer of "The Point of View" in *Scribner* commends Mr. Rhodes's scheme of Oxford scholarships on the especial ground that it tends to "Anglicizing" rather than to "Teutonizing" in education. He says:

In spite of (certain) expert testimonies against Anglicizing in education, it is not donable that scholarship is attainable at Oxford, nor that an Oxford Don is more a man of the world, has much more of the "terity" and rotundity of Mr. Rhodes's intended "all-roundedness" than the corresponding Teutonic functionary. One would go to Oxford with more confidence than to any of the German seats of special knowledge to exemplify the Anglo-Saxon idea of a "scholar and a gentleman." Doubtless proper methods of selection would find a

hundred American youths to whose country the Anglican training would be beneficial. But how tremendous is the responsibility of the selectors!

THE chief recommendations of the Committee on Military Education and Training appointed in April last year, to whose Report we made recent reference, may be briefly summarized as follows:—

(1) That the antecedent education of Army candidates should be of a general nature, that the maximum number of subjects to be taken up should be limited to five (or six in the case of candidates for Woolwich), and that the examination be so framed as to ensure a thorough grounding in the elementary portion of all subjects taken up. (2) That the three examinations for Woolwich, Sandhurst, and for Militia candidates should be amalgamated, and should be competitive for entry to Woolwich and Sandhurst, but qualifying only in the case of Militia candidates. (3) That Yeomanry subalterns should be placed on the same footing as Militia subalterns as regards their eligibility for commissions in the regular Army. (4) That officers of Militia and Yeomanry who have qualified in the entrance examination for Woolwich and Sandhurst should be eligible for the competitive examination in military subjects for commissions in the Army. (5) That the entrance of University candidates into the Army, under revised regulations, should be encouraged. (6) That the number of commissions offered annually to the colonies should be increased. (7) That the existing military colleges at Woolwich and Sandhurst should be maintained, but under revised regulations, and with an amended curriculum. (8) That the course at Sandhurst should be extended to two years. (9) That at both Woolwich and Sandhurst the cadets should go into camp for at least one month every summer. (10) That greater inducements should be offered to attract capable officers to take up instructional work. (11) That the system on which the examinations for promotion are now conducted should be amended with a view to securing more practical tests and greater efficiency. (12) That the regulations under which officers receive rewards for proficiency in certain foreign languages should be amended. (13) That steps should be taken to reduce the expenses of officers in the Cavalry. (14) That the supervision and control of military education throughout the Army should be entrusted to a general officer, with the title of Inspector-General of Military Education, this officer being supplied with an adequate staff and assisted by an Advisory Board. (15) That all promotion should be by selection rather than by seniority.

### THE REGISTER OF TEACHERS.

#### MODIFICATION OF REGULATIONS.

THERE has been published an Order in Council making certain modifications in the regulations for framing the Register of Teachers.

In Sub-section (2) (i) of Regulation 3 (which sets forth the conditions under which persons may be placed on Column B), after the words "for at least one year" there is inserted "or in the case of a student who has taken Honours in a final examination for a degree after spending four academic years at some University in the United Kingdom have undergone a course of training for two terms at least, taken continuously." In Regulation 4 the period of four years from the establishment of the Registration Authority is substituted for three years as the period within which an application to be placed on Column B is to be made thereunder.

In Appendix A the following words are added at the end of the second sentence, in reference to women teachers: "or that under the conditions prescribed by the Delegacy for Local Examinations she has (1) passed the second public examination of the University, or (2) has obtained Honours at the Oxford University Examination for Women in Modern Languages. In Appendix C the Higher Certificate of the National Froebel Union is added to the list of diplomas to be accepted as showing efficiency in teaching.

### THE BRITISH ACADEMY.

LAST January there were published the petition presented to the King for the incorporation of the British Academy for the promotion of Historical, Philosophical, and Philological Studies, and the names of the distinguished signatories, fifty-one in number. These were contained in the *London Gazette* of January 14, and it was announced that the petition had been referred to a Committee of the Privy Council. His Majesty has now been pleased, acting upon the advice of this Committee, to accede to the petition and to grant to the British Academy a Royal Charter. According to this Charter, the Academy aims at the promotion

of the study of moral and political sciences, including history, philosophy, law, politics, and economics, archaeology, and philology. Of the original fifty-one petitioners, who, according to the draft charter, were to be the first Fellows of the Academy and to elect a President and Council from among their own number, three have died—Lord Acton, Mr. S. R. Gardiner, and the Rev. A. B. Davidson. On the other hand, the name of Lord Rosebery has been added to the list. So the following forty-nine gentlemen now become the first Fellows of the British Academy:—

The Earl of Rosebery; Viscount Dillon, President of the Society of Antiquaries; Lord Reay, President of the Royal Asiatic Society; Mr. Arthur Balfour, M.P.; Mr. John Morley, M.P.; Mr. James Bryce, M.P.; Mr. Lecky, M.P.; Sir William Anson, M.P., Warden of All Souls College, Oxford; Sir Frederick Pollock, Corpus Professor of Jurisprudence in the University of Oxford; Sir Edward Maunde Thompson, Director and Principal Librarian, British Museum; Sir Henry Churchill Maxwell-Lyte, Deputy Keeper of the Public Records; Sir Courtenay Ilbert; Sir Richard Jebb, M.P., Regius Professor of Greek in the University of Cambridge; Dr. Monro, Provost of Oriel College and Vice-Chancellor of the University of Oxford; Dr. A. W. Ward, Master of Peterhouse and Vice-Chancellor of the University of Cambridge; Dr. Edward Caird, Master of Balliol College, Oxford; Dr. H. F. Pelham, President of Trinity College and Camden Professor of Ancient History in the University of Oxford; Dr. John Rhys, Principal of Jesus College and Professor of Celtic in the University of Oxford; Rev. George Salmon, D.D., Provost of Trinity College, Dublin; Prof. J. B. Bury, Regius Professor of Greek in the University of Dublin; Prof. S. H. Butcher, Professor of Greek in the University of Edinburgh; Prof. Ingram Bywater, Regius Professor of Greek in the University of Oxford; Prof. E. B. Cowell, Professor of Sanscrit in the University of Cambridge; Rev. William Cunningham, D.D.; Prof. Rhys Davids, Professor of Pali in University College, London; Prof. Albert Dicey, K.C., Vinerian Professor of English Law in the University of Oxford; Rev. Canon S. R. Driver, D.D., Regius Professor of Hebrew in the University of Oxford; Prof. Robinson Ellis, Corpus Professor of Latin in the University of Oxford; Mr. Arthur John Evans, Keeper of the Ashmolean Museum, Oxford; Rev. A. M. Fairbairn, D.D., Principal of Mansfield College, Oxford; Rev. Robert Flint, D.D., Professor of Divinity in the University of Edinburgh; Mr. J. G. Frazer; Mr. Israel Gollancz, University Lecturer in English in the University of Cambridge; Mr. Thomas Hodgkin; Mr. S. H. Hodgson; Prof. T. E. Holland, K.C., Professor of International Law and Diplomacy in the University of Oxford; Prof. F. W. Maitland, Downing Professor of English Law in the University of Cambridge; Prof. Alfred Marshall, Professor of Political Economy in the University of Cambridge; Rev. J. E. B. Mayor, Professor of Latin in the University of Cambridge; Dr. J. A. H. Murray; Prof. W. M. Ramsay, Professor of Humanity in the University of Aberdeen; Rev. Canon William Sanday, D.D., Lady Margaret Professor of Divinity in the University of Oxford; Rev. W. W. Skeat, Elington and Bosworth Professor of Anglo-Saxon in the University of Cambridge; Sir Leslie Stephen; Mr. Whitley Stokes; Rev. H. B. Swete, D.D., Regius Professor of Divinity in the University of Cambridge; Rev. H. F. Tozer; Prof. Robert Yelverton Tyrrell, Professor of Ancient History in the University of Dublin; and Prof. James Ward, Professor of Mental Philosophy in the University of Cambridge.

### CORRESPONDENCE.

[We do not hold ourselves responsible for the opinions expressed by our correspondents.—ED. E.T.]

#### THE HALF-YEARLY MEETING.

To the Editor of the *Educational Times*.

SIR,—In your report of my reply to the various speakers who addressed the meeting on the subject of my resolution, you omit an important word. I said that very much of what had been said was *not* to the point.

It was open to the members to send to the Secretary seven days before the meeting the draft of any amendment or rider. No amendment, however, was then tendered. Yet at the meeting itself much of the discussion had no reference to the principles involved in the resolution, but to certain details or additions which might be considered desirable.

This point I desired to emphasize in the statement I have quoted, while, at the same time, I called the attention of members to the fact that the Council would be in a better position to suggest such emendations if they accepted the main principles set forth in the resolution.

Unfortunately, there were certain influences in operation at the meeting which obscured the result; and I am still of opinion that the majority of members of the College and of the Council are in favour of a settlement of the question on the main lines of the Government measure. Digitized by Google

I regret the course the College is taking. If, owing to insufficient support on the part of educational bodies like our own, the Bill be ultimately withdrawn, a further period of suspense will supervene, to be followed by the introduction of a measure likely to be far less acceptable to private teachers and others than the one now before the House.

It is futile to expect that every possible guarantee can be crowded into an Act of Parliament. These guarantees, in the main, must be earned by the efficiency of our work, that they may be furnished by a discerning and appreciative public.—I am, Sir, &c., J. O. BEVAN.

Chillenden Rectory, Dover, August 21, 1902.

[We regret the accidental omission of "not."—ED., E.T.]

### THE TEACHERS' REGISTRATION COUNCIL.

THE REGISTRAR'S TENURE.

To the Editor of the *Educational Times*.

SIR,—I am extremely obliged to you for publishing my letter of the 13th ult. I am still without an answer to my letter of the 7th of June.

The declaration that I was referring to—and which can be found, as far as my knowledge goes, in all schemes for schools made by the Charity Commissioners—runs as follows:—"I, A. B., declare that I will always, to the best of my ability, discharge the duties of Head Master of \_\_\_\_\_ School during my tenure of the office, and that, if I am removed therefrom, I will thereupon acquiesce in such removal and relinquish all claims to the mastership and its future emoluments, and will deliver up to the Governors, or as they direct, possession of all property of the school then in my possession or occupation."

I am informed by a barrister that to acquiesce in removal renders attempts to get legal redress futile. In what worse position can a head master or the Registrar be than to find that he can be dismissed when he is clearly in the right and his dismissors in the wrong?

And to show that such may be the case with head masters, I would refer you and your readers to two sentences which occur in paragraph 133 of Part III. of the Secondary Education Commission Report:—"One of our witnesses went so far as to urge the maintenance of the present system on the ground that 'a school is a monarchical institution, nor would he give to the head the right of appeal which he refused to the assistant teacher. Admitting that there might have been cases in which the dismissed head master was in the right and the governing body in the wrong, he still maintained that in the long run it was better not to limit the latter's authority, as 'hard cases make bad law.'"

The word "clearly" can be found in the Minutes of Evidence which gave rise to the above passage.—I am, Sir, &c.,

THOMAS ALLEN.

Woodbury, Malvern Link, July 22, 1902.

### "SLIPSHOD ENGLISH."

To the Editor of the *Educational Times*.

SIR,—May I offer a few remarks concerning a passage in your article on "Slipshod English" in the *Educational Times* of June 2? The writer says:

*Embarras de richesses* may be good French, but it is rarely heard on the other side of the Channel. Littré knows it not, and we have searched in vain for an instance in a French author—except that we did light on one in Voltaire.

May I point out (subject to correction) that Voltaire's phrase is "*l'embarras des richesses*," and not "*embarras de richesses*." It occurs in "*Le Droit du Seigneur*," Act II. Sc. vi. (*Le Chevalier*); and this I have verified. The same phrase also forms the title of a comedy by Soulas d'Allainville (published in 1735). If "*embarras de richesses*" is not good French, "*l'embarras des richesses*" is; and at all events it is given as an illustrative sentence in *Bescherelle's* dictionary, latest edition.—I am, Sir, &c., E. LATHAM.

61 Friends Road, E. Croydon, June 21, 1902.

P.S.—There are some interesting remarks about bilingualism in P. G. Hamerton's "French and English."

[No; not "Voltaire's phrase," but "a phrase of Voltaire's." The verification of the use of one expression by Voltaire does not negative our statement that we lighted upon another—which, unfortunately, we cannot put our finger on at the moment.—ED. E.T.]

## A SELECTION FROM CASSELL'S EDUCATIONAL WORKS.

THE COLOUR-BOX SUPERSEDED.

### CASSELL'S BRUSH WORK SHEETS.

12 Sheets in a Packet. Price 3d. per packet.

Six Tablets of Colours for Brush Work given on each Sheet.

Four Specimen Sheets sent post free to any Teacher on receipt of 1d. Stamp.

### CASSELL'S "EYES AND NO EYES" SERIES.

By ARABELLA B. BUCKLEY (Mrs. Fisher).

With 48 Full-page Coloured Plates and other Illustrations expressly executed for this work by Mr. A. FAIRFAX MUCKLEY. Handsomely bound, cloth gilt, with gilt edges, 3s. 6d.

### A HISTORY OF ENGLAND.

By H. O. ARNOLD-FORSTER, M.A.

Fourth and Revised Edition. From the Landing of Julius Cæsar to the Present Day. 852 pages, copiously illustrated, cloth, 5s.; or, superior binding with gilt edges, 6s. 6d.

### Art Painting Books.

**LANDSCAPE PAINTING IN WATER COLOUR.** By J. MACWHIRTER, R.A. With 25 Coloured Plates. Oblong crown 4to, cloth gilt, 5s.

**MARINE PAINTING IN WATER COLOUR.** By W. L. WYLLIE, A.R.A. With 24 Coloured Plates. Oblong crown 4to, cloth, 5s.

### French.

**CASSELL'S FRENCH DICTIONARY.** 615th Thousand. 1,150 pages. Cloth, 3s. 6d.

"Cassell's French Dictionary has become a standard work in this country, being used in the best schools, recommended by many of the first professors of the day, and generally found a reference book of the highest value and importance."—*Daily Chronicle*.

**CASSELL'S LESSONS IN FRENCH.** Cheap Edition. Revised by JAMES BOÏELLE, B.A. Parts I. and II., 1s. 6d. each. Complete in one vol., 2s. 6d. Key, 1s. 6d.

"After a careful examination of this revised edition we cordially recommend it as a very suitable book for pupil-teachers and candidates generally preparing for examination in French."—*Pupil Teacher*.

**FRENCH LESSONS IN FRENCH.** By F. P. DE CHAMP-TASSIN, B.-ès-L., B.-ès-Sc., French Master at the Chelsea Polytechnic. 2s.

An up-to-date Book on the newest lines.

### Latin.

**CASSELL'S LATIN DICTIONARY.** 132nd Thousand. Cloth, 3s. 6d.

"The aim of the revisers of 'Cassell's Latin Dictionary' has been to adapt the work to the requirements of the middle forms of public schools. In pursuance of this aim they have omitted a large number of archaic or post-Augustan words, and have rewritten nearly all the important articles. The historical and geographical notices have been increased in number, and etymologies have been added."—*Educational Times*.

**THE NEW LATIN PRIMER.** By Prof. J. P. POSTGATE. 17th Thousand. Cloth, 2s. 6d.

"A more concise, comprehensive, and intelligent grammar for the use of all but advanced students of Latin cannot be desired."—*Notes and Queries*.

**THE FIRST LATIN PRIMER.** By Prof. J. P. POSTGATE. Cloth, 1s.

**LATIN PROSE.** By M. A. BAYFIELD, B.A. Cloth, 2s. 6d.

### German.

**CASSELL'S GERMAN DICTIONARY.** 277th Thousand. 1,201 pages. Cloth, 3s. 6d.

"The English-German portion of this Dictionary is very full, and great pains have been taken to supply the correct German synonyms for English words and phrases. In this respect the book before us has a distinct advantage over most German Dictionaries, and will afford valuable and necessary help in the study of German composition."—*School Guardian*.

**FIRST LESSONS IN GERMAN READING.** By A. JAGST. Illustrated. Cloth, 1s.

Cassell's Educational Catalogue will be sent post free on application.

CASSELL & CO., LTD., LONDON, AND ALL BOOKSELLERS.

# MESSRS. RIVINGTONS LIST

## RIVINGTONS' COMPLETE COURSE OF ENGLISH HISTORY TEACHING FOR SCHOOLS, &c.

- 1. An Elementary History of England.**  
For the use of the Lower Forms of Schools. By CYRIL RANSOME, M.A., late Professor of Modern History, Yorkshire College, Victoria University. Small fcap. 8vo, with Maps and Plans, 1s. 9d.
- 2. A Class Book of English History.**  
For the use of Middle Forms of Schools, Training Colleges, Army, Intermediate, and Oxford and Cambridge Local Examinations, the Central Welsh Board, Irish Intermediate, Scottish Leaving Certificates, &c. With Maps, Plans, Lists of Important Dates, Subjects for Class, Blackboard Illustrations, Chief Names, Notes and Index. By ARTHUR HASSALL, M.A., Student of Christ Church, Oxford. Crown 8vo, 3s. 6d.
- 3. An Advanced History of England.**  
For use in Upper Forms of Schools and in Colleges. By CYRIL RANSOME, M.A. One Vol. Crown 8vo, with Maps and Plans, 7s. 6d.  
May also be had in Two Periods:—  
Period I.—To Elizabeth, 1603. 4s.  
Period II.—To Victoria, 1895. 4s.

## A SHORT HISTORY OF GREECE.

For the use of Middle Forms of Schools. By W. S. ROBINSON, M.A., formerly Assistant Master at Wellington College. Small fcap. 8vo, with Maps and Plans, 3s.

## A SHORT HISTORY OF ROME.

For the use of Middle Forms of Schools. By W. S. ROBINSON, M.A. Small fcap. 8vo, with Maps and Plans, 3s. 6d.

## A PRIMER OF LATIN GRAMMAR.

By W. MOULEN, M.A., Classical Master at St. John's College, Hurstpierpoint. With a Preface by F. B. JEVONS, M.A., Litt.D., Principal of Bishop Hatfield's Hall, Durham. Crown 8vo, 2s. 6d. Or, separately:—

Latin Accidence. 1s. Latin Syntax. 1s. 6d.

## LATIN PROSE COMPOSITION.

For the Middle Forms of Schools. By M. A. NORTH, M.A., Assistant Master at Clifton College, and A. E. HILLARD, M.A., Head Master of Durham School. Crown 8vo, 3s. 6d.

A Latin Version, 6s. 2d. net, to Teachers only.

**RIVINGTONS' LATIN UNSEENS.** 12 Books. (a) One to Six, for alternative use (of equal difficulty), each containing about sixty to seventy pieces of Prose and Verse, for Fourth Forms of Schools; and (b) Seven to Twelve, for Fifth Forms.

Edited by E. H. C. SMITH, M.A., Assistant Master at Clifton College. Small fcap. 8vo, 6d. each, net.

## A LATIN VERSE BOOK.

For Preparatory Schools. By A. H. THOMAS, M.A., Crescent House School, Brighton. Crown 8vo, 3s. 6d.

A Latin Version, 5s. 2d. net, to Teachers only.

**GREEK PROSE COMPOSITION FOR SCHOOLS.** By M. A. NORTH, M.A., and A. E. HILLARD, M.A. Crown 8vo, 3s. 6d.

A Greek Version, 6s. 2d. net, to Teachers only.

## EXERCISES IN THE SYNTAX AND IDIOMS OF ATTIC GREEK.

Containing 104 Exercises, 3 Appendices and Vocabulary. By W. H. D. ROUSE, M.A., Head Master of the Perse School, Cambridge, and J. M. SING, M.A., Assistant Master at St. Edward's School, Oxford. Crown 8vo, 3s. 6d.

A Greek Version, 6s. 2d. net, to Teachers only.

## DUHAMEL AND MINNSEN'S COMPLETE COURSE OF FRENCH PROSE COMPOSITION.

**1. First Steps in Reading and Composition.**  
An Introduction to French Pronunciation and Reading, with Continuous Narratives for Translation into English and into French, so arranged as to teach the Commonest Parts of Speech and the Commonest Tenses of Verbs.

By J. DUHAMEL, M. ès A. 3s. 6d.  
A French Version, 5s. 2d. net, to Teachers only.

**2. A Primer of French Prose Composition.**  
Including an Elementary Syntax, the Irregular Verbs, 150 Easy Pieces for Translation, and a Complete Vocabulary.

By J. DUHAMEL, M. ès A., and B. MINNSEN, M. ès A., Assistant Masters at Harrow School. 2s. 6d.

A Master's Key, 5s. 2d. net, to Teachers only.

## HANDBOOKS OF PRACTICAL SCIENCE.

In Three Books, published separately.

**I. MEASUREMENT, HYDROSTATICS, AND HEAT.—II. CHEMICAL EXPERIMENTS.—III. EXPERIMENTAL MECHANICS.**

By G. H. WYATT, B.Sc., A.R.C.Sc., Science Master at Emanuel School, Wandsworth Common. Crown 8vo, 9d. each.

## ELEMENTARY INORGANIC CHEMISTRY.

—NON-METALS. By S. R. TROTMAN, M.A., F.I.C., Science Master in the High School, Nottingham. Crown 8vo. With Diagrams. 2s.

"An attractive little volume, simply worded, clearly printed, and plainly illustrated."—*Nature*.

## ELEMENTARY INORGANIC CHEMISTRY.

—METALS. By S. R. TROTMAN, M.A., F.I.C. Crown 8vo. With Diagrams. 2s.

"An admirable first course."—*Scottsman*.  
"Cannot be too highly commended."—*Aberdeen Journal*.

## RIVINGTONS' JUNIOR MATHEMATICS.

Adapted to the Preliminary, Junior, and Senior Cambridge and Oxford Local Examinations, to the Central Welsh Board, Irish Intermediate, Scottish Leaving Certificates, and other similar Examinations. By H. G. WILLIS, M.A., Senior Mathematical Master at Manchester Grammar School. The Books are divided into Two Parts, each containing Three Sets of Two parallel Series, One Series comprising a Term's work.

A copy of the Answers separately will be given gratis to authenticated Teachers whose pupils are using in their classes copies of the books. Applications to be made by these Teachers direct to the Publishers.

**Algebra. Part I.** Without Answers, 1s.; with Answers, 1s. 4d.; Answers only, 4d.

CONTENTS: Evaluation—Addition, Subtraction, Multiplication, Division—Brackets—Equations—Problems—Factors, Highest Common Factor, Quadratics—Fractions.

**Algebra. Part II.** Without Answers, 1s.; with Answers, 1s. 4d.; Answers only, 4d.

CONTENTS: Factors, Highest Common Factor, Lowest Common Multiple—Fractions—Equations of First and Second Degree—Symmetry—Evolution, Evolution—Indices, Surds—Ratio, Proportion, Variation—Progressions.

Parts I. and II., in One Volume, complete, 2s. without Answers; 2s. 6d. with Answers; Answers only, complete in One Volume, 6d.

# FROM MR. MURRAY'S LIST.

## MR. MURRAY'S NEW SERIES.

**THE SOIL.** By A. D. HALL, M.A., Principal of the South-Eastern Agricultural College.

This volume is the first of a group of text-books intended for the use of students in Agriculture. Other volumes, which will be duly announced, will deal with "Plant Physiology," "Manures," &c. [Immediately.]

**ARITHMETIC MADE EASY.** Lectures on Method, with Illustrations, for Teachers and Pupils. By MABEL A. MARSH. 2s. Just out. This manual is especially recommended for use in Training Colleges and for the guidance of Teachers in Elementary Schools.

**INTERMEDIATE FRENCH GRAMMAR AND OUT-LINES OF SYNTAX.** With Historical Notes. By G. H. CLARKE, M.A., of Hymers College, Hull, and L. R. TANQUERAY, B.-es-L. Crown 8vo, 3s. 6d. [Just out.]

"The work of teachers who know their business, know what points must be insisted upon and what must be ignored or just touched upon. In particular we admire the skill with which just enough philology has been introduced. . . . The type is clear, and the general appearance of the grammar attractive."—*Journal of Education*.

**COMMERCIAL GERMAN.** In Two Parts. By GUSTAV HEIN, University of Berlin, Lecturer in German (Honours) to the University of Aberdeen, and MICHEL BECKER, Professor of Modern Languages in the Ecole Alsacienne, Paris.

PART I. With a Map. Crown 8vo, 3s. 6d. [Immediately.] Adapted for the use of students in commercial and continuation classes.

**CHRONIQUE DU REGNE DE CHARLES IX.** By PROSPER MÉRIMÉE. Prepared and Edited for the use of Schools by Prof. ERNEST WEEKLEY, M.A., University College, Nottingham. With Historical and brief Grammatical Notes and a Critical Essay. Crown 8vo, 2s. 6d. [Immediately.]

The above Volumes belong to Mr. Murray's New Series of Secondary Education Text-Books, of which a list will be sent on application.

**INTRODUCTION TO ZOOLOGY.** By W. B. BOTTOMLEY, Professor of Botany at King's College, London University, and Professor of Biology at the Royal Veterinary College. [Immediately.]

**INTRODUCTION TO POETRY.** (Poetic Expression, Poetic Truth, the Progress of Poetry.) By LAURIE MAGNUS, M.A. Feap. 8vo, 2s. Designed to convey the elements of taste and judgment in poetry by the natural or direct method of literature teaching. "He has brought to the task a critical taste and judgment almost as refined and often as illuminating as that of Ruskin."—*Yorkshire Post*.

**PLATO'S REPUBLIC.** By Prof. LEWIS CAMPBELL, Hon. Fellow of Balliol College, Oxford. With Illustrations. Feap. 8vo, 2s. "Prof. Campbell has done good service in writing this excellent book."—*Spectator*. "An excellent addition to the 'Home and School Library.' . . . The sketch of the purpose and development of Plato's work is admirable."—*Morning Post*.

**A FIRST COURSE OF CHEMISTRY.** By J. H. LEONARD, Author of "A First Course of Practical Chemistry." With numerous Diagrams. Feap. 8vo, 1s. 6d.

" . . . an excellent little book for young students. . . . expounded with admirable simplicity and good order. . . . a valuable introduction to experimental knowledge of the constitution of things."—*Scotsman*.

**ELECTRIC WIRING.** A Primer for the use of Wiremen and Students. By W. C. CLINTON, B.Sc. Lond., Demonstrator in the Pender Laboratory, University College, London. With 80 Illustrations and a selection of Worked Examples. Feap. 8vo, 1s. 6d. [Just out.] Written with particular reference to the requirements of the Examinations of the City and Guilds of London Institute.

The above Volumes belong to Mr. Murray's Home and School Library, of which a list will be sent on application.

Mr. Murray begs to call the attention of Students of the

## UNIVERSITY OF LONDON

to the following Works suited to the Examinations in the

Faculty of Economics and Political Science, including Commerce and Industry.

WORKS BY SIR HENRY S. MAINE, K.C.S.I.

**ANCIENT LAW; its Connections with the Early History of Society, and its Relations to Modern Ideas.** Sixteenth Edition. 8vo, 9s.

**POPULAR GOVERNMENT.** Four Essays. I. Prospects of Popular Government.—II. Nature of Democracy.—III. Age of Progress.—IV. Constitution of the United States. Fifth Edition. 8vo, 7s. 6d.

**INTERNATIONAL LAW.** The Whewell Lectures delivered at Cambridge in 1887. 8vo, 7s. 6d.

**CHINA: Her History, Diplomacy, and Commerce,** from the Earliest Times to the Present Day. By E. H. PARKER, Professor of Chinese at the Owens College; Acting Consul-General in Corea, Nov., 1886-Jan., 1887; Consul in Hainan, 1891-2, 1893-4; and in 1892-3 Adviser in Chinese Affairs to the Burma Government. With 19 Maps, &c. Large crown 8vo, 8s. net.

"Mr. E. H. Parker brings to bear upon his subject an experience, an amount of personal insight, and a capacity for criticism so unusual as to endow his pages with an intrinsic merit practically unequalled."—*Pall Mall Gazette*.

**ENGLISH COLONIZATION AND EMPIRE.** By A. CALDECOTT, M.A. (Camb. and Lond.), Professor of Logic and Philosophy at King's College, London. With Maps and Plans. New Edition. With a new chapter bringing the work entirely up to date, by F. A. KIRKPATRICK, M.A., University Extension Lecturer. Crown 8vo, 3s. 6d.

**AN HISTORICAL REVIEW OF THE DEVELOPMENT OF GREATER BRITAIN. THE GROWTH OF THE EMPIRE.** By A. W. JOSE. With many Coloured and other Maps and Diagrams. Crown 8vo, 6s.

**COMMERCIAL KNOWLEDGE.** A Manual of Business Methods and Transactions. By ALGERNON WARREN. Crown 8vo, 2s. 6d.

This text-book of *Handwortschenschaft* includes chapters on Supply and Demand; Free Trade and Protection; Partnership; Companies, Syndicates, and Trusts; Principal and Agent; Contracts; Banking; Transit; Insurance; Tariffs; Employers' Liability; Commercial Travellers; Consuls, &c.

"The book should be used in every senior class both of our Board and private schools, and as an introduction to business life it should prove of great value."—*Statist*.

**PRACTICAL SPANISH.** A Grammar of the Spanish Language, with Exercises, Materials for Conversation, and Vocabularies. By DON FERNANDO DE ARTEAGA, Taylorian Teacher of Spanish in the University of Oxford. Two Parts. Crown 8vo, 7s. 6d. [Just out.]

**THE GREEK THINKERS.** A History of Ancient Philosophy. By Prof. THEODOR GOMPERZ, of Vienna University, Hon. LL.D. Dublin, &c. Vol. I. Translated by LAURIE MAGNUS, M.A., Magdalen College, Oxford. Demy 8vo, 14s. net.

"Such an excellent reproduction of so important a foreign work on one of the greatest of themes is an event in its way."—*Spectator*. Vol. II. Socrates, the Socratics, and Plato. Translated by G. G. BERRY, M.A., Balliol College, Oxford. [In the press.]

**THE USE AND ABUSE OF MONEY.** By W. CUNNINGHAM, D.D., Fellow of Trinity College, Cambridge; Professor of Economic Science, King's College, London. Crown 8vo, 3s.

"To bring political economy down from the region of abstraction as Dr. Cunningham does, and to make it applicable to individual conduct, is not only perfectly legitimate, but a most fruitful and useful form of study. The whole book is worth reading, but especially the last chapters."—*British Weekly*.

**A SHORT HISTORY OF COINS AND CURRENCY.** By Lord AVEBURY, F.R.S., &c. With many Illustrations. Feap. 8vo, 2s. " . . . a treatise as fascinating as a romance."—*Outlook*.

**A GENERAL HISTORY OF EUROPE, 350-1900.** By OLIVER J. THATCHER and FERDINAND SCHWILL, Authors of "Europe in the Middle Ages." Revised and adapted to the requirements of English Colleges and Schools, by ARTHUR HASSALL, M.A., Christ Church, Oxford. With Bibliographies at the end of each Section. With Maps, Genealogical Tables. Crown 8vo, 9s.

**STUDENT'S HISTORY OF MODERN EUROPE.** From the Capture of Constantinople by the Turks, 1453, to the Treaty of Berlin, 1878. By RICHARD LODGE, M.A., Fellow and Tutor of Brasenose College, Oxford. Fourth Edition, thoroughly Revised. Crown 8vo, 7s. 6d.

"This is a work of sterling merit. It is an exhaustive compendium of the facts of the last four centuries, and at the same time an *histoire raisonnée* of the development of the modern European State system. It is characterized throughout by great clearness and masculine common sense."—*Oxford Magazine*.

**STUDENT'S CONSTITUTIONAL HISTORY OF ENGLAND.** From the Accession of Henry VII. to the Death of George II. By HENRY HALLAM, LL.D. Crown 8vo, 7s. 6d.

**HALLAM'S CONSTITUTIONAL HISTORY OF ENGLAND, Chapters I.—IX.** Bound together in One Volume for the special use of Candidates for the LONDON UNIVERSITY EXAMINATIONS. Crown 8vo, 5s.

**ELEMENTS OF POLITICAL ECONOMY.** By JAMES BONAR, M.A., LL.D., Author of "Malthus and his Work," "Philosophy and Political Economy," &c. Crown 8vo. [Shortly.]

**THEORIES OF TAXATION.** By G. ARMITAGE SMITH, Principal of the Birkbeck Institute. Crown 8vo. [Shortly.]

**NATIONAL EDUCATION. Essays towards a Constructive Policy.** Edited by LAURIE MAGNUS, M.A., Magdalen College, Oxford. 8vo, 7s. 6d. net.

**EDUCATION AND EMPIRE.** Addresses on Topics of the Day. By R. B. HALDANE, K.C., M.P., LL.D. Crown 8vo, 5s. net.

**THE SCHOOLMASTER.** A Commentary upon the Aims and Methods of an Assistant Master in a Public School. By A. C. BENSON, of Eton College. Crown 8vo, 5s. net.

# THE UNIVERSITY TUTORIAL SERIES.

## NEW & FORTHCOMING BOOKS

*Designed to cover the requirements of the*

## REVISED LONDON MATRICULATION SYLLABUS.

**Matriculation English Course.** By W. H. Low, M.A. Lond., and JOHN BRIGGS, M.A. Camb., F.Z.S. 3s. 6d.

This book contains grammar, analysis, composition, précis-writing, and paraphrase.

**Matriculation Latin Passages.** Being a selection of Prose and Verse from the best Latin writers. Edited by B. J. HAYES, M.A. Lond. and Camb. 3s. 6d. KEY, 3s. 6d. net. [In preparation.]

### CURRENT EVENTS.

At University College, London, session 1902-3 Fixtures. of the Faculties of Arts and of Science will be opened on Tuesday, September 30; introductory lecture at 3 p.m., by Prof. J. D. Cornack. The session of the Faculty of Medicine will be opened on October 1; introductory lecture at 4 p.m., by Mr. Percy Flemming.

THE Educational Commission to America, under the leadership of Mr. Alfred Mosley, C.M.G., sets out this month. The party will visit New York, Newhaven (Yale), Boston (Harvard), Philadelphia, Baltimore (Johns Hopkins), Washington, Pittsburg, Chicago, Ithaca (Cornell), Syracuse, and Albany, inspecting the most important educational institutions and industrial works.

THE examination for the Brotherton Sanscrit Prize at Cambridge will take place on Saturday, November 29. Candidates must be graduates of Cambridge under the standing of M.A. Apply to Prof. Cowell, 10 Scroope Terrace, Cambridge, on or before November 15.

THE Froebel Society's classes for kindergarten teachers and students will be resumed at St. Martin's Schools, Charing Cross, on September 27.

MR. S. G. SINCLAIR and Mrs. W. P. Sinclair Endowments. have given £1,000 to University College, Liverpool, to establish an entrance scholarship in Arts, as a memorial to the late Mr. W. P. Sinclair, who was one of the founders of University College and for many years an active member of its Court of Governors.

AFTER consultation with Mr. Astor, and in accordance with his wish, the Council of University College, London, has resolved to endow the Chairs of Pure Mathematics and History, and to name them the "Astor Chairs." In consequence of this endowment, the department of History will be reorganized and a Lecturer in Ancient History will be appointed. The Council has also received £1,000 from the Rev. Thompson Yates for the permanent endowment of the department of Economics, and other smaller sums have been received for the same purpose. The department has consequently been reorganized (see "General").

THE REV. HENRY LATHAM, M.A., late Master of Trinity Hall, Cambridge, bequeathed £6,000 to the scholarship fund of the college, and a considerably larger sum to other college purposes.

KING EDWARD'S SCHOOL FOR BOYS, Birmingham, has received £1,000 from two Old Edwardians—Mr. C. and Mr. J. Vernon Pugh—to build a new laboratory.

THE HON. MRS. HARDCASTLE has presented £100 to King Edward's School, Bury St. Edmunds, to found a prize for English Literature in memory of her late husband, a former scholar. For many years Mr. Hardcastle represented Bury in Parliament, and on several occasions gave such a prize to his old school.

THE Imperial University of Tokyo, Japan, has conferred on Dr. Henry Dyer the title of Emeritus Professor, in recognition of his services to science and education in Japan during the time he was Principal and Professor in the Imperial College of Engineering.

THE Royal Commissioners for the Exhibition of 1851 have made a number of appointments to science research scholarships for the year 1902, on the recommendation of the authorities of the several Universities and colleges that sent up the appointees. The scholarships are of the value of £150 a year, and are ordinarily tenable for two years (subject to a satisfactory report at the end of the first year) in any University at home or abroad, or in some other institution approved by the Commissioners. The scholars are to devote themselves exclusively to study and research in some branch of science the extension of which is important to the industries of the country. A limited number of the scholarships are renewed for a third year where it appears that the renewal is likely to result in work of scientific importance.

At Gonville and Caius College, a law and history studentship of the annual value of about £100 a year has been founded upon the benefaction of the late Mr. Frederick Ramadge, M.A., barrister-at-law, formerly Fellow of the college. The studentship is open to all members of the college that have kept not less than nine or more than fifteen terms, and will be tenable for one year. It will be awarded at Midsummer, 1903, and thenceforward in alternate years. Failing candidates whose subject is law or history, it may be awarded in respect of some other branch of literary study. It will not be awarded by the result of a competitive examination.

At the same college the regulations respecting the Frank Smart Fund and the Shuttleworth Fund have been amended. The Frank Smart Studentship of £100, founded in 1887 for the encouragement of botanical research, is open to all members of the college that have kept not less than nine or more than fifteen terms. It is tenable for two years, but may in certain cases be given for one year only, or may in special circumstances be continued for a third year. The governing body of the college may, if no suitable candidate belonging to the college presents himself, offer the studentship *pro hac vice* to other members of the University. The studentship will not be awarded by the result of a competitive examination. From and after Midsummer, 1904, there will be established at this college a Shuttleworth Studentship of the annual value of about £110 for zoology or physiology or (failing candidates in these subjects) some other branch of natural science. The regulations for election and tenure are the same as for the Frank Smart Studentship.

At Trinity Hall the regulations for the Latham Prize have been amended. A prize of £4 will in future be offered in each term open to any member of the college under eleven terms from his matriculation term. No one shall take the prize more than once in three consecutive terms.

THE Technical Education Board of the London County Council will award about 275 Junior County Scholarships (say, 160 to boys and 115 to girls) in December. The examination will be held on Saturdays, October 18 and November 8; or, in case of conscientious objection to Saturday, on Mondays, October 20 and November 10. Apply, by September 20, on form to be obtained at the Board's Offices.

THE Governors of the Parmiter's Foundation School

offer twelve scholarships of the yearly value of £10, open to all boys attending elementary schools in Bethnal Green.

Vacancies and Appointments. PROF. SIR GEORGE GABRIEL STOKES, Bart., F.R.S., President of Pembroke College, Cambridge, has been elected Master of the College in succession to the late Rev. Dr. Searle. Sir George has just entered his eighty-third year. He was Senior Wrangler and First Smith's Prizeman in 1841, and has been Lucasian Professor of Mathematics since 1849. He has had honorary degrees conferred upon him by Oxford, Edinburgh, Dublin, Glasgow, and Aberdeen Universities, as well as by Cambridge. He represented Cambridge University in Parliament from 1887 to 1892. His principal studies and researches have been in physics and mathematics, especially in connexion with light, which was the subject of his Burnett Lectures, published in 1887. He was a member of the first Commission for a Teaching University for London, and he was President of the British Association in 1869, and President of the Royal Society 1885-90. He is enrolled in the Prussian Order *Pour le Mérite*.

At University College, London, Mr. C. P. Sanger, Fellow of Trinity College, Cambridge, has been appointed Lecturer in Public Finance; Mr. G. Udny Yule, Newmarch Lecturer in Statistics; and Mr. A. C. Pigou, Fellow of King's College, Cambridge, Jevons Memorial Lecturer.

Mr. W. G. Hartog has been appointed Assistant to the Professor of French, and thus the advanced work of the department will be considerably extended.

Prof. Brandin has been appointed to hold the Chair of Romance Philology in conjunction with that of French, and Prof. Priebsch (University Professor of German) to hold the Chair of Germanic Philology in conjunction with that of German.

PROF. H. G. ATKINS, M.A., King's College, London, has been appointed (London) University Reader in German.

MR. JAMES BLACK BAILLIE, B.A. Camb., M.A. and D.Phil. Edin., Lecturer on Philosophy at University College, Dundee, has been appointed Professor of Moral Philosophy in the University of Aberdeen, in succession to Prof. Latta. In 1899 he gained the Shaw Fellowship in Philosophy, open to all Scottish graduates of not more than five years' standing. He recently published a work entitled "The Origin and Significance of Hegel's Logic: a general Introduction to Hegel's System."

MR. J. GRAHAM KERR, M.A., of Christ's College, Cambridge, has been appointed Professor of Natural History in the University of Glasgow, in succession to Dr. Young.

DR. BENJAMIN MOORE, Lecturer in Physiology in Charing Cross Medical School, has been elected to the Johnston Chair of Bio-chemistry in University College, Liverpool. Dr. Moore was educated at Queen's College, Belfast, and studied at Leipzig under Ostwald and Ludwig. He was five years on the staff of University College, London, under Prof. Schäfer, and for some time held an appointment in Yale University. He has done much original work.

ON the nomination of the President of the Board of Education, the City and Guilds of London Institute have added the following members to the Examinations Board of the Institute's Department of Technology, as representatives of the Board of Education:—Mr. G. R. Redgrave, Assistant Secretary to the Board of Education; Prof. C. le Neve Foster, F.R.S., Professor of Mining of the Royal College of Science; Mr. J. H. Reynolds, M.Sc., Principal of the Municipal School of Technology, Manchester; Mr. S. H. Wells,

Principal of the Battersea Polytechnic, London; and Sir John Watney, Honorary Secretary.

THE President of the Board of Education has appointed James Walker Hartley, M.A. of Trinity College, Cambridge; Benjamin Beck Skirrow, M.A. of University College, Oxford; and Frederic William Westaway, B.A. of London University, to be Inspectors under the Board of Education.

THE REV. ERNEST NEWSOM, M.A., Vice-Principal of King's College, London, has been elected Reader at the Temple Church.

MR. J. W. CRITCHLEY, M.A., Rector of the High School, Stirling, has been appointed Rector of Dumfries Academy.

MR. GEORGE LOWSON, M.A., F.E.I.S., mathematical master in the High School, Stirling, has been elected Rector, in succession to Mr. Critchley.

Literary Items. "HISTORICAL ESSAYS," by the late Bishop Stubbs, being introductions to certain volumes of the "Rolls Series," have been edited by Mr. Arthur Hassall, M.A., and will presently be published by Messrs. Longmans & Co.

MESSRS. LONGMANS also have in the press a volume by Prof. J. C. Bose, M.A. Cantab., D.Sc. Lond., of the Presidency College, Calcutta, entitled "Response in the Living and Non-Living." The work "describes experimental investigations on animal, vegetable, and inorganic substances regarding their response to stimulus." It is an amplification of papers read before various learned societies in London and Paris.

MESSRS. GEORGE BELL & SONS have in the press two new volumes of the "Cambridge Mathematical Series," which will embody the recommendations of the Committee on the Teaching of Mathematics appointed by the Mathematical Association. The first is a volume of "Examples in Algebra," by Mr. C. O. Tuckey, an assistant master at Charterhouse. The other is an "Elementary Geometry" (comprising the substance of Euclid, Book I., 1-48; Book III., 1-34; and Book IV., 1-5), by Mr. W. M. Baker and Mr. A. A. Bourne, assistant masters at Cheltenham. Both will be ready for use after the summer holidays.

THE REV. U. Z. RULE has prepared "Graduated Lessons on the Old Testament," which will be issued in three small volumes for school use by the Oxford University Press early this month.

MESSRS. A. & C. BLACK will publish immediately "The Book of Jubilees"—the oldest commentary on Genesis and part of Exodus—edited, with introduction and notes, by the Rev. Prof. Charles, Trinity College, Dublin.

MR. ENEAS MACKAY, of Stirling, announces "Bell the Cat; or, Who destroyed the Scottish Abbeys?" by John Jamieson. The polemical title refers to the main purpose of the book—"an effort to controvert the popular belief that the sacred edifices were destroyed by the Reformers." The work will deal with much ecclesiastical and historical matter of wide interest; and it will be illustrated.

THE Teachers' Registration Council make the following announcement:—

All certificated teachers known to the Board of Education to have been employed since January 1, 1901, in elementary schools, training colleges, or pupil-teacher centres, under inspection by

the Board of Education, or in Poor Law schools or certified reformatory or industrial schools, will be placed on Column A of the Register without further application. All other certificated teachers not coming under the above descriptions who wish to be placed on Column A must apply to the Registrar, Teachers' Registration Council, 49 and 50 Parliament Street, London, S.W. No special form will be supplied, but applicants must clearly state full name, address, date of becoming certificated, and name of last public elementary school in which they were employed.

THE Board of Education has issued the Regulations and Syllabus for the King's Scholarship Examination, 1903 (December 15-18).

THE new prospectus of the various faculties and departments of University College, London, containing particulars of the new curricula required by the organization of the internal side of the University of London, is now ready.

IN the reorganized Department of Economics at University College, London, next session, Prof. Foxwell will give a general course of Economics and Economic History. Mr. C. P. Sanger will lecture on Public Finance; Mr. G. Udry Yule on Statistics; Mr. A. C. Pigou, on the Association of Employers and Employed, Arbitration, and Conciliation. Prof. Montague will give a course on the existing British Constitution and its relation to the Constitutions of other Countries. Prof. Macdonell will give a course on International Law; and Prof. Whittaker a course on Industrial and Commercial Law.

KING'S COLLEGE, LONDON, proposes to establish a hostel for students after the model of the Toynbee Hall hostels.

NOTTINGHAM ought to be particularly proud of one sentence in the University Colleges Inspectors' report:—"Though the students of Nottingham University College are drawn from all classes, the opportunities specially afforded to young working men of ability and promise are very considerable, and from this point of view we think that the college exhibits the nearest approach of all the colleges which we visited to a People's University."

PRINCIPAL BEBB wants £20,000 to place Lampeter College on a better footing.

THE number of candidates at the recent Oxford Local Examinations was 11,079, as against 10,337 last year. Of these 7,647 obtained certificates, as against 7,015 in 1901.

THE University of St. Andrews awards 127 L.L.A. diplomas this year. For the May examinations there entered 929 candidates, as against 962 in 1901; 1,424 papers were written, and there were 803 passes and 190 honours.

A "COLLEGIATE DEPARTMENT," providing a three years' course, has been established at Clark University (Worcester, Massachusetts), and will be inaugurated on October 1 under the direction of Mr. Carroll D. Wright, Ph.D., LL.D.

A SPECIAL supplement to the *Schoolmaster* of August 16 consists of a great array of "Facts and Figures for the Education Bill Discussions." While very opportune and useful for the special purpose, it has also a more permanent value for future discussions on the educational system.

THE *Modern Language Quarterly* for July has some very pertinent criticisms of papers set in recent examinations in French and German, and a most useful "list of recent publications" (November 1, 1901, to June 15, 1902).

ST. MARY'S COLLEGE, PADDINGTON, has been recognized by

the Board of Education as a training college for secondary teachers.

\* \* \*

THE Board of Education has just issued three more extremely instructive volumes of "Special Reports on Educational Subjects"—a thin supplement to Vol. VIII., on "Education in the Netherlands" (5d.), and Vols. X. and XI., on "Education in the United States" (2s. 3d. and 2s. 6d.).

### MODERN LANGUAGES IN THE ARMY: A CONTRAST.

By A WAR CORRESPONDENT.

At this moment, when the question of the education of officers has attracted the attention of a Government Commission, the experiences of one who, as a special war correspondent in China, enjoyed peculiar facilities for observing the linguistic attainments of British and foreign officers may not be altogether without interest. There is no doubt that in knowledge of foreign languages the British officers that were in China were singularly deficient, and, in comparison with the officers attached to the German, French, and Italian expeditions, were distinguished by their ignorance of those European tongues that have hitherto been considered essential features in modern education. It was frequently explained to me by our Indian officers that their long residence in India had caused them to forget the European languages they had crammed for the purpose of passing their military examination, while the superficial character of the papers set at these examinations shows that the tests for German and French do not carry the students sufficiently into the heart of the language to enable them to retain any material knowledge of it. In my professional capacity I joined the steamer conveying the German Ambassador from Europe to China, and with him I found a very representative staff of officers whose achievements in the matter of French and English contrasted very favourably with those subsequently revealed by our own men. Moreover, from the beginning such as were ignorant of English spent the voyage in studying books for the purpose of familiarizing themselves with the intricacies of our tongue, while upon their arrival in Tientsin, and when the position of affairs gave them the time at a later date, there were many German and French officers that were at the pains to study English with the assistance of daily tutors from the English settlement in that treaty port. I do not suppose that there is any single case where a British officer endeavoured by any means in his power to brush up his defective knowledge of French or German. In preparation for the language difficulty, however, the officers of the Italian expedition, as well as those of the German expedition, seem to have been supplied with small dictionaries and elementary treatises upon our language. These they carried with them, and, whether they were the result of private purchase or official distribution I do not know, but there is no question of the fact that the volumes were very much in evidence.

The French officers explained their ignorance of English by the remark that everybody spoke French. It was quite true, with the single prominent exception of ourselves, for the British officer was distinguishable by the fact that he was ignorant of French. No special effort had been made by the French, German, or Italian headquarters to secure the services of men especially familiar with the languages spoken by the units of the allied forces. It had been a part of their routine training, and was in no sense extraordinary. In relation to our own men, it would not appear that the advisability of their being familiar with one or other of the half-dozen tongues spoken by the forces of the Allies was taken into account. The military representative of the Government of India attached to the staff of Field Marshal Von Waldersee (who spoke French and English) spoke most lamentable French and German; I understood, however, that his knowledge of Russian was quite useful, at least equalling, if not surpassing, that knowledge of French which was possessed by the lady from India who found herself more easily understood by the French when she spoke in Hindustani. However, with the exception of those officers who were acting as interpreters to the chief and brigade headquarters, this ignorance was not in any way remarkable, as, if the united knowledge of French and German possessed by the staffs of the eight or nine British generals in China had been collected, I do not think it would have enabled any one of them to pass the most elementary paper possible to set in French or German. Upon the other hand, the staff officers attached to the German expedition all spoke at least one language

thoroughly (French), and usually two, the second being English.

Again, it was pointed out to me by no less a person than Admiral Alexieff, the Commander-in-chief of the Russians, upon one occasion when discussing this subject at Port Arthur at the close of the campaign, that the system of military education in Russia and Germany did not emphasize the necessity of acquiring a knowledge of English; it did, however, insist upon a very perfect knowledge of French as an essential qualification of officers in the higher grades of the service. It should be remembered that, even to-day, French is the language of diplomacy and the language of polite society on the Continent. Why the British officer chooses to remain ignorant of even an elementary knowledge of the Gallic tongue when the officers of every military power in Europe make it their medium of mutual understanding it is difficult to conceive.

Excuse may be found for the ignorance of French and German by officers of our Indian Staff Corps, as the hard study which they devote to acquiring their very remarkable knowledge of the languages of India may, perhaps, help them to forget their previous knowledge of French and German; but, in regard to the officers from England detached for special duty and presumably distinguished for some more particular qualification, there should be no occasion, just as there is no excuse, for linguistic ignorance. French was certainly the language whereby communications were exchanged in China, although attached to the various headquarters were officers capable of acting as interpreters. There were one or two connected with British headquarters in Pekin, and others were found seconded for duty with the executive staffs of the different brigades; but, apart from these men, who certainly boasted an easy fluency in French and German, there was a distressing lack of such knowledge among other officers.

It became my good fortune to be associated for some months with an Indian cavalry regiment whose officers were men admirably suited to their work—muscular and courteous sons of Britain, but not distinguished in any remarkable degree for a knowledge of European languages. There were three in this regiment and a few in the other regiments composing the expedition who were able to speak, to read and write, and to translate in French and German; and one soon got to know who they were, their unusual capacity at once throwing them into prominence. I know only one British officer among those in the expedition in Pekin who could speak French, German, Italian, and Russian; he was also very familiar with many of the dialects of India—Captain Holman, D.S.O., Railway Staff Officer in Pekin. A colleague of this officer, Major Griffiths, spoke French and German with admirable precision. Again, there was one other, a subaltern in the same regiment, who spoke fluent French, and was studying Russian. These three men, however, are fixed in my mind by the fact that they spoke foreign languages; the others were only able to converse in their mother tongue and in the tongues of India.

So long as the executive officers are distinguished for their ignorance of the languages of Europe, it is a little unfair to drop too heavily upon officers in the junior branches of the service. Linguistic ignorance is a distinguishing feature of the British officer, and this contempt for foreign languages has, I am sure, played an important part in reducing the mental capacity of the class. It is impossible for any one to assert that the British officer is distinguishable for his brains; the higher in the service he climbs the more stupid does he become; and in China the absolute ignorance of men whose military rank showed that they were possessed of at least fifteen years' service was so appalling that it was impossible to avoid feeling humiliated by the remarkable superiority of the junior officers in the expeditions of the other allies. It was, however, frequently noticed that the Germans did not speak very much English; but then, as I have already mentioned, they did speak French, while our officers did not possess any other medium of conversation than their mother tongue. In regard to the Russian officers, where they were ignorant they were bores pure and simple; but, on the other hand, the educated Russian officer is distinguished for his culture and politeness as much as for his intellectual capacity. There was a Russian staff officer upon the steamer that conveyed the German Ambassador to China who spoke English, French, German, and Italian, who could sing English comic songs by the score, and it was his practice in the evening to entertain his Excellency with recitations from French comedy, while upon very many occasions he would sit down and sing songs in any of four different tongues. He was, indeed, remarkably versatile, and this versatility I found repeated in many of the superior

officers in the Russian service. Admiral Alexieff spoke French, German, and English; Colonel Gromchesky, the Governor General of Mukden, spoke French, German, English, and Chinese; Colonel Pitoff, who held an important administrative command in Manchuria and conducted the expedition down the river to Newchwang, spoke French, German, and English. In short, it was the usual practice of the Russian officers to be able to converse in four European languages, just as many German officers spoke Russian, French, and English or French and English. I am quite certain that there was not one field officer in fifty of the Germans who could not speak perfect French. The Italians all spoke French; very many spoke good English. The French spoke English and German and Latin. Many Russian, German, French, and Italian officers had been to school in England. I made the acquaintance of five Russian officers who had been at Eton.

In effect, the desirability of furnishing the officers of our military and naval services with opportunities for acquiring greater fluency in the French and German tongues as well as technical skill in their profession, aside from the emphatic declaration of the recent Commission, has been made quite clear. But in the light of the scathing report of the Commission, it is to be hoped that the present character of our military examinations will be reformed at once into accord with the requirements of the service. Unfortunately, it is not to be expected that any good will accrue to the nation at large from the many exposures of radical defects in our military system brought about by the war. Lack of education in time past has been a tradition of the English people, and, if there be one thing that will go a longer way than a little British Army, it is our insular contempt of those standards of education which distinguish the training of officers in the armies of other Powers.

It is to be devoutly hoped that immediate reforms may consummate the findings of the recent inquiry, but it must not be supposed by the public that this realization of the rottenness of our military educational system is anything new. It has been apparent long since, while foreign critics have drawn attention to it upon innumerable occasions. Albeit, if in the larger spirit of patriotism that has animated our executive officers the needs of military education have been forgotten, it is at least comforting to know that the pattern of the latest gaiters and the colour of the new putties elicited the warmest commendation in the seats of the mighty. Anxious as the great mass of the nation may be upon the subject of the necessary improvement in the education of our officers, they may confidently accept the assurance that, at least by the conclusion of the next war, the heads of His Majesty's War Office will have received sufficient *data* upon this very interesting subject to enable them to arrive at an encouraging and engaging conclusion as to whether the proposed repairs are worthy of their further consideration. This much most certainly is assured, and for the moment there—and there only—can the question be left.

ANGUS HAMILTON.

## REVIEWS.

### AN ENGLISH ARISTOPHANES.

*The Comedies of Aristophanes*, edited, translated, and explained. By Benjamin Bickley Rogers. In six volumes. Vol. V.: IX. *The Frogs*; X. *The Ecclesiazusæ*. (Sm. 4to, pp. xlvii. + 274, xxxviii. + 238. 15s. Bell.)

The favourable reception of his former editions and translations of single plays has encouraged Mr. Rogers to essay a complete issue of Aristophanes. The present volume, though fifth in order, is the first of the series published; and we have no doubt it will prepare a warm welcome for its successors. The barest justice to Mr. Rogers requires that we should keep in mind the extreme difficulty of the task he has undertaken. The translation involves not merely the representation of the sense of the text, but the reproduction of the metres and the transference of the volatile spirit of a very free, wayward, and intractable original. The rendering of the choruses in any tolerable form of English might well give pause to the most lively confidence; but what can be done with such an example as the penultimate chorus of the "Ecclesiazusæ"? On the whole, we consider that Mr. Rogers has been remarkably successful. Read the English page without regard to the opposite Greek, and you undoubtedly receive an excellent impression of the verve, sparkle, and tone of the original drama. The close adherence to the text—though we are rather inclined to think that Mr. Rogers set out with freer

notions, and afterwards put himself under more stringent rules—inevitably hampers him in comparison with Frere; but, taking together the virtues of accuracy and spirit, and looking at the sustained effort of two whole plays, we cannot hesitate to award Mr. Rogers the first place among translators of Aristophanes. Here and there, indeed, one does not at first sight readily follow the meaning; but such cases are very exceptional, and they are all but unavoidable in a difficult translation. The Greek, however, is at hand to remove the temporary obstruction when it does occur, and in another edition the author may easily clear the way. The introductions deal concisely with the main considerations relative to each play. The introduction to "The Frogs," for example, includes some pointed remarks on the choral metres, and the introduction to the "Ecclesiazusæ" maintains, against Mr. Haigh, that no women were present at the performance of a comedy in the time of Aristophanes. The running commentary under the text is able and luminous and rich in suggestion, while textual criticism is relegated to appendices. Mr. Rogers will probably not be regarded as satisfying the highest scholarship at all points; but his book will be warmly received by all readers that care little for technical minutiae and much for a genial renewal of acquaintance with the substance and manner of the great poet. The work is eminently popular, while the scholarship, if not the highest, is yet high. It forms an excellent introduction to Aristophanes for those that are unable to tackle the original Greek. In view of this great service, one may readily put aside the pedantry of criticism, and heartily welcome the prospect of an English Aristophanes.

### THE "ENCYCLOPÆDIA BRITANNICA."

*The New Volumes of the Encyclopædia Britannica*. Vol. IV. (being Vol. XXVIII. of the complete work). (A. & C. Black and the Times.)

The fourth volume commences with "Electricity" and ends with "Gladstone." The prefatory essay, by Sir Leslie Stephen, surveys "The Growth of Toleration." However one may dissent from the writer at points, one cannot but recognize the clearness and moderation of his exposition of the tendencies observable. He admits that "the existence of any creed or institution is a *prima facie* ground and justification," and that "the longer they have thriven the greater the presumption that they have had some utility." He reviews the obstacles to liberty of conscience, examines the meaning of "authority," and considers the practical applications in religion, education, politics, science, and economics; and he shows how the intellectual horizon has widened, changing the historical and philosophical basis of argument. In religion, "there is," he says, "at least an agreement that a simple creed must be tested upon the widest appreciation of the whole process of intellectual development; that the only authority which can permanently demand assent is the gradual convergence of belief under the freest possible play of thought, and that every honest phase of opinion has a right to a fair hearing, and may be of some use even if only by provoking the exposure of its own fallacy." There are very comprehensive and important articles on England and Wales, Europe, France, and Germany, and less extensive, but full and careful, accounts of such smaller regions as Finland, Florida, and Georgia. England indeed is naturally treated at considerable length under separate heads—Geography, Statistics, History, Church, Bible, Law, Literature. Among men of eminence are Emerson, Fawcett, Fechner, Fitzgerald, Flaubert, Forster, Freeman, Froude, Gambetta, Giers, and Gladstone.

There are many fresh and able articles on great branches of science—Electricity (in various aspects), Embryology, Ethics, Evolution, Fourier's Series, Analytic Functions, Fungi, Gas, Geography, Geology, Geometry. The practical world is represented in Elevators, Embroidery, Engines, Engraving, Finance, Fire and Fire Extinction, Fisheries, Forests and Forestry, Fortification, Friendly Societies, Furniture, &c. There are some notable articles on legal, ecclesiastical, commercial, and social matters. The mass of shorter paragraphs by nameless writers must be commended for intelligent selection and accuracy, as well as the larger expositions by writers of eminence. The high level of excellence is not affected by particular criticisms that may be offered here and there. It is somewhat surprising, for example, that "Sylvester Bonnard" should not be mentioned in connexion with M. Anatole France; that Jordan's "Die Nibelunge" has but "a certain rugged grandeur"; or that Nietzsche should be set on such a high pedestal, and no mention should be made of Dr. Tille's translation of his works. The illustrations (portraits, sketch-maps, plans, &c.) are numerous and good, and the full-page pictures are finely reproduced.

## AN AMERICAN COMPENDIUM OF GEOGRAPHY.

(1) *North America.* (2) *Europe and other Continents.* By R. S. Tarr and F. M. McMurry. (Macmillan.)

These form the second and third parts of a compendium of geography for American schools, the first part being devoted to "Home Geography and the Earth as a Whole." Both books contain introductions on general geography, that in the volume on North America being somewhat more limited in its scope. The explanation of the seasons, always a difficult matter for the teacher, is distinctly good, and illustrated by a number of well-devised pictures. Putting the two together—for they do not both use exactly the same illustrations—no teacher need be at a loss for means to make the problem clear to his pupils. The trade-winds and the anti-trades are not so well explained; the effect of the earth's rotation is only mentioned, not illustrated, as it might be, by the simple experiment of pouring inky water on a revolving globe. The plan of the detailed portion of the work is excellent. Each chapter is preceded by "map questions." For example, apropos of the Southern States, we have, among other questions: (5) Through what States would you pass in going by water from New Orleans to Chattanooga? (6) Find some natural boundaries in this section. (7) Compare the coast with that of New England. Why the difference? (8) Why are there so few lakes? (9) The rivers that rise in Western Texas are often perfectly dry in the western third of their course. Some of these questions can obviously be answered from inspection of the map; others require the pupil to refer to the general chapters at the beginning. Their great merit is that they compel him to think and to work out something for himself before he begins to read. A good deal of the text is taken up with the characteristic industries of different parts of the States, and is plentifully illustrated with pictures. After the text come a number of review questions, and, what is more valuable, some "suggestions," such as: Find blocks of granite and marble in buildings—Find where the canned fruits and vegetables in your neighbouring grocery store come from—Visit a canal and examine a lock—Make a toy canal having a lock in it—About how much sugar does your family use in a year?—See how long a list you can make of articles manufactured partly or wholly out of copper—Give some reasons why Richmond has not become a great city like Philadelphia. So in treating of Europe there are indications of books to be read or talked about, from the "Chanson de Roland" down to "John Halifax, Gentleman," and of persons whose names should be familiar, as Goethe, Bismarck, Wagner. Among the questions we may notice one about the effect of the German military system on emigration; and the suggestion to talk with some Irishman to see how he feels towards England, and why. Altogether the book is calculated to stimulate thought and the acquisition of information about common things. An interesting chapter is added to the volume on "Europe and other Continents," showing historically the distribution over the world of various natural products—coal, iron, rubber, cotton, coffee, and so on; and a comparison of the United States with other countries in respect of wealth, length of railways, and several industries, illustrated by diagrams. In all the most important comparisons, except that of merchant shipping, the United States stands at the head.

## EXPERIMENTAL PSYCHOLOGY.

(1) *Studies in Auditory and Visual Space Perception.* By Arthur Henry Pierce, Ph.D. (Longmans.)

Dr. Pierce is Professor of Psychology in Smith College, and these "Studies" are issued "as the regular publication demanded of the incumbent of the Kellogg University Fellowship of Amherst College at the expiration of his official term." They are contributions to a particular field of experimental psychology. The first, and more continuous, division of the book has for its objects, "first, to make a systematic presentation of all important facts and theories connected with the localization of sound; and, second, to develop a satisfactory theory of the formulation of all facts, old and new, that shall have been brought together." Prof. Pierce traces somewhat briefly, and sometimes with scant ceremony, the development of theory, summarizes the experiments of preceding workers, and then sets out his own experiments. He reaches the conclusion that "the theory of direct perception in accordance with which auditory impressions are themselves endowed with spatial attributes" is the right one; that there exists "an independent auditory space"—an auditory space not indeed of co-ordinate importance and development with either the visual or the tactual space, but yet "independent." For are

not the intracranial localizations of sound independently accomplished?—and "these experiences are as genuinely auditory as any of the extracranial localizations," and they "are in no sense inferences." Assuming, then, "that auditory impressions originally possess positional characteristics, or that they are natively endowed with the attribute of externality," Prof. Pierce proceeds "to show how from a condition of general, indefinite externality sounds come to possess more or less definite and well-ordered localizations in a spatial system." It would be futile to attempt criticism of these positions without experimental verification, which we must leave to the very narrow circle of specialists; although, apart from this, there are considerations that suggest the necessity of a far more elaborate argument than Dr. Pierce seems to bargain for. The visual portion of the book deals with the explanation of a number of optical illusions—among them the illusion of kindergarten patterns. It is well to have such experimental tests applied by investigators untrammelled by hopes or fears as regards existing or future theories. It is no less necessary that other investigators should stringently check the results of their colleagues, and we should be glad to see more activity in experimental psychology in this country.

(2) *Analytical Psychology.* By Lightner Wilmer. 7s. (Ginn.)

In a handy and well printed Manual of 250 pages Prof. Wilmer sets out "a series of experiments that can be performed by untrained students of psychology without supplementary explanation on the part of the teacher, and without costly and complicated apparatus," and that are of immediate "importance as illustrations of the phenomena and processes of mental life." In the arrangement, "where compromise seemed necessary, pedagogical motives have generally outweighed purely scientific considerations."

The scope of the Manual has been purposely restricted to the analysis of the component processes of mental phenomena. The course of the analysis successively presents the essential features of apperception, perception, attention, the range and limits of consciousness, the association of mental contents, and of physiological and physical processes, the relation of mental contents to these processes, and the sensation as the mental element.

The experiments are intended, not primarily to constitute a manual of experimental psychology, but "to illustrate the facts and principles of psychology by leading the student, whether a beginner or an advanced student, to discover for himself the psychological facts upon which are based the principles of the science." Prof. Wilmer very properly insists upon the formation of correct habits of inductive reasoning, and aims at "diverting those who are destined to become teachers from an unwholesome subservience to psychological and pedagogical authorities towards a confident self-dependence upon their own powers of observation and reflection." He has been trained in the best of schools, and he maintains his allegiance to the facts of his science as he apprehends them.

The experiments appear to be judiciously chosen, and the description is uniformly lucid. There can be no two opinions about their value in awakening the student to a vivid realization of the psychological facts, which is an essential step to the due formulation of their bearings. There is no better book to begin the practical study of the subject with. It is unnecessary here to go into details, but we observe one point that may be noted. "Sensations arising from the movements of the body are frequently called muscular sensations, and sometimes a 'muscle-sense' is spoken of. This terminology gives a false emphasis to the physiological contribution of the muscles." The chapters on Association and Perceptions of Space, and on Psycho-physiological and Psycho-physical Analysis, are extremely suggestive by sheer development of the facts through experiment.

## A HOME GALLERY OF NATIONAL PICTURES.

*The Nation's Pictures.* Vol. I. (12s. cloth; 15s. half leather. Cassell.)

Here is the first instalment of what promises to be a very valuable and useful publication, diffusing the influences of art through the land. Popular as are the galleries of pictures that are now open to the public, not only in London, but in all the great cities throughout the country, it is still but a comparatively small fraction of the population that visits them, and a yet smaller that studies them. Messrs. Cassell are to be congratulated on their enterprise in bringing together in a widely accessible form a skilful and varied selection of these pictures reproduced in colour. That is the distinctive feature of the series: the

reproduction of the pictures in colour. There are forty-eight in the present volume, representing the art of forty-two painters; for only six of the artists are drawn upon for two pictures. The variety is thus obviously almost as great as possible within the limits; and each picture is, as nearly as may be, except of course in point of size, a facsimile of the original painting. The student can thus study these pictures with all the advantage of constant access; and every person can make his own picture gallery at a very small cost. We should note that "the experiments in colour have necessarily involved much time, perseverance, and expense"—all which will no doubt be duly rewarded. It is plain from the first volume that "the collection may be taken as thoroughly representative of the best modern art of the country."

## GENERAL NOTICES.

### CLASSICS.

"The University Tutorial Series."—(1) *Cæsar: Civil War, Book I.* Edited by A. H. Allcroft, M.A. (2) *Livy: Book XXI.* Edited by A. H. Allcroft, M.A., and B. J. Hayes, M.A. (Clive.)

(1) The introduction explains clearly the historical position at the opening of the Civil War, gives a concise account of Cæsar and the more important persons that figure in Book I., and outlines the organization of the Roman army at different periods. The notes (45 pages) are pointed, accurate, and appropriate. "H.S." (chapter xxviii. page 84) should have been explained. (2) The introduction (26 pages) deals fully with Carthage, town and people, and with the relations between it and Rome, and explains (with two full-page maps) the route of Hannibal over the Alps, following Mr. Marindin (*Classical Review*, June, 1899). The notes (60 pages) are judicious and thoroughly competent. There is also a very useful index of proper names (14 pages). Both volumes are most creditable additions to a very able and justly popular series.

"Blackie's Illustrated Latin Series."—*Cæsar: The Gallic War, Book VI.* Edited by John Brown, B.A.

"This," we are told, "is a revised, reset, and more fully illustrated edition," the book having been "first published in 1896, and frequently reprinted since." Already, then, it has been stamped with scholastic approval. The introduction (38 pages) contains a life of Cæsar, remarks on the "Commentaries" and on Roman books and book-making, and a very full and instructive account of the Roman army in Cæsar's time. One appendix (14 pages) consists of a careful essay on Druidism; another appendix is devoted to concise hints on Latin-English translation; and there follow 39 exercises well devised for retranslation. All this is very good; only we note the growing tendency to over-elaboration. If the right place for an essay on Druidism be here, then why not a similar essay on the notions of property in Gaul and Germany? No one would gather from Prof. Brown's notes that there is any difficulty on the latter subject. On chapter xxii., he explains that "what Cæsar means is that the land of each tribe was public land, belonging to the tribesmen as a body, not to individuals"—as once in the Scottish Highlands. We think he ought to have shown why he calls it "public" land, why he holds that it "belonged to the tribesmen as a body," and why he says it did not belong "to individuals." Presumably he is aware that on these points he has to reckon with M. Fustel des Coulanges. We miss a necessary note on *pecunia* and *fructus* in chapter xix. "*Sacrificiis student, 'are they keen about sacrifices' (chapter xxi.) is hardly a classical rendering; 'gentibus cognationibusque, 'clans and families' (chapter xxii.) is loose, cognatio being much wider than 'family'; and 'propriam virtutis, 'a proof of valour' (chapter xxiii.) seems weak and perfunctory, propriam being rather 'the hall-mark' than 'a proof.' There are 30 illustrations, mostly good, and a map and a plan. Altogether a very useful edition.*

### MATHEMATICS.

*An Arithmetic for Schools.* By J. P. Kirkman, M.A., and A. E. Field, M.A. 3s. 6d. (Arnold.)

An excellent school arithmetic on a good plan well carried out. The authors, convinced of the necessity of employing the first science studied by children as a means of training them to think for themselves, and to do so in the best way, have made it their aim to show the foundation of every arithmetical process in common sense, and to make it clear to the learner that methods of calculation are not a series of artifices, but the natural means of arriving at desired results. The formal rule, which can be learnt by heart and applied quite mechanically, finds little place in the book. In addition to its value as a text-book, the work is attractive from the quantity of instructive general information it contains. This is so simply and directly given that a student can scarcely fail to be thoroughly interested and vividly impressed. The theory of the elementary rules is exceptionally clear and convincing. The book contains the usual complement of exercises, miscellaneous examples, and selected examination papers.

"Rivingtons' Junior Mathematics."—*Algebra, Part II.* By H. G. Willis, M.A. 1s.; with Answers, 1s. 6d.

As in Part I., there are three groups of graduated exercises, each subdivided into two parallel series. The subdivisions may be used concurrently or in alternate terms, according to the number of weekly lessons given to a class. The work is sufficiently advanced for candidates preparing for examinations of the standard of the obligatory part of the Oxford and Cambridge Senior Locals. The exercises are, as a rule, preceded by oral questions, intended partly as aids to the explanation of principles and partly as a means of training in rapid calculation. The plan of separating the oral questions from the exercises, which are intended for written work, is not a good one, and in many places the vinculum is used where brackets would lend far more clearness. These are minor points, indeed; but they are not without importance.

### MODERN LANGUAGES.

"Heath's Modern Language Series."—*Leberecht Hühnchen* (H. Seidel). By Arnold Werner-Spanhoofd. (Price 1s. 3d.) (2) *Kleider machen Leute* (G. Keller). By M. B. Lambert. (Price 1s. 6d.) (3) *Zriny* (Körner). By Prof. Franklin J. Holzwarth, Ph.D. (Price 1s. 6d.) (4) *Harold* (E. von Wildenbruch). By Charles A. Eggert, Ph.D. (Price 1s. 6d.)

(1) *Leberecht Hühnchen*, "upon whose cradle a kind fairy had laid the best of gifts, the art of being happy," is sure to be a favourite. The story is simple, lively, and humorous. There are useful and sufficient notes, and a vocabulary.

(2) The story, taken from "*Die Leute von Seldwyla*," is of curious interest. The introduction gives a concise account of Keller's career; the notes are pointed and helpful; and the vocabulary is full.

(3) is a tragedy from the Hungarian history of the sixteenth century, with brief biographical introduction and notes.

(4) Ernst von Wildenbruch "shares with Sudermann and Hauptmann the honour of attracting and holding universal attention" in modern Germany. Harold is the King of the English. The introduction gives a sketch of the author and the subject. The notes are very brief, but adequate. All these small volumes are well chosen and excellently got up. Each has a portrait of the author.

### NATURAL SCIENCE.

*An Introduction to the Study of the Comparative Anatomy of Animals.* Vol. II.: *The Coelomate Metazoa.* By Gilbert C. Bourne, M.A., D.Sc., F.L.S. (Bell.)

As in the first volume, Dr. Bourne proceeds on the plan of describing certain types representing *phyla*, his selection being guided by the requirements of the preliminary and intermediate science examinations of the Universities. The examples are ably handled, and the description is strongly supported by a large number of careful diagrams, most of them original. If a pupil fail to follow the simple and clear account of the earthworm, or to take interest in the *Apus canceriformis*, he had better try some other line of study. Dr. Bourne has given considerable space to the leading features of the embryology of the various types, and here he is probably at his best, the exposition being remarkably easy for the student. There is something in his reasons for omitting the embryology of the dogfish, but, for all that, we should have preferred to have it: the pupil could come back to it from the common frog. The wanderings of *Dreissena polymorpha* and *Periplaneta* and the indications of the relations between marine, fresh-water, and terrestrial animals are incidental matters that tend to attract and hold interest. The work is very capably done, and the book is excellently printed and got up.

*A Course in Invertebrate Zoölogy.* By Henry Sherring Pratt, Ph.D. 6s. (Ginn.)

Dr. Pratt is Professor of Biology at Haverford College, and Instructor in Comparative Anatomy at the Marine Biological Laboratory of the Brooklyn Institute of Arts and Sciences at Cold Spring Harbor, L.I. The present volume is intended as "a guide to the dissection and comparative study of invertebrate animals." The plan is "to study each of the larger groups . . . as far as possible, as a whole, instead of detached types of different groups taken more or less at random, as is usually done." . . . "to teach relationships, and to make the study truly comparative." We are by no means satisfied that the results will come up to the expectations of an English examiner. Prof. Pratt, it is true, gives the main points in many types of the larger groups, and then glimpses of comparison of these types; but there is a lack of conciseness and correlation throughout. The interpolation of questions to test the student's train of thought, as well as direction to note this and to do that, is a happy idea; and the exercises are good. It is a useful process to require the student to execute his own drawings from the specimen under study; but it is a weakness to furnish no illustrations to the text. The appendix contains some useful notes on classification. The latest and best of the systems—that of Berthold Hatschek (1888)—is set out in a somewhat modified form. There is also an extensive glossary, as well as an index.

## MISCELLANEOUS.

*Analysis of Commercial Correspondence.* By Dettloff Müller. (Teubner.)

\*Herr Müller is English master at the High School of Commerce in Leipzig. His book contains some excellent features, which should be of service to German, and perhaps also American, students, whilst readers in England would gain from it an insight into American style and vocabulary of correspondence in business. Through the forms of letters supplied there runs a greater continuity than is ordinarily found in similar books; and the explanatory matter prefixed to each section is unusually good. There is also an abstract of the Anglo-American law of sale, wisely based on Benjamin's standard text-book. Some oddities of spelling and phraseology, American and original, need not prove deterrent; but the next edition should clear away such gratuitous drawbacks to a substantially useful volume.

"Sammlung Neuphilologischer Vorträge und Abhandlungen."—(1) *De Hugo à Mistral* (Prof. Michel Jouffret). Mk. 1.80. (2) *On certain Aspects of Recent English Literature* (R. Shindler). Mk. 1.80. (3) *Die Methodik des neusprachlichen Unterrichts* (Prof. W. Vietor). Mk. 1. (Teubner.)

(1) Seven lectures on contemporary French poetry, delivered in the holiday courses at Marburg in 1899 by Prof. Jouffret of the Lycée, Marseilles. The subjects are Victor Hugo and his successors, especially Leconte de Lisle, Sully-Prud'homme, Fr. Coppée, and José Maria de Hérédia; with a final lecture on Provençal poetry, "Frédéric Mistral et les Félibres." The treatment is bright and suggestive.

(2) Six lectures, also delivered at Marburg in the summer of 1899, on Tennyson, Arnold, Clough, Swinburne, Meredith, Thomson (of "The City of Dreadful Night"), Hardy, Browning, and Kipling. Mr. Shindler handles his subjects with discrimination, as well as in popular form.

(3) Four lectures, outlining the history of the methods of language teaching, delivered as Marburg holiday addresses in 1899, 1900, and 1901. In the first two there is much curious matter illustrative of olden ways; the others deal with the modern reform, of which Vietor is "einer der ältesten Verfechter." They are all characterized by verve and glints of humour, as well as by strenuous purpose.

## FIRST GLANCES.

## MATHEMATICS.

Davison, Charles, Sc.D.: *Easy Mathematical Problem Papers.* 2s. 6d. Blackie.

[For pupils under about seventeen. Answers and hints.]

Oliver & Boyd's Educational Series.—The Tweeddale Arithmetics: (1) Book VI., 8d.; (2) Answers to Books I.-V., I.-III., 3d. each; IV.-V., 6d. each.

[In noticing Books I.-V. the other month we said: "The answers to the exercises are not given." Here they are in five nicely got-up books. Book VI. worthily completes an excellent series.]

## SCRIPTURE.

The Century Bible.—(1) Ephesians, Colossians, Philemon, Philippians. Edited by the Rev. G. Currie Martin, M.A., B.D. (2) Revelation. Edited by the Rev. C. Anderson Scott, M.A. Jack.

[Excellent additions to an admirable series.]

Hamer, Rev. C. J.: *The New Testament History for Young Students.* 1s. Allman.

[Simple narrative; lucid; not critical.]

The Semitic Series.—(1) *The Early History of Syria and Palestine.* By Lewis Bayles Paton, Ph.D. (2) *The Theology and Ethics of the Hebrews.* By Archibald Duff, M.A., LL.D., B.D. 5s. net each. Nimmo.

[Able and instructive. Excellent get up.]

Whitham, Rev. A. R., M.A.: *Handbook to the History of the Hebrew Monarchy to the Accession of Solomon.* 2s. 6d. Rivingtons.

[For teachers and students. Sketch map. Text (revised edition), with footnotes; thirty-one schemes of lessons, matter and method in parallel columns; blackboard summaries; strong Church tone.]

## EDUCATION.

American Teachers' Series.—*The Teaching of History and Civics in the Elementary and the Secondary School.* By Prof. Henry E. Bourne, B.A., B.D. 6s. net. Longmans.

[Part I. on "The Study and Teaching of History." Part II.—"The Course of Study"—a review of the general field.]

Benson, A. C.: *The Schoolmaster.* 5s. net. Murray.

[“A Commentary upon the aims and methods of an Assistant Master in a Public School.” Does “not profess to be a scientific educational treatise.”]

Bodkin, Rev. Richard C., C.M.: *How to Reason.* 1s. net. Browne & Nolan (Dublin).

[“The A B C of logic reduced to practice in analyzing essays, speeches, books.” Acute and stimulating.]

De Montmorency, J. E. G., B.A., LL.B.: *State Intervention in English Education.* 5s. net. Cambridge University Press.

[“A short history from the earliest times down to 1833 . . . the first date on which the monies of Parliament were voted for elementary educational purposes in Great Britain.”]

Findlay, J. J., Ph.D.: *Principles of Class Teaching.* 5s. Macmillan.

[“Written with a very practical purpose.” Systematic exposition. Main principles advanced have already “been put to a somewhat severe test” in practice.]

Haldane, R. B., M.P., LL.D., K.C.: *Education and Empire.* 5s. net. Murray.

[“Addresses on certain topics of the day.” “More than ever as science tends increasingly to reduce Nature to subjection, education becomes important.”]

Knox, Right Rev. E. A., D.D., Bishop of Coventry: *Pastors and Teachers.* 5s. net. Longmans.

[Six lectures on “Pastoral Theology.” Introduction by the Bishop of Worcester. “Impossible to divide the education of a child into two water-tight compartments, one labelled religious, and the other secular.”]

Langlois, Ch.-V.: *Questions d'Histoire et d'Enseignement.* 3fr. 50. Hachette.

[Ten articles reprinted from reviews and partly re-written. “L'histoire ancienne du haut enseignement, les récentes réformes dans l'enseignement supérieur, les questions relatives aux sanctions de l'enseignement historique, à la méthode et aux destinées des études historiques et à l'organisation du travail scientifique en général.”]

O'Donnell, F. Hugh, M.A.: *The Ruin of Education in Ireland, and the Irish Fanar.* 5s. net. Nutt.

[“Experiences of Irish education, in the form of an outline of evidence for the University Commission.” Outspoken.]

Report of the United States Commissioner of Education for 1899-1900. Vol. II. Washington: Government Printing Office.

[Most interesting and instructive.]

Rooper, T. G.: *Educational Studies and Addresses.* 2s. 6d. net. Blackie.

[Most of them were read before various branches of the Parents' National Educational Union, and nearly all have appeared in the *Parents' Review*.]

Wright, G. Lionel: *The Vocal System (How Children may Read at the age of six).* 1s. net. Clifton, Bristol: the Author.

[By means of blackboard and *viva voce*.]

## MISCELLANEOUS.

Art-Workers' Quarterly. Vol. I., No. 3, July. 2s. 6d. net. Chapman & Hall.

[With large coloured plate of Hardwicke tapestry and 8 other supplementary plates. Handsome and artistic.]

Board of Education: *Revised Instructions applicable to the Code of 1902.* Eyre & Spottiswoode.

Cassell's Living London. Vol. I. Edited by George R. Sims. 12s. cloth; 16s. half leather.

[Extremely interesting and varied series of articles on “forms and phases of London life, from the highest to the lowest.” Lavishly and effectively illustrated.]

Cricknet Album, *The Golden Penny, 1902.* 2d. 190 Strand.

[“Special articles by an expert, giving the records of the Australians and the story of each first-class county club in England.” Photographic groups and character sketches.]

Cricknet of To-day and Yesterday. Parts IV.-VIII. 7d. net each. Jack.

[Fully maintains its original promise.]

Dawbarn & Ward's Rural Handbooks.—(1) *Outdoor Carpentry.* By S. Walter Newcomb. (2) *Garden and Grounds: how to lay out and arrange.* By T. W. Sanders, F.L.S., F.R.H.S. 6d. net each.

[Practical, sensible, and usefully illustrated.]

Familiar Wild Flowers. Figured and described by F. Edward Hulme, F.L.S., F.S.A. Seventh Series. 3s. 6d. Cassell.

[New volume. Charming and instructive. 40 plates.]

Kerner and Oliver: *Natural History of Plants.* Parts II. and III. 1s. 6d. each. Blackie.

[Scientific, yet popular; excellent illustrations.]

Kyle, Galloway, F.R.S.L. *Flags and their Story: their Meaning and Uses.* 1s.; 2s. cloth. County Publishing Co. (Darlington).

[“An illustrated patriotic handbook.” Introductory note by Lord Charles Beresford, M.P. Interesting and careful. The author knows that the “Union Jack” is not a Jack.]

National Union of Teachers: *Report for 1902.* 1s. Bolton House, 67 and 71 Russell Square, W.C.

University Tutorial Series.—*Matriculation Directory, No. XXXII.* June, 1902. University Tutorial Press.

# Oxford University Press.

## Some Books for 1903 Examinations.

**Manuals of the New Testament.** By the Rev. T. H. STOKOE, D.D.

Vol. I. "The Four Gospels," 3s. 6d.; or separately, Part I, "The Gospel History"; Part II, "The Gospel Teaching," 2s. each.

Vol. II. "Life and Letters of St. Paul," 3s. 6d.; or separately, Part I, "Life of St. Paul"; Part II, "Letters of St. Paul," 2s. each.

**Old Testament History for Schools.** By the same Author. Third Edition. Part I: From the Creation to the Settlement in Palestine. Part II: From the Settlement to the Disruption of the Kingdom. Part III: From the Disruption to the Return from Captivity. 2s. 6d. each, with Maps.

**Graduated Lessons on the Old Testament.** By the Rev. U. Z. RULE; edited by the Rev. Lt. J. M. BERR. In 3 Vols., with Maps. In paper boards, with cloth back, 1s. 6d. each Volume; in cloth, 1s. 9d.

**Helps to the Study of the Book of Common Prayer.** Being a Companion to Church Worship. By W. R. W. STEPHENS, B.D., Dean of Winchester. 2s.

### ENGLISH.

**Chaucer.—Prologue to the Canterbury Tales.** Edited by W. W. SKEAT, Litt.D. 1s.

— **The Complete Works of Geoffrey Chaucer.** Edited, from numerous Manuscripts, by the same Editor. With Glossarial Index and Portrait. 3s. 6d. Printed on Oxford India Paper, 8s.

**Shakespeare.—Macbeth.** Edited by W. G. CLARK, M.A., and W. A. DIS WRIGHT, D.C.L. 1s. 6d.

— **Midsummer Night's Dream.** Edited by W. ALDIS WRIGHT, D.C.L. 1s. 6d.

**Milton.—The Poetical Works of John Milton.** Edited, after the Original Texts, by H. C. BEECHING, M.A. With Portrait and Facsimile Title-pages. 3s. 6d. Printed on India Paper, cloth extra, 8s.; and in leather bindings.

— **Comus.** Edited by R. C. BROWNE, M.A. 6d.

**Addison.—Selections from Papers in the "Spectator."** Edited by T. ARNOLD, M.A. 4s. 6d.

**Scott.—Lady of the Lake.** Edited by W. MINTO, M.A. 3s. 6d.

— **Talisman.** Edited by H. B. GEORGE, M.A. 2s.

**A Primer of Historical English Grammar.** By HENRY SWEET, M.A., Ph.D. 2s.

**A Primer of English Etymology.** Second and Revised Edition. By W. W. SKEAT, Litt.D. 1s. 6d.

**Poems of English Country Life.** Selected, with Introduction and Notes, by H. B. GEORGE, M.A., and W. H. HADOW, M.A. 2s.

### LATIN.

**Cornelius Nepos.—Selected Lives.** With Notes, Maps, Vocabularies, and English Exercises. By J. B. ALLEN, M.A. 1s. 6d.

**Caesar.—De Bello Gallico.** Edited by C. E. MOBERLY, M.A. Second Edition. Books III–V, 2s. 6d.; VI–VIII, 3s. 6d.

**Cicero.—Select Orations. In Verrem Actio Prima, Philippica IX, &c.** Edited by J. R. KING, M.A. Second Edition. 2s. 6d.

### LATIN—continued.

**Cicero.—Pro Milone.** Edited by A. B. POYNTON, M.A. New and Revised Edition. 2s. 6d.

**Horace.—The Odes, Carmen Seculare, and Epodes.** Edited by E. C. WICKHAM, D.D. Second Edition. 6s.

**Livy.—Book XXI.** Edited by M. T. TATHAM. 2s. 6d.

**Ovid.—Tristia. Book I.** Edited by S. G. OWEN, M.A. Second Edition, Revised. 3s. 6d.

— **Tristia. Book III.** By the same Editor. 2s.

**Phaedrus.—The Fables.** Edited by ROBINSON ELLIS. 1s. net.

**Virgil.—Aeneid. Books IV–VI.** Edited by T. L. PAPILLON, M.A., and A. E. HAIGH, M.A. 2s.

### GREEK.

**Euripides.—Medea.** Edited by C. B. HEBERDEN, M.A. Second Edition. 2s.

— **Alcestis.** Edited by C. S. JERRAM, M.A. 2s. 6d.

**Homer.—Iliad.** With Introduction, brief Homeric Grammar, and Notes, by D. B. MONRO, M.A. Books I–XII. 6s.

— **Odyssey. Books VII–XII.** Edited by W. W. MERRY, D.D. 3s.

**Lucian.—Vera Historia.** Edited by C. S. JERRAM, M.A. Second Edition. 1s. 6d.

**Thucydides.—Book III.** Edited by H. F. FOX, M.A. 3s. 6d.

**Xenophon.—Vocabulary to the Anabasis.** By J. MARSHALL, M.A. 1s. 6d.

— **Anabasis. Book I.** With Map. By the same Editor. 2s. 6d.

— **Memorabilia.** By the same Editor. 4s. 6d.

### FRENCH AND GERMAN.

**A Concise French Grammar, including Phonology, Accidence, and Syntax, with Historical Notes.** For use in Upper and Middle Forms. By ARTHUR H. WALL, M.A. 4s. 6d.

**Molière.—Le Misanthrope.** Edited by H. W. GEGG MARKHEIM, M.A. 3s. 6d.

**Hoffmann.—Heute mir, Morgen dir.** Edited by J. H. MAUDE, M.A. 2s.

**Schiller.—Maria Stuart.** Edited by C. A. BUCHHEIM, Phil.Doc. 3s. 6d.

### HISTORY.

**A School History of England.** Down to the death of Queen Victoria. With Maps, Plans, and Bibliographies. By various writers. 3s. 6d.

**Relations of Geography and History.** By H. B. GEORGE, M.A. With two Maps. 4s. 6d.

### MATHEMATICS.

**Arithmetic.** By R. HARGREAVES, M.A. 4s. 6d.

COLLEGE OF PRECEPTORS.

Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

PRACTICAL CRITICISMS AND SUGGESTIONS ON TEACHING.

To be delivered by The Rev. Canon EVAN DANIEL, M.A., F.C.P., Formerly Principal of the Battersea Training College.

The Second Course of Lectures (Thirtieth Annual Series) will commence on Friday, September 26th, at 7 p.m.

The Course is mainly based on criticism lessons actually given before the Lecturer, and will draw attention to the more serious errors that young teachers commit, and to the ways in which they may be avoided. Special pains will be taken to connect the Art with the Science of Education, and to refer success and failure in teaching to the observance and violation respectively of natural laws.

SYLLABUS.

I. *Preparation of Lessons.*—Need of full and fresh Knowledge—Sources of Information—Need of Arrangement—Notes of Lessons—Limits and Aims of Lessons—Divisions of Lessons—Provision of Apparatus, Illustrations, Maps, &c.—Provision for securing Co-operation of Pupils—Provision for testing Success of Lessons.

II. *Method.*—Not to be selected arbitrarily—Regulated by Interdependence of Knowledge and by Laws of Mind—General Principles—From the Simple to the Complex—From the Indefinite to the Definite—From the Concrete to the Abstract—The Genesis of Knowledge in the Race—From the Empirical to the Rational—Independent Discovery of Truth.

III. *Apparatus, Experiments, and Illustrations.*—Things always more impressive than Words—Need of Appeals to the Senses—Specimens for Individual Examination—Graphic Representations—Enlarged Drawings of Parts—Need of some Indication of Scale—Experiments—Need of Judgment in Selecting—Rehearsal of Experiments—Registration of Results as arrived at—Relative Value of Pictures, Drawings, Blackboard Sketches, Models—Function of Teacher in all Lessons appealing to the Mind through the Senses.

IV. *Questions and Answers.*—Uses that may be made of Questions—Introductory—To secure Co-operation—Disciplinary—Resumptive—Questions directing Observation—appealing to Memory—to Imagination—to Conceptive Faculty—to Judgment—to Reason—Common Faults in Questioning—Language—Length—Form—Order—Treatment of Children's Errors—Answers Wholly Wrong Partially Wrong—Examinations—Construction of Papers—Modes of Marking—Teacher's Use of Blunders.

V. *The Kindergarten.*—The Senses our first Teachers—Limits to their Training—The Habit of Observation—Nature's Method—Artificial Education—Froebel's Services to Education—Utilization of Childish Instincts—Gifts and Occupations—Principles of the Kindergarten applicable to the later stages of Education—Transition from Kindergarten to Ordinary School too Abrupt—Object Lessons—Elementary Science—Treatment.

VI. *Reading, Writing, and Drawing.*—Analytic and Synthetic Methods of Teaching—Reading—Spelling—Dictation Lessons—Reading Aloud—Writing—Analysis of Letters—Mullhauser's Method—Locke's—Cowham's—Scientific Criticism of Writing—Drawing—Training of Eye and Hand—Object Drawing—Analysis—Directed Observation—Simultaneous Drawing Lessons.

VII. *Arithmetic and Geometry.*—First Notions of Numbers—Composition and Decomposition of Numbers—Notation—Numeration—Arithmetical Rules to be established by the Method of Discovery—Arithmetical Tables and their Illustration—Rules presenting Special Difficulty—Mental Arithmetic—Paper Work—Excellences to be insisted on—Accuracy and Rapidity—Euclid—Introduction to Blackboard Work—Deductions.

VIII. *Grammar and Teaching of Languages.*—Grammar contained in Language, and to be sought there—Parts of Speech to be classified and defined by Pupils—Accidence to be collected by Pupils—Syntax to be discovered and formulated by Pupils—Parsing—Analysis of Sentences—Need of Logical Consistency in Grammar—Languages learnt with different Objects in view—for mere Reading—for Speaking and Writing—Methods appropriate to each—Lessons for Young Children—for more Advanced Pupils.

IX. *English Literature.*—Aims of Teacher—Authors and Pieces suitable for different Ages—Method of Teaching English Literature illustrated by Examples—Simple Poems—Romantic Epics—Shakespeare—Milton—Essays—Preparation by Pupils—Paraphrasing—History of English Literature—Manuals—Examinations in English Literature—Criticism.

X. *Geography.*—Home Surroundings—Maps—Globe—Order of Treatment determined by Interdependence of Physical Facts—Physical Geography—Political Geography—Commercial Geography—Physiography—Sources of Information—Illustrations needed—Models.

XI. *History.*—Starting-point—Order of Time—Regressive Order—Early Lessons—Episodes—General Notions—Detailed Study of Special Periods—Mode of treating Biographies—Illustrations—Pictorial—Literary—Busts—Coins—Facsimiles—Synchronistic Charts—Original Authorities—Use of Text-books at different Stages—Constitutional History—Duties of Citizenship.

XII. *Discipline.*—Attendance—Punctuality—Order—Attention—School-rules—Motives appealed to—The Teacher's Eye—Rewards and Punishments—Emulation—Public Opinion—Characteristics of good Discipline as regard Means and Ends—School Tone—Formation of Habits—Character.

The Fee for the Course of Twelve Lectures is Half-a-Guin.

The Lectures will be delivered on FRIDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

MATHEMATICS.

Geometrical Note.

By R. F. DAVIS, M.A.

EUCLID'S Propositions II. 11 and IV. 10 might very well be dispensed with if the inscription of the regular decagon in a given circle were allowed to precede that of the pentagon.

(i.) Let O be the centre and OA the radius of a given circle. Along the tangent at A take TA = 2OA. Draw TPOQ. Then shall TP be the length of the side of the regular decagon inscribed in the circle whose radius = QP (= 2OA).

For TP.TQ = TA<sup>2</sup> = QP<sup>2</sup>; then compare (ii.).

(ii.) Let PR be the side of a regular decagon inscribed in a circle centre Q. Produce QP to T so that TP = PR, and join TR. Then PQR = 2π/10 = π/5; QPR (= QRP) = 2π/5, since QP = QR; P<sup>2</sup>TR = PRT = π/5, since TP = PR; therefore TR = QR = QP, TR touches the circle about QPR, and TP.TQ = TR<sup>2</sup> = QP<sup>2</sup>.

15088. (Rev. T. WIGGINS, B.A.)—(1) Of numbers between 1 and 20, how many sets of 3, 4, or 5 can be found such that the square of one number in each set equals the sum of the squares of the remaining numbers in the same set? Also, if the numbers from 1 to 100 are taken, how many sets of 3 numbers satisfy the above conditions? No set should be a multiple of any other. (2) Find in two ways a<sub>1</sub>, a<sub>2</sub>, ... a<sub>6</sub>, such that a<sub>1</sub><sup>2</sup> = a<sub>2</sub><sup>2</sup> + a<sub>3</sub><sup>2</sup> = a<sub>4</sub><sup>2</sup> + a<sub>5</sub><sup>2</sup> = a<sub>6</sub><sup>2</sup> + a<sub>7</sub><sup>2</sup> = a<sub>8</sub><sup>2</sup> + a<sub>9</sub><sup>2</sup>, where each of the a's lies between 1 and 100, but the suffixes have no reference to order of magnitude.

Solution by Lt.-Col. ALLAN CUNNINGHAM, R.E.

Assuming that in the solutions of

(i.) e<sup>2</sup> = a<sup>2</sup> + b<sup>2</sup>, (ii.) d<sup>2</sup> = a<sup>2</sup> + b<sup>2</sup> + c<sup>2</sup>, (iii.) e<sup>2</sup> = a<sup>2</sup> + b<sup>2</sup> + c<sup>2</sup> + d<sup>2</sup>,

no two of the numbers are to be alike in any one solution, the solutions with numbers > 20 are as follow:

(i.) 5<sup>2</sup> = 3<sup>2</sup> + 4<sup>2</sup>, 13<sup>2</sup> = 12<sup>2</sup> + 5<sup>2</sup>, 17<sup>2</sup> = 15<sup>2</sup> + 8<sup>2</sup>; total 3.

(ii.) Writing for shortness d(a, b, c) for d<sup>2</sup> = a<sup>2</sup> + b<sup>2</sup> + c<sup>2</sup>, 7(6, 3, 2); 9(8, 4, 1); 11(9, 6, 2); 13(12, 4, 3); 15(14, 5, 2); 15(11, 10, 2); 17(12, 9, 8); 19(18, 6, 1); 19(15, 10, 6); total 9.

(iii.) Writing for shortness e(a, b, c, d) for e<sup>2</sup> = a<sup>2</sup> + b<sup>2</sup> + c<sup>2</sup> + d<sup>2</sup>, 11(10, 4, 2, 1); 13(10, 8, 2, 1); 13(10, 7, 4, 2); 15(14, 4, 3, 2); 15(12, 8, 4, 1); 15(10, 8, 6, 5); 15(11, 8, 6, 2); 15(13, 6, 4, 2); 17(14, 8, 5, 2); 17(12, 10, 6, 3); 17(13, 10, 4, 2); 17(11, 10, 8, 2); 19(16, 8, 5, 4); 19(16, 10, 2, 1); 19(14, 10, 7, 4); 19(14, 10, 8, 1); 19(12, 10, 9, 6); total 17.

Next, with numbers > 100 the solutions of (i.) are (the value of e is given for shortness)

e = 5, 13, 17, 25, 29, 37, 41, 53, 61, 65, 65, 73, 85, 85, 89, 97; total 16; as e may be any prime of form (4w + 1), or any power or product of such primes, the products 65, 85 are counted twice (each giving two solutions).

(2) The only solutions with numbers > 100 are

65<sup>2</sup> = 39<sup>2</sup> + 52<sup>2</sup> = 25<sup>2</sup> + 60<sup>2</sup> = 63<sup>2</sup> + 16<sup>2</sup> = 33<sup>2</sup> + 56<sup>2</sup>;

85<sup>2</sup> = 51<sup>2</sup> + 68<sup>2</sup> = 75<sup>2</sup> + 40<sup>2</sup> = 13<sup>2</sup> + 84<sup>2</sup> = 77<sup>2</sup> + 36<sup>2</sup>;

as 65, 85 are the only numbers (< 100) which contain two unequal prime factors each of the form (4w + 1).

Note to 15088 By the PROPOSER.

In the form e(a, b, c, d) 5 other sets may be found, viz.,

9(2, 4, 5, 6); 14(1, 5, 7, 11); 18(1, 3, 5, 17); 18(3, 5, 11, 13); 18(5, 7, 9, 13).

Also if two of the numbers may be alike in the form d(a, b, c), the total becomes 14; and if two or three of the numbers in the form e(a, b, c, d) are alike, the total is increased to 52.

15107. (I. ARNOLD.)—There are two opposite inclined planes each inclined to the horizon at an angle of 15°, viz., AB and BC; and touching each other at B. The planes are 100 feet long each; and a small perfectly smooth metallic ball rolls down AB and then ascends BC. In what time will the ball come to rest between the two planes?

Solution by M. PERINS.

Let h be the height of either plane. When the ball comes to B it has a

velocity of  $\sqrt{2gh}$  in the direction AB acquired in time  $\sqrt{2gh}/g \sin 15^\circ$ .

The component,  $\sqrt{(2gh) \cos 30^\circ}$ , of this velocity along BC takes the ball up that plane to a height of  $h \cos^2 30^\circ$  feet in time  $[\sqrt{(2gh)/g \sin 15^\circ} \cos 30^\circ]$ , and when the ball comes down the plane CB to B it has a velocity of  $\sqrt{(2gh) \cos 30^\circ}$  in time  $[\sqrt{(2gh)/g \sin 15^\circ} \cos 30^\circ]$ . As before, the component,  $\sqrt{(2gh) \cos^2 30^\circ}$ , of this velocity along AB takes the ball up that plane to a height of  $h \cos^4 30^\circ$  in time  $[\sqrt{(2gh)/g \sin 15^\circ} \cos^2 30^\circ]$ . In coming down AB the ball takes the same time. So the whole time (in seconds) taken before the ball comes to rest is the sum of the infinite series  $\sqrt{(2gh)/g \sin 15^\circ} + 2[\sqrt{(2gh)/g \sin 15^\circ} \cos 30^\circ + 2[\sqrt{(2gh)/g \sin 15^\circ} \cos^2 30^\circ + \dots]$

This is  $= [\sqrt{(2gh)/g \sin 15^\circ} + 2[\sqrt{(2gh)/g \sin 15^\circ} \cos 30^\circ [1 + \cos 30^\circ + \cos^2 30^\circ + \dots]]$   
 $= [\sqrt{(2gh)/g \sin 15^\circ} (1 + 2 \cos 30^\circ) [1/(1 - \cos 30^\circ)]]$   
 $= \sqrt{(200/g \sin 15^\circ)} [2(1 + \sqrt{3})]/(2 - \sqrt{3})$   
 $= 100 \text{ secs. nearly,}$

since  $h = 100 \sin 15^\circ = 5\sqrt{2} (1 + \sqrt{3})^{\frac{1}{2}} (2 + \sqrt{3})$ .

**15054.** (G. F. S. HILLS.)—There are six confocals to  $x^2/a^2 + y^2/b^2 = 1$ , such that quadrilaterals circumscribed to this ellipse are inscribed in the confocal, and the six values of  $\lambda [x^2/(a^2 + \lambda) + y^2/(b^2 + \lambda) = 1]$  are given by  $(\lambda^2 - a^2b^2)(\lambda^2 + 2b^2\lambda + a^2b^2)(\lambda^2 + 2a^2\lambda + a^2b^2) = 0$ .

Solutions (I.) by R. F. WHITEHEAD; (II.) by the PROPOSER.

(I.) If the lines XY, YX', X'Y', Y'X be  $(lx \pm my \pm nz = 0)$  referred to the triangle PQR, any conic touching them is of the form

$$ax^2 + by^2 + cz^2 = 0,$$

where  $l^2/a + m^2/b + n^2/c = 0 \dots (1)$ .

Also any conic through  $XYX'Y'$  will be of the form

$$(lx + my + nz)(lx + my - nz)$$

$$+ \theta (lx - my + nz)(-lx + my + nz) = 0$$

$$\text{or } l^2x^2 + m^2y^2 - n^2z^2 + 2\mu lmx + 2\mu mny = 0$$

$$[\text{where } \mu = (1 + \theta)/(1 - \theta)].$$

Hence  $\Delta = abc$ ,  $\Theta = bc^2 + cam^2 - abn^2 = -2abn^2$  [from (1)],

$$\Theta' = -am^2n^2 - bn^2l^2 + c^2m^2(1 - \mu^2) = abn^2/c + c^2m^2(1 - \mu^2) \text{ [from (1)],}$$

$$\Delta' = -l^2m^2n^2(1 + \mu^2);$$

therefore  $\Theta' = a^2b^2n^4/\Delta - c\Delta'/n^2 = \Theta^2/4\Delta + 2\Delta\Delta'/\Theta$ .

This is the invariant condition that a quadrilateral may be drawn about S and in S'.

If now S be  $bx^2 + ay^2 - ab = 0$ , and S' be a confocal

$$(b + \lambda)x^2 + (a + \lambda)y^2 - (a + \lambda)(b + \lambda) = 0,$$

we have  $\Delta = -a^2b^2$ ,  $\Delta' = -(a + \lambda)^2(b + \lambda)^2$ ,

$$\Theta' = -(a + \lambda)(b + \lambda)[(a + \lambda)\lambda + 3ab], \quad \Theta = -ab[\lambda^2 + 2(a + b)\lambda + 3ab];$$

whence, on reduction, we have

$$\lambda^6 + 2(a + b)\lambda^5 + 5ab\lambda^4 - 5a^2b^2\lambda^2 - 2a^2b^2(a + b)\lambda - a^3b^3 = 0,$$

$$\text{or } (\lambda^2 - ab)(\lambda^2 + 2a\lambda + ab)(\lambda^2 + 2b\lambda + ab) = 0.$$

(II.) Take the conics

$$S \equiv x^2/p^2 + y^2/q^2 = 1, \quad S' = ax^2 + 2bxy + \dots + c = 0.$$

Take points whose eccentric angles are  $\alpha, \beta, \gamma, \delta$  on the first; then the pole of  $\beta\gamma$  for it lies on S' if

$$(ap^2 - bq^2 + c) \cos \beta \cos \gamma + (bq^2 - ap^2 + c) \sin \beta \sin \gamma + ap^2 + bq^2 + c + 2gp(\cos \beta + \cos \gamma) + 2fq(\sin \beta + \sin \gamma) + 2hpq \sin(\beta + \gamma) = 0 \dots (i.),$$

on slight reduction,

Hence, if we draw a quadrilateral circumscribing S, touching at points  $\alpha, \beta, \gamma, \delta$ , the corners all lie on S', if the four equations of type (i.) between  $\alpha\beta, \beta\gamma, \gamma\delta, \delta\alpha$  hold. This is a poristic system, and the condition for its existence is

$$\begin{vmatrix} ap^2 - bq^2 + c & 2hpq & 2gp \\ 2hpq & bq^2 - ap^2 + c & 2fq \\ 2gp & 2fq & ap^2 + bq^2 + c \end{vmatrix} = 0.$$

In the case of confocals

$$f = g = h = 0, \quad c = -1, \quad a = 1/(p^2 + \lambda), \quad b = 1/(q^2 + \lambda);$$

$$\text{hence } [p^2/(p^2 + \lambda) - q^2/(q^2 + \lambda) - 1] [q^2/(q^2 + \lambda) - p^2/(p^2 + \lambda) - 1] \times [p^2/(p^2 + \lambda) + q^2/(q^2 + \lambda) - 1] = 0,$$

$$\text{or } (\lambda - p^2q^2)(\lambda^2 + 2q^2\lambda + p^2q^2)(\lambda^2 + 2p^2\lambda + p^2q^2) = 0.$$

Note the above condition for porism can be obtained thus: Let

$$f(\alpha\beta) = a \cos \alpha \cos \beta + b \sin \alpha \sin \beta + c + h \sin(\alpha + \beta) + g(\cos \alpha + \cos \beta) + f(\sin \alpha + \sin \beta).$$

Then the four equations  $f(\alpha\beta) = 0, f(\beta\gamma) = 0, f(\gamma\delta) = 0, f(\delta\alpha) = 0$  exist only if a certain relation hold.

Now  $f(\beta\theta) = 0, f'(\delta\theta) = 0$  have the same roots for  $\theta$ , viz.  $\theta = \alpha, \theta = \gamma$ ; hence, equating the coefficients of  $\cos \theta, \sin \theta$ , and the constant term,

$$a \cos \beta + h \sin \beta + g = h \cos \beta + b \sin \beta + f = g \cos \beta + f \sin \beta + c = \lambda$$

$$a \cos \delta + h \sin \delta + g = h \cos \delta + b \sin \delta + f = g \cos \delta + f \sin \delta + c = \lambda.$$

Eliminate  $\cos \beta - \lambda \cos \delta, \sin \beta - \lambda \sin \delta, 1 - \lambda$ ; we get

$$\begin{vmatrix} a & h & g \\ h & b & f \\ g & f & c \end{vmatrix} = 0.$$

**14877.** (ROBERT W. D. CHRISTIE.)—Factorize  $3e^4 + \{f(e-f)\}^2$ .

E.g. :  $1483181587 = 24841 \times 59707.$

Solutions (I.) by H. W. CURJEL, M.A., and others; (II.) by Lt.-Col. ALLAN CUNNINGHAM, R.E.; (III.) by the PROPOSER.

(I.)  $3e^4 + \{f(e-f)\}^2 = (3e^2 - 3ef + f^2)(e^2 + ef + f^2)$ ;

and, putting  $e = 149$  and  $f = 16$ , we get

$$1483181587 = 24841 \times 59707.$$

(II.) Let  $N = \{f(e-f)\}^2 + 3e^4 \dots \dots \dots (1)$ .

Here  $N = A^2 + 3B^2 \dots \dots \dots (2)$ .

Hence every factor (F) of N is of same form (2).

Let  $N = F' \cdot F'' = (A' + 3B') \cdot (A'' + 3B'') \dots \dots \dots (3)$ .

Then  $N = (A'A'' \mp 3B'B'')^2 + 3(A'B'' \pm B'A'')^2 \dots \dots \dots (4)$ .

Here three cases arise according as  $e, f$  are odd or even.

Cases (i.), (ii.) ( $e$  odd).—Taking the two upper signs in (4),

$$N = (A'A'' - 3B'B'')^2 + 3(A'B'' + B'A'')^2 = A^2 + 3B^2.$$

Now take  $A' = e + \frac{1}{2}f, B' = \frac{1}{2}f, A'' = \frac{1}{2}f, B'' = e - \frac{1}{2}f$ .

Therefore  $A = (e + \frac{1}{2}f) \frac{1}{2}f - \frac{3}{2}f(e - \frac{1}{2}f) = -f(e - f)$ ;

$$B = (e + \frac{1}{2}f)(e - \frac{1}{2}f) + (\frac{1}{2}f)^2 = e^2.$$

Case (i.) ( $e$  odd,  $f$  even).—Take  $f' = f$ ; then

$$A = -f(e - f), \quad B = e^2.$$

Case (ii.) ( $e$  odd,  $f$  even).—Take  $f' = (e - f)$ ; then

$$A = -(e - f)f, \quad B = e^2.$$

Thus, in both cases, (i.), (ii.), the product (3) reduces to the required form (1).

Case (iii.) ( $e$  even,  $f$  odd).—Taking the two lower signs in (4),

$$N = (A'A'' + 3B'B'')^2 + 3(A'B'' - B'A'')^2 = A^2 + 3B^2.$$

Now take  $A' = f - \frac{3}{2}e, B' = \frac{1}{2}e, A'' = f + \frac{1}{2}e, B'' = \frac{1}{2}e$ .

Therefore  $A = (f - \frac{3}{2}e)(f + \frac{1}{2}e) + 3(\frac{1}{2}e)^2 = f(e - f)$ ;

$$B = (f - \frac{3}{2}e) \frac{1}{2}e - \frac{1}{2}e(f + \frac{1}{2}e) = -e^2;$$

so that here also the product (4) reduces to the required form (1).

Ex. of (i.).— $N = 1483181587 = 2128^2 + 3 \cdot 149^4; e = 149, f(e - f) = 16 \cdot 133$ ; take  $f = 16 = f'$ . Here

$$A' = 157, \quad B' = 8, \quad A'' = 8, \quad B'' = 141;$$

$$F' = 157^2 + 3 \cdot 8^2 = 24841, \quad F'' = 8^2 + 3 \cdot 141^2 = 59707.$$

Ex. of (ii.).—[Same as in (i.)];  $e = 149, f(e - f) = 16 \cdot 133$ ; take  $f = 133, f' = 16$ ; and the rest of the work is as in Case (i.).

Ex. of (iii.).— $N = 44161 = 119^2 + 3 \cdot 10^4; e = 10, f = 23$ . Here

$$A' = 8, \quad B' = 5, \quad A'' = 28, \quad B'' = 5;$$

$$F' = 8^2 + 3 \cdot 5^2 = 139, \quad F'' = 28^2 + 3 \cdot 5^2 = 859.$$

(III.) The given expression  $= \{e^2 + ef + f^2\} \{e^2 + e(e - f) + (e - f)^2\}$ .

If  $e$  be composite, we can eliminate  $f^4$  and obtain

$$3g^4 + (g - 1)^2 = 3(k^2 + 1)^4 + k^4 = \{(k^2 + 1)^2 + (k^2 + 1) + 1\} \{(k^2 + 1)^2 + (k^2 + 1)k^2 + k^4\},$$

an expression which leads to further developments.

**10236.** (ARTEMAS MARTIN, LL.D.)—What is the greatest number of equal spheres, each 1 inch in diameter, that can be packed in a hollow sphere whose internal diameter is 3 inches?

Solution by J. BLAIKIE, M.A.

It seems clear that 13 is the greatest number. Seven equal spheres may be arranged with their centres in one plane through the centre of the hollow sphere, so that the central sphere is touched by the other six. Three spheres may be placed above and three below, and thus the central sphere will be touched by twelve spheres, and each of the enveloping spheres will touch five equal spheres as well as the outer sphere of 3 inches diameter. It would also be possible to arrange the twelve enveloping spheres at the corners of an icosahedron, and in that case each would touch the central

sphere, but the enveloping spheres would not touch each other. For, if O, A, B, C, D, E be six adjacent vertices of an icosahedron of which A, B, C, D, E are in one plane, and if OL be drawn perpendicular to this plane, it is easy to calculate that

$$OL^2 = AB^2(3 + \sqrt{5})/(10 + 4\sqrt{5}),$$

which is greater than  $\frac{1}{2}AB$ , since  $4(3 + \sqrt{5})$  is greater than  $10 + 4\sqrt{5}$ . Thus, if OL be produced its own length to O', an equal sphere whose centre was at O' would not touch the sphere O, and the central sphere touching the twelve spheres whose centres are at the vertices of the icosahedron and whose radii are each equal to half an edge, is less than each of the enveloping spheres. If then an equal sphere be placed at the centre, each of the enveloping spheres will be pushed out radially, and they will cease to touch each other, but the additional space is clearly insufficient to admit a fourteenth sphere.

**14961.** (H. BATEMAN.)—The axis of a parabola circumscribing a triangle is a SIMSON line with respect to the triangle formed by joining the middle points of the sides.

Solutions (I.) by Professor SANJANA, M.A.; (II.) by A. M. NESBITT, M.A., and L. ISSERLIS.

(I.) Let a parabola be circumscribed about the triangle  $abc$ , so that  $qrs$ , the axis, makes an angle  $\theta$  with  $bc$ ; let  $ABC$  be the triangle formed by joining the mid-points of the sides of  $abc$ . Then

$$\angle CQR = \theta, \quad \angle AST = \theta - B, \\ \angle CRT = \theta + C;$$

and it is well known that the distances of B and C from that SIMSON-line of  $ABC$  which makes the angle  $\theta$  with  $BC$  are respectively

$$2R \sin \theta \sin(\theta - B) \cos(\theta + C) \quad \text{and} \quad 2R \sin \theta \sin(\theta + C) \cos(\theta - B),$$

where R is the radius of the circumcircle of  $ABC$ .

If the coordinates of  $a, b, c$  be  $x_1y_1, x_2y_2, x_3y_3$  respectively, we have

$$y_2^2 - y_1^2 = 4a(x_2 - x_1);$$

therefore  $(y_2 + y_1)(y_2 - y_1)(x_2 - x_1) = 4a$ ;

therefore  $2y_c \tan(\theta - B) = 4a$  or  $y_c = 2a \cot(\theta - B)$ ,

$y_c$  being the ordinate of C. Similarly,

$$y_b = 2a \cot(\theta + C), \quad y_a = 2a \cot \theta.$$

But  $y_c - y_a = CA \sin(\theta + C) = 2R \sin B \sin(\theta + C)$ ;

so that  $2a \{\cot(\theta - B) - \cot \theta\} = 2R \sin B \sin(\theta + C)$

and  $a = R \sin \theta \sin(\theta - B) \sin(\theta + C)$ .

Thus  $y_b = 2R \sin \theta \sin(\theta - B) \cos(\theta + C)$

and  $y_c = 2R \sin \theta \sin(\theta + C) \cos(\theta - B)$ .

Hence the axis  $qrs$  is a SIMSON-line of the triangle  $ABC$ .

(II.) Let 123 be the triangle, A, B, C the mid-points of the sides, and let BC meet the axis in L, CA in M, and AB in N. Then, if the coordinates of 1 be  $(am_1^2, 2am_1)$ , &c., the equation to AC (which bisects 23 and is parallel to 13) is

$$\frac{y - a(m_2 + m_3)}{x - \frac{1}{2}a(m_2^2 + m_3^2)} = \frac{2}{m_1 + m_3};$$

therefore the abscissa of M is  $\frac{1}{2}a(m_2^2 - \Sigma)$ , where

$$\Sigma \equiv m_2m_3 + m_3m_1 + m_1m_2,$$

and the equation of a line through M perpendicular to AC is

$$y/[x - \frac{1}{2}a(m_2^2 - \Sigma)] = -\frac{1}{2}(m_1 + m_3).$$

Interchanging  $m_1$  and  $m_2$ , we get the line through L perpendicular to BC, and at once we find that these meet in the point  $(-a\Sigma, \frac{1}{2}a\Pi)$ , where

$$\Pi \equiv (m_2 + m_3)(m_3 + m_1)(m_1 + m_2).$$

Symmetry shows that the line through N perpendicular to AB passes through the same point. It is, moreover, easily seen that this point—call it P—is on the circle through ABC. For the axis (K) and the three sides of the triangle ABC form a system of four lines, and it is known

that in such a system the four circles round the four triangles obtained by suppressing each line in turn have a common point. But the circle AMN circumscribes the triangle formed by omitting BC, the circle BNL that formed by omitting CA, and the circle CLM that formed by omitting AB; and these obviously all pass through P; therefore the circle ABC passes through P. Hence the perpendiculars from P, a point on the circle ABC, to the sides of the triangle ABC, meet those sides in three points L, M, N, which lie on the axis of the parabola.

**15051.** (R. KNOWLES.)—Prove that the sum to  $r$  terms of the series  $1 - 6 + 15 - 28 \dots \pm r(2r-1)$ , when  $r$  is an even number,  $= -\frac{1}{2}r(2r+1)$ , and, when  $r$  is an odd number,  $= \frac{1}{2}(r+1)(2r-1)$ .

Solutions (I.) by Lt.-Col. ALLAN CUNNINGHAM, R.E., and C. A. B. GARRETT; (II.) by H. B. GOODWIN, and J. H. TAYLOR, M.A.; (III.) by T. PEELE, A.I.A.

(I.) Let  $S_r$  = sum of  $r$  terms, and take the terms in pairs. When  $r$  is even,

$$S_r = (1-6) + (15-28) + (45-66) + \&c. \\ = -(5+13+21+\&c. \text{ to } \frac{1}{2}r \text{ terms}) \\ = -\{10 + (\frac{1}{2}r-1)8\} \cdot \frac{1}{2}r = -\frac{1}{2}r(2r+1).$$

When  $r$  is odd,  $S_r = 1 + (-6+15) + (-28+45) + \&c.$   
 $= 1 + 9 + 17 + 25 + \&c. \text{ to } \frac{1}{2}(r+1) \text{ terms}$   
 $= \{2 + \frac{1}{2}(r-1)8\} \cdot \frac{1}{2}(r+1) = \frac{1}{2}(r+1)(2r-1).$

(II.) When the number of terms is even, the series may be written

$$2 - 2 \cdot 2^2 + 2 \cdot 3^2 - 2 \cdot 4^2 \dots \\ -1 + 2 - 3 + 4 \dots \text{ to } r \text{ terms,}$$

or  $2(-3-7-11-15 \dots \text{ to } \frac{1}{2}r \text{ terms}) + \frac{1}{2}r$ ;

where  $S = 2 \cdot \frac{1}{2}r \{-6 + (\frac{1}{2}r-1)(-4)\} + \frac{1}{2}r = -\frac{1}{2}r(2r+2) + \frac{1}{2}r = -\frac{1}{2}r(2r+1)$ .

If the number of terms is odd, and  $= r$ , then  $(r-1)$  is even; consequently, by the formula proved above, the sum of  $(r-1)$  terms is  $-\frac{1}{2}(r-1)(2r-1)$ . Adding the  $r$ -th term, namely,  $r(2r-1)$ , we have for the whole sum

$$-\frac{1}{2}(r-1)(2r-1) + 2r^2 - r \text{ or } \frac{1}{2}(2r^2 + r - 1) = \frac{1}{2}(r+1)(2r-1).$$

(III.) Let  $t_p$  = numerical value of the  $p$ -th term,  $s_p = t_{2p-1} - t_{2p}$ ,

$S_p$  = sum of  $p$  terms of the original series,  $s_p = -(8p-3)$ ;

$$S_{2n} = \sum_{p=1}^{n} s_p = -n(4n+1).$$

Put  $2n = r$ :

$$S_r = -\frac{1}{2}r(2r+1) \quad (r \text{ even}),$$

$$S_{2n-1} = S_{2n} + t_{2n} = -n(4n+1) + 2n(4n-1) = n(4n-3).$$

Put  $2n-1 = r$ :

$$S_r = \frac{1}{2}(r+1)(2r-1) \quad (r \text{ odd}).$$

**15084.** (A. M. NESBITT, M.A.)—If  $u_r$  denote the chance that of  $r$  letters intended for  $r$  different recipients and placed at random into  $r$  envelopes correctly addressed, not one shall reach its proper destination (disregarding errors of delivery, &c.), it is fairly obvious a priori that

$$u_n + u_{n-1} \cdot 1! + u_{n-2} \cdot 2! + \dots + u_0 \cdot n! = 1.$$

Solve this difference equation directly; i.e., prove that  $u_n$  = the first  $n+1$  terms of the expansion of  $e^{-1}$  without reference to the problem from which it originally sprang.

Solution by Professor NANSON.

If  $v_n = n! u_n$  and E is defined by  $E v_n = v_{n+1}$ , the given equation is

$$(E+1)^n v_0 = n!.$$

Hence  $u_n = \frac{1}{n!} E^n v_0 = \sum (-1)^r \frac{1}{r!(n-r)!} (E+1)^r v_0 = \sum (-1)^r \frac{1}{(n-r)!}$ ,

the result required.

QUESTIONS FOR SOLUTION.

**15185.** (Professor S. SIMCOM.)—Show that

$$n^r - \binom{n}{2}(n-2)^r + \binom{n}{4}(n-4)^r - \binom{n}{6}(n-6)^r + \dots \\ = n \Delta^r \cdot 2^{1(n-1)} \cos(n-1) \frac{1}{2} \pi + \binom{n}{2} \Delta^{2r} \cdot 2^{1(n-2)} \cos(n-2) \frac{1}{2} \pi + \dots \\ \dots + \binom{n}{r} \Delta^{2r} \cdot 2^{1(n-r)} \cos(n-r) \frac{1}{2} \pi.$$

**15186.** (G. H. HARDY, B.A.)—Prove that

$$(i.) \int_0^{\pi} \frac{(\log \cos^2 ax)^2}{1+x^2} dx = 2\pi \left[ \left\{ \log \left( \frac{1+e^{-2a}}{2} \right) \right\}^2 + 2 \int_0^a \log(1+e^{-2a}) da \right]. \\ (ii.) \int_0^{\pi} \frac{(\log \sin^2 ax)^2}{1+x^2} dx = 2\pi \left[ \left\{ \log \left( \frac{1-e^{-2a}}{2} \right) \right\}^2 \right. \\ \left. + \frac{1}{2} \pi^2 + 2 \int_0^{\pi} \log(1-e^{-2a}) da \right].$$

(iii.)  $\int_0^x \log \cos^2 ax \log \sin^2 ax \, dx = 2\pi \left[ \log \left( \frac{1+e^{-2a}}{2} \right) \log \left( \frac{1-e^{-2a}}{2} \right) + \int_0^x \log(1-e^{-4a}) \, da \right]$ .

15187. (Professor LANGHORNE ORCHARD, M.A., B.Sc.)—Find the mean of all circles inscribed in a circle of unit radius.

15188. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—If  $\sum N$  denote the sum of the divisors of a number (including both 1 and  $N$ ), find  $L, M, N$  such that  $\int L = \int M = \int N = \Omega$  (an odd number).

15189. (R. W. D. CHRISTIE.)—If  $\sum N$  (any integer whatever) equal three triangulars, say  $a(2a+1) + (2m+1)(m+1) + (2n+1)(n+1)$ , find  $2N+1$  (any odd number) equal to four integral squares in terms of  $m, a, n$ .

15190. (Professor NANSON.)—If

$$\begin{aligned} A &= bc - f^2, \dots; & F &= gh - af, \dots; \\ A' &= b'c' - f'^2, \dots; & F' &= g'h' - a'f', \dots; \\ A_1 &= bc' + b'c - 2ff', \dots; & F_1 &= gh' + g'h - af' - a'f, \dots; \end{aligned}$$

prove that the equations

$$\begin{vmatrix} A & B & C & F & G & H \\ A' & B' & C' & F' & G' & H' \\ A_1 & B_1 & C_1 & F_1 & G_1 & H_1 \end{vmatrix} = 0$$

are equivalent to two relations; and if, further,

$$A_2 = BC' + B'C - 2FF', \dots; \quad F_2 = GH' + G'H - AF' - A'F, \dots;$$

prove that the equations

$$\begin{vmatrix} a & b & c & f & g & h \\ a' & b' & c' & f' & g' & h' \\ A_2 & B_2 & C_2 & F_2 & G_2 & H_2 \end{vmatrix} = 0$$

are also equivalent to two relations, and determine whether the two sets of relations are equivalent.

15191. (R. W. D. CHRISTIE.)—Factorize

$$AX^n + BX^{n-1} + CX^{n-2} \dots + Z = 0$$

for all values of  $n$ : e.g.,  $n = 3, A = 1, B = 2, C = 3, Z = 4, X = 10k + 1$ ; then the factors are

$$10 \{ 90(30 + 3 + 2) + 3(3 + 4 + 3) + 1 \} = 10 \times 3181.$$

15192. (R. C. ARCHIBALD, M.A., Ph.D.)—Show that the length of the first positive pedal of the cardioid  $r = 2a(1 - \cos \theta)$  with respect to its vertex is  $12a \left( 2 + \frac{1}{\sqrt{3}} \log(2 + \sqrt{3}) \right)$ .

15193. (A. S. TOMBE, B.A.)—A quartic has two cusps and a node; prove that the line joining the two points of inflexion, the line joining the two cusps, and the bitangent all pass through a common point. (Mentioned in SALMON'S *Higher Plane Curves*, p. 258.)

15194. (JAMES BLAIRIE, M.A.)—Obtain by means of a geometrical construction expressions for the diameter of the sphere circumscribing (1) a dodecahedron, (2) an icosahedron, in terms of the length of an edge. Prove from the result or otherwise that in the dodecahedron  $d^4 = 9a^2(a^2 - a^2)$ , and in the icosahedron  $d^4 = 5a^2(a^2 - a^2)$ , where  $a$  is the length of the edge,  $d$  the length of the diameter.

15195. (R. TUCKER, M.A.)—Prove

$$\begin{vmatrix} \cos B \cos C & -p \cos C & p \cos B \\ p' \cos C & \cos C \cos A & -p' \cos A \\ -p'' \cos B & p'' \cos A & \cos A \cos B \end{vmatrix} = \Pi(\cos A) \Pi(\cos B + \cos C - \cos A),$$

where  $p = \cos B - \cos C, p' = \cos C - \cos A, p'' = \cos A - \cos B$ .

15196. (C. E. YOUNGMAN, M.A.)—Three circles, each touching the other two, cut a fourth orthogonally, and touch a fifth; and the five radii are the reciprocals of  $u, v, w, x, y$ . Show that  $y = u + v + w \pm 2x$ , counting  $u$  negative when its circle incloses those of  $v$  and  $w$ .

15197. (Professor NANSON.)—Find the general equation of a conic passing through the intersections of a line  $L$  and a conic  $S$ , and through the intersections of a second line  $L'$  and a second conic  $S'$ .

15198. (Professor SANJANA, M.A.)—ACA', BCB' are two fixed conjugate diameters of a hyperbola, and CP, CD are two conjugate semi-diameters: if AP, BD meet in O, and A'P, B'D in Q, prove that PODQ is a parallelogram, whose diagonal OQ is of fixed length and lies along an asymptote. Find also the maximum area of this parallelogram.

15199. (Professor NEUBERG.)—Trouver le lieu du centre d'une quadrique passant par quatre points fixes et dont les axes sont parallèles à des droites données.

15200. (R. KNOWLES. Extension of Question 9764.)—A third tangent to a conic at a point R meets two tangents TP, TQ in MN; if O be the mid-point of MN, prove that (1) the diameter through O bisects TR; (2) if the polar of O meets PQ in F, FT is parallel to the tangent at R.

15201. (Professor COCHEZ.)—On donne une circonférence  $x^2 + y^2 = R^2$  et une droite  $D, x = a$  et un point  $M(a, \beta)$ . Par M on mène une sécante rencontrant D en A et la circonférence en B et C. Par B et C on mène les tangentes BP, CP et l'on joint PA. (1) Lieu de P; (2) lieu du milieu Q de PA; (3) lieu de M', projection de M sur PA.

15202. (R. CHARTRES.)—If the base of a triangle be the horizontal range of a projectile that passes through both the in-centre and the ortho-centre of the triangle, and if the in-circle passes through the centroid (suggested by Question 12641), find the ratio of the sides, the angle of projection, and the BROCARD angle.

15203. (A. M. NESBITT, M.A.)—A ball of mass A impinges obliquely upon another of mass B, which is in contact with an inelastic vertical wall, A's velocity before impact being perpendicular to the wall, the whole motion taking place upon a smooth horizontal table. If  $a$  be the angle between A's first direction and the line of impact, and  $\theta$  the angle of deviation of A, prove that  $\cot \theta \cot a = 1 + A/B$ .

15204. (V. DANIEL, B.Sc.)—From the greatest angle C of any triangle, a line CPP<sub>1</sub>P<sub>2</sub>... is drawn counterclockwise, so that each of the angles CPA, PP<sub>1</sub>C, ..., P<sub>n</sub>P<sub>n+1</sub>P<sub>n-1}, ... is equal to C. Similarly, CQQ<sub>1</sub>Q<sub>2</sub>... is drawn clockwise. Show that the limiting points thus determined within the triangle are the BROCARD points. [For the case  $C = \frac{1}{2}\pi$ , P and Q coincide; see Question 14189, Vol. LXXII., p. 43.]</sub>

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

8050. (Professor WOLSTENHOLME, M.A., Sc.D.)—The lengths of the edges OA, OB, OC of a tetrahedron OABC are respectively  $x + \cdot 1108, x$ , and  $x - \cdot 1108$ ; those of the respectively opposite edges BC, CA, AB are respectively  $x + 2 \cdot 9695, x + 2 \cdot 8587, x + 2 \cdot 7079$ ; the sum of the plane angles BOC, COA, AOB is  $2S$ , that of the dihedral angles at O is  $2s$ : prove that the minimum value of  $S - s$  is  $-0^\circ 2' 34'' \cdot 9$ , when  $x$  has the value  $6 \cdot 9099$  nearly.

8442. (Professor SARADARANJAN RAY, M.A.)—A number of equal spherical balls rest in contact arranged symmetrically round a centre of force, their centres all lying on a sphere whose centre is the centre of force; if the balls which surround a given ball touch one another in order, prove (1) that the number of balls must be either 4, 6, or 12; and the squares of the radii of each ball and of the sphere passing through the centres are in the ratios of  $\frac{2}{3}, \frac{1}{2}$ , or  $\frac{\sqrt{5}-1}{2\sqrt{5}}$ ; and find (2) what other arrangements would be possible if the balls which surround a given ball do not touch in order.

8839. (D. BIDDLE.)—A small sphere, perfectly elastic, after falling from rest through a distance  $h$ , strikes an inclined plane of indefinite dimensions, and rebounds from it again and again. Find the second and third points of contact, when the plane is inclined to the horizon at an angle (1) of  $45^\circ$ , (2) of  $30^\circ$ .

9076. (Professor NASH, M.A.)—If  $A\omega, B\omega, C\omega, A\omega', B\omega', C\omega'$  meet the circum-circle in X, Y, Z, X', Y', Z', show that (1) the triangles XYZ, X'Y'Z' are similar and equal to ABC, and are TUCKER'S triangles of another triangle A'B'C', similar and similarly situated to ABC, the centre of similitude being the pole of  $\omega\omega'$  with respect to the BROCARD circle; and (2) area A'B'C' : area ABC =  $\sin^2 3\omega : \sin^2 \omega$ .

9773. (B. PERICE.)—A un certain jeu, le joueur A. gagne un point chaque fois qu'il tire une boule blanche d'une urne qui contient 3 boules blanches et 2 boules noires; chaque fois qu'il tire une boule noire, il perd tous ses points, et B., qui ne fait jamais de tirage, en gagne un. Quelle est la probabilité pour A. de faire  $h$  points le premier? Cas particulier où  $h = 3$ .

9908. (Professor CATALAN.)—Démontrer que

$$1 + \frac{q}{1-q} + \frac{q^2}{(1-q)(1-q^2)} + \frac{q^3}{(1-q)(1-q^2)(1-q^3)} + \dots = 1 + \frac{q}{1-q} + \frac{q^4}{\{(1-q)(1-q^2)\}^2} + \frac{q^9}{\{(1-q)(1-q^2)(1-q^3)\}^3} + \dots$$

NOTICES TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor, Miss CONSTANCE I. MARKS, B.A., 10 Matheson Rd., West Kensington, W.

Vol. II. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price to Subscribers, 5s.; Non-Subscribers, 6s. 6d.

# Williams & Norgate's List.

## THE FRENCH LANGUAGE.

**Delbos.—The Student's Graduated French Reader.** For the Use of Public Schools. I.—First Year: Anecdotes, Tales, Historical Pieces. Edited, with Notes and a complete Vocabulary, by LÉON DELBOS, M.A., of H.M.S. "Britannia." Twelfth Edition. 166 pages. Crown 8vo, cloth, 2s. II.—Second Year: Historical Pieces and Tales. Edited, with Notes, by LÉON DELBOS, M.A., of H.M.S. "Britannia," late of King's College, London. Sixth Edition. 180 pages. Crown 8vo, cloth, 2s.

"It would be no easy matter to find a French reader more completely satisfactory in every respect than that of M. Delbos."—*Athenæum*.

"This is a very satisfactory collection from the best authors, selected with great care, and supplied with adequate notes. . . . A thoroughly good book of this kind should, in fact, be calculated to inspire a taste for literature in the student's mind. The volumes edited by M. Delbos fairly meet this requirement."—*Journal of Education*.

"The notes are critical and explanatory. The book is well printed and excellently got up."—*Educational Times*.

**Delbos.—Little Eugène's French Reader.** For Beginners. Anecdotes and Tales. Edited, with Notes and a complete Vocabulary. Fourth Edition. Crown 8vo, cloth, 1s. 6d.

This reader is intended for young children who have mastered the most elementary rules of French accidence, and who know their regular verbs.

**Victor Hugo.—Les Misérables.** Les Principaux Épisodes. Edited, with Life and Notes, by J. BOIELLE, Senior French Master, Dulwich College. 2 Vols. Crown 8vo, cloth, each 3s. 6d.

"May be pronounced a success. The selection has been made with judgment, and the notes are good."—*Athenæum*.

"A worthy addition to our stock of French reading-books, which will be welcomed by numberless masters. . . . M. Boielle's notes are full and to the point, his philology is sound, and his translations idiomatic."—*Journal of Education*.

"Has done extremely well in putting forth this selection of the most striking episodes of Victor Hugo's masterpiece, and has done it well."—*Educational Times*.

"Has produced a manual which has the merit of presenting the style of the greatest French writer of the century."—*Scotsman*.

**Victor Hugo.—Notre-Dame de Paris.** Adapted for the use of Schools and Colleges. By J. BOIELLE, H.A., Senior French Master, Dulwich College. 2 Vols. Crown 8vo, cloth, each 3s.

"His notes abound in good renderings of sentences and phrases, opportune remarks on the proper meanings of words, and historical information necessary to elucidate the text."—*Athenæum*.

"His famous work, adapted with commendable taste and judgment. . . . presents every factor which could be put together to make a perfect school-book."—*Spectator*.

"Equipped in the same excellent manner as the same author's 'Misérables.' . . . Makes an admirable school-book."—*Scotsman*.

## GRAMMARS AND EXERCISES.

### FOR PUBLIC SCHOOLS WHERE LATIN IS TAUGHT.

**Eugène's The Student's Comparative Grammar of the French Language.** With an Historical Sketch of the Formation of French. For the use of Public Schools. With Exercises. By G. EUGÈNE FASNACHT, late French Master, Westminster School. Twenty-first Edition, thoroughly Revised. Square crown 8vo, cloth, 5s. Or, separately, Grammar, 3s.; Exercises, 2s. 6d.

"The appearance of a grammar like this is in itself a sign that great advance is being made in the teaching of modern as well as of ancient languages. . . . The rules and observations are all scientifically classified and explained. . . . Mr. Eugène's book is one that we can strongly recommend for use in the higher forms of large schools."—*Educational Times*.

"In itself this is in many ways the most satisfactory grammar for beginners that we have as yet seen."—*Athenæum*.

**Eugène's French Method.** Elementary French Lessons. Easy Rules and Exercises preparatory to the "Student's Comparative French Grammar." By the same Author. Seventeenth Edition. Crown 8vo, cloth, 1s. 6d.

"Certainly deserves to rank among the best of our elementary French exercise books."—*Educational Times*.

"To those who begin to study French, I may recommend, as the best book of the kind with which I am acquainted, Eugène's Elementary Lessons in French. It is only after having fully mastered this small manual and exercise book that they ought to begin the more systematic study of French."—Dr. BREYMAN, Lecturer on the French Language and Literature, Owens College, Manchester (Preface to "Philological French Grammar").

**Eugène's Comparative French-English Studies.** Grammatical and Idiomatic. Being an entirely Rewritten Edition of the "French Exercises for Middle and Upper Forms." Sixteenth Edition. Cloth, 2s. 6d.

**Boielle (James).—French Composition through Lord Macaulay's English.** Edited, with Notes, Hints, and Introduction, by JAMES BOIELLE, B.A., Univ. Gall. Senior French Master, Dulwich College, &c., &c. Crown 8vo, cloth, 3s. per volume.

Vol. I. Frederick the Great.

Vol. II. Warren Hastings.

Vol. III. Lord Clive.

"This, we may say at once, is an exceedingly useful idea, well carried out, and one of the best things of its class that we have seen. . . . We can pronounce the equivalence of the idioms recommended to be quite unusually just."—*Saturday Review*.

"This volume is obviously the work of a practical teacher, produced, or rather begotten, not in the closet, but in the class-room, and—what is rarer—of a teacher equally conversant with both languages. In reviewing the two previous volumes we explained and expressed our approval of M. Bioielle's method of teaching French composition, and it is sufficient to say that the present essay is as fully and judiciously annotated as the two previous ones."—*Journal of Education*.

**Delbos (L.).—The Student's French Composition.** on an entirely New Plan. With Introduction and Notes. (In use at Harrow, Eton, &c.) Crown 8vo, cloth, 3s. 6d.

In the first part of this work is given an almost word-for-word imitation of the English as it should appear when turned into French, and as that imitation is on the same page as the correct English text, the student will have something more than notes to guide his faltering steps. All the pieces contained in Part I. are the result of actual class work, and that most contained in Part II. have also been used with the advanced pupils.

"The passages are carefully chosen and have been proved by use in class. . . . Will be found most useful."—*Journal of Education*.

**Roget (F. F.).—First Steps in French History, Literature, and Philology.** For Candidates for the Scottish Leaving-Certificate Examinations, the various Universities' Local Examinations, and the Army Examinations. Crown 8vo, cloth, 5s.

"This manual will be a boon to many who have neither time nor inclination to work through a large volume on the history of French literature, but who yet desire to obtain a knowledge sufficient to enable them to pigeon-hole their reading of French prose and poetry."—*Educational Times*.

"He has displayed qualities which are rarer and more trustworthy than mere erudition."—*Saturday Review*.

**Roget (F. F.).—An Introduction to Old French.** By F. F. ROGET, of Geneva University, late Tutor for Comparative Philology, Edinburgh. History, Grammar, Chronology, and Glossary. Second Edition, with Map of French Dialects. Crown 8vo, cloth, 6s.

The work is not intended to be an exhaustive Grammar, but an *introduction* to the larger works by Bartsch, Clehat, Darmstetter, &c. It is eminently suitable for use with classes of advanced students.

## THE GERMAN LANGUAGE.

**Weisse's Complete Practical Grammar of the German Language.** With Exercises on Conversation, Letters, Poems, and Treatises, &c. Fourth Edition, almost entirely Rewritten. Crown 8vo, cloth, 6s.

"We have no hesitation in pronouncing this the fullest and most satisfactory German grammar yet published in England."—*Journal of Education*.

**Weisse's Short Guide to German Idioms.** Being a Collection of the Idioms most in use. With Examination Papers. 8vo, cloth, 2s.

This book of German Idioms will be found to be a fairly complete collection of such phrases as come under this designation, being commonly used both by good writers and in ordinary conversation: while the arrangement in alphabetical order of the characteristic or cue-words will make it easy for the student to refer to any particular expression.

**Möller (A.).—A German Reading Book.** A Companion to Schlatter's "German Class Book." New Edition. Corrected to the Official German Spelling. With a complete Vocabulary. 12mo, cloth, 2s.

The anecdotes and tales forming the Reader have been carefully selected, and are arranged so that the pieces are shortest at the beginning and gradually become more difficult.

**Hein's German Examination Papers.** Comprising a complete set of German Papers set at the Local Examinations in the four Universities of Scotland. By G. HEIN, Aberdeen Grammar School. Crown 8vo, cloth, 2s. 6d.

**A Short Sketch of German Literature.** Prepared for the Scottish Leaving Certificate Examinations. By VIVIAN PHILLIPPS, B.A., Fettes College. Thoroughly Revised. Second Edition. Pott 8vo, 1s.

**Apel's Short and Practical German Grammar for Beginners.** with copious Examples and Exercises. Third Edition. 12mo, cloth, 2s. 6d.

Intended for students who cannot command a sufficient amount of time for a full acquisition of that difficult tongue, but who nevertheless wish to obtain a fair knowledge of it within a brief period, and in the least laborious manner possible.

**Apel (M.).—German Prose Stories for Beginners** (including Lessing's Prose Fables), with an Interlinear Translation in the natural order of Construction. Second Edition. 12mo, cloth, 2s. 6d.

## SCHOOL DICTIONARIES.

Uniform in Binding. Price 3s. 6d.

**James (William) and C. Stoffel.—German-English and English-German Dictionary.** Complete Grammatical Dictionary of the German and English Languages. 1009 pages. 8vo. Thirty-fourth Edition. Special cloth binding.

**James (William) and A. Molé.—French-English and English-French Dictionary.** With Tables of Irregular Verbs. 1000 pages. Fifteenth Edition. Crown 8vo, special cloth binding.

**Larsen (A.).—Danish, Norwegian, and English Dictionary.** Third Revised and Enlarged Edition. 688 pages. Large 8vo, strongly bound, half roan, 12s. 6d.

**Rosing (S.).—English and Danish Dictionary.** Seventh Edition. 540 pages. Large 8vo, strongly bound, half roan, 11s. 6d.

Now ready. Third Hundred Thousand.

**Kiepert's Atlas Antiquus.** Twelve Maps of the Ancient World. For Schools and Colleges. By Dr. HENRY KIEPERT. Eleventh Edition, Improved, Corrected, and Enlarged, with List of Names. Folio, boards, 6s.; cloth, 7s. 6d.

Recently Published, demy 8vo, 3s. net, with large Plate and numerous Illustrations in the Text.

**Medical Indoor Gymnastics; or a System of Hygienic Exercises for Home Use.** To be practised anywhere without Apparatus or Assistance by Young and Old of either Sex for the Preservation of Health and General Activity. By D. G. M. SCHREIBER, M.D., late Director of the Orthopedic and Medicinal-Gymnastic Institution in Leipzig. Revised and Supplemented by RUDOLF GRAEFE, M.D. Translated from the Twenty-sixth German Edition. Invaluable to both Teachers and Scholars.

# EDUCATIONAL WORKS BY A. K. ISBISTER, M.A., LL.B.

(LATE DEAN OF THE COLLEGE OF PRECEPTORS.)

## LATIN AND GREEK.

Sixteenth Edition, with Map. 12mo.

### **CÆSAR'S COMMENTARIES on the GALLIC WAR.**

- BOOKS I.-V. With Notes Critical and Explanatory,  
a Vocabulary of all the Words in the Text, and  
Easy Reading Lessons for Beginners ..... price 3s. 6d.  
BOOKS I.-VII. do. do. 4s. 6d.  
Do. (without the Reading Lessons) ..... 4s. 0d.

Twenty-fifth Edition.

- BOOK I. (with Vocabulary, Reading Lessons, &c.) ..... 1s. 6d.

Fourteenth Edition. 12mo, price 3s. 6d.

### **XENOPHON'S ANABASIS, Books I. to III.** With Notes, Vocabulary of all the Words in the Text, and a Series of Easy Reading Lessons for Beginners. Designed as a First Greek Reading Book in Schools.

## ELOCUTION.

Tenth Edition. 12mo, price 3s. 6d.

### **THE ILLUSTRATED PUBLIC SCHOOL SPEAKER**

**AND READER**, based on Grammatical Analysis, comprising a choice Selection of pieces for Reading and Recitation, annotated for Expression, Emphasis, and Pauses, and illustrated by Diagrams and Figures exhibiting to the eye the appropriate gestures and positions; to which is added a selection of Greek, Latin, French, and German Extracts, suitable for "Speech Days" at Public Schools.

New Edition. 12mo, price 1s. 6d.

### **LESSONS IN ELOCUTION AND EXPRESSIVE**

**READING FOR BOYS**, based on Grammatical Analysis; with a choice selection of Extracts for Reading and Repetition, classified, under heads for practice in various styles of Reading, and annotated for Expression, Emphasis, and Pauses, illustrating the theory of Emphasis and Pauses.

New Edition. 12mo, price 1s. 6d.

### **LESSONS IN ELOCUTION AND EXPRESSIVE**

**READING FOR GIRLS**, based on Grammatical Analysis; with a choice selection of Extracts for Reading and Repetition, classified, under heads for practice in various styles of Reading, and annotated for Expression, Emphasis, and Pauses, and the Analysis of Sentences, with the figure [of a Girl] showing the proper attitude in Reading.

## ENGLISH GRAMMAR.

Nineteenth Edition. 16mo, 1s. 6d.; or in Two Parts, price 9d. each.

### **THE ELEMENTS OF ENGLISH GRAMMAR AND COMPOSITION**, including the Analysis of Sentences, simplified for Beginners.

Tenth Edition. 12mo, price 6d.

### **A FIRST BOOK OF ENGLISH GRAMMAR, GEOGRAPHY, AND ENGLISH HISTORY.** With Arithmetical Tables, Dates, &c.

Eleventh Edition. 12mo, price 1s. 6d.

### **FIRST STEPS IN READING AND LEARNING:** a Reading-Book for Beginners, designed to utilize the time of those learning to read, by presenting, in a series of Easy Reading and Writing Lessons, a First Course of Scripture and English History, Geography, English Grammar, Spelling, and Arithmetic, interspersed with Moral Lessons and Simple Poetry for Repetition.

## GEOMETRY.

Sixth Edition. 12mo, price 3s. 6d.

**THE COLLEGE EUCLID:** Comprising the First Six and portions of the Eleventh and Twelfth Books read at the Universities. Chiefly from the Text of Dr. SIMSON. With a new arrangement of the Figures and Demonstrations: the Enunciations of the Propositions separately for Self-Examination, apart from the Text; Notes and Questions on each Book; and a Series of Geometrical Problems for Solution, from the most recent University Examination Papers.

Fifteenth Edition. 12mo, price 2s. 6d.

**THE SCHOOL EUCLID:** Comprising the First Four Books. With Questions, Geometrical Exercises, &c.

THE SCHOOL EUCLID, Books I. & II. With Questions, Exercises, &c. 12mo, price 1s. 6d.

THE SCHOOL EUCLID, Book I. With Questions, &c. 12mo, price 1s.

New Edition. 12mo, price 9d.

**THE COLLEGE AND SCHOOL EXAMINER IN EUCLID**, containing the Enunciations of all the Propositions in the College and School Editions, Questions on the Definitions, Arithmetical and Algebraical Demonstrations of the Propositions in Books II. and V., and a large collection of Geometrical Problems for Solution. Designed for Class and Self-Examination, and adapted to all Editions of Euclid.

Third Edition. 12mo, price 1s. 6d.

**FIRST STEPS TO EUCLID:** Comprising the Propositions of Book I., prepared for writing out, with a recapitulation of the steps of the Demonstration appended to each. Forming a Text-book for the above.

Fifth Edition. Two Quarto Copy Books, price 6d. each.

**THE GEOMETRICAL COPY-BOOK.** Arranged for writing out the Propositions of Euclid in the Abbreviated and Symbolical Form adopted in the Universities and Public Schools.

## ARITHMETIC.

Ninth Edition. 12mo, price 1s.; or, with Answers, 1s. 6d.

**UNITARY ARITHMETIC.** Embodying the First Book of Arithmetic of the Irish National Board. With numerous additional Examples, and selections from recent Examination Papers; and a full exposition of the "Unitary" System, or Method of Working Arithmetic *without rules*.

\* \* \* In this Edition, Questions in Proportion, Practice, Interest, Stocks, Partnership, Profit and Loss, &c., are, by the "Unitary" Method, solved by a single rule.

## BOOK-KEEPING.

New Edition. 18mo, price 9d.

**THE ELEMENTS OF BOOK-KEEPING**, by SINGLE and DOUBLE ENTRY; with Practical Explanations and Exercises on the most useful Forms for Business.

4to, 1s. each.

**ENGRAVED ACCOUNT BOOKS.** Ruled and Interleaved for Copying, adapted to the above.

No. I. Business Forms. 1. Bills of Parcels and Book Debts. 2. Invoices. 3. Account Sales. 4. Receipts. 5. Promissory Notes and Drafts. 6. Bills of Exchange.

No. II. Day-Book and Cash-Book.

No. III. Ledger, Index, and Balance Sheet.

# MR. EDWARD ARNOLD'S EDUCATIONAL LIST.

# EDUCATIONAL REVIEW.

Edited by **NICHOLAS MURRAY BUTLER.**

"We find the 'Educational Review' absolutely indispensable at every turn."—MICHAEL E. SADLER, Director of Special Inquiries and Reports, Board of Education, London, England. September 13, 1901.

"I wish I could tell you how much of stimulus and inspiration I get from reading the 'Educational Review.' The educational world can never repay you for the work you have put into that richly stored magazine. I have just gone through the entire twenty-one volumes in order to get some things that I especially desired, and I am simply amazed at what I find in those volumes."—WILBUR P. GORDY, High School, Hartford, Conn. September, 1901.

"To men like myself it is a sort of working library. Its volumes stand always at my elbow."—Prof. PAUL H. HANUS, Harvard University.

"The broadest and most able of the American periodicals devoted to education."—*New York Times*.

"An educational magazine of which the teaching profession may well be proud. There is nothing better in educational journalism in any country. And it has an editor who has convictions, and the courage of them."—*School and Home Education*, Bloomington, Ill.

"The 'Review' has from the first issue taken its place at the head of American periodicals devoted to education. It is, indeed, the first educational paper in America to win for our country the respect of educationalists abroad."—*Journal of Pedagogy*, Ypsilanti, Mich.

14s. 6d. a Year, 1s. 10d. a Copy. Ten Numbers, none being issued for July and August. Current numbers kept in stock.

**GINN & COMPANY,**  
*Educational Publishers,*

**LONDON, BOSTON, AND NEW YORK.**  
9 St. Martin's Street, Leicester Square, London, W.C.

GINN & COMPANY, the leading Educational Publishers of America, have now established a house of business in London, under the management of Mr. FRED. J. MATHESON.

Some of the specialties among the books published by this firm are the "College Series" of Greek and Latin Authors, the "Latin and Greek School Classics," the "International Modern Language Series," books on Anglo-Saxon, and a large assortment of English Classics, edited respectively for children and for students.

Much attention has been attracted by GINN & COMPANY'S books on Nature Study.

Myers' "General History" has met with great favour in England, since it deals with World History as no book published in England does.

Books sent on approval for inspection.

Catalogues will be sent post free to all applying for them.

GINN & COMPANY, 9 St. Martin's Street, Leicester Sq., London, W.C.

## *Educational Publications.*

**ALGEBRA FOR THE USE OF SCHOOLS AND COLLEGES.** By WILLIAM THOMSON, M.A., B.Sc., F.R.S.E., Professor of Mathematics, Stellenbosch College; formerly Assistant Professor of Mathematics in the University of Edinburgh. Crown 8vo, cloth, 4s. 6d.; with the Answers in one, 5s.; the Answers separately, 1s. 6d.

"The sets of examples, and the working out of the examples, evince the skill of a practised algebraist."—*Saturday Review*.

**ART.—ELEMENTARY HISTORY OF ART.** By N. D'ANVERS. Fourth Edition, revised and brought up to date. With 375 Engravings. Crown 8vo, 10s. 6d.; or in two parts, in plainer binding:—I. Architecture and Sculpture, 5s.; II. Painting: Ancient and Modern, 6s.

**GEOGRAPHY.—PHYSICAL GEOGRAPHY.** By A. GUYOT. Profusely Illustrated. 4to, 10s. 6d.

**GEOGRAPHY.—ECLECTIC PHYSICAL GEOGRAPHY.** By R. HINMAN. With numerous Illustrations. Crown 8vo, 5s.

**GEOMETRY.—A PRIMER OF ORTHOGRAPHIC PROJECTION (SOLID GEOMETRY, &c.).** By G. T. PLUNKETT. Crown 8vo, 2s. 6d.

**GRAMMAR.—AN ENGLISH GRAMMAR WITH ANALYSIS AND PROSODY.** For the use of Teachers and the Higher Classes in Schools. By S. E. STRONGE, M.A., Q.U.I., Inspector of Schools; and A. R. EAGAR, M.A., T.C.D., First Senior Moderator, and sometime Professor of English Language at Alexandra College, Dublin. Crown 8vo, cloth, 3s.

"The book is thoughtfully and carefully written; its explanations are clear; its views generally sound, and there is a refreshing absence of the numerous little slips so frequent in the definitions of even the best grammars."—*Educational Times*.

**HEAT.—A SCHOOL COURSE IN HEAT.** Revised and Enlarged. By W. LARDEN, M.A., Assistant Master in the R.N.E. College, Devonport; late Science Scholar, Merton College, Oxford. Fifth Edition. Enlarged and re-written. Crown 8vo, cloth, 5s.

A Text-book at Rugby, Clifton, Cheltenham, Bedford, Birmingham, Uppingham, and other eminent Schools and Colleges.

"Distinguished by the simplicity of the language and the copiousness of the illustrations and analogies employed."—*Academy*.

**HISTORY.—SCHOOL CHRONOLOGY; OR, THE GREAT DATES OF HISTORY.** By the Rev. W. J. CONYBEARE, M.A., sometime Fellow of Trinity College, Cambridge. New Edition by the Rev. EDWARD CONYBEARE. 16mo, paper cover, 1s.

**HISTORY.—OUTLINES OF ROMAN HISTORY.** Four Periods on Sheet. By ASHLEY BICKERSTETH, B.A. 4to, 2s. 6d.

**LOGARITHMS TO SEVEN PLACES, A NEW MANUAL OF.** By C. BRUHNS. New Edition. Royal 8vo, 6s.

**MECHANICS.—A TEXT-BOOK OF MECHANICS AND HYDROSTATICS.**

By HERBERT HANCOCK, M.A., F.R.A.S., F.R.Met.Soc., late Scholar and Triple Prizeman at St. John's College, Cambridge, Lecturer on Geometry to the Architectural Association, London. With over 400 Diagrams. Crown 8vo, cloth extra, 5s.

"This book is the embodiment of a series of notes which the author had written for his own use when lecturing on this subject. He has now so arranged them that by the help of copious illustrative examples and diagrams taken from common objects the student may be able to master the fundamental principles upon which a knowledge of mechanics and hydrostatics is based. In order that those who have not hitherto acquired much knowledge of mathematics may have some tools to work with, Mr. Hancock has explained the method of measuring angles and the geometrical meanings of the terms used in plane trigonometry; and throughout the book he has described each portion of this subject in so simple a manner that there should be no difficulty in obtaining a very useful knowledge of these sciences. The author has attached to each chapter a large number of questions, the answers to which are given at the end of the book. Many of these questions are taken from the matriculation examinations of the University of London, and those of the Royal Military Academy, Woolwich, and exemplify the kind of problems generally set by examiners."—*Builder*.

"A text-book which is well devised to make the student think for himself, the best training he can possibly have."—*English Mechanic*.

**PHYSICAL EDUCATION.—HOW TO GET STRONG AND HOW TO STAY SO.** By WILLIAM BLAIKIE. With Illustrations. 16mo, cloth. A New and Enlarged Edition. 520 pages, cloth extra, 6s.

This Edition contains 224 pages more than the previous Editions, and also numerous additional Illustrations.

**PHYSICAL EDUCATION.—SOUND BODIES FOR OUR BOYS AND GIRLS.**

By WILLIAM BLAIKIE. With numerous Illustrations. 16mo, cloth, 2s. 6d.

**PHYSICAL EDUCATION.—A MANUAL OF SWEDISH DRILL FOR TEACHERS AND STUDENTS.** By GEORGE L. MELIO, Gold Medallist. New Edition. Crown 8vo, boards, 2s. 6d.

**PHYSICAL EDUCATION.—HEALTH AND CONDITION IN THE ACTIVE AND THE SEDENTARY.** By DR. N. E. YORKE-DAVIES. Crown 8vo, 3s. 6d.; Revised and Cheaper Edition, 2s. 6d.

**PHYSICAL EDUCATION.—HOW TO BRING UP YOUR CHILDREN.** Being an Essay on Education. By JOHN LOCKE ("The Great Philosopher," 1632-1704). 1s. net.

**PHYSICAL SCIENCE.—SHORT STUDIES IN PHYSICAL SCIENCE.** By VAUGHAN CORNISH, M.Sc. Illustrated. Crown 8vo, cloth, 5s.

**THERMO-DYNAMICS:** Treated with Elementary Mathematics; and containing applications to Animal and Vegetable Life, Tidal Friction, and Electricity. By J. PARKER, M.A. With numerous Diagrams. Crown 8vo, cloth, 10s. 6d. Supplementary Volume, crown 8vo, cloth, 6s.

The Examination will take place in London, and at the following Local Centres:—Birmingham, Bristol, Leeds, Liverpool.

Examination Fee, 2s.

Regulations and Entry Forms may be obtained on application to the Secretary of the College of Preceptors, Bloomsbury Square, W.C.

C. R. HODGSON, B.A., Secretary.

## COLLEGE OF PRECEPTORS.— (Bloomsbury Square, W.C.)

### LECTURES FOR TEACHERS ON THE SCIENCE AND ART OF EDUCATION.

#### THE PRACTICE OF EDUCATION.

To be delivered by the Rev. Canon EVAN DANIEL, M.A., formerly Principal of the Battersea Training College.

The Second Course of Lectures (Thirtieth Annual Series) commenced on Friday, September 26th, at 7 p.m.

The Course is mainly based on criticism lessons actually given before the Lecturer, and will draw attention to the more serious errors that young teachers commit, and to the ways in which they may be avoided. Special pains will be taken to connect the Art with the Science of Education, and to refer success and failure in teaching to the observance and violation respectively of natural laws.

For Syllabus, see p. 434.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

The Lectures will be delivered on Friday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C.

Members of the College have Free Admission to the Course.

C. R. HODGSON, B.A., Secretary.

### UNIVERSITY DIPLOMA FOR WOMEN.

THE UNIVERSITY OF ST. ANDREWS grants Diploma and Title of L.L.A. to WOMEN.

60 Examination Centres in Great Britain and abroad. For Prospectus, apply to the SECRETARY, L.L.A. Scheme, The University, St. Andrews, N.B.

Patron—HIS MAJESTY THE KING.

President—H.R.H. THE PRINCE OF WALES, K.G.

LOCAL CENTRE EXAMINATIONS held annually in March and April at all Centres. In London and a few Suburban Centres they are held in November and December as well as March and April. (See Syllabus A.)

SCHOOL EXAMINATIONS, held three times a year—viz., March and April, June and July, and October and November. (See Syllabus B.) Entries for the October-November Examination will be received on or before October 8th, 1902.

Specimen Theory Papers set in the Local Centre and School Examinations of 1896 to 1901, inclusive, can be obtained on application to the Central Office. Price 3d. per set, per year, post free.

Copies of Syllabuses A and B, and all information, will be sent on application to

JAMES MUIR, Secretary.

14 Hanover Square, London, W.

Telegraphic address: "Associa. London."

## ARMY SCHOOLMASTERS.—

There are a number of vacancies in the Corps of Army Schoolmasters. Civilian Schoolmasters only will be accepted who have passed on Second Year's Papers in the First or Second Division, or who hold a Certificate qualifying them to superintend Pupils Teachers from the Board of Education. Students in Training Colleges will also be accepted under certain conditions. Candidates must not be over twenty-four years of age. Accepted candidates will be required to join as soon as convenient.

Further particulars can be obtained on application (in writing) to the DIRECTOR OF ARMY SCHOOLS, War Office, London, S.W.

## LONDON COLLEGE OF MUSIC. (Incorporated.)

GREAT MARLBOROUGH STREET, LONDON, W.

Patron: HIS GRACE THE DUKE OF LEEDS.  
Dr. F. J. KARN, Mus. Bac. Cantab., Principal.  
G. AUGUSTUS HOLMES, Esq., Director of Examinations.

EXAMINATIONS in PIANOFORTE PLAYING, SINGING, THEORY, and all branches of Music will be held in London and 350 Provincial Centres in December, when certificates will be granted to all successful candidates.

The Higher Examinations in Practical and Theoretical Music for Diplomats of Associate (A.L.C.M.), Licentiate (L.L.C.M.), the Teachers' Diploma (L.C.M.), and Fellowship (F.L.C.M.), also take place in December.

SYLLABUS for 1902 containing particulars of (1) The Teachers' Diploma (L.C.M.), (2) The new Cumulative Certificate, and (3) Four Exhibitions value £6. 6s. each, may be had of the SECRETARY.

In the Educational Department students are received and thoroughly trained under the best professors at moderate fees. Day and Evening Classes are held.

The WINTER TERM commenced Monday, September 22nd.

A VACATION COURSE of Instruction in Special Subjects for Teachers and others is held at Easter, August, and Christmas.

T. WEEKES HOLMES, Secretary.

## LONDON MATRICULATION and PROFESSIONAL PRELIM. EXAMS.—

Mr. A. W. BAIN, B.A. (Lond.), Inter. B.Sc. (Lond.), F.C.S., Anglo-Saxon and Early English Text Society's Prizeman (Univ. Coll., Lond.), Silver Medallist and Exhibitor in Chemistry (Univ. Coll., Lond.), Honours in Theoretical and Practical Chemistry (S.K.), &c., holds Classes for these and other Examinations, at 207 Gray's Inn Road, London. Coaching in Science and Higher Mathematics, &c., for Degree Examinations by Private Tuition. 12 years' successes.

(Univ. Corr. Coll. London Office),

32 Red Lion Square, Holborn, W.C.

**UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.**

(A Constituent College of the University of Wales.)  
Principal—H. R. REICHEL, M.A., LL.D.

Next Session begins October 1st, 1902. The College Courses are arranged with reference to the Degrees of the University of Wales and include most of the Subjects for the B.A. and B.Sc. Degrees of the London University. Students may pursue their first year of Medical study at the College. There are special departments for Agriculture and Electrical Engineering, a Day Training Department for men and women and a department for the training of Teachers in Secondary Schools.

Sessional Fee for ordinary Arts Course, £11. 1s.; ditto for Intermediate Science or Medical course, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. The new Hall of Residence for women students in Upper Bangor—fee thirty guineas for the Session—is now open.

At the Entrance Scholarship Examination (held in September) more than twenty Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition. There are special Scholarships and Exhibitions reserved for Welsh Candidates.

For further information and copies of the various Prospectuses, apply to

JOHN EDWARD LLOYD, M.A.,  
Secretary and Registrar.

**UNIVERSITY COLLEGE OF NORTH WALES.**

(A Constituent College of the University of Wales.)  
DEPARTMENT FOR THE TRAINING OF SECONDARY TEACHERS.

Professor of Education—J. A. GREEN, B.A. (Lond.), assisted by Miss A. N. JOHNSTON, M.A., and Mr. F. FLETCHER, B.A.

Preparation is offered for the Teachers' Diploma of the University of Wales, and for the Cambridge Diploma (Theoretical and Practical). Facilities for Practical Training are provided at the two County Schools in Bangor. A Kindergarten and Preparatory School has also been established in connexion with and under the control of the Department, and a Course in preparation for the Higher Certificates of the National Froebel Union has been arranged.

Full particulars of the Courses, Fees, Scholarships, &c., may be had on application to the REGISTRAR.

**UNIVERSITY COLLEGE OF WALES, ABERYSTWYTH.**

(One of the constituent Colleges of the University of Wales.)

TRAINING DEPARTMENT FOR SECONDARY TEACHERS, MEN AND WOMEN.

Professor of the Theory, Practice, and History of Education—FOSTER WATSON, M.A. Lond.

Assistant-Lecturers—Miss C. P. TREMAIN, B.A. Lond.; D. R. HARRIS, B.A. Cantab. and Lond.

Preparation for (a) the Degrees in Arts and Science of the University of Wales, the curriculum for which includes the Theory and History of Education as an optional subject in the third year; (b) The Teachers' Diploma of the University of Wales; (c) Cambridge Teachers' Certificate, Theory and Practice; (d) London University Teachers' Diploma; (e) College of Preceptors' Diplomas.

Composition Fee for the Session (including Lectures and Practice) £10.

Men Students reside in registered lodgings in the town, or at the Hostel for Men Students. Warden—Prof. J. W. MARSHALL, M.A.

Women Students reside in the Hall of Residence for Women Students.

For General Prospectus of Science and Art Departments, also for Special Prospectuses of the Law, Normal and Agricultural Departments, and all other particulars, apply to

T. MORTIMER GREEN,  
Registrar.

**UNIVERSITY OF DURHAM.**

**DIPLOMA IN THEORY AND PRACTICE OF TEACHING.**

PARTICULARS of the Course of Training for Secondary Teachers and of the Examination for the above Diploma may be obtained from the SECRETARY OF EXAMINATIONS, North Bailey, Durham.

**BEDFORD COLLEGE FOR WOMEN**

(UNIVERSITY OF LONDON),  
YORK PLACE, BAKER STREET, W.  
Principal—Miss ETHEL HURLBATT.

The Session 1902-3 will open on Thursday, October 2nd.

Students are requested to enter their names on Wednesday, October 1st.

Lectures are given in all branches of General and Higher Education.

Taken systematically they form a connected and progressive Course, but a single Course of Lectures in any subject may be attended.

Courses are held in preparation for all Examinations of the University of London in Arts and Science, for the Teachers' Diploma (London), and for the Teachers' Certificate (Cambridge), and also a Special Course of Scientific Instruction in Hygiene. Six Laboratories are open to Students for Practical Work. Four Entrance Scholarships will be awarded in June, 1903. A Gladstone Memorial Prize and the Early English Text Society's Prize will be awarded to Students in June, 1903.

Students can reside in the College.  
Full particulars on application to the PRINCIPAL.

**BEDFORD COLLEGE FOR WOMEN**

(UNIVERSITY OF LONDON),  
YORK PLACE, BAKER STREET, W.

DEPARTMENT FOR PROFESSIONAL TRAINING IN TEACHING.

(Recognized by the Cambridge Syndicate.)

Head of the Department—Miss H. ROBERTSON, B.A.

The Third Term of the Session 1902 begins on Thursday, October 2nd.

The Course includes full preparation for the Examinations for the Teaching Diplomas granted by the Universities of London and Cambridge, held annually in December.

Six open Pfeiffer Scholarships, each of the value of 15 guineas, will be awarded in January, 1903. Candidates must hold a Degree or an equivalent in Arts or Science. Application to be made to Miss ROBERTSON not later than December 13th, 1902.

**THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN TEACHERS.**

As the post of Principal has become vacant, owing to the appointment of Miss Punnett as Normal Mistress in the New Day Training College under the London County Council, Miss MARGARET S. YOUNG, B.A. Lond., Assistant Mistress of the North London Collegiate School for Girls and formerly Resident Lecturer at the Training College (1892-7), has, with the consent of the Governors and Head Mistress of the above School, kindly undertaken to act as Principal of the College during the Interregnum Term, pending the appointment of a new Principal.

A residential College providing a year's professional training for Secondary Teachers.

The course includes preparation for the Cambridge Teacher's Certificate (Theory and Practice), and for the Teachers' Diploma of the London University. The Students attend the Cambridge University Lectures on Teaching, in addition to those of the Resident and Visiting Lecturers. Ample opportunity is given for practice in teaching science, languages, mathematics, and other subjects in various schools in Cambridge.

Students are admitted in January and in September. Full particulars as to qualifications for admission, scholarships, and bursaries may be obtained on application to Miss M. S. YOUNG, Cambridge Training College, Wollaston Road, Cambridge.

**THE INCORPORATED FROEBEL EDUCATIONAL INSTITUTE.**

Chairman of the Committee—Sir W. MATHER, M.P.  
Treasurer—Mr. C. G. MONTEFIORE, M.A.  
Secretary—Mr. ARTHUR G. SYMONDS, M.A.

TRAINING COLLEGE FOR TEACHERS,  
TALGARH ROAD, WEST KENSINGTON, LONDON, W.

Principal—Miss E. LAWRENCE.

Headmistress of Kindergarten and School—Miss A. YELLAND.

Students are prepared for the Examinations of the National Froebel Union, and for the University of Cambridge Teachers' Examination.

Prospectuses and all particulars may be obtained on application to the PRINCIPAL at the Institute.

**OWENS COLLEGE, MANCHESTER.**

The SESSION in the ARTS, SCIENCE, and LAW DEPARTMENTS will commence on October 7 next. Special Prospectuses are issued for the following Departments:—Engineering, Electrical Engineering, Chemistry, Commercial Education, and Law. In the Faculty of Medicine (including the Dental, Pharmaceutical, and Public Health Departments) the SESSION commences on October 1. Prospectuses of any of the above Departments will be forwarded on application.

S. CHAFFERS, Registrar.

**JOINT AGENCY FOR WOMEN TEACHERS.**

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, and Private Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Head Mistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Office hours—9.50 a.m. to 5.30 p.m. Hours for interviews are from 10.30 a.m. to 1 p.m., and 2 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only, when the Office is closed.

**JOINT AGENCY FOR ASSISTANT MASTERS.**

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A. Cantab.

Low Commissions. Liberal Discount.

Head Masters having vacancies on their staffs, and Assistant Masters seeking appointments, are asked to communicate with the REGISTRAR.

Office Hours—10 a.m. to 5 p.m.; Saturdays, 10 a.m. to 1 p.m. Interviews generally between these hours or by special appointment.

**KING'S COLLEGE, LONDON**

(UNIVERSITY OF LONDON).  
DEPARTMENT FOR TRAINING TEACHERS FOR SECONDARY SCHOOLS.

The Course, which is intended to meet the requirements of the Teachers' Registration Council, is both Practical (including properly directed work in a Secondary School) and Theoretical (preparing for the London Teachers' Diploma and the Certificate of the Teachers' Training Syndicate).

The Course occupies a year, beginning in October or January. The fee is £30 for the year if paid in advance, or £10. 10s. per Term (three Terms).

For further particulars apply to the SECRETARY, King's College, Strand, W.C.

**ST. GEORGE'S TRAINING COLLEGE FOR WOMEN TEACHERS,**

EDINBURGH.

Principal—Miss M. R. WALKER.

This College provides a complete Course of Professional Training for Ladies who desire to become Teachers in Secondary Schools or Governesses in Families. The Course, which lasts for one year, includes attendance at the University Lectures on Education, in addition to Lectures delivered by the College Staff, and the Students have ample opportunities of gaining experience in Class Teaching in good Schools. Students are admitted in January and October. For prospectus and further particulars apply to the PRINCIPAL, 5 Melville Street, Edinburgh.

**LONDON COUNTY COUNCIL**

TECHNICAL EDUCATION BOARD.

A Guide to the Best Historical Novels and Tales.

BY JONATHAN NIELD.

"This book is indispensable for all teachers who believe in the educational value of historical fiction. It contains an interesting introduction, a classified list of the best historical novels and tales, suggestive courses of reading for boys and girls, and an extensive bibliography of the subject. Though Mr. Nield does not appear to be himself a teacher or primarily interested in education, he displays considerable insight into the needs of the teacher, and shows acquaintance with various educational books and papers which would naturally be outside the ken of the mere literary man. . . . We heartily commend the book to our readers; it combines the excellences of a useful work of reference and a dainty gift-book in quite an extraordinary degree."—School World. "Only a special devotion to the historical novel . . . could have qualified him to lay such an omnivorous feast before the readers of the books he inventories. For he has not merely given a catalogue of historical novels . . . but gives a list of what he thinks the principal historical novels. In this he wisely casts a very wide net, seeing that he has to suit all ages and sects of readers. . . . A good work of reference, which quite probably includes everything that an intelligent boy is likely to enjoy."—Academy and Literature. "The 'Guide' . . . shows a wide range of knowledge, and is likely to be a very useful list. . . . An introduction deals sensibly with the question what an historical novel is."—Atheum. "Most readers will be prepared to admit that his able preface makes out a very strong case for such an educational use of historical novels as his full and carefully classified lists make possible."—Manchester Guardian (Leading Article).

# EDUCATIONAL REVIEW.

Edited by NICHOLAS MURRAY BUTLER.

"We find the 'Educational Review' absolutely indispensable at every turn."—MICHAEL E. SADLER, Director of Special Inquiries and Reports, Board of Education, London, England. September 13, 1901.

"I wish I could tell you how much of stimulus and inspiration I get from reading the 'Educational Review.' The educational world can never repay you for the work you have put into that richly stored magazine. I have just gone through the entire twenty-one volumes in order to get some things that I especially desired, and I am simply amazed at what I find in those volumes."—WILBUR P. GORDY, High School, Hartford, Conn. September, 1901.

"To men like myself it is a sort of working library. Its volumes stand always at my elbow."—Prof. PAUL H. HANUS, Harvard University.

"The broadest and most able of the American periodicals devoted to education."—*New York Times*.

"An educational magazine of which the teaching profession may well be proud. There is nothing better in educational journalism in any country. And it has an editor who has convictions, and the courage of them."—*School and Home Education*, Bloomington, Ill.

"The 'Review' has from the first issue taken its place at the head of American periodicals devoted to education. It is, indeed, the first educational paper in America to win for our country the respect of educationalists abroad."—*Journal of Pedagogy*, Ypsilanti, Mich.

14s. 6d. a Year, 1s. 10d. a Copy. Ten Numbers, none being issued for July and August. Current numbers kept in stock.

# ROBERT BOYLE,

INVENTOR AND SANATARIAN

(Founder of the Profession of Ventilation Engineering).

By LAWRENCE SAUNDERS.

New and Enlarged Edition. Price 10s. 6d.

"ROBERT BOYLE was the author of many brilliant inventions."—*Academy*.  
 "A little book with much in it to suggest thoughts. It is a biographical sketch of the two BOYLES, father and son, who have made their names famous by their system of ventilation. More enthusiastic, simple-hearted men it would be hard to find. The history of their lives, their genius, and their inventions is most interesting."—*Life*.  
 "The record of an earnest, energetic, and untiring life: a life governed by high principle and devoted to noble ends. Self-culture and help to others were his most marked traits. He was foremost in all social and sanitary movements."—*Sanitary Engineering*.  
 "ROBERT BOYLE bore a distinguished name in science, and proved himself worthy of it."—*Edinburgh Courant*.  
 "A man of indubitable inventive genius, and strong philanthropic zeal."—*Scotsman*.  
 "A sketch—rather too brief—of the lives of ROBERT BOYLE, father and son, who have brought the question of ventilation and sanitation to science by the discoveries of their inventive genius."—*Christian World*.  
 "A bright story of true Christian heroism. As we read through these pages of the insurmountable difficulties overcome by the BOYLES, father and son; of the good done; the sanitation achieved; the inventions perfected; we see men whose sole aim was to serve God, benefit mankind, and whose example should be held up to all our boys beginning life."—*Christian*.  
 "An excellently written biography of the eminent inventor and philanthropist, ROBERT BOYLE. . . . The work is practically a biography of the late ROBERT BOYLE and of his son ROBERT, who is still living and carrying on his father's great work as a sanitary engineer. Both are characters such as Samuel Smiles might well apply his genius to describing."—*Hull Express*.

ROBERT BOYLE & SON, LTD.,  
64 HOLBORN VIADUCT, LONDON;  
And at GLASGOW, PARIS, BERLIN, and NEW YORK.

MR. ROBERT BOYLE'S (JUNR.)  
"SANITARY CRUSADES."  
5s. each, Illustrated.

- A SANITARY CRUSADE  
Through the Continent of America.
- A SANITARY CRUSADE  
Through the Far East (India, China, Corea, Japan).
- A SANITARY CRUSADE  
Through South Africa.
- A SANITARY CRUSADE  
Through Australasia, Polynesia, Java, Borneo, Sumatra, Malay Peninsula, Siam, Burmah.
- A SANITARY CRUSADE  
Through Europe.
- A SANITARY CRUSADE  
Through North Africa (Morocco, Algeria, Tunis, Tripoli, Egypt, The Soudan).
- A SANITARY CRUSADE  
Through Iceland and The Faroes.
- A SANITARY CRUSADE  
Through the West Indies and Central America. (Not yet ready.)

"Mr. ROBERT BOYLE, who has been the moving spirit for the past thirty-five years in the 'sanitary crusades,' which were then inaugurated, has visited almost every country in the world, preaching the doctrine of health, and inculcating a knowledge of the benefits to be derived from breathing pure air. There is probably no one who has a more comprehensive or extended knowledge of the science and practice of ventilation than Mr. ROBERT BOYLE, or who has done more to advance the cause of ventilation."—*Building News*.

Post free on application.

## SHORT FRENCH EXAMINATION PAPERS (110),

Each containing Six Idiomatic Sentences to render into French.  
Price 2s. 6d., cloth.

Many of the grammatical questions are taken, by permission, from the Oxford and Cambridge Local Examinations, from those of the College of Preceptors, the London Matriculation, the Oxford and Cambridge Joint Board, and from the Cambridge Higher Local Examinations.

"A very useful set of questions."—*Modern Language Quarterly*.  
"The English idioms for translation into French are well chosen. It is a useful little book."—*University Correspondent*.

"The exercises in the use of idioms are especially good."—*Bookman*.  
"We noticed at the time of its appearance this very useful collection of test papers, and need only here add that the key is full and accurate save for some obvious misprints and one or two slips that we have noticed."—*Journal of Education*.

"We are great advocates of abundant exercises; hence our immediate approval of this book."—*School Guardian*.

"We have much pleasure in recommending this useful collection of papers in grammar and idiomatic sentences. It will save the teacher many an hour of labour, and would be valuable for a class entering for an examination to work through steadily."—*Educational Review*.

A KEY, issued to Teachers and Private Students only, can be obtained from the Publishers. 6s. net. (A list of errata is issued with this.)

By H. R. LADELL, M.A., F.R.G.S.

## THE PUBLIC SCHOOL SPELLING CARD.

Fortieth Thousand. Price 6d. By the same Author.

Containing nearly 1,000 words (in which actual mistakes have frequently been made, as collected from Dictations, Essays, Examination Papers, &c., during a period of more than fifteen years), with Rules.

Also, in Book Form, "HOW TO SPELL AND SPEAK ENGLISH." Third Edition. Price 1s.

This also embodies most of the errors in the sentences set for correction in the Examination Papers of the London Matriculation, the Oxford and Cambridge Locals, the College of Preceptors, &c.

## French Essentials and French Conversation Sentences.

Second Edition. Price 2s. cloth; 1s. 6d. boards. By the same Author.

"This short grammar is compiled by a master who knows his business. The type is good, the arrangement good, and there is nothing superfluous."—*Journal of Education*.

"Students preparing for examination in French grammar and composition will know the worth of this little book. The colloquial sentences at the end are a useful addition."—*Bookman*.

[An APPENDIX, embodying the final official changes in the Simplification of French Grammar Rules, will be presented with each copy.]

RELFE BROTHERS, Ltd.,  
6 Charterhouse Buildings, Aldersgate, E.C.

# CUSACK'S COPY-BOOKS

FOR

## SECONDARY AND COMMERCIAL SCHOOLS.

In One Volume, bound in cloth. Complete  
Set of Books, 1s. 6d. net.

Containing complete instructions on the  
formation of the Letters of the Alphabet.

The system taught in these books is very simple, and most carefully graduated, and results in a style of writing being most legible and sufficiently free that a youth or girl can take their place at the merchant's desk on leaving school, with nothing in their handwriting to learn or unlearn.

CITY OF LONDON BOOK DEPOT,  
White Street & Finsbury Street, London, E.C.

- Sanderson's Outlines of the World's History.** Part IV. Modern History specially dealing with European History. 2s. 6d.

## NEW FRENCH AND GERMAN BOOKS

- A SKELETON GERMAN GRAMMAR.** By Professor H. G. ATKINS, of King's College. Printed in red and black. Cloth, 1s. 6d.  
This new book is intended to give the "irreducible minimum" of grammar requisite for reading German texts. It is not intended as a manual for the study of grammar after the old fashion, that is to say, for grammar's sake, but rather as a guide for the beginner who proceeds direct to the translation of a German text, or begins by grappling with the difficulties of real German in a similar way by any direct method. A feature of the book is the use of red ink to emphasize points of special importance.
- A SKELETON FRENCH GRAMMAR.** By Professor H. G. ATKINS, King's College, London. 1s. 6d.  
Similar in scope and arrangement to the "Skeleton German Grammar." [To be ready immediately.]
- FIRST STEPS IN GERMAN.** By W. SCHOLLE, Ph.D., and GEORGE SMITH, M.A. 1s. 6d.  
This book is based throughout on the New Method. The lessons are conversational, and are intended to be used with Hölzel's pictures, which are given in the book. An interesting section consists of German songs with music, the authors holding that these facilitate and lend interest to the acquirement of German pronunciation.
- A GERMAN GRAMMAR.** By W. SCHOLLE, Ph.D., and GEORGE SMITH, M.A. 1s. 6d.  
A systematic companion to "First Steps in German."

READY IMMEDIATELY.

## Practical Book-keeping

For Commercial Classes.

With Exercises, Examination Papers and Answers.  
By WALTER GRIERSON. 1s. 6d.

This new work is thoroughly interesting and practical. An outstanding feature is the clear and effective method by which the fundamental principles of book-keeping are explained at the outset, and emphasized throughout the book.

The Exercises are specially adapted for Students preparing for Oxford Local and College of Preceptors' Examinations.

All teachers of the subject should see this new and highly practical work.

READY IMMEDIATELY.

## A First Greek Reader

By R. A. A. BERESFORD, M.A., Author of "A First Latin Reader," and R. N. DOUGLAS, M.A., of Uppingham School. 2s.

This Reader (a companion to Mr. Beresford's popular First Latin Reader) consists of two parts: in the first part each lesson consists of one page, containing an illustration explained by eight or nine simple sentences; the second part consists of stories and anecdotes of greater length, carefully graduated, and freely illustrated with full-page plates and photographs of famous statues and busts. The text is set at the Clarendon Press in a large and bold type.

## The Educational Times.

*To be,  
or not to be—  
"Scrapped" ?*

THE British Association, with all its prestige, has not escaped the sharp side of censorious tongues; but last year it went to school—or, rather, it took the school to its bosom—and it has now learned the game of "Pass it on." The activity of youth has displayed itself this year with astonishing vigour in the Section of Educational Science, and we rejoice to witness such indubitable signs of the energy that guarantees future progress. The indagations of youth and of genius are incalculable, and, therefore, need hardly be surprising; and, if sometimes they seem spasmodic and not very definite of aim, yet even then they are part of a complex whole, which, no doubt, somehow and somehow gets benefit from them. There is always something new when the British Association sits in Belfast, and so we were prepared for a stirring of the waters in the Education Section. The waters, accordingly, were stirred. It behoves us to ascertain the significance of the event.

The main assault on the existing educational system was led by Prof. Armstrong, the President of the section, who marshalled his well tried battery to bear on the stubborn citadel. Educational science—why, there is no such thing! It boots not now to dispute the allegation; there is, no doubt, much room for improvement, but still, even in these days, the business of teaching is not conducted altogether at haphazard. What we are concerned to know is not the unhelpful opinion (as expressed by one of George MacDonald's people) that we are "a'thegether a' wrang," but precisely where and how the system is in fault and may be improved. Prof. Armstrong certainly referred to specific points. He properly insisted that theory is superior to practice, and he urged that education would be more fruitful if teachers would give greater attention to "imagination"—"theory"—"the considered use of facts." Is it true, then, that teachers neglect the exercise of the imagination? At this moment we have on our table new school-books expressly devoted to the cultivation of the imagination generally; we have others expressly devoted to natural facts and "encouraging children to use their eyes always and to reflect on what they see"; and we have others of general contents embracing a liberal supply of what we will call—*pace* Prof.

Armstrong—excellent lessons of both characters, to say nothing of shoals of editions of our best literature as well as floods of elementary books presenting the newest ideas in all branches of science. But "education has ceased to be practical because it has failed to keep pace with the march of discovery." In what respect? Both school-books and the methods of using their contents are indefatigably kept up to date. One great bugbear seems to be the classics; but it is enough to point to the fact that non-classical subjects are steadily making room for themselves, in spite of some injudicious opposition or short-sighted discouragement. But the chief difficulty appears to be that the school is not "for the most part modelled on the work-shop, giving to this term the most varied meaning possible," and that "a great part of the time" is not spent "at the work-bench, tool in hand." How far the suggested change ought to be made is a question for much further consideration. But Prof. Armstrong's examples of criticism do not carry us far. He holds up the importance of economy of coal, and tells us that food is "outside the schoolmaster's ken." Is it possible that such things are ignored in the schools so as to deserve the Professor's sneers? We do not believe it for a moment. All such criticisms are too vague to do more than suggest to teachers the constantly recurring duty of self-examination.

Where does Prof. Armstrong lay the blame for all the inefficiency he castigates? He has already thrown part of it on the teachers, and, to our mind, not justly, or at least extravagantly and vaguely. Then there are the examining bodies. Three courses are open to these—to lead, to keep abreast of the times, to stagnate. Prof. Armstrong says they almost invariably stagnate, "a syllabus, when once adopted, remaining in force year after year." The charge, undoubtedly, applies to certain University examinations; but otherwise it is less than fair. Obviously it is waste of ammunition to fire over the heads of the examinees; but a lower aim does not mean "stagnation," and we are much inclined to think that most syllabuses are framed so as to test examinees with reasonable fairness and completeness. The real point, we take it, is an alleged want of practicality—a point that it is for the critics to prove to demonstration. True enough, examinations tend to retard, rather than to favour, the introduction of improved methods of teaching; but, then, where is the line to be drawn? Again, there are the School Boards. We are heartily with

Prof. Armstrong when he urges that "it is imperative that a sound public policy should be framed and that nothing should be allowed to stand in the way of the public good." But what is that policy? Lord Hugh Cecil and Dr. Clifford will agree that "nothing should be allowed to stand in the way of the public good"; but that leaves us still face to face with the Sphinx. However, Prof. Armstrong considers that the blame to be put upon the School Boards "is as nothing as compared with the blame to be put upon the Education Department." The Education Department has a broad back. The first necessary step, according to Prof. Armstrong (who employs another metaphor) is "to reorganize the Education Department, root and branch, to imbue it throughout with sound ideals," and so forth. We wish him luck in the undertaking. We shall hope to see that "monthly bonfire of red tape and official forms." We shall be still more interested to see Prof. Armstrong's substitutes. He would establish an Intelligence Board, partly official, but partly unofficial, so as to maintain constant touch with outside opinion and effort. But, really, does the Education Department not know what is going on outside? And is it so certain that it would be an advantage to education if its functions were to become "those of an exchange and inquiry office, rather than directive and assertive"? We dare say it is not a perfect institution; but most people would probably like to know more definitely how it is to be reorganized before lending a hand to pull it to pieces.

We are glad that Prof. Armstrong urged strongly the necessity for better provision for the training of teachers, whether in connexion with the Universities or otherwise. We recognize that full explanations of his objections to the existing system of education could not find room in a single address, and that any criticism of his utterances may, therefore, do him less than justice. The general bombardment is very well in its way; it will, at least, waken up some people, and attract attention. Prof. Armstrong's forecast of the regenerated future is interesting, and much of it seems probable enough. But reforms take time, and we do not care to ride off on imagination. "Why cannot we agree," asks Prof. Armstrong, "to scrap our scholastic and academic ideals, if not our schools and schoolmasters, and refit on scientific lines?" The answer is that our way is to proceed by reform and not by revolution—to satisfy ourselves of the worthlessness of the one system and the value of the other before making the exchange. Besides, there is something more in life than "science." In fact, we "exercise our imagination" upon the story of the elephant, who is said to try the bridge or the swamp with his sagacious foot before trusting his weight upon it. In any case, the country is open to instruction and persuasion. Let Prof. Armstrong and his friends now proceed to draw up (1) a detailed criticism, and (2) a fresh detailed scheme, so that we may know precisely the wrongs and the rights of the case in particulars—a modern "Chrestomathia," up to date, reasoned out on accurate information as well as on sound principle, taking account of the pertinent facts at each stage of the process, and so calculated to conciliate public approval and to compel the acquiescence of those that possess the power of the last word in the matter.

## NOTES.

THOUGH the opposition to the Education Bill has been largely based on educational and political grounds, it can no longer be ignored that more and more impetus is being sought from ecclesiastical or theological opinion and purpose. The *Daily News* (September 15) makes this open avowal:

This Bill is in all its essential aspects the work of Convocation, and it bears upon its face throughout the impress of priestly pretension. It is this fact which is the source of the intense hostility which has been aroused against the Bill, not merely among Nonconformists, but among Churchmen who still cherish their Protestantism and who fear nothing so much as the insidious workings of those who desire to make the Church of England an appanage of the Church of Rome.

Dr. Clifford, indeed, draws "a clear distinction between the English Church as a whole and that section of it which has made itself notorious by its denunciations of Protestantism, its repeated approaches to the Pope, and its inordinate appetite for Roman Catholic beliefs and practices." But, for all that, he calls the measure "this bishops' Bill." It is surely not to be supposed that all the bishops that favour the Bill belong to this obnoxious section and are leagued to betray the Church to Rome. No doubt "a clerical war" is popularly more effective than a sober discussion of the specific provisions of the Bill in view of the simple facts. Education may well cry a plague on a good many ecclesiastics of both patterns.

FROM the standpoint of unexcited reason, half of Dr. Clifford's nine points would seem to be much better than the whole. For half of them a good deal of sound argument might be put forward; in fact, we have already urged, or at least indicated, such lines of solid objection. But to say that "the primary rights of the people to control their own life, directly and freely, in the indescribably important department of elementary and secondary education" and "the enjoyment and exercise of full liberty of conscience" are among the things at stake is rather tall language for the facts intended. Dr. Clifford means every syllable of it; but then he is in an elevated frame of mind on the subject—a frame of mind not easy to accommodate to the House of Commons level. Again, all citizens may justly have concern for "the fair fame and augmented serviceableness of the English Church"; but, then, the English Church has its legally constituted custodians, who, with full knowledge of the situation, appear to think that the Bill is a good thing, and they, too, are entitled to their convictions and bound to act upon them. We certainly need not trouble our heads in this connexion about "the stability and growth of our Empire." Except for popular purposes, such extravagance is not merely futile, but hurtful. In this Bill there is a direct conflict between opposing views on certain specific points, and the question is how to reach an accommodation. To engineer a crusade against the existence of the Bill is quite another affair, and a risky affair in more ways than one.

THE promoters of the Yorkshire demonstration at Leeds, as well as the promoters of the demonstration at Glasgow,

while advancing some substantial criticisms, also materially weakened their case by giving prominence to the argument that the Government is proceeding with the Education Bill "without mandate or authority from the electorate." There is no possible objection to their "calling upon the Prime Minister to withdraw the Bill or to dissolve Parliament and submit the measure to the judgment of the country without delay." But to base such a demand on the absence of "mandate or authority from the electorate" is preposterous. The Government, if they have no "mandate," undoubtedly have "authority," which seems good enough for the occasion. It is obviously impossible to foresee, or, even if you do foresee, to deal with, every possible question of the next six or seven years at an election time in such wise as to give the victorious party a specific authority [or "mandate" on every important subject of their term of office. If this "mandate" principle be valid, the Government had no business to deal with anything—outside routine—except the South African War and the subsequent settlement of the country. But the moment the Government were put in office they were established for the statutory term and placed under obligation to propose such laws as they might think necessary or desirable. All this should have been considered by the electors at the ballot-box. They were well warned. To turn round now with this preposterous cry of "no mandate" is ridiculous.

PROF. DEWAR, in his very able Presidential Address to the British Association, put in a strong word for the better endowment of education, and contrasted the chemical equipment in this country and in Germany so forcibly as to startle the *Times*, if not those that were already familiar with the facts. His example of the firm of Friedrich Bayer & Co. is but one of many; but it is rather painful that "the fundamental discoveries upon which this gigantic industry is built were made in this country and were practically developed to a certain extent by their authors," and yet slipped through their fingers because "we did not possess the diffused education without which the ideas of men of genius cannot fructify beyond the limited scope of an individual." The root of the mischief, says Prof. Dewar, "is in the want of education among our so-called educated classes, and, secondarily, among the workmen on whom these depend"; we are two generations behind Germany "in point of general training and specialized equipment." But, even if we were on a level with Germany, what can be done with our "leaders of industry," who look askance at science, and will not, in spite of the incessant remonstrances in Consular Reports, adapt their products or even their price lists to their customers? Are we to be told that the schools cannot supply brains and energy equal to those of Germany, if there is a demand for them? We trow not.

PROF. PERRY told the British Association and the world that the ordinary system of mathematical study is "abominable," and that "our whole public-school system ought to be 'scrapped.'" We venture to think that the *ἄβρις* of the scientific man ought to be peremptorily "scrapped." Out of

his abounding contempt for teachers below professorial rank and not protected by large incomes, he said:

The difficulty about all laboratory exercise work worth the name is that of finding demonstrators and assistants who are wise and energetic. Through foolishness and laziness the most beautiful system becomes an unmeaning routine, and the more smoothly it works the less educational it is. In England just now the curse of all education is the small amount of money available for the wages of teachers—just enough to attract mediocre men. I have been told, and I can easily imagine, that such men have one talent over-developed, the talent for making their job softer and softer, until at length they just sit at a table, maintaining discipline merely by their presence, answering the questions of such students as are earnest enough to come and worry them.

The wretched calumny deserves no answer—in words, at least. But, while Prof. Perry boasts that teachers are nowhere in comparison with engineers, we adopt for English teachers what Dr. Albert Shaw says about American teachers (*Educational Review* for September):—

A large part of the progress of our times, even in the field of wealth production, has been due to research and study by men who were actuated not in the least degree by the motives of gain. But the greatest example of all is afforded by what is now the foremost of all our professions, namely, the profession of teaching. Here we find scores of thousands of men and women, rendering noble, unselfish, and indispensable service to the community on the basis of fixed, moderate stipends, removed almost wholly from the competitive sphere of activity, and inspired to diligence and efficiency in their work by a sense of duty and responsibility.

AMONG other matters of educational interest discussed at the meeting of the British Association was the well worn question of the teaching of English. While others were glorifying the spread of English abroad, and even looking forward to its universal dominion, Prof. Hartog, of Owens College, contended that it is very badly taught at home—reinforcing his view by certain criticisms in a recent Blue Book. There is no sacramental efficacy in a Blue Book, however, and one must deal with the criticisms on their merits. Every one agrees that English should be taught "rationally and systematically" at school, and probably there is no teacher but labours to do this very thing. It is pitiful, of course, so far as it is the fact, that our boys should be so "nearly inarticulate" and so "deficient in the art of expressing themselves on paper." But it is to be remembered that facile literary expression is a complicated and by no means easy attainment, and that teachers, however sensible and ardent for more rational methods, are controlled by the requirements of examinations.

ELSEWHERE we draw attention to the reopening of the evening continuation schools under the London School Board. The fees that must now be charged in most of the schools will be seen to be practically nominal, and will not bar any student that has a desire for further knowledge. The subjects are of the most varied character, and in the main practical; but the provision for history is surprisingly limited. We trust, of course, that the schools will be largely attended, and we note especially that any one interested in the work may obtain "copies of a prospectus for circulation amongst those who would be benefited by a course of instruction in the schools" from the Clerk of the Evening Continuation Schools Committee, School Board for London, Victoria Embankment, W.C. Now is the time, indeed, to bring all such institutions to the notice of young men and maidens. The Northampton Institute, Clerkenwell (St. John Street Road), for example, makes large provision for the teaching

of technological and trade subjects in day as well as in evening courses; and this is but one branch of the City Polytechnic, which also holds multifarious classes in literary, commercial, and science and art subjects at the Birkbeck Institution and the City of London College.

We cordially welcome the first number of *Indian Education* (1s., Longmans), whose advent we recently heralded. We like the look of it, and have high hopes of its future. It is liberally printed and got up, and the matter is varied and of good quality. The opening article is by a native—Mr. J. G. Agashe: it gives interesting glimpses of education in ancient and mediæval India, and is, indeed, the most instructive contribution in the number. We cannot agree with the editor's suggestion that the lack of "published work" by Indians implies "that India is not ready for a University," or that the people of India do not "really study or criticize Western life, literature, philosophy, or history." The test is too limited, especially under the conditions. Mr. Yoxall, M.P., writes the London Letter. He tells how he beheld among the Volunteers at Oxford on the King's birthday "several Indian students ranked; and a gallant show they made." Then at Cambridge, on another day, he "heard with what satisfaction the University authorities regard the increasing number of Indian students on the banks of the Cam." And "these are Imperial links." But, we venture to remind him, he did not behold a gallant show of Indian Volunteers at Cambridge. Indians are not admitted to the Cambridge ranks; nor are they admitted as Volunteers at the Inns of Court. Mr. Yoxall should inquire into this dubious condition of the "Imperial links."

In these days, when Nature-study has taken such a hold on educationists, it is interesting to chance upon a strong favourable opinion expressed more than half a generation back by a distinguished Oxford tutor. "I hold it to be an unquestioned fact," says Mr. W. Warde Fowler, in "A Year with the Birds"—a very charming and instructive volume, reissued the other day by Messrs. Macmillan—"that the direction of children's attention to natural objects is one of the most valuable processes of education." We are more concerned, however, to note an obstacle mentioned by Mr. Fowler. "When the boys go to a public school," he says, they will find themselves in the "grip of a system of compulsory game-playing which will effectually prevent any attempt at patient observation."

There is doubtless very much to be said for this system, if it be applied, like a strong remedy, with real discriminating care; but the fact is beyond question that it is doing a great deal to undermine and destroy some of the Englishman's most valuable habits and characteristics, and among others his acuteness of observation, in which, in his natural state, he excels all other nationalities. It is all the more necessary that we should teach our children, *before* they leave home, some of the simplest and most obvious lessons of natural history.

This conflict of interests is well worth attention. An accommodation ought not to be a matter of any great difficulty.

"EDUCATIONIST" or "educationalist"? Well, what does it matter? Or, rather, why should one not use either form according to one's taste or fancy, without posing other people with such an inane question? It is a correspondent of the

*Daily News* that is in perplexity, and our contemporary does not shrink from giving the preference to "educationalist." The reason is that "it seems to soften the impropriety of the word a little to spin it out." But wherein lies "the impropriety"? Our contemporary seems to make answer when it says: "For our own part, we confess we are among the objectionists as to the manufacture of new hybrid words." By the way, has the word "objectionist," which seems to be equally hybrid, yet been adopted in any reputable dictionary? Both "educationist" and "educationalist" have been so adopted. Besides, the latter word is not "new"; it has been freely used for at least twenty years. And, if the formative "-ist" is not yet naturalized, there will have to be a very extensive weeding of the accepted English vocabulary. It is interesting to recall that Trench regarded "educational"—which is now at least two generations old—as an "offensive, at best a very questionable, novelty in the English language." Now it is very much at home.

### SUMMARY OF THE MONTH.

THE agitation against the Education Bill has been steadily prosecuted throughout the month. While much attention has been locally directed to ways and means of thwarting the operation of the Act in case the Bill becomes law, the protagonist of the opposition—the Rev. Dr. Clifford—has set forth "what is at stake in the war raised by this Education Bill" under the following heads:—

1. The primary rights of the people to control their own life, directly and freely, in the indescribably important department of elementary and secondary education.
2. The enjoyment and exercise of full liberty of conscience.
3. The maintenance of constitutional law in the procedure of Government.
4. The efficiency and adequacy of education, sustained by the funds of the people, in what are known as denominational schools.
5. The continuance and extension of the people's schools, and the progressive realization of the true ideal of State education.
6. The complete equipment of the teaching profession, its deliverance from theological and ecclesiastical tests, and the opening of its doors as a profession, and of its training schools, to ability, industry, willingness to serve, and citizenship.
7. The exclusion of women from the ranks of those who may be freely and directly chosen to serve in the administration of national education.
8. The fair fame and augmented serviceableness of the English Church.
9. The stability and growth of our Empire.

THE Northern Counties Education League held a "great Yorkshire demonstration" against the Education Bill at Leeds (September 20). The following resolution was put from five platforms, and of course carried:—

That this great meeting of inhabitants of the West Riding of Yorkshire, held on Woodhouse Moor, and addressed from several platforms, condemns the Government Education Bill, because it deprives men and women, who have hitherto elected or served upon School Boards, of the constitutional rights they have hitherto enjoyed; because it abolishes direct popular control of the schools for which the people are taxed; because it weakens the guarantees of efficiency, progress, and liberty in national education; and because it proposes to levy local rates everywhere in support of sectarian dogmas, ecclesiastical tests for teachers, and clerical management. This meeting expresses its indignation that the Government, without mandate or authority from the electorate, should propose to destroy School Boards and to make sectarian schools a charge upon the ratepayers. Finally, the meeting calls upon the Prime Minister to withdraw the Bill, or to dissolve Parliament and submit the measure to the judgment of the country without delay. And that copies of this resolution be forwarded to the Prime Minister.

THE Committee of the Baptist Union have decided to propose to the autumn assembly at Birmingham a resolution declaring the "solemn determination" of the ministers and delegates "not to submit to this measure even if it becomes law," but "to offer passive resistance to its enforcement and to render it unworkable by every means in their power." After justifying this position

on the grounds of "clerical control" and taxation without popular control, the resolution concludes thus:

They regard the Bill as the product of an alliance between the Government, the High Anglican party, and the Roman Catholic Hierarchy, having for its main purpose the clericalizing of education, the disregard of the just rights of all Free Church citizens, and the undermining of Protestantism and Nonconformity. And since this attempt occurs at the end of a series of sectarian aggressions in our national education legislation, and as a fresh and unprovoked disturbance of the present arrangement, they are resolved to use their political influence to secure a system of national education in harmony with the principles of justice and efficiency, and in which no public money shall be granted to denominational schools, every public elementary school shall be unsectarian and placed under the management of representatives of the people, and no citizen, teacher, or scholar be placed at any legal disadvantage on account of religious opinions.

THE resolution of the Congregational Union submitted to the Glasgow meeting also "urges all friends of education and of civil and religious liberty (1) to organize themselves more thoroughly to secure the abandonment of the measure or an appeal to the people; and (2), if the Act is forced upon the nation, to use all honourable means to make it unworkable." "The final clause," says Dr. Parker, "greatly needs strengthening; it wants accent, fire, and passion; in short, it wants to be Cliffordised."

A UNITED Committee of representatives from the National Free Church Council, the Metropolitan Federation of Free Church Councils, and various educational and women's organizations has been formed to make arrangements for important meetings throughout London during the autumn. It is proposed to hold a great gathering in St. James's Hall on the eve of the opening of Parliament.

THE *Times* says that "the recasting of the Ministry under its new chief has accomplished a long-hoped for, but long deferred, step in our educational administration."

Up to now education has remained an annex, so to speak, of the Privy Council, in the position accorded to it in 1839, when the State first gave grudging attention to a matter that had previously been left to voluntary effort. In no other country of Europe would such a state of things as regards national education have been conceivable during the past fifty years; in no other country would the accident of appointment as Lord President of the Council have placed a statesman *ipso facto* at the head of national education. . . . It is unfortunate that the first President of the Education Board, though distinguished for industry and good sense, should have so little claim to be an educational authority; but, on the other hand, it is satisfactory, at a time of education crisis, that the responsible Minister should be in the Cabinet. To Mr. Gladstone belongs the credit of having given Mr. Acland a position which, no doubt, helped him to do considerable work for elementary education. . . . We trust that henceforth it will be almost a matter of course that the Minister for Education will be a member of the Cabinet. The Board of Education has now achieved its independence. It is about to take over the educational powers of the Charity Commission; and the fusion between Whitehall and South Kensington, though not yet complete, is gradually proceeding. By the time that the Local Authorities to be created under the Education Bill have got fairly to work, the Central Authority will, we may hope, be sufficiently strong and coherent for its work of general supervision. In the Consultative Committee, already in active operation, it has a valuable means of access to expert opinion.

THE educational system was subjected to fiery criticism in the Educational Science Section of the British Association at the Belfast meeting. Prof. Armstrong, President of the Section, said the Section was in advance of the times, "being concerned with a non-existent science."

He enforced Tyndall's prescription of "the cultivation and exercise of imaginative power—the scientific use of the imagination"—as a preservative from "the fate of an organism too rigid to adjust itself to its environment," and a means of "plasticity to the extent that the growth of knowledge demands." . . . The importance of the part played by theory in science could not be exaggerated. . . . If teachers generally would pay more attention to theory, their teaching would doubtless be more fruitful of results; facts they knew in plenty, but they lacked training in the considered use of facts. We were ceasing to be practical because modern practice was based on a larger measure of theory, and our schools were paying no proper attention to the development of imaginative power or to giving training in the use of theory as the interpreter of facts; didactic and dogmatic teaching were producing the result which infallibly followed in their wake—sterility of intellect. Our system of education had no proper theoretical basis. Educators had ceased to be practical, because they have failed to keep pace with the march of discovery; the theoretical basis underlying their profession having been enlarged so rapidly and to

such an extent that it was beyond their power to grasp its problems. The priesthood of the craft were, in fact, possessed by the spirit of narrow parochialism, and upholders of an all too rigid creed. . . . We do not sufficiently consider the economy of coal: waste not, want not. Food, again, is an important subject "outside the schoolmaster's ken." Cooking, a branch of applied chemistry, is a failure for want of imaginative power in the cook. . . . Whether or no there be "good in everything," children must at least be encouraged to seek it—to use their eyes always, and to reflect on what they see.

"WHY," asked Prof. Armstrong, "cannot we agree to scrap our scholastic and academic ideals, if not our schools and schoolmasters, and refit on scientific lines?"

Unfortunately, it too often happened that those placed in authority were the very last to attempt to march with the times. Bodies such as our Universities, the Education Department, and the Civil Service Commissioners might have been expected to lead the way, to keep the most watchful eye on all that was happening, and to note and apply all improvements. The very contrary had been the case. At bottom the spirit of commercialism was the cause of much of this contorted action. . . . Three courses were open to examining bodies—to lead; to keep just abreast of the times; and to stagnate. The last was almost invariably chosen, a syllabus remaining in force year after year. Consequently, examinations tended to retard, rather than to favour, the introduction of the improved methods of teaching. . . . At the present time, when the responsibility of controlling all grades of education is about to be cast upon the community, and the actual call to arms is imminent, it is imperative that a sound public policy should be framed, and that nothing should be allowed to stand in the way of the public good. The blame to be put upon School Boards in England for having allowed an impracticable system of education in the schools is as nothing as compared with the blame to be put upon the Education Department for having allowed such a system to grow up by the adoption of academic ideals and academic machinery. The first necessary step will be to reorganize the Education Department root and branch, to imbue it throughout with sound ideals, and lead it to understand its great importance as the head centre of the educational system. But its functions will be those of an exchange and inquiry office rather than directive and assertive. Such a department will have an Intelligence Board, whose members are partly official, partly unofficial, so that it may maintain itself in constant touch with outside opinion and effort. One function of this Board will be to preside at a monthly bonfire of red tape and official forms, for in future, even if no other subject of Government concern be kept in a lively and living state, education must infallibly be.

PROF. ARMSTRONG foresees that gradually a complete revolution must take place in school procedure and in school buildings, which are but "extensions of the monkish cell and the cloister."

Instead of being a place fitted only for the rearing of what I have elsewhere termed "desk-ridden emaculates," the school will be for the most part modelled on the workshop, giving to this term the most varied meaning possible, and a great part of the time will be spent at the work bench, tool in hand. Nature's workshop will, of course, be constantly utilized, and the necessary provision will be made for outdoor exercise and physical training. Scientific method will underlie the whole of the education. It will be recognized that education has two sides—a literary and a practical—that the mind can work through fingers—in fact, through all the senses—and that it is not embodied only in the so-called intellect, a narrow creation of the schools. The practical training will, therefore, be regarded as at least equal in importance to the literary. Heads of schools will not only be potential bishops, but almost all careers will be open to them. The class system will be largely abandoned; children's school time will not be chopped up into regulated periods in a manner which finds no analogy in the work-a-day world, but they will have certain tasks confined to them, and will be allowed considerable latitude in carrying them out. In fact, they will be treated as rational beings, and their individuality and self-respect developed from the outset.

Dealing finally with the training of teachers, Prof. Armstrong urged that power of thought, individuality, and imagination should be developed. It was a lasting shame to the State and the School Boards that so little had been done to provide competent teachers. The future rested with the Universities; but to save the nation they must be practical, and admit broader conceptions.

PROF. PERRY, President of the Engineering Section, trenchantly discussed the education of the engineer, and also gave his opinion upon "what general education is best for the average English boy."

The public schools of England teach English through Latin, a survival of the time when only special boys were taught at all, and when there was only one language in which people wrote. Now the average boy is also taught Latin, and when he leaves school for the Army or any other pursuit open to average boys he cannot write a letter, he cannot construct a grammatical sentence, he cannot describe anything he has seen. The public school curriculum is always growing, and it is never subtracted from or rearranged. There is one subject which ordinary schoolmasters

can teach well—Latin. The other usual nine subjects have gradually been added to the curriculum for examination purposes; they are taught in water-tight compartments—or, rather, they are only crammed, and not taught at all. Our school system resembles the ordinary type of old-established works, where gradual accretion has produced a higgledy-piggledy set of shops which one looks at with stupefaction, for it is impossible to get business done in them well and promptly, and yet it seems impossible to start a reform anywhere. What is wanted is an earthquake or a fire—a good fire—to destroy the whole works and enable the business to be reconstructed on a consistent and simple plan. And for much the same reason our whole public-school system ought to be “scrapped.” What we want to see is that a boy of fifteen shall have had mental training in the study of his own language, in the experimental study of mathematics, and in the methods of the student of natural science. Such a boy is fit to begin any ordinary profession, and, whether he is to enter the Church, or take up medicine or surgery, or become a soldier, every boy ought to have this kind of training. When I have advocated this kind of education in the past I have usually been told that I was thinking only of boys who intend to be engineers; that it was a specialized kind of instruction. But this is very untrue.

As to technical education, Prof. Perry rejects all known standards: “the worst we can copy is what we find now in Germany and Switzerland”; “what we must strive for is the discovery of a British system suiting the British boy and man.”

Technical education is an education in the scientific and artistic principles which govern the ordinary operations in any industry. It is neither a science, nor an art, nor the teaching of a handicraft. It is that without which a master is an unskilled master, a foreman an unskilled foreman, a workman an unskilled workman, and a clerk or farmer an unskilled clerk or farmer. The cry for technical education is simply a protest against the existence of unskilled labour of all kinds. To have any good general system the employers must co-operate. Much of the training is workshop practice, and it cannot be too often said that this is not to be given in any college. . . . In fact we have all got to see that there is far too much unskilled labour among workmen and foremen and managers, and especially in owners. . . . I laugh at the idea that any country has better workman than ours, and I consider education of our workmen to be the corner-stone of prosperity in all engineering manufacture. . . . There is another important thing to remember. Should foreigners get the notion that we are decaying, we shall no longer have our industries kept up by an influx of clever Uitlanders, and we are much too much in the habit of forgetting what we owe to foreigners, Fleming and German, Hollander, Huguenot, and Hebrew, for the development of our natural resources. . . . In our country nearly all discoveries come from below. The leaders of science, the inventors, receive from a thousand obscure sources the germs of their great discoveries and inventions. When every unit of the population is familiar with scientific ideas our leaders will not only be more numerous, but they will be individually greater. And it is we, and not the schoolmasters, who are familiarizing the people with a better knowledge of nature.

PROF. H. L. WITHERS, of Owens College, addressed the Educational Science Section on the training of teachers.

The problem of the training of teachers is essentially different in a primary and a secondary school. . . . As regards secondary schools, the multiplicity of types is so great that any single stereotyped system of training would be futile. . . . Each University must for the future be equipped with a department of education as effective as its departments of law and medicine. In this a concrete and comparative study of educational organism and method, material for which exists in Mr. Sadler's volumes of Special Reports, should be carried on together with practical exercises in teaching and observations of actual school work. Experienced masters and mistresses should give lectures and demonstrations in connexion with the work of such a department, and there should be a museum of educational appliance and a library of educational literature. Secondary teachers have usually to specialize in one subject or group of subjects, and they will need the help of specialists in their study of method. As much as time allows must also be done to refer students to the principles of mental, moral, and physical science upon which the theory and practice of education must ultimately be based. The history of education and of educational institutions must not be neglected. A continuous course of probation must be served by each student in a school of the same type as that in which he is preparing to work as a master. Room must be made for other forms of training also, and the utmost freedom of experimentation must be allowed, to begin with, consistently with thoroughness and efficiency. If vigorously taken up by Parliament and Local Authorities as well as by Universities and schools, all working together, the professional training of teachers cannot but exercise an immense influence upon the future of education in England, and help to provide that army of disciplined and resourceful men and women upon which the success of the country in peace and war must finally depend.

The evening continuation schools under the School Board

for London reopened in the middle of the month. Owing to new regulations of the Board of Education, fees are charged in most of the schools to scholars above 16; scholars under 16 are admitted free to all schools; and in 66 schools no fees will be charged to any students. In the majority of schools the fee will be 1s. the session for any number of subjects; in commercial schools, 2s. 6d.; and in science and art schools, 5s. 382 schools give general instruction, 21 special instruction in commercial subjects, and 10 in science and art. Special schools for adults are opened, and in the ordinary schools adult pupils are, as far as possible, taught by themselves. Lectures on English literature are given in about 40 schools, and on history in 3. Gymnastics are taught at 104 centres, and doctors and nurses teach first aid and home nursing in upwards of 200 schools. There are also facilities for women and girls to learn practical cookery, dress-cutting and making, and laundry; and for men and boys to receive instruction in woodwork. Students are prepared for the examinations held by the Board of Education (South Kensington), the Civil Service, Society of Arts, London Chamber of Commerce, &c., and prizes and certificates are awarded.

SIR HENRY CRAIK'S remarks in his annual Report on Secondary Education in Scotland, on the early withdrawal of pupils from schools, apply equally to English practice:

This is, indeed, one of the most serious difficulties against which secondary education in Scotland has to contend. The only remedy for it lies in the growth of a more enlightened public opinion. It is not uncommon to see comparisons drawn between the results achieved by secondary schools in Scotland and in Germany. Such comparisons are altogether unfair, inasmuch as they ignore the difference in the conditions that prevail. So long as the Scottish lad continues to leave school two or three years earlier than his German contemporary, so long must the responsibility rest not upon teachers, but upon parents. For some time there has been a growing dissatisfaction in Scotland regarding the defective education of youth entering upon a mercantile career. That dissatisfaction is a thoroughly healthy sign. It means that commercial men are more and more realizing the supreme importance of a sound mental training. The remedy for the present state of affairs lies in their own hands. The educational machinery of the country can never have a fair chance until merchants in a body set their faces against the practice of putting boys into business at thirteen or fourteen, and until in their selection of apprentices they give preference and reasonable encouragement to those who can produce evidence of having profited by their school training. It is to this, rather than to the institution of fresh examinations, that the country must look if it desires that lads should enter business properly equipped for the work of life. Examining may become a serious danger if there is too much of it.

AMONG the Bills announced at the opening of the Dutch States General (September 16) were measures for extending facilities for intermediate and higher education, for developing technical education, and for making better provision of pensions to teachers in private schools and to the widows of teachers in general. A Royal Commission is to be appointed to codify the various laws relating to education.

## CORRESPONDENCE.

[We do not hold ourselves responsible for the opinions expressed by our correspondents.—ED. E.T.]

### LANTERN SLIDE LECTURES FOR THE PEOPLE.

To the Editor of the Educational Times.

SIR,—You have been good enough in previous years to grant us space in your columns for the purpose of calling the attention of the public to our annual offer of Lantern Slide Lectures for the people. May we mention that we are loaning this year many new and interesting sets? Some of the old favourites, too, have been thoroughly revised and added to, and we feel sure will again prove acceptable to the general public. “Anecdotes about Famous Folk,” “Pretty Pictures for All,” “Gems of Comic Art,” “The Beautiful Homes of England,” “Something about Sailors,” “Lecture Lessons,” &c., may be enumerated as a few of the many subjects on loan.

To those of your readers who may be interested in this matter we shall be happy to forward full particulars by return, on receipt of their application.—We are yours, &c.,

GEORGE NEWNES, LIMITED (Lantern Slide Lectures Department),  
8-11 Southampton Street, Strand, W.C., September 15, 1902.

EDUCATIONAL CATALOGUE POST FREE ON APPLICATION.

## BELL'S ILLUSTRATED CLASSICS.

Full Illustrated Prospectus of this Series post free on application.

Price, with or without Vocabularies, 1s. 6d. each.

**CAESAR.—DE BELLO GALLICO. Book I.** Edited by A. C. LIDDELL, M.A., Assistant Master at the High School, Nottingham.  
**— Book II.** Edited by A. C. LIDDELL, M.A.  
**— Book III.** Edited by F. H. COLSON, M.A., Head Master of Plymouth College, and G. M. GWYTHER, M.A., Assistant Master.  
**— Book IV.** Edited by the Rev. A. W. UPCOTT, M.A., Head Master of Christ's Hospital.  
**— Book V.** Edited by A. REYNOLDS, M.A., Assistant Master at Merchant Taylors' School.  
**— Book VI.** Edited by J. T. PHILLIPSON, M.A., Head Master of Christ's College, Finchley.  
**CICERO.—SPEECHES AGAINST CATILINE, I. and II.** Edited by P. HERRING, M.A., Assistant Master at Blundell's School, Tiverton.  
**SELECTIONS FROM CICERO.** Edited by J. F. CHARLES, B.A., Assistant Master at the City of London School.  
**CICERO.—DE SENECTUTE.** Edited by A. S. WARMAN, B.A., Assistant Master at the Grammar School, Manchester.  
**CICERO.—DE AMICITIA.** Edited by H. J. L. J. MASSÉ, M.A., Assistant Master at St. Paul's Preparatory School.  
**CORNELIUS NEPOS.—EPAMINONDAS, HANNIBAL, CATO.** Edited by H. L. EARL, M.A., Assistant Master at the Grammar School, Manchester.  
**EUTROPIUS. Books I. and II.** Edited by J. G. SPENCER, B.A., Assistant Master at St. Paul's Preparatory School.  
**MORACE.—ODES. Book I.** Edited by C. G. BOTTING, B.A., Assistant Master at St. Paul's School.  
**— Book II.** Edited by C. G. BOTTING, B.A.  
**— Book III.** Edited by H. LATTER, M.A., Assistant Master at Cheltenham College.  
**— Book IV.** Edited by H. LATTER, M.A.  
**LIVY. Book IX., cc. 1.-xix.** Edited by W. C. FLAMSTEAD WALTERS, M.A., Professor of Classics at King's College.

**HANNIBAL'S FIRST CAMPAIGN IN ITALY.** Selected from Livy, Book XXI., and edited by F. E. A. TRAYES, M.A., Assistant Master at St. Paul's School.  
**OVID.—METAMORPHOSES. Book I.** Edited by G. H. WELLS, M.A., Assistant Master at Merchant Taylors' School.  
**SELECTIONS FROM OVID'S METAMORPHOSES.** Edited, with Introduction and Notes, by J. W. E. PEARCE, M.A., Merton Court Preparatory School, Sidcup.  
**OVID.—ELEGIC SELECTIONS.** By F. COVERLEY SMITH, B.A., High School, Nottingham.  
**OVID.—TRISTIA. Book I.** Edited by A. E. ROGERS, M.A.  
**— Book III.** Edited by H. R. WOOLRYCH, M.A., Head Master of Blackheath School.  
**PHAEDRUS.—A SELECTION.** Edited by the Rev. R. H. CHAMBERS, M.A., Head Master of Christ's College, Brecon.  
**STORIES OF GREAT MEN.** Edited by the Rev. F. CONWAY, M.A., Assistant Master at Merchant Taylors' School.  
**VERGIL.—ÆNEID. Book I.** Edited by the Rev. E. H. ESCOTT, M.A., Assistant Master at Dulwich College.  
**— Book II.** Edited by L. D. WAINWRIGHT, M.A., Assistant Master at St. Paul's School.  
**— Book III.** Edited by L. D. WAINWRIGHT, M.A.  
**— Book IV.** Edited by A. S. WARMAN, B.A., Assistant Master at the Grammar School, Manchester.  
**— Book V.** Edited by J. T. PHILLIPSON, M.A., Head Master of Christ's College, Finchley.  
**— Book VI.** Edited by J. T. PHILLIPSON, M.A.  
**VERGIL.—SELECTIONS FROM ÆNEID. Books VII.-XII.** Edited by W. G. COAST, B.A., Assistant Master at Fettes College.  
**XENOPHON.—ANABASIS. Book I.** Edited by E. C. MARCHANT, M.A.  
**— Book II.** Edited by E. C. MARCHANT, M.A.  
**— Book III.** Edited by E. C. MARCHANT, M.A. [In the press.]

## GREEK PLAYS.

Price, with or without Vocabularies, 2s. each.

**ÆSCHYLUS.—PROMETHEUS VINCTUS.** By C. E. LAURENCE, M.A., Assistant Master at Blackheath School.  
**EURIPIDES.—ALCESTIS.** By E. H. BLAKENEY, M.A., Head Master of Sir W. Borlase School, Great Marlow.  
**EURIPIDES.—BACCHÆ.** By G. M. GWYTHER, M.A., Assistant Master at Plymouth College.  
**— HECUBA.** By the Rev. A. W. UPCOTT, M.A., Head Master of Christ's Hospital.  
**— MEDEA.** By the Rev. T. NICKLIN, M.A., Assistant Master at Kossall School.

## BELL'S ILLUSTRATED LATIN READERS.

Edited by E. C. MARCHANT, M.A.

**SCALÆ PRIMÆ.** Simple Stories for Translation, with Notes and Vocabulary. By J. G. SPENCER, B.A., St. Paul's Preparatory School. With 29 Illus. Second Edition. 1s.  
**SCALÆ MEDIÆ.** Extracts from Eutropius and Caesar. With Notes and Vocabulary. By PERCY A. UNDERHILL, M.A. With 20 Illustrations. Price 1s.  
**SCALÆ TERTIÆ.** Graded Extracts in Verse and Prose from Phædrus, Ovid, Nepos, and Cicero. With Notes and Vocabulary. By E. C. MARCHANT, M.A. With 28 Illus. 1s.

Crown 8vo, with 30 Illustrations, 1s. 6d.

### KAIMÆ ΗΡΩΘΗ. A FIRST GREEK READER.

In Two Progressive Parts. With Hints and Vocabularies. By E. C. MARCHANT, M.A., Fellow of Lincoln College, Oxford, and late Classical Master at St. Paul's School.

With Coloured Plates and numerous other Illustrations. Crown 8vo, 1s. 6d. each.

### BELL'S LATIN COURSE

FOR THE FIRST YEAR. In Three Parts.

By E. C. MARCHANT, M.A., and J. G. SPENCER, B.A.

## CAMBRIDGE MATHEMATICAL SERIES. New Volumes.

**DIFFERENTIAL CALCULUS FOR BEGINNERS.** By ALFRED LODGE, M.A., late Fellow of St. John's College, Oxford, Professor of Pure Mathematics at the Royal Indian Engineering College, Coopers Hill. With an Introduction by Sir OLIVER LODGE, D.Sc., F.R.S., LL.D., Principal of the University of Birmingham. Crown 8vo, 4s. 6d.

**ELEMENTARY GEOMETRY.** Comprising the substance of Euclid, Book I., 1-48; Book III., 1-34; and Book IV., 1-5. By W. M. BAKER, M.A., Head Master of the Military and Civil Department of Cheltenham College, and A. A. BOURNE, M.A., Senior Mathematical Master at the same College. Crown 8vo, 2s. 6d. Also Book I., separately, 1s.

This volume is written on the lines recommended by a Committee of the Mathematical Association which was formed at the suggestion of the British Association for the purpose of making reforms in the teaching of Elementary Mathematics.

**EXAMPLES IN ALGEBRA.** By C. O. TUCKEY, B.A., Assistant Master at Charterhouse, late Scholar of Trinity College, Cambridge. Crown 8vo, with or without Answers, 3s.

This volume also follows the suggestions of the Committee of the Mathematical Association referred to above.

## NEW VOLUME OF BELL'S SCIENCE SERIES.

**INJURIOUS AND USEFUL INSECTS.** An Introduction to the Study of Economic Entomology. By Prof. L. C. MIALL, F.R.S. With 100 Illustrations. 3s. 6d.

"Professor Miall has been happily inspired; he has given us just the book which was wanted; just the book which we might expect from him."—*Pilot*.

"An admirable elementary text-book of its subject."  
—*Scotsman*.

### WORKS BY

C. P. MASON, B.A., F.C.P.

**ENGLISH GRAMMAR.** Including Grammatical Analysis. 177th-182nd Thousand. Cloth, 3s. 6d.

**A SHORTER ENGLISH GRAMMAR.** With copious and carefully graded Exercises, containing the pith of the "English Grammar," with fewer minutes and more Exercises. 62nd-66th Thousand. Cloth, 3s. 6d.

**OUTLINES OF ENGLISH GRAMMAR.** For the use of Junior Classes. 127th-136th Thousand. Cloth, 2s.

**FIRST NOTIONS OF GRAMMAR.** For Young Learners. 135th-144th Thousand. Cloth, 1s.

**PRACTICE AND HELP IN THE ANALYSIS OF SENTENCES.** Cloth, 2s.

**CODE STANDARD ENGLISH GRAMMAR.** Adapted to the requirements of the successive standards of the New Code. Five Parts.

Complete List of Mr. C. P. Mason's Works post free on application.

**THE FITZROY PICTURES.** For Schools, Churches, Mission Rooms, and Hospitals. Designed by HEYWOOD SUMNER, SELWYN IMAGE, C. W. WHALL, LOUIS DAVIS, and C. M. GERE. Prices from 6d. to 5s. 6d.

Full Illustrated Prospectus on application to the Publishers.

# MACMILLAN & CO.'S

**Text-Books for the Oxford and Cambridge Local Examinations, the Oxford and Cambridge Schools Examination, London University, and College of Preceptors' Examinations.**

## LATIN.

- Macmillan's Latin Course.** By A. M. COOK, M.A., and W. E. P. PANTIN, M.A. **First Part**, 3s. 6d. **Second Part**, 4s. 6d. **Third Part**, 3s. 6d. KEY, 4s. 6d. net.
- Shorter Latin Course.** By the Same. **Part I**, 1s. 6d. KEY, 4s. 6d. net. **Part II**, 2s. KEY, 4s. 6d. net.
- Macmillan's Latin Reader.** By H. J. HARDY, M.A. 2s. 6d.
- Macmillan's Elementary Latin-English Dictionary.** By Rev. G. H. NALL, M.A. 3s. 6d.
- Latin Accidence and Exercises.** Arranged for Beginners. By W. WELCH, M.A., and C. G. DUFFIELD, M.A. 1s. 6d.
- Exercises in Unseen Translation in Latin.** By W. WELCH, M.A., and C. G. DUFFIELD, M.A. 1s. 6d.
- Latin Passages for Translation.** For the Use of Higher Forms in Schools, and of Students working for Pass Degrees. Selected by M. ALFORD. 3s.
- Caesar.—The Gallic War.** Edited by Rev. JOHN BOND, M.A., and Rev. A. S. WALPOLE, M.A. 4s. 6d.
- Caesar.—Gallic War.** With Notes and Vocabulary. **Book I.** By Rev. A. S. WALPOLE, M.A. 1s. 6d. **Book IV.** By C. BRYANS, M.A. 1s. 6d. **Book V.** By C. COLBECK, M.A. 1s. 6d. **Book VI.** By C. COLBECK, M.A. 1s. 6d.
- Cicero.—Pro Milone.** Edited by F. H. COLSON, M.A. 2s. 6d.
- Cicero.—Pro Cluentio.** Edited by W. PETERSON, Litt.D. 3s. 6d.
- Eutropius.—Books I and II.** With Notes and Vocabulary by W. WELCH, M.A., and C. G. DUFFIELD, M.A. 1s. 6d.
- Horace.—Odes.** **Books I, II, III, and IV.** With Notes and Vocabulary. By T. E. PAGE, M.A. (*Elementary Classics*.) 1s. 6d. each. (*Classical Series*.) 2s. each.
- Horace.—Select Epodes and Ars Poetica.** With Introduction and Notes. By H. A. DALTON, M.A. 1s. 6d. **Epodes.** Edited by T. E. PAGE, M.A. 2s.
- Livy.—Books XXI and XXII.** With Notes and Vocabulary. By Rev. W. W. CAPES and J. E. MELHURST, M.A. 1s. 6d. each.
- Livy.—Books II and III.** Edited by Rev. H. M. STEPHENSON, M.A. 3s. 6d.
- Ovid.—Metamorphoses.** **Book VIII.** Edited by C. H. KEENE, M.A. 2s.
- Ovid.—Tristia.** **Book I.** With Notes and Vocabulary. By E. S. SHUCKBURGH, M.A. 1s. 6d.
- Ovid.—Tristia.** **Book III.** With Notes and Vocabulary. By E. S. SHUCKBURGH, M.A. 1s. 6d.
- Phaedrus.—Fables.** With Notes and Vocabulary. By Rev. G. H. NALL, M.A. 1s. 6d.
- Plautus.—Captivi.** Edited by A. R. S. HALLIDIE, M.A. 3s. 6d.
- Virgil.—Aeneid.** **Books I, II, III, IV, and VI.** With Notes and Vocabulary. By T. E. PAGE, M.A. 1s. 6d. each.
- Virgil.—Aeneid.** **Book I.** With Notes and Vocabulary. By Rev. A. S. WALPOLE, M.A. 1s. 6d.
- Virgil.—Aeneid.** **Book V.** With Notes and Vocabulary. By Rev. A. CALVERT, M.A. 1s. 6d.
- Terence.—Hauton Timorumenos.** Edited by E. S. SHUCKBURGH, M.A. 2s. 6d.; with Translation, 3s. 6d.

## GREEK.

- Macmillan's Greek Course.—**
- First Greek Grammar.** By Rev. W. G. RUTHERFORD, LL.D. **Accidence**, 2s. **Syntax**, 2s. Complete, 3s. 6d.
- Easy Exercises in Accidence.** By G. H. UNDERHILL, M.A. 2s.
- A Second Exercise Book.** By Rev. W. A. HEARD, M.A. 2s. 6d. KEY, 5s. net.
- Easy Exercises in Syntax.** By Rev. G. H. NALL, M.A. 2s. 6d.
- Greek Prose Composition.** By S. O. ANDREW, M.A. 3s. 6d. KEY, 5s. net.
- Greek Reader: Stories and Legends.** With Notes, Vocabulary, and Exercises. By F. H. COLSON, M.A. 3s.
- Passages for Greek Translation for Lower Forms.** By G. H. PEACOCK, M.A., and E. W. W. BELL, M.A. 1s. 6d.
- An Introduction to Greek Prose Composition.** By H. PITMAN, M.A. 2s. 6d. KEY, 5s. net.
- The Acts of the Apostles.—Authorized Version.** With Notes. By T. E. PAGE, M.A., and Rev. A. S. WALPOLE, M.A. 2s. 6d.
- The Acts of the Apostles.—The Greek Text.** With Notes. By T. E. PAGE, M.A. 3s. 6d.
- The Gospel according to St. Luke.—The Greek Text.** With Introduction and Notes. By Rev. J. BOND, M.A. 2s. 6d.
- The Gospel according to St. Matthew.—Greek Text.** With Introduction and Notes. By Rev. A. SIOMAN. 2s. 6d.

- Aeschylus.—Agamemnon.** With Translation. By A. W. VERRALL, Litt.D. 12s.
- Demosthenes.—De Corona.** Edited by B. DRAKE. Revised by E. S. SHUCKBURGH, M.A. 3s. 6d.
- Euripides.—Mecuba.** With Notes and Vocabulary. By Rev. J. BOND, M.A., and Rev. A. S. WALPOLE, M.A. 1s. 6d.
- Euripides.—Bacchae.** Edited by R. Y. TYRRELL, M.A. 3s. 6d.
- Euripides.—Alcestis.** With Notes and Vocabulary. By Rev. M. A. BAYFIELD, M.A. 1s. 6d. Edited by M. L. EARLE, Ph.D. 3s. 6d.
- Euripides.—Medea.** With Notes and Vocabulary. By Rev. M. A. BAYFIELD, M.A. 1s. 6d. Edited by A. W. VERRALL, Litt.D. 2s. 6d.
- Homer.—Iliad.** **Book IX.** Edited by J. H. PRATT, M.A., and W. LEAF, Litt.D. 2s. **Books I-XII.** Edited by W. LEAF, Litt.D., and Rev. M. A. BAYFIELD, M.A. 6s.
- Sophocles.—Antigone.** Edited by Rev. M. A. BAYFIELD, M.A. 2s. 6d.
- Thucydides.** **Book VII.** Edited by E. C. MARCHANT, M.A. 3s. 6d.
- Thucydides.** **Books VI and VII.** Edited by Rev. P. FROST, M.A. 3s. 6d.
- Xenophon.—Memorabilia Socratica.** Edited by A. R. CLUER, B.A. 5s.
- Xenophon.—Anabasis.** **Book I.** With Notes and Vocabulary. By Rev. A. S. WALPOLE, M.A. 1s. 6d.; with Exercises by E. A. WELLS, M.A. 1s. 6d.
- Xenophon.—Anabasis.** With Notes and Vocabulary. **Book V.** By Rev. G. H. NALL, M.A. 1s. 6d. **Book VI.** By Rev. G. H. NALL, M.A. 1s. 6d.

## ENGLISH.

- A Short History of English Literature.** By Prof. G. SAINTSBURY. 8s. 6d.
- A History of English Literature.** By E. J. MATHEW, M.A. 4s. 6d.
- English Grammar, Past and Present.** By J. C. NESFIELD, M.A. 4s. 6d. KEY, 2s. 6d. net. (*Adapted to the London Matriculation Course.*)
- Outline of English Grammar.** By J. C. NESFIELD, M.A. 1s. 6d. KEY, 2s. 6d. net.
- Oral Exercises in English Composition.** By J. C. NESFIELD, M.A. 1s. 6d.
- Junior Course of English Composition.** By J. C. NESFIELD, M.A. 1s. 6d.
- Manual of English Grammar and Composition.** By J. C. NESFIELD, M.A. 2s. 6d. KEY, 2s. 6d. net.
- Word-Building, Transcription, and Composition.** By ROBERT S. WOOD, Vol. I, 1s. Vol. II, 2s.
- The Parts of Speech and their Uses.** By H. W. HOUSEHOLD, M.A. 1s. 6d.
- A First Book in Writing English.** By E. H. LEWIS, Ph.D. 3s. 6d.
- A First Manual of Composition.** By E. H. LEWIS. 3s. 6d.
- A Second Manual of Composition.** By E. H. LEWIS. 4s. 6d.
- Burke.—Speech on Conciliation with America, on American Taxation, Letter to the Sheriffs of Bristol.** With Introduction and Notes. By F. G. SELBY, M.A. 3s. 6d.
- Chaucer.—The Prologue, &c.** Edited by M. H. LIDDELL. 3s. 6d.
- Chaucer.—Works.** Edited by A. W. POLLARD, &c. 3s. 6d.
- Macaulay.—Lays of Ancient Rome.** (Containing Horatius, Lake Regillus, and The Armada.) With Introduction and Notes. By W. T. WEBB, M.A. 1s. 9d.
- Macaulay.—Essay on Lord Clive.** With Introduction and Notes. By K. DEIGHTON. 2s.
- Macaulay.—Essay on Warren Hastings.** With Introduction and Notes. By K. DEIGHTON. 2s. 6d.
- Milton.—L'Allegro, Il Penseroso, Lycidas, Arcades, Sonnets, &c.** With Introduction and Notes. By W. BELL, M.A. 1s. 9d.
- Milton.—Comus.** With Introduction and Notes. By W. BELL, M.A. 1s. 3d.
- Scott.—The Lady of the Lake.** With Introduction and Notes. By G. H. STUART, M.A. 2s. 6d.; sewed, 2s.
- Scott.—The Talisman.** Border Edition. 3s. 6d.
- Shakespeare.—Macbeth.** With Introduction and Notes. By K. DEIGHTON. 1s. 9d.
- Shakespeare.—A Midsummer Night's Dream.** With Introduction and Notes. By K. DEIGHTON. 1s. 9d.
- Shakespeare.—Twelfth Night.** With Introduction and Notes. By K. DEIGHTON. 1s. 9d.
- Shakespeare.—Coriolanus.** With Introduction and Notes. By K. DEIGHTON. 2s. 6d.; sewed, 2s.
- Spenser.—The Faerie Queene.—Book I.** With Introduction and Notes. By H. M. PERCIVAL, M.A. 3s.

## FRENCH AND GERMAN.

- French Course.** By A. C. POIRÉ. **FIRST YEAR**, 1s. **SECOND YEAR**, 1s. 6d.
- Macmillan's Progressive French Course.** By G. E. FASNACHT. **FIRST YEAR**, 1s. **Supplementary Exercises to First Year**, 1s. **SECOND YEAR**, 2s. **THIRD YEAR**, 2s. 6d. **KEYS**, 4s. 6d. net each.
- Macmillan's Progressive French Readers.** By the Same. **FIRST YEAR**, 2s. 6d. **SECOND YEAR**, 2s. 6d.
- Macmillan's French Composition.** By the Same. **Part I**, 2s. 6d. KEY, 4s. 6d. net. **Part II**, 5s. KEY, 5s. net.
- Abridged French Grammar.** By G. E. FASNACHT. 2s. 6d.
- An Elementary French Grammar.** By G. E. FASNACHT. 1s. 6d.
- A Compendious Dictionary of the French Language.** By Prof. ALFRED ELWALL and GUSTAVE MASSON. 3s. 6d.
- Molière.—Le Misanthrope.** Edited by G. E. FASNACHT. 1s.
- A German Primer.** By OTTO SIEPMANN. 3s. 6d. KEY, 3s. 6d. net.
- Macmillan's Progressive German Course.** By G. E. FASNACHT. **FIRST YEAR**, 1s. 6d. **SECOND YEAR**, 3s. 6d. **KEYS**, 4s. 6d. net each.
- Macmillan's Progressive German Readers.** By the Same. **FIRST YEAR**, 2s. 6d.
- Macmillan's German Composition.** By the Same. **Part I**, 2s. 6d. KEY, 4s. 6d. net.
- A Compendious German and English Dictionary.** By Prof. WHITNEY and A. H. EDGREN. 5s. **German-English**, 3s. 6d.
- Goethe.—Egmont.** Edited by S. PRIMER, Ph.D. 3s. 6d.
- Hauff.—Die Karavane** (containing "Kuhf Storch" and "Das Gespensterschiff"). With Notes and Vocabulary. By H. HAGER, Ph.D. 3s.
- Schiller.—Maria Stuart.** Edited by C. SHELDON, Litt.D. 2s. 6d.
- Schiller.—Maria Stuart.** Edited by H. SCHOENFELD. 3s. 6d.

## SCIENCE.

- Introduction to Chemistry and Physics.** By Prof. W. H. PERKIN, Jr., Ph.D., F.R.S., and BEVAN LEAN, D.Sc., B.A. (Lond.). In 2 Vols., 2s. each.
- Exercises in Practical Physics.** By R. A. GREGORY and A. T. SIMMONS. In Two Parts, 2s. each.
- Elementary General Science.** By A. T. SIMMONS and L. M. JONES. 3s. 6d.
- An Introduction to Practical Physics.** By D. RINTOUL, M.A. 2s. 6d.
- Heat, Light, and Sound.** By D. E. JONES. 2s. 6d.
- Magnetism and Electricity for Beginners.** By H. E. HADLEY. 2s. 6d.
- Chemistry for Organized Schools of Science.** By S. PARRISH. 2s. 6d.
- Inorganic Chemistry for Beginners.** By Sir H. E. ROSCOE and J. LUNT. 2s. 6d.
- Elementary Mechanics of Solids.** By W. T. A. EMTAGE, M.A. 2s. 6d.
- Applied Mechanics for Beginners.** By J. DUNCAN. With Exercises. 2s. 6d.
- Mechanics for Beginners.** By W. GALLATI, M.A. 2s. 6d.
- Physiology for Beginners.** By Sir M. FOSTER, K.C.B., and L. E. SHORE. 2s. 6d.
- Botany for Beginners.** By E. EVANS. Second Edition. 2s. 6d.
- Practical Botany for Beginners.** By Professor F. O. BOWER, Sc.D., F.R.S., and D. T. GWYNNE VAUGHAN, M.A. Second Edition. 3s. 6d.
- Physiology for Beginners.** By A. T. SIMMONS, B.Sc. 2s. 6d.
- Geology for Beginners.** By W. W. WATTS, M.A. 2s. 6d.

## THE UNIVERSITY TUTORIAL SERIES.

### COLLEGE OF PRECEPTORS' EXAMINATIONS, 1903.

- Caesar.—Gallic War, Book IV.** By A. H. ALLCROFT, M.A. Oxon., and T. R. MILLS, M.A. Oxon. Text and Notes. 1s. 6d. Vocabulary, 1s.
- Euripides.—Medea.** By J. THOMPSON, M.A. Camb., and T. R. MILLS, M.A. Oxon. Text and Notes. 3s. 6d.
- Horace.—Odes, Book III.** By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Camb. and Lond. Text and Notes, 1s. 6d. Vocabulary, 1s.
- Livy.—Book XXI.** By A. H. ALLCROFT, M.A. Oxon. Text and Notes, 2s. 6d. Vocabulary, 1s. 6d.
- Vergil.—Aeneid, Book VI.** By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Text and Notes, 1s. 6d. Vocabulary, 1s.

### LONDON MATRICULATION NEW REGULATIONS.

- Matriculation English Course.** By W. H. LOW, M.A. Lond., and JOHN BRIGGS, M.A. Camb., F.Z.S. 3s. 6d. [Ready. This book contains grammar, analysis, composition, précis-writing.]
- Matriculation Latin Unseens.** Being the Passages set for Translation from Unprescribed Books, 1875-1902. 1s. [Ready.]
- Matriculation Modern History.** Being the History of England, 1485-1901, with some reference to the Contemporary History of Europe and Colonial Developments. By C. S. FEARENSIDE, M.A. Oxon. 3s. 6d. [Ready October, 1902.]
- The New Matriculation Algebra.** With a Chapter on Graphs. By RUPERT DEAKIN, M.A. 3s. 6d. [Ready.]
- Matriculation Advanced Algebra and Geometry.** Edited by Wm. BRIGGS, LL.D., M.A. 4s. 6d. [Ready early in October, 1902.]
- The New Matriculation Chemistry.** By G. H. BAILEY, D.Sc., Ph.D., and R. H. ADIE, M.A., B.Sc. Part I., 4s. Part II., 2s. [Ready early in October, 1902.]
- Matriculation Physics: Heat, Light, and Sound.** By R. W. STEWART, D.Sc. Lond., and JOHN DON, M.A., B.Sc. Lond. 4s. 6d. [Ready.]
- The New Matriculation Botany.** By A. J. EWART, D.Sc. 3s. 6d. [Ready October, 1902.]

### SOUTH KENSINGTON EXAMINATIONS.

#### ELEMENTARY STAGE. 2s. each Volume.

- Building Construction, First Stage.** By BRYSSON CUNNINGHAM, B.E., Assoc. M.Inst.C.E.
- Mathematics, First Stage.** Containing all the Algebra and Euclid required. Edited by Dr. Wm. BRIGGS, M.A., F.R.A.S.
- Mechanics (Solids), First Stage.** By F. ROSENBERG, M.A., B.Sc. Fourth Edition. KEY, 1s. net.
- Mechanics of Fluids, First Stage.** By G. H. BRYAN, Sc.D., F.R.S., and F. ROSENBERG, M.A., B.Sc. Second Edition.
- Sound, Light, and Heat, First Stage.** By JOHN DON, M.A., B.Sc.
- Magnetism and Electricity, First Stage.** By R. H. JUDE, M.A., D.Sc. Second Edition.
- Inorganic Chemistry (Theoretical), First Stage.** By G. H. BAILEY, D.Sc., Ph.D. Heidelberg. Edited by Dr. Wm. BRIGGS, M.A., F.C.S. Second Edition.
- Botany, First Stage.** By A. J. STEWART, D.Sc.
- Physiography, First Stage.** By A. M. DAVIES, A.R.C.S., B.Sc., F.G.S.
- Hygiene, First Stage.** By R. A. LYSTER, B.Sc.
- Price 1s.
- Inorganic Chemistry (Practical), First Stage.** By F. BEDDOW, Ph.D., D.Sc. Second Edition.
- Price 1s. 6d.
- Organic Chemistry (Practical).** By GEORGE GEORGE, F.C.S.

Full Catalogue of the University Tutorial Series, and List of Books suitable for the following Examinations, free on application:—

COLLEGE OF PRECEPTORS, and Oxford and Cambridge Locals,  
London University Matriculation New Regulations, Inter. Arts, and B.A., 1903 and 1904;  
SOUTH KENSINGTON (including Books for the ADVANCED STAGE), &c.

London: W. B. CLIVE, University Tutorial Press  
Warehouse, 157 Drury Lane, W.C.

### CURRENT EVENTS.

THE next monthly meeting of members of the Fixtures. College of Preceptors will take place on Wednesday, October 15, at 7.30 p.m., when Mr. L. W. Lyde will read a paper on "The Teaching of Geography in Lower Forms (with special reference to Examinations)."

\* \* \*

A CONFERENCE of representatives of the Universities and of associations of teachers and others will take place at Cambridge on November 14 and 15, to discuss questions relating to the training of teachers, with special reference to the Order in Council as to registration.

\* \* \*

AT St. Andrews University, Mr. Carnegie will be installed as Lord Rector on October 24.

Mr. R. B. Haldane, M.P., K.C., LL.D., will deliver the Gifford lectures on October 14-21.

◆◆◆

MR. JOHN M'CONNELL has promised £1,000 towards the establishment of a Faculty of Commerce in Queen's College, Belfast.

\* \* \*

THE RIGHT HON. W. J. PIRRIE has provided a site for the Pirrie laboratories of the College. The building will contain departments for physical, optical, and engineering science, and several rooms for practical work.

\* \* \*

THE Aberystwyth Town Council has made a free grant of land to Aberystwyth University College for the extension of the buildings.

\* \* \*

ALDERMAN HENRY HARRISON, J.P., President of the Blackburn Chamber of Commerce, has made to the Peel Trustees a gift of £1,000 in North-Eastern Debenture Stock for the purpose of establishing a scholarship for modern languages.

◆◆◆

MR. P. A. BARNETT, H.M.I.S., has gone out to be Superintendent of Public Education in Natal.

\* \* \*

MR. JOHN SIME, M.A. (St. Andrews and Oxford), Lecturer in Moral Philosophy in St. Andrews University, has succeeded Dr. Baillie as Lecturer in Logic and Moral Philosophy in University College, Dundee.

\* \* \*

HERR JULIUS FREUND, Ph.D., Lecturer in German in the University of Lund, has been appointed Lecturer in German in the University of St. Andrews. Dr. Freund is a native of Marburg and an old pupil of Prof. Vietor, whom he has several times assisted in conducting holiday courses for English-speaking teachers of German at Marburg.

\* \* \*

MR. H. W. MALCOLM, M.A., B.Sc. of Aberdeen University, has been appointed Lecturer and Demonstrator in Physics at University College, Bristol.

Literary Items. THE Clarendon Press has in preparation the final volumes (or parts) of the "Coptic Version of the New Testament (Northern dialect)," Dr. Redpath's "Concordance to the Septuagint," Mrs. Margolionth's "Syriac Dictionary," Mr. Macaulay's "Works of John Gower," Mr. Toller's "Anglo-Saxon Dictionary" (Supplement), and Thorold Rogers's "History of Agriculture and Prices." Also: "The Mediæval Stage" (2 vols.), by E. K. Chambers, M.A.; an edition of "The Lay of Havelok the Dane," by Prof. Skeat; "The Arab Conquest of Egypt," by Prof. A. J. Butler; Messrs. Vigfússon and York-Powell's edition of "The Land-náma-bóc" (2 vols.); and an "Historical Atlas of Modern Europe, from the Decline of the Roman Empire," edited by Dr. R. L. Poole.

MR. MURRAY promises at an early date a first series of "St. Margaret's Lectures" (6) on the "Criticism of the New Testament," by well known scholars; two volumes of biographical essays on "Some Eighteenth Century Men of Letters," by the late Rev. Whitwell Elwin; and a new "Greek Grammar for Schools and Colleges," embodying "some of the results of the linguistic discoveries of the present day," by John Thompson, M.A.

MESSRS. LONGMANS have in the press a volume of "Historical Essays and Reviews," by the late Bishop Creighton; a work on "Constitutional Law" (Dr. Hart's "American Citizen Series"), by the Hon. Judge McClain, of Iowa; "The Age of the Fathers," two volumes of "chapters in the history of the Church during the fourth and fifth centuries," by the late Prof. Bright; "The Making of our Middle Schools," an account of the development of secondary education in the United States, by Prof. Brown, of the University of California; and Prof. Sully's exposition of the philosophy of "Laughter and Humour."

MESSRS. G. BELL & SONS will shortly publish a new edition of Carlyle's "French Revolution," with introduction, notes, and appendices by Mr. J. Holland Rose, and with numerous illustrations and portraits from contemporary prints, which were in many cases used by Carlyle himself, and can be seen to have inspired some of his more graphic passages. The work will be issued, like the original edition, in three volumes, uniform with the editor's "Life of Napoleon I."

MESSRS. CASSELL announce the immediate issue of an illustrated edition of "Social England," revised and partly re-written, in fortnightly parts, at 1s. net each. There will be about 2,500 illustrations reproduced from authentic historic documents and pictures, and numerous coloured plates and maps.

THE *International Monthly* has become the *International Quarterly*. The September number is the first of the new issue. Mr. Fisher Unwin is the publisher.

MESSRS. BELL will publish immediately a volume on "The Art of Walter Crane," by Mr. P. G. Konody, the editor of the *Connoisseur*. The book will be profusely illustrated with coloured plates, photogravures, and other illustrations, covering all sides of the artist's work.

THE County Councils of the Ridings have published a very interesting pamphlet on "Agricultural Education in Yorkshire," giving a general account of the steps taken by them in conjunction with the Yorkshire College "to further educational and scientific work as applied especially to agriculture." There are many instructive illustrations.

General. EARLY next month the Privy Council will be ready to hear the case for a charter incorporating a University for Liverpool.

THE Belfast Chamber of Commerce, after consultation with the authorities of Queen's College, has drawn up a scheme for the establishment of a Faculty of Commerce, with a diploma and a degree in the college; and this scheme has been laid before the Royal Commission on University Education in Ireland. (See "Endowments.")

THE British Association meets next year at Southport. Sir Norman Lockyer will be the President.

FORMS of entry for the Cambridge Local Examinations commencing on December 15 can now be obtained from the Local Secretaries at the several centres.

THE Leipziger Lehrerinnen-Verein is projecting the erection of an "Auguste Schmidt Haus" in Leipzig in memory of the lady that was Honorary President of the General German Women Teachers' Union and of the Federation of German Women Teachers' Unions, and "the soul of the German women's movement."

MESSRS. ROBERT BOYLE & SON (64 Holborn Viaduct) intend "to present to the schools of this country and the colonies a large educational diagram illustrating 'natural ventilation.'" A very fine diagram it is, and sure to prove instructive and practically useful.

THE Board of Education has issued its Report for 1901-02 (Cd. 1275; 6d.); Report for 1901 on Museums, Colleges, and Institutions under its administration (Cd. 1266; 11d.); General Reports of H.M.I. on Science and Art Schools and Classes and Evening Schools, and of Examiners in Science and Art, for 1901 (Cd. 1214; 5½d.); and Model Course of Physical Training for Upper Departments of Public Elementary Schools (3d.). Messrs. Eyre & Spottiswoode also publish the Report on Secondary Education, 1902 (4d.), and the Third Report of the Royal Commission on University Education in Ireland (6s.).

### UNIVERSITY LIFE IN GERMANY.

By W. B. WALLACE, B.A.

WHAT Nuremberg is to the hideousness of the towns, that the German student is to the stereotyped human figures, of contemporary Europe—a quaint and interesting survival of mediævalism in the midst of the dull uniformity and the Philistine conventionality of modern life.

This is no new doctrine, for the *Burschen* have always been invested with a halo of romanticism, with which, strange to say, the fumes of their beer and tobacco by no means incongruously blend.

Literary interest, of course—a factor whose influence can scarcely be overrated—more than even the bizarre realities of his surroundings, has elevated the Teuton student to a Walhalla in which his Oxford, Cambridge, Dublin, and Paris fellows have no part. Was not Dr. Faustus—the Faustus of legend, of Marlowe, of Goethe, and of Gounod—a student ere he became a professor at Wittenberg and enjoyed the posthumous acquaintance of Helen of Troy? Has not an English writer, famous in politics as well as poesy, depicted for us in tragi-comic verse the somewhat ludicrous woes of an *alumnus* in the "U—niversity of Göttingen"? The sweetest of Transatlantic bards loved the memories of his Heidelberg—his by virtue of the adoptive prerogative of genius—even as he loved the bouquet of his own Catawba wine; and who that has read "Vanity Fair" can ever forget the infatuated youths who paid their court to Becky, that rather dubious *Engel Engländerin*, in the ducal town of Pumpernickel?

The savour and aroma of the middle ages which that subtle distiller of strange, old-world essences, Charles Reade, has so marvelously reproduced in his "The Cloister and the Hearth," still hangs, as we *Baye sail*, around the *Museumschloesse* of the Fatherland

and their abodes. Let us try to catch a whiff of it, fragrant as the breath of one of their own coloured meerschauams, ere it vanish into the *Ewigkeit* before the strong, merciless furnace-blasts of utilitarianism and progress.

In Germany, as everybody knows, Universities—there are twenty of them—are scattered broadcast over the face of the land; and they preponderate, not in number only, but in social influence as well. At Oxford, Cambridge, and Dublin, the University—to use a simile of Petronius, with slight but necessary alteration—is merely the fringe: the town, with its municipal life and interests, is the robe: while, with our Teutonic cousins, on the other hand, everywhere, with the obvious exception of Berlin, it is the University that is the robe, while the town is merely the fringe. The students pervade the place, and are very strikingly in evidence wherever you turn; they are, so to speak, the ruling caste, while the *Philisters*, as they call the townsmen, are nowhere. They have their customs, their rights, their peculiar costumes; all other buildings are dominated by those of the University.

There are, of course, cliques and “sets” in our English Universities, but not to such a marked extent as in Germany. Here there are the *Corps*, the *Burschenschaften*, and the less pretentious *Vereine*, to one or other of which clubs or unions the student, as a rule, belongs, although in theory it is open to him to hold aloof from all such allurements and devote himself to hard work.

On ordinary occasions the *Bursch* wears a flat cap displaying the colours of the corporation to which he belongs, or else a kind of three-cornered hat called a *Stürmer*, similarly adorned. The proper time to see him, however, is when he is “dressed all in his best” on high days and holy-days, when he appears, in short, in *collem Wichs* (full fig), as they call it. He is then arrayed in braided jacket of green, red, or white, as the case may be, and sports a broad scarf, high jack-boots, great leather gauntlets reaching nearly to the elbow, a long rapier, and a small embroidered cap, which can only be kept balanced on the head by an effort of ingenuity, the result of long practice. Witnessing a procession of these gentry in their quaint but picturesque gala attire, each wearing the distinctive badge and colours of his society or club, you might well fancy yourself back in the days of good old Albrecht Dürer.

The *Kneipen* (beer saloons) of the various unions are decorated more or less gorgeously. Tables are ranged along the walls in the form of a horseshoe. There are banners, escutcheons, photographs, the inevitable bust of the Kaiser, and, last but not least, Gargantuan beakers for Gargantuan drinkers. An entertainment is generally given once a week, wherein beer and music and tobacco are very much to the fore, under the auspices of a president, duly supported by assessors. This *thaliarchus* is an absolute monarch in his small domain: a sword is placed before him when he takes his seat to show his sovereign authority, and in questions of drink or song there is no appeal from his decisions. All these festive gatherings are conducted according to fixed rules, and have a language of their own. There are different modes of drinking, known by extraordinary names (*Salamanderreiben*, &c.); comrades are addressed as *commilitones*; and the assembly is called the *corona*. The students of the first year, who are dubbed *Füchs* (foxes), sit apart under the presidency of a senior, whose duty it is to instruct them in the mysteries of drinking and chorus singing, *selon la règle*.

Drinking contests are frequent; and every student possesses—or is supposed to possess—what is called a *Kommerzbuch*, which is a veritable anthology containing songs of all kinds—patriotic, bacchanalian, and sentimental. Perhaps the most celebrated of these ditties is the “*Gaudeamus*.” The ring of pessimism rather reminds us of our own “*Down among the Dead Men*”:

*Gaudeamus igitur juvenes dum sumus !  
Post jucundam juventutem,  
Post molestam senectutem,  
Nos habebit humus, nos habebit humus.*

Drinking, smoking, and singing, however, are not the only relaxations of the true student; there is also the time-honoured institution of the *duello*. Duels are strictly forbidden in the Universities, as well as in the Army—“*e pur si batte!*” Traditions die hard, and the duel, like the Chaldaean astrologers and soothsayers in ancient Rome, is proscribed, and yet connived at and retained. As a rule, at a University, one takes place every week. Needless to say, these encounters are not à l'outrance. When the principals, with their seconds and companions, take their place on the *Mensur* (ground)—which, for prudential reasons, is generally in the vicinity of

some quiet country *Gasthaus* (tavern)—they are encased in a *quasi*-armour of stout leather. It is only the face or head that can be reached by the rapier—the weapon in use on such occasions. Ugly, if not dangerous, wounds are quite possible, and a combatant sometimes loses a portion of an ear or of a nose, or receives a nasty slash across the cheek; but such hurts are regarded as “honourable scars.” The duration of the duel is strictly limited to fifteen minutes.

Life even at a German University is not all “beer and skittles,” as the saying goes, and duelling. The students have to prepare for that great and serious struggle in the world, in which the Teutons are certainly not the men to go to the wall; and the twenty seats of learning of which the Fatherland can boast are leading centres, now as of old, of thought, culture, and research. The Government is most munificent in its support of learning. It has spent, for instance, no less than £120,000 recently on the University of Strasburg, and the German University professor is an important and well paid functionary, although, of course, salaries vary. At Königsberg a professor receives from 3,900 to 7,200 marks per annum; at Berlin, from 3,300 to 12,000; at Halle, from 3,500 to 9,000.

A student's matriculation fees also vary from 18 marks at Bonn and Berlin to 20 marks at Leipzig, and he must also pay for each course of lectures he attends. The fixed *honorarium* which a professor receives at Heidelberg from every student who attends his classes is 5 marks an hour; at Göttingen it is as much as 7 marks. This system of payment is obviously not without its advantages. Monetary considerations compel the student to exercise prudence in his selection of courses, and it is the interest of each professor to make his lectures as useful and attractive as possible; for, of course, the more pupils he has, the larger are his receipts.

As a rule, the professors' lectures are, as the derivation of the word imports, simply “readings” (*Vorlesungen*). It is seldom, indeed, that a teacher is found who, like the great metaphysician and Kantian commentator Kuno Fischer, of Heidelberg, can address a class without notes. The average German *savant* is painstaking, thorough, and accurate to a degree, but he is rarely brilliant or eloquent.

The number of professors and students varies considerably in the different Universities. In the year 1896–97 there were 341 professors at Berlin University, and over 5,000 students; while at the same period at Rostock the professors numbered 44, and their *alumni* 500.

### MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on September 13. Present: Rev. J. Stewart, Vice-President, in the Chair; Mr. Barlet, Mr. Baumann, Mr. Bidlake, Mr. Brown, Mr. Butler, Mr. Chettle, Mr. Harris, Mr. Holland, Miss Jebb, Mr. Kelland, Mr. Millar Inglis, and Rev. Dr. Scott.

The minutes of the last meeting were read and confirmed.

Diplomas were awarded to the following persons, who had passed the required Examination for the Associateship of the College:—Miss M. M. Baugh, A. F. Corridon, A. H. Harris, D. M. Periton, and Miss K. A. Perratt.

The report of the Finance Committee was adopted.

On the motion of Mr. Millar Inglis, a Committee was appointed to consider in what ways the usefulness and influence of the College might be extended.

The following persons were elected members of the College:—

Miss E. S. Gandy, A.C.P., Queen Street, Deal.  
Miss M. Punnett, B.A. Lond., Cambridge Training College.  
Mr. C. B. Hughes, A.C.P., Willow House School, Walsall.  
Miss H. Hamilton-Gibbs, Convent of the Assumption, Richmond, Yorks.  
Mr. S. H. Mitchell, L.C.P., Elmwood House, Port Talbot.  
Mr. T. R. Wilson, Wethersfield House, Victoria Park, Cambridge.

The following books had been presented to the Library since the last meeting of the Council:—

By the VOLTA BUREAU, WASHINGTON.—International Reports of Schools for the Deaf; Statistics of Speech-Teaching in American Schools for the Deaf, 1901.  
By E. ARNOLD.—Arnold's New Shilling Geography; Arnold's Literary Reading Books (In the World of Books and In Realms of Gold); Fletcher's Elementary Geometry.  
By G. BELL & SONS.—The Abbey History Readers, Books I.-V.; Macnair's Introduction to Chemistry; Lodge's Differential Calculus for Beginners.  
By BLACKIE & SON.—Blackie's Illustrated Continental Geography Readers (Australasia); Reversible Copy-Books, Nos. 5, 6, and 7; Scholle and Smith's First Steps in German, and First German Grammar; Smart's Selections from De Musset; Wimbolt's Virgil's Georgics, Book IV.  
By C. J. CLAY & SONS.—Harper's Song of Solomon (Cambridge Bible for Schools and Colleges).  
By W. B. CLIVE.—Matriculation Directory, No. XXXII., June, 1902.

By GINN & Co.—The Youth's Companion Series (Northern Europe and The Wide World); Allen and Greenough's Cicero's Orations and Letters; Benan and Smith's Academic Algebra; Blaisdell's Life and Health; Brownell's Valerius's El Pajaro Verde; Davis's Elementary Physical Geography; Gage's Introduction to Physical Science; Heinemann's Curso Completo de Arithmetica; Hodge's Nature-Study and Life; Litchfield's Selections from English Poets; Loomis's Original Investigation, or How to Attack an Exercise in Geometry; Meier's Herbarium and Plant Description; Myers's The Middle Ages; Pimney's Spanish and English Conversation (First Book); Pratt's Invertebrate Zoology; Stone and Fickett's Trees in Prose and Poetry; Turk's Selections from De Quincey; Wightman's Hugo's Notre Dame de Paris; Witmer's Analytical Psychology.

By MACMILLAN & Co.—Bradshaw's First Step in Arithmetic; Downie's Holmes's The Autocrat of the Breakfast Table; Webb's Selections from Campbell; Duncan's Applied Mechanics for Beginners.

By METHUEN & Co.—Rose's Rose Reader; Williamson's Class-Book of Easy Dictation and Spelling.

By RALPH HOLLAND & Co.—Clough's Reprint of Scholarship Questions.

By RIVINGTONS.—Robinson's Short History of Rome; Morich's Premieres Lectures Francaises.

By the UNIVERSITY EXAMINATION POSTAL INSTITUTION.—Cambridge Higher Local French and Arithmetic Papers.

By HACHETTE & Co.—Hermann Lange's Household German, Part I.; Spencer's Le Baccus.

Calendars of University College of Wales, Aberystwyth; St. Andrews University; Glasgow University; Manitoba University; University College, Bristol.

COLLEGE OF PRECEPTORS.

CERTIFICATE EXAMINATION—PASS LIST.

JULY, 1902.

The following is the list of the successful candidates at the Colonial Centres—Colombo, Grenada, and Lagos:—

N.B.—The small italic letters denote that the candidate to whose name they are attached was distinguished in the following subjects respectively:—

a = Arithmetic, h = History,  
al = Algebra, ms = Mensuration,  
e = English, s = Scripture.

The small figure 2 prefixed to names in the Third Class List denotes that the candidates were entered for the Second Class.

Bracketing of names implies equality of merit.

BOYS.

SECOND CLASS [OR JUNIOR].—HONOURS DIVISION.

Perkins, F. B. ms. Private tuition.  
Johnson, A. O. C.M.S. Grammar School, Lagos.

SECOND CLASS [OR JUNIOR].—PASS DIVISION.

Shogbesan, A. O. a. al. C.M.S. Grammar School, Lagos.  
Gairy, E. J. h. Private tuition.  
Thomas, S. A. C.M.S. Grammar School, Lagos.  
Rodrigo, J. B. City College, Colombo.  
Silva, B. Private tuition.  
Turton, J. R. C.M.S. Grammar School, Lagos.

THIRD CLASS.—HONOURS DIVISION.

Turlo, S. A. s. a. al. C.M.S. Grammar School, Lagos.  
Baptiste, E. C. e. a. Private tuition.

THIRD CLASS.—PASS DIVISION.

<sup>2</sup>Baptist, S. A. C.M.S. Grammar School, Lagos.  
<sup>2</sup>Fernando, M. J. City College, Colombo.  
Mahon, H. e. a. Private tuition.  
Dubissette, J. C. " " "  
Cadore, C. A. " " "  
Mitchell, D. Da C. R. " " "  
<sup>2</sup>Trimane, L. P. City College, Colombo.  
Agbebi, D. s. a. al. C.M.S. Grammar School, Lagos.  
Williams, A. E. N. " " "  
<sup>2</sup>Wanigasoorya, D. J. A. Private tuition. " "  
Shosun, W. F. C.M.S. Grammar School, Lagos.  
Rode, L. S. e. City College, Colombo.  
<sup>2</sup>Andrews, J. R. Private tuition.  
Jibona, S. A. C.M.S. Grammar School, Lagos.  
<sup>2</sup>Suppramanian, S. Private tuition.  
<sup>2</sup>Jayawardene, J. P. " "  
Luxana, A. S. City College, Colombo.

GIRLS.

THIRD CLASS.—PASS DIVISION.

Wilson, R. Private tuition.  
Hurley, M. F. " "  
Robert, E. e. " "

LOWER FORMS EXAMINATION.

Bassanayake, D. W. M. City College, Colombo.  
Jayatilake, A. " "

PROFESSIONAL PRELIMINARY EXAMINATION—PASS LIST.

SEPTEMBER, 1902.

The Supplementary Examination by the College of Preceptors for Certificates recognized by the General Medical Council, the Incorporated Law Society, the Royal College of Veterinary Surgeons, the Pharmaceutical Society of Great Britain, the Board of Education, and other bodies, was held on the 2nd, 3rd, and 4th of September, in London, and at four other local centres, viz.,

Birmingham, Bristol, Leeds, and Liverpool. The following candidates obtained Certificates:—

FIRST CLASS.

Pass Division.

Bliss, M. F. Penny, E. A.  
Bloxsome, H. E. Platts, H.  
Brown, C. M. Reynolds, J. L.  
Horner, H. W. Watson, W. H.

SECOND CLASS.

Honours Division.

Capon, R. S. Meers, J. H.  
Heron, F. W. D. Price, C. E.

Pass Division.

Atkins, F. R. L.	Hollick, R. G. <i>ch.</i>	Pitt, E. J. <i>a. al.</i>
Barlow, E. C.	Keats, B. A.	Pool, G. W.
Basford, F.	King, T. H. V.	Ravenhill, E. L. B.
Bintcliffe, J. W. <i>a.</i>	Kirk, G. C. K.	Rawson, H. F. <i>ch.</i>
Bowman, A. G.	Knowles, J.	Roberts, D. C.
Briggs, W. E. P.	Land, E. T. <i>ge.</i>	Roberts, J.
Burdett, J. H.	Lang, J. E.	St. John, A. H. V. <i>f. ge.</i>
Clarke, C.	Lloyd, T. P.	Skilleter, A. E. W. C.
Colwell, R. M.	Lucas, G. B.	Sleep, T. L.
Cooper, H. W. <i>a.</i>	Lucas Tooth, A. L.	Stainer, C. H. <i>al.</i>
Davies, A. W.	Mathew, P. W. <i>gr.</i>	Startin, J.
Falconer, A.	Maynard, A. C. M.	Strange, C. F. <i>g.</i>
Farrant, H. B. <i>a.</i>	Miles, A.	Tamplin, F. S.
Ferguson, G. D. G.	Miller, H. C.	Torry, E. N.
Foster, H. E. B.	Minchin, R. S.	Turkington, J. S.
Gee, P. <i>a.</i>	Nairn, J.	Verity, T.
Gibbings, R. J.	Neale, W. E.	von Braun, C. R. B. <i>ge.</i>
Gilbert, N. H.	Nicholson, M. A.	Wakeham, W. R. B.
Greig, S.	Oukley, P. D.	Webb, M. V.
Heap, H.	Packham, G.	Wilson, H. A. F.
Hemingway, N.	Parkhouse, G.	Young, J. F.

N.B.—The small italic letters denote that the candidate to whose name they are attached was distinguished in the following subjects respectively:—

a = Arithmetic, g = Geography,  
al = Algebra, gr = German,

REVIEWS.

WHAT TO TEACH, AND WHY.

Principles of Class Teaching. By J. J. Findlay, M.A., Ph.D. (Macmillan.)

This is the third volume of Messrs. Macmillan's series of "Manuals for Teachers"; and, though it is not likely to be generally recognized as a text-book for students in training, it will for that very reason commend itself more to the educational world that has passed the stage of examinations. English writers on pedagogics may be roughly divided into two camps—the theorists who have never taught and the teachers who have no theory. Dr. Findlay would show us a more excellent way. Theory and practice, he holds, cannot be divorced, and little is gained by drawing a sharp distinction between the two. As he puts it epigrammatically: "Theory without Practice is wind; Practice without Theory is quackery." The charge is partly true. But Dr. Findlay does scant justice to his predecessors. Thus, it is hardly fair to dismiss Sir Joshua Fitch's "Lectures on Education" with a patronizing compliment as the most favourable specimen of the "frankly empirical." But this is a venial error compared with the supercilious arrogance of calling Prof. Bain's "Education as a Science" the "dull and pointless essays of an Aberdeen philosopher." Here is the first time, we should say, that Dr. Bain's writing has been called "pointless"—the most inapplicable epithet in the dictionary. Dr. Bain was a pioneer, and, whatever grounds there may be for dissent from any of his conclusions, we remember too well the yeoman service that he rendered in the early days of the Education Society against the ancient reign of sciolism and obscurantism "to speak ill of our father Parmenides." Dr. Findlay might learn from R. H. Quick's "Remains"—a book with which he seems unacquainted—how a philosopher should treat a brother philosopher from whom he dissents. Besides, it is well to remember that there is pretty certainly a reply to the dissent.

Such blemishes, however, are happily rare—the defects, in fact, of the author's qualities, his rather aggressive determination to call no man master, and to think out independently the educational problems that confront him. The question that Dr. Findlay has set himself to solve is "What to teach, and why?"

and the book needs some such sub-title to make its scope clear and to distinguish it from manuals like Thring's "Theory and Practice of Teaching" and Mr. Arthur Sidgwick's "Class Discipline." Of desks and blackboards, of marks, place-taking, and removes, of examinations internal and external—in short, of all the machinery of a school-class—we hear nothing; or, to speak by the card, all such details are brushed aside as accidentals with which the philosopher has no concern. Now it may be quite true that among English teachers these externals are apt to usurp the whole field of education; yet we cannot help recalling the importance that a great political philosopher attached to a round or a square table at the Council Board, and we picture to ourselves the disappointment of the young teacher whose soul is vexed by the indeterminate equation of marks when he consults a writer who announces in his preface that the first charge he has laid upon himself is "to set out the matter in a form adapted to the practical requirements of teachers now at work, and reads: 'Marks may have a proper place in class management; for the individual, especially before adult life, is unable to rise to the full practice of the corporate virtues.'" We fear that, instead of reading on to see how the corporate virtues may be stimulated in Jones *minimus*, who gets nought each week for his dictation, and Smith *major*, who forfeits all his marks for talking, he will, like the rich young man in the Gospel, go away very sorrowful.

We have so far indicated what the reader must not expect to find, and the more agreeable task remains of adumbrating in brief the contents, and showing, as far as can be done by sample, how far the volume, though it does not pretend to be a *vade mecum* for the journeyman teacher, deserves to be perused and studied by every one who aspires to be an educator.

The treatise falls into two sections of about equal length—Curriculum and Method. The introduction discusses briefly the meaning of Education and dismisses as foreign to the present inquiry two of the three branches, Aim and Administration, and limits the third branch, Practice, to the conduct of a class—that is, any number of pupils between twenty and forty. The superior limit, we may note in passing, strikes us as arbitrary, and in the Welsh schools, with which Dr. Findlay is conversant, the head form rarely exceeds a dozen.

After these preliminary definitions, the motives in the selection of material are treated at length. The two conflicting principles of inheritance or tradition and self-development are excellently stated, and the diagonal of forces, if we may borrow a mathematical term, worked out. The motto chosen for the chapter is a quotation from "Dombey and Son." We would suggest, as putting the argument in a nutshell, a sentence from President Murray Butler's "Addresses": "When we hear it sometimes said: 'All education must start from the child,' we must add: 'Yes, and lead into human civilization'; and when we hear it said, on the other hand, that all education must start from the traditional past, we must add: 'Yes, and be adapted to the child.'"

The third chapter treats of the nature of the pursuits selected for class teaching. On these there is now a pretty general agreement among teachers, and we need not discuss the six groups of Dr. Findlay's scheme. The only novelty—an eccentricity, we are inclined to call it—is that language is grouped with music, and drawing among the arts. Now we may concede to Dr. Findlay that one aim of language is "to create new forms for expressing idea, to put thought and feeling into speech, precisely as the painter puts thought and feeling upon canvas"; but this is not, as he would have it, the only aim—nor, indeed, the chief aim—from the educator's point of view. The language teacher, whether his subject-matter is Thucydides or Goethe or Chaucer, aims, above all, at getting his pupils to understand and to interpret. When they have grasped the meaning, words (as Horace says) will naturally follow. To bracket a language lesson such as this with fiddling and freehand drawing is a fantastic paradox.

In the next chapter the general scheme is applied to the three existing types of schools—(1) primary, with a special primary stage; (2) higher primary; and (3) secondary schools. The guiding principle here is that specialization, or preparation for a particular career, should be confined to the last year, or in the case of high schools the last two years, of the course.

We particularly welcome Dr. Findlay's testimony, based on practical experience, as to the advisability of postponing the study of Latin. A daily lesson for two years in French—it need not last more than half an hour to three-quarters—will give pupils a real grip of the language, and then (at fourteen) will come a year of Latin for all, and Latin will be afterwards dropped by those who elect for the scientific or commercial side. As to

the supposed danger of postponing Latin and Greek, "sufficient experience has already been gained to show that clever pupils (and these alone are worthy of a classical education) can attain the highest University standards by commencing later with as much ease as those who used to commence in childhood."

We had intended similarly to analyze Part II., on "Method," but space forbids, and no *résumé* could do justice to the various specimens of lessons given as illustrations of first principles. Only, as we said at starting, the assistant master will be conscious at each step that he is "moving about in worlds not realized." It is an ideal class-room for which Dr. Findlay legislates. He presupposes a trained head master who knows his business co-operating with a homogeneous staff who know theirs, carrying out a scheme of work which has been planned in common council and in which the various parts are dovetailed to a nicety—a scheme in which Matriculation and Joint Board Examinations are ignored, and into which the thought of scholarships does not enter; which moves on the poles of self-culture and the common weal. We turn to the reality that will confront most commencing teachers—a head master who believes in the classics and has never heard the name of Herbart; governors whose sole test of success is the number of scholarships won by the school; colleagues chosen, one for his scholarship, another for his cricket, and a third because he can talk French, each pursuing his own method and agreeing only (with the head master) in the belief that pedagogics is an invention of visionaries and charlatans, of no more concern to practical men than crystal-gazing or thought-reading.

#### THE LATEST DICTIONARY OF THE BIBLE.

*Encyclopædia Biblica: a Critical Dictionary of the Literary, Political, and Religious History, the Archæology, Geography, and Natural History, of the Bible.* Edited by the Rev. T. K. Cheyne, M.A., D.D., and J. Sutherland Black, M.A., LL.D. Vols. I.-III. 20s. net each. (Black.)

The idea of this remarkable work originated with a remarkable scholar—the late Prof. Robertson Smith, to whose memory it is dedicated. On his premature death, the execution of his conception was undertaken by his friends, Drs. Cheyne and Black, "as a charge from one whose parting message had the force of a command." What Robertson Smith contemplated "was no mere collection of useful miscellanea, but a survey of the contents of the Bible as illuminated by criticism—a criticism which identifies the cause of religion with that of historical truth, and, without neglecting the historical and archaeological setting of religion, loves best to trace the growth of high conceptions, the flashing forth of new intuitions, and the development of noble personalities, under local and temporal conditions that may often be, to human eyes, most adverse." How thoroughly well Robertson Smith's friends have carried out his ideas must be apparent to the most casual reader of these volumes. One cannot, indeed, ignore the obvious fact that many sincere persons have been not a little disturbed by the character of the results and the whole tendency of the work. But here there seems to be a profound, though by no means unnatural, misconception. It is to be recognized that the fresh positions are taken up, not wantonly and provocatively, but under stress of prolonged and severe special study; and that they are advanced, not in a dogmatic and aggressive tone, but with the judicial seriousness befitting the difficulty of the questions involved. We find, indeed, a constant carefulness of discrimination between points that are advanced with confidence and points that are offered as more or less uncertain, being based on probabilities of varying strength, which are set forth for the reader's consideration. No one can reasonably demand more, or be content with less. Criticism of the Sacred Scriptures is as old as the Fathers of the Church, and the so-called "higher criticism," which is simply the criticism of the best scholars, has to be reckoned with. Galileo affirmed that the earth goes round the sun, in opposition to the universal belief of his time and much to the disturbance of the settled notions of many good people; but no harm has come of it, either to the sun or to the earth, and nobody now disputes the theory any more than the multiplication table. In the same way, we apprehend, the fears of many good people for the results of modern scholarly examination of the Sacred Books, though really inevitable, are yet quite vain. Scholars will sift the wheat from the tares and from the chaff of the conclusions put forth, and the faith will thus be rectified and purified. When a Nonconformist divine like Prof. Archibald Duff tells us, incidentally, in his new "Hebrew Grammar," that the second chapter of Genesis was written some four centuries

before the first chapter, one cannot but recognize that the flood-gates of inquiry are opened and that no man can shut them. It is only a mind lulled in lethargy that can calmly wave aside investigation of such a striking and authoritative assertion, with all its train of consequences. Now there is hardly a page of these three volumes but raises questions of varying degrees of importance similarly calling for solution; and it seems perfectly clear, therefore, that the scholars contributing the articles—foremost scholars of every civilized country and of every denomination—are doing a very high service, not only to true learning, but to true religion, by placing every one of the difficulties in the strongest light of modern scholarship with the most careful and reverent expression both of question and of attempted solution.

Here, of course, it is impossible to discuss any one question of the thousands treated in these masterly volumes. In so far as the articles set out the latest information on matters involving no dispute whatever, their utility needs no recommendation. Such matters necessarily occupy a very considerable portion of the space; and in these the habitual care and high scholarship of the writers are manifest. In so far as the articles deal with difficulties, whether obvious to the unlearned reader or discerned only by the acumen of scholarly observation, the points are marshalled in lucid array and frankly handled; and, if in any case the critic adventures on speculations that seem to be bold, not to say rash, he is certain to be promptly brought to book by other critics of no less capacity and learning. We are bound, however, to say that we do not anticipate much danger to the contributors to these volumes. We certainly find conclusions that look daring and are far-reaching; but they are uniformly expressed with the qualifications that warn every attentive reader of the degree of certainty implied, and accompanied with reasons and references whereby they can be tested. One could not readily conceive a more valuable aid to the serious student of the Sacred Books. How far the results may be put forward in teaching or in preaching is a matter for the judgment of the particular teacher or preacher; but it is a matter that calls for careful consideration. An oculist is chary about letting a patient suddenly into the full light; and so it is with the practitioners of the mind. Robertson Smith was expelled from his professorial chair amidst a convulsion of his church; yet now the very opinions that caused such an upheaval are all but commonplaces of educated religious thought. What is fit for the atmosphere of scholars is not always fit for the atmosphere of the pulpit, and still less for the school. There is a discretion in these things. But the work of the scholars—especially such careful, scholarly, and judicious work as is contained in these volumes—ought to be closely followed by those whose duty calls upon them to teach in the church or in the school. The maps, sketches, plans, and illustrations are of the best; and the editorial skill is of the very first division of the first class.

#### THE "ENCYCLOPEDIA BRITANNICA."

*The New Volumes of the "Encyclopædia Britannica."* Vol. V. (being Vol. XXIX. of the complete work). (A. & C. Black and the *Times*.)

The prefatory essay, by Mr. Benjamin Kidd, reviews the application of the doctrine of evolution to sociological theory and problems. Mr. Kidd enumerates the earlier theories leading up to natural selection, and explains the position of Darwin, Spencer, Wallace, Huxley—and Kidd. He is necessarily confined to the congenial region of large generalities, and, while he justly points the general drift of development under the four great names, he shows an easy and gratuitous contempt for what he calls the "Ptolemaic standpoint" of the Utilitarians. It is, of course, a suggestive article; but there are lying at the back of it assumptions that require a good deal of fortification. The articles of the volume run from "Glarus" to "Jutland," occupying 763 pages. Several important countries fall to be described—none more important, from the British point of view, than India. Mr. J. S. Cotton writes an able, painstaking, and judicious account of the geography and statistics of India, the history of the country and the position of the Native States being assigned to two retired Anglo-Indians of eminence, who take care to veil the seamy side. Sir Auckland Colvin does indicate disapproval of the "Forward Policy" and the urgent necessity for peaceful internal development; but official restraint still has hold of him, and his account of the National Congress is amazingly misconceived. Sir Alfred Lyall does not mention the attitude of the Nizam during the Mutiny, and he decorously covers up one

of the most disgraceful of Anglo-Indian injustices in this sentence:

Since that time [1800] the only material transaction with the Haidarabad State has been the assignment to the British Government of certain districts yielding a net revenue set apart for the payment of an auxiliary force that the Nizam had undertaken to maintain, the surplus, if any, of revenue, after payment of the troops, to be credited to the Haidarabad Treasury.

A very "material transaction," indeed! But what reader would understand from this sentence that the Nizam was publicly acknowledged by the Viceroy to be under no obligation to maintain that force; that we were under obligation to do the work for which that force was maintained; that the Nizam could not of his own motion disband that force; that we seized the Berars—the richest of the Nizam's provinces, "the great field of supply of the best and cheapest cotton grown in India"—to guarantee a debt that was never due and has been officially shown to have never been due; that from 1853 to 1860 we never once furnished accounts (as we were bound to do under Article VIII. of the Treaty of 1853); and that in 1860 we compelled the Nizam to forgo the obligation? "The districts," Sir Alfred does state, "are still thus held in trust under British management." "In trust"! One only wishes that the "trustees" could be subjected to the opinion of a Chancery judge. It is very painful to find "history" permanently recorded in this fashion under authoritative names. Sir Alfred will find the true story of this discreditable business concisely set forth in *India*, May 9, 1902. The very elaborate account of Japan is exceedingly useful at the present time. The article on Ireland, too, contains a valuable set of statistics. The historical account is fair enough, but colourless and pointless. There are many articles of large social and commercial importance—those on the Grain Trade of the World, Heredity, Hops and Hop Growing, Hospitals, Hygiene, Income Tax, Industrial and Reformatory Schools, Iron and Steel, Irrigation, &c. The great scientific subjects are very fully dealt with, and the judicious notices of living persons of distinction continue to be a useful feature. The illustrations are numerous and excellent.

#### ITALY AND THE BARBARIANS.

*The Barbarian Invasions of Italy.* By Pasquale Villari. Translated by Linda Villari. Two volumes. (32s. Fisher Unwin.)

Prof. Villari's initial purpose in writing this "first volume of Italian history"—the original is in a single volume—was patriotic and practical; for why should Italian students not have "a series of volumes treating separately and in a popular style of the different periods of Italian history under all its different aspects, and also comprising the history of other civilized nations," just as the students of other European countries and of America have their series of historical manuals? The work will be useful here also: the period is of much importance, and we have no book of manageable size and popular character already in possession. Dr. Hodgkin's monumental work, to which Prof. Villari acknowledges his indebtedness, is for the big library and the scholar. Prof. Villari makes a somewhat modest estimate of his book: "It is neither a learned nor a scholastic book," he says, "nor is it a philosophic study of universal history. . . . I merely narrate events in chronological and logical order, without commenting or descanting on them, doing my best to avoid dryness." Dryness he certainly avoids; but, though his course is plain narrative, he indicates clearly enough the bearing of events; and his work is well fitted for an introduction to the upbreak of the Roman Empire and the rise of modern Italy.

Prof. Villari starts with an examination of the causes of the fall of the Roman Empire—civil, military, economic, and religious—and not merely the *latifundia*. With the first introduction of the Barbarians he naturally avails himself of the descriptions by Cæsar and Tacitus, but he evades, rather than clears up, the well known points of difficulty, and he speaks of the Teutonic Mark as if Fustel de Coulanges had never discussed the matter. "The Romans were the first to create private property by freeing it from its archaic form": this looks like a trustful paraphrase of G. L. von Maurer's doctrine in 1854. When the author gets to his strictly historical business, however, he is on firm ground, and may be safely followed. From his earlier chapters on the political and social conditions English readers will insensibly draw comparisons that merit serious consideration. He describes the successive waves of invasion with great spirit, with unflagging interest, and with much discrimination; shows how the doomed Empire struggled against its swarming foes; notes the

origin and progress of the historical opposition between the civil and religious powers; and glances at the varying conditions of the mass of the people. The real beginning of modern Italy may be dated from the occupation of the Longobards, whose monarchy was, in fact, independent of the Empire; and this is narrated in the second of these volumes. The work ends with the coronation of Charles the Great.

We have not the original before us, but we judge that the translation is rather literal. There must be some omission on page 243. The Latin terms seem strangely liable to misprints, and there are other marks of unintelligent or careless reading. "Ætius" seems intentional, but it ought to be "Aëtius." No doubt such slight but vexatious blemishes will be removed in another—and cheaper—edition.

#### ILLUSTRATIONS OF ENGLISH MEDIEVAL HISTORY.

*Companion to English History (Middle Ages).* Edited by Francis Pierpont Barnard, M.A., F.S.A. With 79 Plates. (Clarendon Press.)

A very handsome, elaborate, and instructive volume. It is divided into twelve sections, each written by a specialist on the particular matters—ecclesiastical architecture, domestic architecture, military architecture and the art of war, military and civil costume, heraldry, shipping, town life, country life, monasticism, trade and commerce, learning and education, art. There need be no exacting inquiry as to the limits of "medieval" times for the purposes of the book; the point has been settled in a practical way that will commend itself to all readers. Nor need there be any objection to the overlapping observable in several of the sections. "This," as the editor reasonably remarks, "apart from being unavoidable, will not be without its advantage in illustrating the connexion and interdependence of the matters treated." The illustrations form a most prominent and useful feature. They have been for the most part "specially drawn or photographed for the book, and all that could be made from the objects themselves have been so made." They are in great variety—often half a dozen or more on a single plate—and they convey the idea of the objects with a definiteness and vividness beyond the power of any description. They are beautifully reproduced.

The more technical sections—on architecture, costume, heraldry, and art—are written in simple language, and the more special terms are incidentally explained. They bring into clear relief a very large number of matters essential to a just realization of the conditions of the times, matters that are commonly left to the helpless imagination of the pupils. The other sections extend, deepen, and render more precise such knowledge of the subjects as find place in the ordinary text-books. They are not overloaded with details, and the arrangement (with help of the index) makes reference quite easy. The whole work contributes immensely to a distinct conception of the main lines of gradual development of methods in the organization of different departments of national activity—military, civil, and social. The lists of books of reference appended to the various chapters will be helpful to teachers. The volume, however, will be found just as useful by private students of English history. It marks a distinct advance in the means of historical instruction.

#### MATHEMATICS FOR PHYSICISTS.

*Higher Mathematics for Students of Chemistry and Physics.*

By J. W. Mellor, D.Sc. (Longmans.)

The excellent object of this work is to place within the reach of science students a means of gaining as much knowledge of higher mathematics as will enable them to pursue their special practical study and research with the greatest power and facility. Such students have no need to follow all the intricacies of every subject included in pure mathematics; but they do require to have a clear grasp of the general principles and leading theorems of several of its branches in order that they may be convinced of the importance of the tools that mathematics can furnish to the scientist, and that they may also learn to use those tools with the necessary skill. Throughout the volume the author constantly dwells on the complementary nature of mathematical and physical science. Here the mathematician finds the practical example that adds the impress of reality to his interesting theories, and here the student of physical science is led to find in mathematical language the natural expression of a wealth of scientific truths. The writer deals mainly with the fundamental principles of the differential and integral calculus and of differential equations, with infinite series, with the elementary por-

tions of analytical geometry, plane and solid, and with some of the higher portions of algebra, including probability and the theory of errors. The principles of the various subjects are ably treated, and great use is made of the valuable assistance afforded by graphical methods.

Having regard to the extended scope and consequent size of the work, it is, perhaps, scarcely to be expected that the first edition should be free from errors. Unfortunately there are a great many. In addition to the numerous misprints there are inaccuracies of greater importance, some of which appear to be the result of want of precision in expressing ideas correct in themselves, whilst others are actual mistakes. On page 322 it is stated that friction is proportional to velocity; on page 134 the test for convexity or concavity with regard to the foot of a positive ordinate is wrongly worded and the blunder is repeated; on page 140 it is asserted that the total curvature of an elementary arc is equal to the limit of  $\delta a' \delta a$ . These examples sufficiently indicate the necessity for a careful revision of what is essentially a most valuable text-book for students. One other remark seems to be called for—viz., that the ellipse can scarcely, with any show of justice, be classed as "not a very important curve," even though it may play a less important part in some branches of science than the parabola or hyperbola; for is it not absolutely fundamental in astronomy and in lunar and planetary theory? The diagrams, which are very numerous, are often wanting in the delicacy of finish that is naturally looked for in a publication such as the present one.

## GENERAL NOTICES.

### CLASSICS.

*Select Orations and Letters of Cicero.* (Allen and Greenough's Edition.) Revised by J. B. Greenough and G. L. Kittredge. (6s. Ginn.)

The Orations presented in full are the Defence of Roscius, Pompey's Military Command ("Pro Lege Manilia"), the four against Catiline, and the Citizenship of Archias; and from the Verrines are taken "Actio Prima" and "Actio Secunda" IV. 52-60 (the Plunder of Syracuse), and V. 61-66 (Crucifixion of a Roman Citizen). There are twenty-one Letters, six from those "ad Atticum" and the rest from those "ad familiares." The long syllables are marked throughout the text. Brief prefatory explanations put the student in position for the text, and the notes are very useful as far as they go, though they are far from being so detailed as Dr. Reid's. A general introduction (53 pages) contains a sketch of the life of Cicero, remarks on Roman oratory, on Cicero as an orator, on Latin and English style, and on ancient oratorical delivery, and a pretty full outline of main points in the Roman Constitution. There are five maps, a plan of the Forum (exhibiting the remarkable series of excavations begun in 1890), and more than a hundred excellent illustrations, especially busts, coins, views, &c.; also a vocabulary (226 pages). The work is marked by competent scholarship and painstaking care throughout; and it is beautifully printed and strongly bound.

"Parallel Grammar Series."—*A Parallel of Greek and Latin Syntax.*

By C. H. St. L. Russell, M.A. (Swan Sonnenschein.)

Mr. Russell has carried out the system of this well known series with great care and efficiency. The examples are judiciously selected; the explanations are succinct and clear; the graduation of the materials is successful; and there is a scheme "assigning definite sections of the book to every Form, and suggesting the points at which each subject may successively be begun, continued, and summarized." The first Part, dealing briefly with "English Syntax and the Laws of Agreement," might have been dispensed with; at least, it ought to be unnecessary. It is prefixed "from the belief that half the difficulty of Greek and Latin grammar arises from ignorance of the common laws of speech"—ignorance that ought to be dispelled beforehand. The Latin and the Greek portions may be studied independently; and either or both may be read in connexion with the ordinary manuals of accidence or prose. The latter procedure will probably be found more effective than independent use of the volume. But on its own lines the volume is exceedingly well devised and executed.

### MATHEMATICS.

*A First Step in Arithmetic.* By J. G. Bradshaw, B.A. (2s. Macmillan.)

The object of this little book is to furnish the teachers of the youngest boys in our preparatory schools with a large collection of exercises suitable for oral and for written work. The opening chapter gives valuable suggestions on the teaching of the principles of the first four rules, simple and compound. These introductory pages will be full of interest also to all engaged in the education of children, whilst they are likely to be of the greatest use to very many.

*Commercial Arithmetic.* By Frank L. Grant, M.A., F.R.A.S., and Alexander M. Hill, M.A. (3s. 6d. Longmans.)

This text-book has been written mainly to meet the requirements of

students preparing for a commercial career and already possessing a knowledge of the elementary portions of arithmetic. Attention may be drawn to some of the special and interesting features of the work. The authors, for example, having first explained the general principles which underlie the treatment of algebraic equations, apply these to the discussion of many of the practical problems of arithmetic; the excellent chapter on "Profit and Loss" affords a good illustration of the advantages that may often be derived from such methods. Again, a very useful elementary treatment of the theory of logarithms is introduced, enabling students to appeal to logarithmic calculation in solving questions on compound interest and annuities. The work, however, needs some careful revision, for all parts of it do not make an equally satisfactory impression. There are, moreover, definitions that might be improved, and errors and misprints that require correction. Amongst the latter one or two of importance should be noted: the incorrect formula given for the determination of the area of any regular polygon, and the evident misprint in Article 343, where the value of  $\pi$  is discussed.

#### MODERN LANGUAGES.

"Heath's Modern Languages Series."—*Practical French Grammar*. By W. H. Fraser, B.A., and J. Squair, B.A., Professors in the Romance Department of the University of Toronto. With an Introduction by William Robertson, M.A., Examiner in Modern Languages for Aberdeen University.

The aim is "to provide a practical and thorough course in French grammar and elementary composition for schools and colleges" in accordance with "recent advances in the methods of modern language teaching." There is a brief phonetic introduction, not too minute, and phonetic transcriptions are put in brackets after vocabulary words throughout Part I., as well as in the general French-English vocabulary at the end of the book. Part I. (pages 13-128) is a well graded series of exercises based on the elements of the grammar, beginning with "Où est le livre?" and "Montrez-moi le papier, la plume et l'encre," and so forth, but less inane than usual, and quickly getting on to connected narrative. Part II. (pages 129-336) furnishes a systematic grammar, commencing with the verb, which is very fully treated, with various devices for intelligent and ready apprehension. The handling of the various parts of speech, as well as of the syntax, is most careful and thorough. Perhaps Mr. Robertson exaggerates but little when he anticipates that the syntax "will undoubtedly command the unqualified admiration of teachers." The exercises for Part II. are placed separately at the end (pages 337-394). There are full vocabularies and a good index. The book is a substantial piece of work, and teachers will do well to look at it.

*A German Skeleton Grammar*. By Prof. H. G. Atkins, M.A. Lond., B.A. Cantab. (1s. 6d. Blackie.)

Prof. Atkins gives the "irreducible minimum" by way of "guide for the beginner who proceeds direct to the translation of a German text," and emphasizes points of special importance—especially inflexions and irregularities—by printing them in red ink. Quite a sensible little book.

*First Steps in German: Speaking, Reading, Grammar, Songs*. By W. Scholle, Ph.D., and G. Smith, M.A. (1s. 6d. Blackie.)

The first volume of a projected series. "What, to our knowledge, is new in this series," say the authors, "is the strict adherence to the principle of observation, more particularly in the present book, which is entirely based upon the—practically acquired—certainty that language teaching in the sound, meaning, and grammatical structure of the word offers to pupils of various ages an inexhaustible, well graded, and interesting wealth of material for observation." Hölzel's "Der Frühling" and "Der Winter" are reproduced and used as typical object lessons for conversation. The ear is primarily addressed. The book comprises the whole accidence (except the subjunctive) and elementary syntax. Clarendon type is freely used to give prominence. The songs are useful for forming and impressing a vocabulary, as well as for exciting interest. The idea of the book makes strong, but quite reasonable, demands upon the flexibility of the teacher.

#### NATURAL SCIENCE.

*Elementary Treatise on Physics, Experimental and Applied*. Translated from Ganot's "Éléments de Physique" by Prof. E. Atkinson, Ph.D., F.C.S. Sixteenth Edition. Edited by Prof. A. W. Reinold, M.A., F.R.S. (15s. Longmans.)

Prof. Reinold has introduced considerable modifications into the new edition of Ganot's classical work, while taking care to maintain the general features that have given it such wide and prolonged popularity. His object has been "to render the general treatment more systematic, by rearranging, especially in the Books on Magnetism and Electricity, the subject-matter, and to add information respecting recent developments." That is to say, he has carefully brought the work up to date both in matter and in form. Yet, although he has added a large amount of new matter and some 90 new illustrations in the text, he has managed to keep the bulk of the volume down to its former proportions. This result he has achieved by the omission of many descriptions of apparatus and machines that have ceased to be

of interest, and also of "certain mathematical disquisitions which seemed to be of doubtful value in a work of this kind." All this is clearly in the way of improvement; for the book aims at giving a simple account of the most important facts and general laws of all branches of physics, and must, therefore, keep step with the times and refuse to go too deeply or too exhaustively into any one branch. Evidently Prof. Reinold has given this standard work another long lease of life and usefulness.

*Elementary Plant Physiology*. By Daniel Trembley MacDougal, Ph.D. (3s. Longmans.)

Dr. MacDougal, who is Director of the Laboratories, New York Botanical Garden, is favourably known to teachers and students of botany, and this new volume will prove another addition to his reputation. It is intended to replace his "Experimental Plant Physiology" (1895) and "to meet the constantly increasing demand for a course in elementary demonstrations which may be followed by beginners in the subject of botany." Simple methods are purposely used to illustrate important scientific principles, both chemical and physical. The chapter on "Stimulation and Correlation" is particularly interesting and instructive. The present volume, though small, is the work of an artist in practical scientific teaching. It is beautifully got-up and profusely illustrated with more than a hundred excellent diagrams.

#### ENGLISH.

- (1) "The Windsor Shakespeare."—*Othello; The Merry Wives of Windsor; King Lear; The Tempest*. Edited by Henry N. Hudson, LL.D. (Jack.)
- (2) "The Warwick Shakespeare."—*King Lear*. Edited by D. Nichol Smith, M.A. (1s. 6d. Blackie.)
- (3) "The Temple Shakespeare for Schools."—*The Tempest*. Edited by Oliphant Smeaton, M.A. (Dent.)
- (4) "Gill's Oxford and Cambridge Edition."—*A Midsummer Night's Dream*. Edited by Stanley Wood, M.A.
- (5) *Questions on A Midsummer Night's Dream*. Compiled and arranged by George Carter, M.A. (Relief.)
- (6) "The Pictorial Shakespeare."—*Richard II.* (1s. Blackie.)

(1) The Windsor edition is most tastefully got up, a pleasure to read and to handle. Dr. Hudson's introductions and notes, which were originally prepared for Messrs. Ginn's Harvard Edition, are brief and discriminating, but adequate for the general reader; and the longer "critical notes" at the end contain much illustrative information as well as judicious criticism. Each volume has an excellent frontispiece. A charming, handy, and instructive edition.

(2) Mr. Nichol Smith provides the usual school appliances in reasonable fulness and with scholarly discrimination. In appendices he gives interesting extracts showing "the sources of the plot," and a careful treatment of the metre. There is also a concise glossary. An able, sensible, and manageable school edition, and thoroughly well got up.

(3) Mr. Smeaton's introduction presents lucidly the facts of Shakespeare's life, with an examination of the play. His notes are largely fresh, and the numerous parallels are effectively illustrative. The glossary is tolerably detailed, and should be very useful. Mr. Walter Crane contributes eight charming full-page pictures; the coloured frontispiece shows Italian costumes of the period; and there are many interesting illustrations from contemporary prints. Altogether a useful and attractive edition.

(4) Mr. Wood is bewilderingly exhaustive. He makes "a patched fool" of the text, printing in italics all such words and phrases as are explained in the margin or at the bottom of the page, and marking one set by reference letters and the other by reference figures. The pupil ought not to be confused and peppered with notes on all sides. Introduction, supplementary notes "intended principally for senior students," plays on words, anachronisms, grammar, metre, classical names, glossary, examination papers, works of reference—appalling to the pupil, but a full treasury to the teacher. The work is thoroughly well done, but overdone. There are some very good illustrations.

(5) Mr. Carter is possessed by a like fury of exhaustiveness. "Masters," says Bottom, "I am to discourse wonders; but ask me not what." Mr. Carter would "master" him to some purpose. What does he not ask? We should like to set him to answer his own questions: we dare prophesy he would rise a sadder, if not a wiser, man. How would he "correct the language or grammar of the following":—"Say he comes to disfigure, or present, the person of Moonshine," and "I'll meet thee, Pyramus, at Ninny's tomb"? We fancy there would be more scope in "correcting the language or grammar of the following":—"Give instances from this scene of (1) the use of words bearing exactly opposite sense to which it is intended; (2) the use of words which have a different sense, but a similar sound to that which is intended." A merciful teacher may turn the collection to useful account, but it indicates how pupils may be incurably disgusted with Shakespeare and all his works.

(6) A very good shillingsworth. The historical and literary matters are briefly and adequately presented in the introduction and appendices, and the notes are pointed, sensible, and sufficient.

#### REPRINTS.

Messrs. Macmillan are issuing some admirable reprints of well known works, mostly novels and tales, at half-a-crown apiece. For example: Mrs. Craik's *Agatha's Husband* and *The Head of the Family*, Mrs.

Molesworth's *Tell me a Story* and *Little Miss Peggy*, Miss Austen's *Emma* (with introduction by Mr. Austin Dobson), Miss Yonge's *The Dove in the Eagle's Nest*, Mr. Warde Fowler's *A Year with the Birds*, and Captain Marryat's evergreen *Mr. Midshipman Easy* and *Peter Simple*. The illustrations are by distinguished artists, the print is excellent, and the get-up is attractive.

Messrs. Ward, Lock, & Co. publish a handy edition of George Eliot's *The Mill on the Floss*, effectively illustrated by Bertha Newcombe. The type is clear, but the paper is rather thin. They have also added to the "Minerva Library" Lane's *Modern Egyptians*, with eighty illustrations and sixteen full-page engravings—an astonishing bargain.

#### READERS FOR INFANTS.

Messrs. Nelson offer *Picture Readers for Infant Classes*. "For five-year-olds" we have one sample: "A Box of Toys." "For six-year-olds" we have four: (1) "Our Rail-Ride," (2) "Pets and Friends," (3) "A Day on the Sands," (4) "Mary had a Little Lamb." The lessons are easy and interesting, the pictures are coloured, and the get-up is attractive. Each book has sixteen pages, and costs a penny.

Messrs. Chambers send us specimens of their *Complete Tales for Infants*: (1) "Off to the Sea"—32 pages, 2d. (paper) or 3d. (cloth); (2) "What Fun!"—24 pages, 1½d. (paper) or 2½d. (cloth). Here again the lessons are interesting, and the pictures are excellent. Messrs. Chambers's *Continuou Readers* are a little more advanced. There is G. A. Henty's "At Duty's Call"—32 pages, 2d. (paper), or 3d. (cloth)—with short notes and explanations. All these should come to be favourites.

#### HISTORY AND GEOGRAPHY.

*A History of Russia*. By W. R. Morfill, M.A. (Methuen.)

Prof. Morfill has availed himself of the accessible Russian materials—histories, memoirs, diaries, &c.—and thus has the immense advantage of viewing the facts from all sides. He shows great judgment in selection and proportion; he narrates simply and clearly; and he expresses his estimates of policy, conduct, and character with thoughtful discrimination. The interest is vivid throughout—more especially, perhaps, in the careful account of Napoleon's Russian campaign and of the Crimean War. He commences with the birth of Peter the Great and ends with the death of Alexander II. The Central Asian projects of Russia are rather severely condensed into a bare outline. Prof. Morfill holds that Lord Aberdeen showed throughout the Crimean War episode "true patriotism and a far-seeing policy." After all his explanation of the origin of that wretched war, one feels that something yet remains unsaid. By the way, the date of the declaration of war by "England" (that is to say, Great Britain) was March 28, 1854 (as stated on pages 404 and 406), not March 24 (as stated on page 401). But the volume is an excellent piece of work. It is very usefully illustrated by twelve maps and plans, and has a good index.

"Cambridge Historical Series."—*History of Scotland*. Vol. II. By P. Hume Brown, M.A., LL.D. (Cambridge University Press.)

Prof. Hume Brown now carries the story down from the accession of Mary Stewart to the Revolution of 1689. The stage is a short one—barely a century and a half—but it is crowded with important developments. Religion was the dominating force in determining the course of national affairs. First there was the question whether Protestantism or Roman Catholicism was to prevail; and secondly there was the question of the divine right of kings. "The Revolution marks the definitive triumph of the secular over the theological spirit in the conduct of public affairs; and, so far as Scotland is concerned, in this fact lies its main significance in the national history." The treatment of Mary is soberly judicial: she was "a remarkable woman," but grievously deficient "in self-respect, in self-control, in that balance of mind and character which gives weight to judgment and action." Apart from the Casket Letters, Prof. Hume Brown holds her privy to the crime of Kirk of Field. The social and literary progress of the country is concisely but pointedly traced. The author shows familiarity with all the essential documents, and maintains a calm and dispassionate tone throughout. His style seems to improve, but there is no glint of brilliancy in it yet; still it is a fit embodiment of his thought and work—plain, sincere, and solid.

"Black's Elementary Geography Readers."—(1) Reader IV.A.:

*The British Isles*. (2) Reader IV.B.: *Europe*.

The geographical facts—surroundings and surface, climate and products, industry and commerce, with political and social notes—are set out in readable and agreeable form. The illustrations, both lavish and appropriate, form a valuable feature. Both volumes are most interesting and attractive, and ought to find much favour.

"Black's Descriptive Geographies from Original Sources."—*Central and South America*, with the West Indies. Selected by F. D. Herbertson, B.A., and edited by A. J. Herbertson, Ph.D. F.R.S.E.

This, we think, is the third volume of a most useful series. The main geographical facts are briefly summarized in the introduction, with constant reference to the body of the book, which consists of extracts—graphic, interesting, instructive, and trustworthy—from the writings of travellers, chiefly modern. The bibliography appended will enable teachers to extend the descriptions at any point. Of course, the book may be used as a "reader," though its primary

purpose is to stimulate independent reading. The selections are thoroughly judicious, and the illustrations (twenty-three) are characteristic and advantageous.

#### FIRST GLANCES.

##### CLASSICS.

- Ball, F. Kingsley, Ph.D.: *The Elements of Greek*. 6s. Macmillan.  
[Grammar, exercises, vocabularies. Illustrations.]
- Blackie's Illustrated Greek Series.—Xenophon's *Anabasis*, Book II. Edited by G. H. Nall, M.A. 2s.  
[Introduction, notes, index. Map; illustrations.]
- Blackie's Illustrated Latin Series.—Virgil's *Georgics*, Books III. and IV. Edited by S. E. Winbolt, M.A. 1s. 6d. each.  
[Introduction, notes, appendix, indexes. Illustrations. Special attention to metrical technique. Careful and scholarly.]
- Blackwoods' Classical Texts.—Arrian: *Anabasis*, Books I. and II. By H. W. Auden, M.A. 2s. 6d.  
[Introduction, notes, appendices, index.]
- Champneys, A. C., M.A.: *English Extracts for Latin Prose*. Longmans.  
[156 extracts; 97 sentences. Introductory "Hints."]

##### MATHEMATICS.

- Beman, Prof. W. W., and Prof. D. E. Smith: *Academic Algebra*. 5s. Ginn.  
[Up to College stage. Endeavours "to modernize the subject."]
- Fletcher, W. C., M.A.: *Elementary Geometry*. 1s. 6d. Arnold.  
["A *Leitfaden* rather than a book." "To retain Euclid's axioms to-day is sheer hypocrisy."]
- Murray's Text-Books of Secondary Education.—*Arithmetic made Easy*. By Mabel A. Marsh. 2s.

##### PHYSICS.

- Bopp, Prof. C.: *Chart of the Metric System (with Notes)*. Williams & Norgate, for Fr. Doerr.  
[Bold and clear. Extremely useful.]
- Lehfeldt, Prof. R. A., D.Sc.: *A Text-Book of Physics*. 6s. Arnold.  
[With sections on the application of physics to physiology and medicine.]
- MacGregor, Prof. James Gordon, D.Sc., LL.D., &c.: *An Elementary Treatise on Kinematics and Dynamics*. 10s. 6d. Macmillan.  
[3rd Edition. "A systematic treatment of the whole subject." For "the higher classes of schools and the junior classes of colleges."]
- Rivingtons' Handbooks of Practical Science.—No 1, *Mensuration, Hydrostatics, and Heat*. By G. W. Wyatt, B.Sc., A.R.C.S. 9d.  
[3rd Edition, revised. Tested "with large classes."]

##### MENTAL SCIENCE.

- Brentano, Franz: *On the Origin of the Knowledge of Right and Wrong*. Translated by Cecil Hogue. 5s. net. Constable.  
[Lecture to the Vienna Law Society, 1889. Notes, longer than lecture; appendices.]
- Lightfoot, Rev. John, M.A., D.Sc.: *Elementary Logic*. Ralph, Holland, & Co.  
[Enlarged and revised edition of "Logic and Education." "For University and Certificate students." Deductive and inductive: exercises on each chapter; appendix on "More Recent Developments of the Syllogism."]

##### DRAWING AND WRITING.

- Bevis, A. W.: *Stepping-Stones to Industrial Drawing and Design*. Vol. I.—*Straight Lines*. 1s. net. Longmans.  
[Well conceived and worked out. "Many of the examples are the original work of young children attending Irish schools."]
- Blackie's Reversible Copy Books (Vere Foster's Medium). Nos. 3 to 7. 2d. each.  
[Round and clear. Excellent.]
- Carroll, John: *Pattern Drawing and Design*. 1s. 6d. Burns & Oates.  
["The application of geometrical drawing to the construction of ornament and the planning of patterns." 112 pages. Carefully graduated; very numerous illustrations. Practical; judicious.]
- Cassell's Brushwork Sheets.—(1) *Wild Flowers*. (2) *Entertaining Pictures*. (3) *Pictures wanting Words*. Twelve sheets in each series; set of six water colours on each sheet. 3d. each series.  
[Good practice; exercises in taste and judgment.]
- Dessin, Premier Congrès International de l'Enseignement du, Paris (August 29—September 1, 1900). 5fr. 117 Boulevard Saint-Germain.  
["Tous les documents, sans exceptions, de nature à faire connaître non seulement l'histoire de la Session proprement dite, mais encore celle de sa préparation, et, en rendant compte des travaux du Comité international permanent, celle de sa continuation" (348 pages).]

## MODERN LANGUAGES.

Blackie's Little French Classics.—(1) *Les Martyrs* (Chateaubriand), Selections. Edited by E. T. Schoedelin, B.A. (2) *Le Cid* (Corneille), Scenes. Edited by Louis A. Barbé. (3) *Les Plaideurs* (Racine). Edited by D. Lowe Turnbull, M.A. (4) *Contes Fantastiques* (Eckmann-Chatrian). Edited by Marguerite Ninet. (5) *Lyrical Poems* (Hugo; selected). Edited by P. C. Yorke, M.A., Lic.-ès-L. (6) *Un Episode de Guerre* (Stendhal). Edited by J. E. Michell, M.A. (7) Selections from *L'Insecte* (Michelet). Edited by M. A. Gerothwohl, M.A., L.-ès-L. 4d. each.

[Good selections very competently edited.]

Clarke, G. H., M.A., and L. R. Tanqueray, B.-ès-L.: *Intermediate French Grammar*. 3s. 6d. Murray.

[“With outlines of historical accident.” Spacious get up.]

Cour Supérieur Black.—(1) *Lettres, Maximes, et Caractères du XVII. Siècle*; (2) *Les Empires* (Bossuet). Edited by Prof. L. Braundin, Ph.D. 9d. each.

[Illustrations. Excellent get up.]

De Arteaga y Pereira, Fernando, Hon. M.A. Oxon.: *Practical Spanish*. 2 vols. 7s. 6d. Murray.

[Grammar with exercises, materials for conversation, and vocabularies. “For the traveller and the business man, as well as for the student.”]

Logeman, Prof. William S., L.H.C., B.A.: *How to Speak Dutch*. Kegan Paul, Trench, Trübner, & Co.

[3rd Edition, “carefully revised and much enlarged; with translations into Cape Dutch of all sentences and conversations by J. F. Van Oordt, B.A.” Full, practical, useful.]

Mansion, J. Edmond, B.-ès-L.: *A First Book of “Free Composition” in French*. 1s. Blackwood.

[“Used in class teaching and found suitable.”]

Ninet, Marguerite: *French in Picture and Talk*. 2s. 6d. Blackie.

[“A handbook of conversational French”; “to assist the young teacher.” “Meant to be used in conjunction with a set of eight pictorial sheets, each giving representations of a number of familiar objects with their names in French.” Phonetic transcription under the French text. Well done.]

Pitt Press Series.—*Madame Thérèse, and L'Histoire d'un Conscrit* (Eckmann-Chatrian). Edited by A. R. Ropes, M.A. 3s. each.

[Introduction, notes, index, maps.]

Livingtons' Modern German Series.—*Beginners' Texts*: (1) *Deutsches Allerlei*; (2) Selections from Hebel's *Schatzkästlein*. By R. J. Morich. 9d. net each.

[Notes, vocabulary, verb-lists. Serviceable.]

Trechmann, E. J., M.A., Ph.D.: *Les Fâcheux* (Molière). 2s. Clarendon Press.

[Capable literary introduction and notes.]

Wolff, Jetta S.: *Français pour les tout Petits*. 1s. 3d. Arnold.

[“Scenes from child life in France.” Illustrated. Simple, idiomatic, bright, and interesting. Notes and vocabulary.]

## ENGLISH LANGUAGE AND LITERATURE.

Bacon: *Essays, Civil and Moral*. 2s. Ward, Lock, & Co.

[Minerva Library. 494 close-printed pages. *Essays*; *Advancement of Learning*; *Novum Organum*; *Great Instauration*; *Wisdom of the Ancients*; *New Atlantis*. Biographical introduction; illustrations. Tastefully got up.]

Black's School Shakespeare.—*Richard III., and Macbeth*. Edited by L. W. Lyde, M.A. 1s. 4d. each.

[Introduction largely dramatic and literary; notes “mainly concerned with what is typically Elizabethan in Shakespeare's language.” Sensible, suggestive, and adequate.]

Blackie's English Classics.—(1) *Milton's English Sonnets*; (2) *Milton's Lycidas*; (3) *Milton's Ode on the Morning of Christ's Nativity*; (4) *Keats's Ode to the Nightingale, &c.* Edited by E. H. Blackeney, M.A. 2d. each.

[Careful, concise, and instructive.]

Bohn's Standard Library.—*Swift: Prose Works, Vol. IX.* Edited by Temple Scott. 3s. 6d. Bell.

[Notes very careful and helpful. Portrait.]

Burke: *Thoughts on the Cause of the Present Discontents*. Edited by F. G. Selby, M.A. 2s. 6d. Macmillan.

[Introduction, full notes, summary, index.]

Chambers's Twentieth Century Readers. Book III. 1s. Book V. 1s. 6d.

[Suitable matter—except that the sketch of Lord Roberts and of the relief of Kimberley are uncritical glorifications. Coloured and other illustrations. Spellings, notes, meanings, &c.]

Cross, J. W.: *George Eliot's Life*. 2 vols. 2s. net each. Blackwood.

[Warwick edition. Thin paper; handy size; pretty get up. A charming edition of an able and instructive biography.]

Dinglewood Shakespeare Manuals.—*Supplement to A Midsummer Night's Dream*. By Stanley Wood, M.A. 6d. John Heywood.

[Questions and notes. Immense store for teachers.]

Eliot, George: *The Mill on the Floss*. 2 vols. 3s. net. Blackwood.

[Handy. Delightfully got up.]

“Globe” Poetry Reader: for Advanced Classes. 1s. 4d. Macmillan.

[Judicious and varied selection; biographical notes.]

Hyde, Mary F.: *Lessons in the Use of English*. 3 parts, 9d. each; together, 2s. Heath.

[“The leading aims . . . are to develop the child's power of thought, to form in him habits of correct expression, and to give him a taste for good literature.”]

Lobban, J. H.: *The School Anthology*. 2 vols. 2s. each. Blackwood.

[“To provide for the middle and upper forms of schools a representative selection of the best English verse from Chaucer to the present time.” Exhibits sound judgment and scholarly taste.]

## HISTORY AND GEOGRAPHY.

*The Australian Commonwealth: its Geography and History*. 1s. Arnold.

[Timely and serviceable. Map. Portrait of Lord Hopetoun.]

Black's School History.—(1) *Famous Englishmen, Book II.*: Cromwell to Roberts. By John Finmore. 1s. 4d. (2) *Social Life in England, Vol. I.*—to 1603. By John Finmore. 1s. 6d.

[(1) Mostly “painted without the warts.” Many portraits. (2) Well done; an extremely useful supplement to the ordinary history. Good illustrations.]

Blackie's Narrative Histories.—No. III.A: *An Introduction to British History*. 1s. 2d.

[Popular aspects, simply presented. Many illustrations.]

Dale, Lucy: *The Principles of English Constitutional History*. 6s. Longmans.

[For upper forms of schools, and for University beginners.]

Davis, Prof. W. M.: *Elementary Physical Geography*. 5s. 6d. Ginn. [28 plates, 7 of them double-page, several coloured; 190 figures. 7½ × 5½; 400 pages.]

Devi, Sri. Hemlota (Mrs. Sarkar): *The History of India*. 2s. Longmans.

[Translated by M. S. Knight from the second Bengali edition. “To teach young people, through simple language and simple ideas, the real history of India.”]

Lindsey Historical Series.—*London Matriculation Test Papers in English History*. Arranged by J. S. Lindsey. 8d. Heffer (Cambridge).

[All the questions set at London University in English History, June, 1888, to January, 1902. Arranged according to periods and topics in twenty-four test papers. Suggestive.]

Macmillan's New Geography Readers.—*Africa and Australasia*. 1s. 6d.

[Description lucid and simple. Illustrations numerous and good. Excellent summary.]

## MISCELLANEOUS.

*Nature Study: Realistic Geography—Model based on the 6-inch Ordnance Survey*. Designed by G. Herbert Morrell, M.A. 3s. net. Stanford.

[“For the study of local land configuration around a village school. The model shows the surroundings of Streatley-on-Thames.” Each contour level is printed on a separate card, and all can be built up so as to “form an accurate representation of the configuration of the country.” Similar models can be made for any locality. Good idea effectively executed.]

Paton's List of Schools and Tutors. Fifth annual edition. 1s.

[“Particulars of some of the best English schools for boys and girls—with a few on the Continent”; and lists of scholarships and exhibitions open at the public schools. Numerous photographs of schools. Handsomely got up.]

R.H.S. Curves. By Prof. R. H. Smith. 10s. 6d. Cassell.

[Complete set of 23 templates, from ¼ in. to 6 in. variation of radius per 1 in. arc. Very careful and useful.]

*Three Maids in a Hood; or a Wayside Pansy*. 1s. Bemrose.

[A slight story (with teachers in it); sober cast; anticipated surprise.]

Y.W.C.A., *New facts about the: Report for 1901*. 25 and 26 George Street, Hanover Square.

[For those interested in girl life and labour in London.]

Ward, Lock, & Co.'s *Illustrated Guide-Books*.—Whitby; Llandudno, &c.; Penzance, &c.; Edinburgh. 1s. each.

[New editions. Useful maps and many illustrations. Practical, concise, handy, and well got up.]

# OXFORD UNIVERSITY PRESS.

OXFORD AND CAMBRIDGE CERTIFICATE EXAMINATIONS,  
JULY, 1903.

- CHAUCER.—THE PROLOGUE TO THE CANTERBURY TALES.** (School Edition.) Edited by W. W. SKEAT, Litt.D. 1s.

BEST MEDIUM FOR OBTAINING PUPILS.

SIXTH ANNUAL EDITION NOW PREPARING.

The large sum we expend each year in advertising "List of Schools" in the best newspapers ensures the largest circulation of any such work, and brings applications from parents all over the United Kingdom, India, the Colonies, and the Continent. Copies are also placed in the best Clubs, Libraries, Hotels, Boarding Houses, &c., in London and the Provinces. Hundreds of Pupils have been obtained through the medium of Paton's "List of Schools."

MAY WE  
SEND YOU A SPECIMEN COPY?

J. & J. PATON,  
EDUCATIONAL AGENTS,

# Blackie's Little French Classics

Interesting Selections from great French Writers, well edited, well printed, well bound. **Fourpence** each book.

**Alphonse Daudet—La Mule du Pape.** Edited by H. W. PRESTON, M.A.

**Buffon—Selections.** Edited by Rev. H. J. CHAYTOR, M.A.

**Prosper Mérimée—Mateo Falcone,** and other Stories. Edited by J. E. MICHELL, M.A., of Westminster School.

**La Fontaine—Longer Fables.** Edited by A. H. WALL, M.A., of Marlborough College.

**Victor Hugo—Lyric Poems.** Edited by PHILIP C. YORKE, M.A., Magdalen College, Oxford.

**Lesage—Selections from Gil Blas.** Edited by HAROLD W. ATKINSON, M.A., of Pretoria High School.

**Rabelais—Selections.** Edited by E. C. GOLDBERG, M.A., of Tonbridge School.

**Madame de Sévigné—Select Letters.** Edited by MABEL VERNON HARCOURT, of Notting Hill High School for Girls.

**Théophile Gautier—Le Pavillon sur l'Eau, &c.** Edited by W. G. HARTOG, of University College, London.

**Brueys and Palaprat—L'Avocat Patelin.** Edited by E. B. LE FRANÇOIS.

**Corneille—Scenes from Le Cid.** Edited by LOUIS A. BARBE, B.A., of Glasgow Academy.

**Stendhal—Un Episode de Guerre.** Edited by J. E. MICHELL, M.A., of Westminster School.

**Erckmann-Chatrian—Contes Fantastiques.** Edited by Miss MARGUERITE NINET.

**Michelet—L'Insecte.** Selections edited by M. GEROTHWOHL, of Sir John Cass's Institute.

**Chateaubriand—Les Martyrs.** Selections edited by E. T. SCHORDELIN, B.A., of Highgate School.

**Racine—Les Plaideurs.** Edited by D. LOWE TERNBULL, M.A., of George Heriot's School, Edinburgh.

**Musset—Selections in Verse and Prose.** Edited by F. W. B. SMART, M.A., of Eastbourne College.

**Victor Hugo—Waterloo.** Edited by G. H. CLARKE, M.A.

**Bossuet—Oraisons Funèbres.** Selections. Edited by the Rev. H. J. CHAYTOR, M.A., of Merchant Taylors' School, Crosby.

**Molière—Scenes from Le Médecin malgré lui.** Edited by W. J. CLARK, M.A.

*Others in preparation.*

# The Warwick Shakespeare

**THE WARWICK SHAKESPEARE** is now in use in most of the leading Schools, Colleges, and Universities throughout the British Empire.

**As You Like It.** Edited by J. C. SMITH, M.A. 1s. 6d.

**Coriolanus.** Edited by E. K. CHAMBERS, M.A. 1s. 6d.

**Cymbeline.** Edited by A. J. WYATT, M.A. 1s. 6d.

**Hamlet.** Edited by E. K. CHAMBERS, M.A. 1s. 6d.

**Henry the Fifth.** Edited by G. C. MOORE SMITH, M.A. 1s. 6d.

**Henry the Eighth.** Edited by D. NICHOL SMITH, M.A. 1s. 6d.

**Julius Cæsar.** Edited by ARTHUR D. INNES, M.A. 1s.

**King John.** Edited by G. C. MOORE SMITH, M.A. 1s. 6d.

**King Lear.** Edited by D. NICHOL SMITH, M.A. 1s. 6d.

**Macbeth.** Edited by E. K. CHAMBERS, M.A. 1s.

**Merchant of Venice, The.** Edited by H. L. WITHERS, M.A. 1s. 6d.

**Midsummer Night's Dream, A.** Edited by E. K. CHAMBERS, M.A. 1s. 6d.

**Much Ado about Nothing.** Edited by J. C. SMITH, M.A. 1s. 6d.

**Richard the Second.** Edited by C. H. HERFORD, Litt.D. 1s. 6d.

**Richard the Third.** Edited by GEORGE MACDONALD, M.A. 1s. 6d.

**Tempest, The.** Edited by F. S. BOAS, M.A. 1s. 6d.

**Twelfth Night.** Edited by ARTHUR D. INNES, M.A. 1s. 6d.

LONDON: BLACKIE & SON, LIMITED, 50 OLD BAILEY, E.C.

## COLLEGE OF PRECEPTORS.

### Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

### PRACTICAL CRITICISMS AND SUGGESTIONS ON TEACHING.

To be delivered by The Rev. Canon EVAN DANIEL, M.A., F.C.P., Formerly Principal of the Buttersea Training College.

#### SYLLABUS.

I. *Preparation of Lessons.*—Need of full and fresh Knowledge—Sources of Information—Need of Arrangement—Notes of Lessons—Limits and Aims of Lessons—Divisions of Lessons—Provision of Apparatus, Illustrations, Maps, &c.—Provision for securing Co-operation of Pupils—Provision for testing Success of Lessons.

II. *Method.*—Not to be selected arbitrarily—Regulated by Interdependence of Knowledge and by Laws of Mind—General Principles—From the Simple to the Complex—From the Indefinite to the Definite—From the Concrete to the Abstract—The Genesis of Knowledge in the Race—From the Empirical to the Rational—Independent Discovery of Truth.

III. *Apparatus, Experiments, and Illustrations.*—Things always more impressive than Words—Need of Appeals to the Senses—Specimens for Individual Examination—Graphic Representations—Enlarged Drawings of Parts—Need of some Indication of Scale—Experiments—Need of Judgment in Selecting—Rehearsal of Experiments—Registration of Results as arrived at—Relative Value of Pictures, Drawings, Blackboard Sketches, Models—Function of Teacher in all Lessons appealing to the Mind through the Senses.

IV. *Questions and Answers.*—Uses that may be made of Questions—Introductory—To secure Co-operation—Disciplinary—Resumptive—Questions directing Observation—appealing to Memory—to Imagination—to Conceptive Faculty—to Judgment—to Reason—Common Faults in Questioning—Language—Length—Form—Order—Treatment of Children's Errors—Answers Wholly Wrong—Partially Wrong—Examinations—Construction of Papers—Modes of Marking—Teacher's Use of Blunders.

V. *The Kindergarten.*—The Senses our first Teachers—Limits to their Training—The Habit of Observation—Nature's Method—Artificial Education—Froebel's Services to Education—Utilization of Childish Instincts—Gifts and Occupations—Principles of the Kindergarten applicable to the later stages of Education—Transition from Kindergarten to Ordinary School too Abrupt—Object Lessons—Elementary Science—Treatment.

VI. *Reading, Writing, and Drawing.*—Analytic and Synthetic Methods of Teaching Reading—Spelling—Dictation Lessons—Reading Aloud—Writing—Analysis of Letters—Mulhauser's Method—Locke's—Cowham's—Scientific Criticism of Writing—Drawing—Training of Eye and Hand—Object Drawing—Analysis—Directed Observation—Simultaneous Drawing Lessons.

VII. *Arithmetic and Geometry.*—First Notions of Numbers—Composition and Decomposition of Numbers—Notation—Numeration—Arithmetical Rules to be established by the Method of Discovery—Arithmetical Tables and their Illustration—Rules presenting Special Difficulty—Mental Arithmetic—Paper Work—Excellences to be insisted on—Accuracy and Rapidity—Euclid—Introduction to Blackboard Work—Deductions.

VIII. *Grammar and Teaching of Languages.*—Grammar contained in Language, and to be sought there—Parts of Speech to be classified and defined by Pupils—Accidence to be collected by Pupils—Syntax to be discovered and formulated by Pupils—Pursing—Analysis of Sentences—Need of Logical Consistency in Grammar—Languages learnt with different Objects in view—for mere Reading—for Speaking and Writing—Methods appropriate to each—Lessons for Young Children—for more Advanced Pupils.

IX. *English Literature.*—Aims of Teacher—Authors and Pieces suitable for different Ages—Method of Teaching English Literature illustrated by Examples—Simple Poems—Romantic Epics—Shakespeare—Milton—Essayists—Preparation by Pupils—Paraphrasing—History of English Literature—Manuals—Examinations in English Literature—Criticism.

X. *Geography.*—Home Surroundings—Maps—Globe—Order of Treatment determined by Interdependence of Physical Facts—Physical Geography—Political Geography—Commercial Geography—Physiography—Sources of Information—Illustrations needed—Models.

XI. *History.*—Starting-point—Order of Time—Regressive Order—Early Lessons—Episodes—General Notions—Detailed Study of Special Periods—Mode of treating Biographies—Illustrations—Pictorial—Literary—Busts—Coins—Facsimiles—Synchronistic Charts—Original Authorities—Use of Text-books at different Stages—Constitutional History—Duties of Citizenship.

XII. *Discipline.*—Attendance—Punctuality—Order—Attention—School-rules—Motives appealed to—The Teacher's Eye—Rewards and Punishments—Emulation—Public Opinion—Characteristics of good Discipline as regard Means and Ends—School Tone—Formation of Habits—Character.

Crown 8vo, cloth. Price One Shilling.

## FRENCH WORDS AND PHRASES.

By J. G. ANDERSON and F. STORR,  
ASSISTANT MASTERS IN MERCHANT TAYLORS' SCHOOL.

"The words and phrases in this book are well chosen."—*Educational News*, October 13, 1900.

"Extremely valuable."—*Guardian*, September 12, 1900.

"A convenient series of lists of words with the French and English in parallel columns arranged under such headings as 'Relationships,' 'Class-Room Objects,' 'Colours,' &c."—*School World*, August, 1900.

"The book . . . supplies a real want. The idioms and proverbs in the concluding chapters are well selected."—*Educational Times*, August, 1900.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

MATHEMATICS.

15080. ((Professor NANSON.)—Lines drawn through the vertices of a triangle  $\Delta$  divide the angles into the segments  $\alpha, \alpha'; \beta, \beta'; \gamma, \gamma'$ , and form a triangle  $\Delta'$ . If  $R, R'$  are the radii of the circum-circles of  $\Delta, \Delta'$ ,

prove that 
$$\frac{R'}{R} = \frac{\sin \alpha \sin \beta \sin \gamma - \sin \alpha' \sin \beta' \sin \gamma'}{\sin(\beta + \gamma') \sin(\gamma + \alpha') \sin(\alpha + \beta')}$$

and deduce the theorems of CEVA and MENELAUS.

Solution by R. TUCKER, M.A., and Rev. T. ROACH, M.A.

$BR = c \sin \alpha / \sin(\alpha + \beta')$ ,

$BP = a \sin \gamma' / \sin(\beta + \gamma')$ ;

therefore

$$\begin{aligned} PR \sin(\alpha + \beta') \sin(\beta + \gamma') \\ &= c \sin \alpha \sin(\beta + \gamma') - a \sin \gamma' \sin(\alpha + \beta') \\ &= 2R [\sin(\gamma + \gamma') \sin \alpha \sin(\beta + \gamma') \\ &\quad - \sin(\alpha + \alpha') \sin \gamma' \sin(\alpha + \beta')] \end{aligned}$$

= (after reduction)

$$\begin{aligned} 2R [\Pi \sin \alpha - \Pi \sin \alpha' + \sin^2 \gamma' \sin \alpha \cos(\beta + \gamma) - \sin^2 \alpha \sin \gamma' \cos(\alpha' + \beta') \\ + \sin \alpha \sin \gamma' \cos \gamma' \sin(\beta + \gamma) - \sin \alpha \sin \gamma \cos \alpha \sin(\alpha' + \beta')] \\ &= 2R [\Pi \sin \alpha - \Pi \sin \alpha' + \sin \alpha \sin \gamma' \{ \sin(\beta + \gamma + \gamma') - \sin(\alpha + \alpha' + \beta') \}] \\ &= 2R [\Pi \sin \alpha - \Pi \sin \alpha']; \end{aligned}$$

therefore  $R'/R = [\Pi \sin \alpha - \Pi \sin \alpha'] / \Pi \sin(\alpha + \beta')$ ,

$R'$  vanishes when numerator vanishes, which proves CEVA's and MENELAUS's theorems (cf. LACHLAN, *Modern Pure Geometry*, pp. 52, 58).

A Corollary to Euclid III. 22.

By the Rev. C. TAYLOR, D.D.

Let the sides AB, BC, CD of a convex cyclic hexagon meet the opposite sides DE, EF, FA in successive points L, M, N. Then  $\angle L + \angle N = \angle M$ .

This would be useful in editions of EUCLID as a Corollary or additional Proposition. Assuming it as a Lemma, we see that the three circles LDB, MBE, NFD meet in a point P, and PASCAL's theorem follows at once for the case of the circle. For the point P is evidently in line with LN, and so with LM or MN.

This note was suggested by the elementary proof of PASCAL's theorem for the case of the circle given by Mr. R. F. DAVIS in the *Mathematical Reprint*, Vol. LXXIV, p. 112.

The use of the lemma as above seems to me to make the proof somewhat simpler and much easier to remember.

15109. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Find the least solution in positive integers of  $x^3 + y^3 = mz^3$ , where  $m = (3\mu - 1)$ , a positive integer  $> 2$ , and  $x \neq y$ ; and  $x, y, z$  have no common factor.

Solution by the PROPOSER.

$(x^3 + y^3) = (x + y)(x^2 - xy + y^2) = mz^3$ .

As  $(x^2 - xy + y^2)$  is known to contain no factors of form  $m = 3\mu - 1$ , the latter must be a factor of  $(x + y)$ . Hence  $x + y = m$ , or  $m\lambda$ ; but the latter will be found (see the PROPOSER's solution of Question 14945) to involve  $x = \lambda\xi, y = \lambda\eta, z = \lambda\zeta$ , an excluded case. Substituting  $x + y = m$ , and dividing by  $m$ , gives

$m^2 - 3xy = z^3$  and  $xy = \frac{1}{3}(m^2 - z^3) = a$  positive integer.

Hence also

$(x - y)^2 = \frac{1}{3}(4z^3 - m^2) = a\alpha$ .

These involve  $z = 3\zeta + 1$  (since  $m = 3\mu - 1$ ), and  $4 > m^2/z^3 > 1$ . A few trials now suffice to give the lowest solution  $m = 20, z = 7, x - y = 18, x + y = 20, x = 19, y = 1$ , and  $19^3 + 1^3 = 20 \cdot 7^3$ .

5734 & 5702. (5734.) (A. MARTIN.)—A has  $m$  dollars and B  $n$  dollars, and they play at a game for which it is  $b : a$  that B shall win any one game; prove that the chances for the ultimate success of each player are

$a^n (b^m - a^m) : (b^{m+n} - a^{m+n})$  and  $b^m (b^n - a^n) : (b^{m+n} - a^{m+n})$  respectively.

(5702.) (Rev. Prebendary W. A. WHITWORTH, M.A.)—A and B play at a game which cannot be drawn, and the odds are  $\mu : \nu$  in favour of A winning any assigned game. They agree to play until either A shall have won by scoring  $m$  games ahead of B, or B shall have won by scoring  $n$  games ahead of A. Show that, when A has scored  $p$  games more than B, the odds in favour of his winning the match are

$\mu^{m+n} - \mu^m - \nu^{m+p} : \mu^{m-p} \nu^{m+p} - \nu^{m+n}$ .

[From this follows as a corollary Ex. 236 in the 3rd Edition of *Choice and Chance*.]

Solutions (5734) by H. W. CURJEL, M.A., and Professor NANSON; (5702) by H. W. CURJEL, M.A.

(5734) Let  $u_m$  = chance of A's ultimate success when he has  $m$  dollars. Then  $u_x = a/(a+b) u_{x+1} + b/(a+b) u_{x-1}$ , and  $u_0 = 0$  and  $u_{m+n} = 1$ . Hence

$u_x = A + B (b/a)^x = (b^x a^{m+n-x} - a^{m+n}) / (b^{m+n} - a^{m+n})$ ,

from the initial and final conditions; therefore

$u_m = a^n (b^m - a^m) / (b^{m+n} - a^{m+n})$ ,

and B's chance of ultimate success =  $1 - u_m = b^m (b^n - a^n) / (b^{m+n} - a^{m+n})$ .

(5702) This follows from the above by putting  $\mu$  and  $\nu$  for  $a$  and  $b$ , and assuming that A and B have  $n+p$  and  $m-p$  dollars respectively, and we get  $u_{n+p} : 1 - u_{n+p} = \mu^{m+n} - \mu^m - \nu^{m+p} : \mu^{m-p} \nu^{m+p} - \nu^{m+n}$ .

15104. (R. KNOWLES.)—Prove that the sum to  $r$  terms of the series

$1 - 10 + 35 - 84 + \dots \pm \frac{1}{2} r (4r^2 - 1)$

is  $-\frac{1}{2} r (4r^2 + 6r - 1)$  when  $r$  is even and  $\frac{1}{2} (4r^3 + 6r^2 - r - 3)$  when  $r$  is odd.

Solution by T. PEELE, A.I.A.

Using the same notation as in Question 15051,

$s_p = -\frac{1}{2} (48p^2 - 24p + 3), S_{2n} = \sum_{p=1}^{2n} s_p = -\frac{1}{2} n (16n^2 + 12n - 1)$

Let  $r$  be even, =  $2n$  say;

$S_r = -\frac{1}{2} r (4r^2 + 6r - 1);$

$S_{2n-1} = S_{2n} + t_{2n} = -\frac{1}{2} n (16n^2 + 12n - 1) + \frac{1}{2} n (16n^2 - 1) = \frac{1}{2} (16n^3 - 12n^2 - n).$

Let  $r$  be odd, =  $2n - 1$  say;

$S_r = \frac{1}{2} (4r^3 + 6r^2 - r - 3).$

14930. (EMILE LEMOINE.)—Trouver dans un triangle ABC un point M tel que si l'on mène par M une parallèle à BC coupant AB en  $A_b$ , AC en  $A_c$ ; une parallèle à CA coupant BC en  $B_c$ , BA en  $B_a$ ; une parallèle à AB coupant CA en  $C_a$ , CB en  $C_b$ , les deux triangles  $A_b B_c C_a, A_c C_b B_a$  soient égaux.

Solution by J. PRESCOTT, B.A.

If M be the centre of gravity of the triangle, M satisfies the required condition. For, let AMX be one of the medians. Then since  $AM = 2MX$ , therefore

$AA_b = 2A_b B$

and

$AA_c = 2A_c C,$

that is,  $B_a, A_b, C_b, B_c, A_c, C_a$  are the points of trisection of the sides of the triangle. Now  $BC_b = \frac{1}{3} BC = \frac{2}{3} BX$ ; therefore  $B_a C_b = \frac{2}{3} AX$ . Similarly,

$C_a B_c = \frac{2}{3} AX;$

therefore

$B_a C_b = C_a B_c.$

In the same way

$A_b C_a = A_c B_b$  and  $B_c A_c = B_a A_b;$

therefore  $\Delta A_b B_c C_a = \Delta A_c C_b B_a.$

15118. (Professor NEUBERG.)—On mène à deux cercles donnés A, B des tangentes a, b telles que la bissectrice de l'angle ab soit parallèle à une droite donnée m. Trouver le lieu du point de rencontre C des droites a, b, et construire la tangente à ce lieu au point C.

Solutions (I.) by D. BIDDLE; (II.) by the PROPOSER.

(I.) This question comprises three cases, namely, (1) that in which the two circles lie between the two tangents, (2) that in which the two tangents lie between the two circles, (3) that in which one circle is internal and the other external to the tangents. But the principle is much the same in each, and we will therefore consider the first alone.

Let O be the mid-point between the two centres of the given circles.

Draw OQ, AF, BG parallel to the given straight line, and take D, E on the circumferences, such that  $\angle DAF = \angle EBG = \theta$ , and let the tangents DC, EC meet OQ in L, M respectively. Then

$$\frac{1}{2}(OL + OM) = ON = x \quad \text{and} \quad \frac{1}{2}(OL - OM) \cot \theta = NC = y.$$

Let  $BP = p$ ,  $OP = q$ : then

$$OL = R \sec \theta + p \tan \theta + q \quad \text{and} \quad OM = r \sec \theta + p \tan \theta - q,$$

where R, r are the radii to A, B respectively. Consequently

$$x = \frac{1}{2}(R+r) \sec \theta + p \tan \theta \quad \text{and} \quad y = \frac{1}{2}(R-r) \operatorname{cosec} \theta + q \cot \theta.$$

About O describe two circles, of radius  $\frac{1}{2}(R+r)$ , and  $\frac{1}{2}(R-r)$  respectively. Then a simple method of finding a point on the required locus is as follows:—Take U on the larger of the two concentric circles and join OU, cutting the smaller circle in Z. Draw the tangents US, ZT meeting BG, BP in S, T respectively. Then C is found on completing the parallelogram. It is evident that the locus intersects AF at  $C_0$ , where the tangent to circle B also touches A, the proper tangent to A being on the opposite side of AF to  $IC_0$ .

In order to draw, at C, a tangent to the locus, produce OU to cut TC, SC in  $\alpha, \beta$  respectively, and on OQ find Q, such that

$$QN : NC = SB : Ta.$$

That QC is tangential to the locus appears from the fact that

$$Ta = \left\{ \frac{1}{2}(R-r) \cot \theta + q \operatorname{cosec} \theta \right\} \operatorname{cosec} \theta$$

and

$$S\beta = \left\{ \frac{1}{2}(R+r) \tan \theta + p \sec \theta \right\} \sec \theta,$$

which, the former taken negatively, are the respective differential coefficients of  $y, x$  with respect to  $\theta$ .

(II.) (i.) J'adopte les axes coordonnés OQ, OW et les notations de M. BIDDLE. Les coordonnées des centres A, B étant  $(p, q), (-p, -q)$ , les équations des tangentes DC, EC sont

$$(x-q) \cos \theta + (y-p) \sin \theta = R, \quad (x+q) \cos \theta - (y+p) \sin \theta = r.$$

Tirons-en les valeurs de  $\cos \theta, \sin \theta$  pour les substituer dans l'égalité  $\cos^2 \theta + \sin^2 \theta = 1$ ; nous aurons pour le lieu de C une équation du quatrième degré.

(ii.) Décomposons la vitesse V du point C sur sa trajectoire ( $1^o$ ) en deux vitesses  $v$  et  $w$  dirigées suivant CD et une perpendiculaire à DC; ( $2^o$ ) en deux vitesses  $v'$  et  $w'$  dirigées suivant CE et une perpendiculaire à EC. Alors les composantes  $u$  et  $u'$  sont proportionnelles aux longueurs des tangentes DC, EC; car ces tangentes ont des vitesses angulaires égales et de sens contraires. Il résulte de là que

$$\frac{\cos(V, u)}{\cos(V, u')} = \frac{\sin(V, CD)}{\sin(V, CE)} = \frac{CD}{CE};$$

par conséquent la tangente est dirigée suivant la symédiane du triangle CDE.

15136. (Professor COCHEZ.)—Etudier les courbes

$$(1) (x-y)^2 x + 2(x-y)y + 1 = 0, \quad (2) y^2 = (x^4 - 1)/x^2.$$

Solution by A. M. NESBITT, M.A.

(1) The asymptotes are  $x-y+2=0, x-y=0, x+2=0$ .

The points B, B' (0,  $\pm 1/\sqrt{2}$ ), C, C' (1,  $\pm \sqrt{2}$ ), A (-1, 0), and D (2,  $\frac{2}{3}$ ) are on the curve; and the values of  $dy/dx$  (exact or approximate) at these points are B (.68), B' (-.32), A ( $\frac{2}{3}$ ), C (.77), C' (-2.77), D (.9).

The three points A, B, C are collinear, as are also A'B'C'.

The serpentine branch is difficult to draw exactly, as the inclinations

at A, B, C are so nearly equal; but it crosses ABC from the lower side to the upper at A and C.

[Rest in Vol.

Note on two connected Problems in Mean Value.

By R. CHARTRES.

- (1) Two random points are taken in a triangle and joined to a vertex: find the mean value of the triangle thus formed.
- (2) Three random points are taken in a tetrahedron and joined to a vertex: find the mean value of the tetrahedron thus formed.

Let the area of ABC, and the volume of ABCD, be each unity.

(1) The mean value of  $AQ'P' = \frac{1}{3}$ . Now let Q move in the element  $AQ'$ , and this result will be reduced to  $\frac{2}{3}$  of its value. Therefore mean value of  $APQ = (\frac{2}{3})^2$  of  $\frac{1}{3} = \frac{4}{27}$ .

(2) Since the mean value of  $P'Q'R' = \frac{1}{3}BCD$ , therefore mean value of  $AP'Q'R' = \frac{1}{3}$ . Now, let Q move in the element  $AQ'$ , and this result will be reduced to  $\frac{2}{3}$  of its value. Therefore mean value of  $APQR = (\frac{2}{3})^3$  of  $\frac{1}{3} = \frac{8}{27}$ .

15150. (Professor LANGHORNE ORCHARD, M.A., B.Sc.)—Find the product of the two series

$$(1) 1 + 3 + 7 + 13 + 21 + 31 + \dots \text{ to } n \text{ terms;}$$

$$(2) 1 + 13 + 73 + 241 + 601 + 1261 + \dots \text{ to } n \text{ terms.}$$

Solutions (I.) by R. W. D. CHRISTIE and Rev. T. ROACH, M.A.;  
(II.) by J. BLAIRIE, M.A.

(I.) The general terms are  $n^2 - n + 1, n^4 - n^2 + 1$ .  
The sums are  $\frac{1}{3}n(n^2 + 2)$  and  $\frac{1}{15}n(2n^4 + 5n^2 - 5n + 8)$ .  
The product required is  $\frac{1}{45}n^2(n^2 + 2)(2n^4 + 5n^2 - 5n + 8)$ .

(II.) Series (1)

$$= \sum \{1 + (n-1)n\} \\ = n + \frac{1}{2}(n-1)n(n+1) = \frac{1}{2}n(n^2 + 2).$$

Series (2)

$$= \sum \{1 + (n^2 - 1)n^2\} \\ = \sum \{1 + \frac{1}{2}(n-2)(n-1)n(n+1) + \frac{1}{2}(n-1)n(n+1)(n+2)\} \\ = n + \frac{1}{15}(n-2)(n-1)n(n+1)(n+2) + \frac{1}{15}(n-1)n(n+1)(n+2)(n+3) \\ = \frac{1}{15}n(2n^4 + 5n^2 - 5n + 8);$$

therefore product of series =  $\frac{1}{45}n^2(n^2 + 2)(2n^4 + 5n^2 - 5n + 8)$ .

**15033.** (R. TUCKER, M.A.)—Three circles are given by  $x^2 + y^2 + C = 0$ ,  $x^2 + y^2 + Ax = 0$ ,  $x^2 + y^2 + By = 0$ .

Find the area of the triangle formed by the polars of their radical centre with respect to the three circles. [Has the question been considered in the general, or any particular form, geometrically or analytically?]

*Solution by Professor SANJANA, M.A., and CONSTANCE I. MARKS, B.A.*

The radical centre is evidently  $x' = C/A$ ,  $y' = C/B$ . Its polars with respect to the given circles are

$$xx' + yy' + C = 0, \quad xx' + yy' + \frac{1}{2}A(x + x') = 0, \quad xx' + yy' + \frac{1}{2}B(y + y') = 0.$$

Twice the area of the triangle formed by these

$$= \frac{\left\{ -\frac{1}{2}AB(x'^2 + y'^2) + \frac{1}{2}C(Bx' + Ay') + \frac{1}{2}ABC \right\}^2}{\frac{1}{2}ABx'y' \left\{ \frac{1}{2}(Bx' + Ay') + \frac{1}{2}AB \right\}}$$

see SALMON, § 39. Substitute the values of  $x'$  and  $y'$ , and simplify; we

$$\text{shall get the area} = \frac{\left\{ C(A^2 + B^2) + A^2B^2 \right\}^2}{2AB \left\{ 2C(A^2 + B^2) + A^2B^2 \right\}}$$

Professor SANJANA remarks:—"I have not seen the Question treated analytically anywhere; in the form given, it does not seem capable of geometrical solution."

**5473.** (H. W. HARRIS.)—Prove that, if

$$F(m, n, p) = \begin{vmatrix} 1 & 1 & 1 & 1 \\ \alpha^m & \beta^m & \gamma^m & \delta^m \\ \alpha^n & \beta^n & \gamma^n & \delta^n \\ \alpha^p & \beta^p & \gamma^p & \delta^p \end{vmatrix},$$

$$\text{then } F(m, n, p) \{ F(1, 2, 3) \}^2 = \begin{vmatrix} F(m, 2, 3) & F(1, m, 3) & F(1, 2, m) \\ F(n, 2, 3) & F(1, n, 3) & F(1, 2, n) \\ F(p, 2, 3) & F(1, p, 3) & F(1, 2, p) \end{vmatrix},$$

and generalize for a similar determinant of any order.

*Solution by Professor NANSON.*

If  $(abc)$ ,  $(xyz)$  are any two third order determinants, it is known that

$$\begin{vmatrix} (ayz) & (xaz) & (xya) \\ (byz) & (xbz) & (xyb) \\ (eyz) & (xcz) & (xyc) \end{vmatrix} = (abc)(xyz)^2.$$

Further, if  $H_n$  is the complete symmetric function of  $\alpha\beta\gamma\delta$  of order  $n$ , it is known that

$$\frac{F(m, n, p)}{F(1, 2, 3)} = \begin{vmatrix} H_{m-1} & H_{n-1} & H_{p-1} \\ H_{m-2} & H_{n-2} & H_{p-2} \\ H_{m-3} & H_{n-3} & H_{p-3} \end{vmatrix}.$$

It therefore follows that

$$F(mnp) \{ F(\mu\nu\omega) \}^2 = \begin{vmatrix} F(m\nu\omega) & F(\mu n\omega) & F(\mu\nu m) \\ F(n\nu\omega) & F(\mu n\omega) & F(\mu\nu n) \\ F(p\nu\omega) & F(\mu p\omega) & F(\mu\nu p) \end{vmatrix}.$$

Taking  $\mu, \nu, \omega = 1, 2, 3$ , the required result follows. The same proof applies to determinants of any order.

**3619.** (OMEGA.)—Given the sides of three squares inscribed in a triangle, determine the triangle. [Mr. BIDDLE points out that the equations given in the allied Question 9526 are incorrect, but could be readily put into the proper form. See Old Questions in *Ed. Times*, May 1, 1902.]

*Solution by D. BIDDLE.*

Let  $l > m > n$ , and let  $a, b, c$  be the sides of the required triangle ABC, on which the squares of side  $l, m, n$  are respectively based. Then

$$a = l(1 + \cot B + \cot C), \quad b = m(1 + \cot A + \cot C), \\ c = n(1 + \cot A + \cot B),$$

$$\text{and } l(1 + \cot B + \cot C)/\sin A = m(1 + \cot A + \cot C)/\sin B \\ = n(1 + \cot A + \cot B)/\sin C.$$

Multiply by  $\sin A \sin B \sin C$ , and reduce; then

$$l(\sin A + \sin B \sin C) = m(\sin B + \sin A \sin C) = n(\sin C + \sin A \sin B),$$

$$\text{whence } \sin A = \frac{\sin B(m - l \sin C)}{l - m \sin C}, \quad \sin B = \frac{\sin C(n - m \sin A)}{m - n \sin A},$$

$$\sin C = \frac{\sin A(l - n \sin B)}{n - l \sin B}.$$

From these values we obtain

$$\frac{\sin B}{\sin A} = \frac{b}{a} = \frac{l - m \sin C}{m - l \sin C} \quad \text{and} \quad \frac{\sin C}{\sin A} = \frac{c}{a} = \frac{l - n \sin B}{n - l \sin B}$$

in which the lengths of  $b$  and  $c$  in relation to  $a$  are shown to be dependent on the angles formed by  $b$  and  $a, c$  and  $a$  respectively. If  $a$  be taken of a given length, we can trace, by aid of the two formulae, two loci of  $A'$ , and where these intersect will be the apex of a triangle having the given length as base, and similar in all respects to that required. It will be easy to alter the size to suit the given inscribed squares.

QUESTIONS FOR SOLUTION.

**15205.** (J. C. ST. CLAIR.)—Two equal rectangular boards, divided into the same number of squares, are placed so as to have a common corner as shown in the figures. On the corners of the squares are placed  $mn - 1$  white pieces in the lower board, and  $mn - 1$  black pieces in the upper one, the common corner being vacant. A piece of either colour may be moved into the place that happens to be vacant, either by a single step or by leaping over an intervening piece of the opposite colour; the white pieces moving always upward or to the right along the lines, and the black pieces downward or to the left. The number of pieces in the outer sides of each board being  $m, n$ , show that the minimum number of moves (steps and leaps) in which the positions of the white and black pieces can be interchanged is  $M = mn(m + n - 1) + 2\mu\nu - 1$ , where  $\mu, \nu$  are the greatest integers in  $\frac{1}{2}m, \frac{1}{2}n$ . In the figures  $m = 4, n = 3, \mu = 2, \nu = 1$ , and  $M = 75$ , of which 30 are steps and 45 are leaps.

*Note.*—There is no actual solution of the puzzle for  $m = n = 2$ . When  $n = 1$ , we have the familiar puzzle where  $m - 1$  pieces of each colour are placed in a row with a vacant space between them.

**15206.** (H. MACCOLL, B.A.)—The letter  $A$  denoting a proposition, what are the respective chances of  $A', A'', A''', A''''$ , first, on the assumption that  $A'$  and  $A'$  are equally probable; secondly, on the assumption that  $A', A'', A'''$  are equally probable? *Definitions.*—The exponents (or predicates)  $\tau, \iota, \epsilon, \eta, \theta$  respectively denote true, false, certain, impossible, variable (neither certain nor impossible); the symbol  $A^\tau$  asserts that  $A$  is  $x$  (or belongs to the class  $x$ ); the symbol  $A^{\tau\nu}$  means  $(A^\tau)^\nu$  and asserts that  $A^\tau$  is  $y$  (or belongs to the class  $y$ ); and so on. The symbol  $A^\circ$  means  $A^{\circ A}$  and asserts that the chance of  $A$  is neither 1 nor 0, but some proper fraction between the two.

**15207.** (Professor NANSON.)—Prove that

$$\int_0^\infty (a^2 + x^2) \dots (a_n^2 + x^2) = \frac{\Pi \Delta}{2 PQ}$$

where  $P = \Pi a_r, Q = \Pi(a_r + a_s)$  ( $r, s = 1, 2, \dots, n$ );  $\Delta = (a_{\rho\sigma})$ ,  $a_{\rho\sigma} = \rho a_{\rho-\sigma}$  ( $\rho, \sigma = 1, 2, \dots, n - 2$ ); and  $\rho_\sigma$  is the sum of the products  $\rho$  together of  $a_1, a_2, \dots, a_n$ . Deduce the value of  $\int_0^\infty (a^2 + x^2)^{-n} dx$ .

**15208.** (G. H. HARDY, B.A.)—Prove that, if  $a$  and  $b$  are co-prime odd positive integers, and  $a$  is an even positive integer  $< a + b$ ,

$$\frac{1}{a} \sum_{-1}^{a-1} (-)^i \frac{\sin i\pi/a}{\sin ib/\pi} + \frac{1}{b} \sum_{-1}^{b-1} (-)^i \frac{\sin i\pi/b}{\sin ia/\pi} = -\frac{a}{ab}.$$

**15209.** (T. MUTR, LL.D.)—If  $\Delta$  be the discriminant of  $ax^2 + by^2 + cz^2 + 2fyz + 2gzx + 2hxy$ , and  $A, B, \dots$  be the cofactors of  $a, b, \dots$  in  $\Delta$ ,

$$\text{then } \frac{\partial(A, B, C, F, G, H)}{\partial(a, b, c, f, g, h)} = 2 \left( \frac{ABC}{abc} \right)^2 \frac{\partial(F\sqrt{BC}, G\sqrt{CA}, H\sqrt{AB})}{\partial(f\sqrt{bc}, g\sqrt{ca}, h\sqrt{ab})}.$$

**15210.** (J. S. LAWSON, M.A.)—If all the terms, except  $u_5$ , of the series  $u_1, u_2, \dots, u_9$  be given, show that

$$u_5 = \frac{1}{75} [56(u_1 + u_6) - 28(u_3 + u_7) + 8(u_2 + u_8) - (u_1 + u_9)].$$

**15211.** (R. W. D. CHRISTIE.)—Investigate methods for determining whether a given prime  $1/\rho$  has or has not (1) a complete period, and (2) an odd or even period.

**15212.** (Professor SANJANA, M.A.)—Resolve into prime factors the numbers  $2^{2^k} + 1, 3^{2^k} + 1, 12^{2^k} + 1$ .

**15213.** (M. R. PEIRIS.)—The series of odd natural numbers is divided into groups 1, 3, 5 ... to  $r$  terms,  $(2r + 1), (2r + 3), (2r + 5) \dots$  to  $2r$  terms, and so on; each group having the number of terms of the first group more than the group that precedes it. Show that the sum of the terms in the  $n$ -th group bears to the sum of the first  $n$  odd natural numbers a relation which depends only on  $r$ . Hence obtain the sums of the  $n$ -th groups of the similarly divided series (1) of even natural numbers and (2) of natural numbers.

**15214.** (D. BIDDLE.)—Having it given that  $x^2 - y^2 = a$ , and  $xz - yw = b$ , find  $x^2 - w^2$ , all the values being integral, but (except  $a$  and  $b$ ) unknown.

**15215.** (W. P. WORKMAN, M.A.)—If a fraction whose denominator is not divisible by 3, 11, or 37 give rise to a decimal with six figures in the recurring period, and  $a, b, c, d$  be four cyclically consecutive figures of this period, prove that  $(a - b + c)(b - c + d) = -10$ . Generalize the theorem.

**15216.** (R. C. ARCHIBALD, M.A., Ph.D.)—The trisectrix of MACLAURIN ( $r \cos \frac{1}{3}\theta = C$  or  $r \sin 2\theta + a \sin 3\theta = 0$ ), the logocyclic curve or strophoid ( $r \cos \theta + a \cos 2\theta = 0$ ), and the cubic of TSCHIRNHAUSEN ( $r^3 \cos \frac{1}{3}\theta = a^3$ ) are nodal cubics. Express their equations in the form  $X^3 + Y^3 + Z^3 = 0$ , where  $X, Y, Z$  are linear functions of the Cartesian coordinates.

**15217.** (R. TUCKER, M.A.)—In the figure to Question 15153, the projections of AB, AC on BC are constant: prove that the join of the circum-centres of ABC, ABC' touches a parabola.

**15218.** (JAMES BLAIKIE, M.A.)—If  $x$  be the edge of an icosahedron and  $y$  the radius of the circumsphere, show that  $5x^4 - 20x^2y^2 + 16y^4 = 0$ .

**15219.** (Professor NEUBERG.)—D'un point quelconque M d'une circonférence donnée on abaisse une perpendiculaire MP sur un diamètre fixe AB; on prolonge la courbe AM d'une longueur MN = AP. Trouver l'aire de la courbe engendrée par le point N.

**15220.** (A. M. NESBITT, M.A.)—A perpendicular AQ is drawn from the vertex A of a parabola to the common chord of the parabola with its circle of curvature at P, meeting it in Q. Show that the locus of Q is a cissoid.

**15221.** (H. BATEMAN.)—A parabola circumscribes a triangle and touches the circum-circle: prove that it also touches the radical axis of the inscribed and circumscribed circles.

**15222.** (I. ARNOLD.)—There are two inclined planes each 100 feet long, viz., AC and BC, and each inclined at an angle of  $15^\circ$  to the horizon. A small smooth weight slides freely down AC and then ascends BC; after descending BC it reascends AC; and so on. It is required to find the number of times it will ascend the plane AC before losing half the velocity acquired in the first descent.

#### OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

**8508.** (A. GORDON.)—If the four common tangents  $T_1, T_2, T_3, T_4$  be drawn to two circles  $A_1$  and  $B_1$ , and cut two concentric circles  $A_2$  and  $B_2$  in  $P_1R_1, Q_1S_1, \&c.$ , show that the four quadrilaterals similar to that formed by  $T_1$ , viz., with sides the tangents at  $P_1, Q_1, R_1, S_1$ , will have their sixteen vertices concentric.

**8517.** (Professor GILLILAND, M.A.)—A vessel formed by cutting a segment of depth  $d$  from a sphere of radius  $r$  has a handle movable about a horizontal axis which is a diameter of the plane face of the segment: show that the equilibrium is unstable if the weight of the liquid poured in exceed  $[d/2(r-d)] \times$  weight of the vessel.

**9138.** (A. B. BASSET, M.A.)—A liquid prolate spheroid is rotating in steady motion about an equatorial axis, under the influence of its own attraction;  $a, b$  are the semi-major and minor axes of a meridian section,  $\gamma$  the molecular rotation of the liquid, and  $h$  the angular momentum. If the free surface receive a small ellipsoidal displacement, prove that the motion is stable provided the disturbance does not change the values which  $\gamma/b$  and  $h$  have in steady motion; but, if  $h$  is altered by the disturbance, prove that the motion is unstable.

**9220.** (EMILE VIGARIÉ.)—Étant donné un triangle ABC, son cercle circonscrit et un point Q dans son plan, (1) Trouver deux points P, P' tels que, si par Q on mène une corde quelconque MN, les droites MP, NP (ou MP', NP') coupent le cercle circonscrit aux extrémités d'un même diamètre; (2) Les quatre points M, N, P, P' sont sur une même circonférence; (3) Quelle est la relation qui existe entre les deux points P, P'? (4) Par rapport à quelle droite ces points sont-ils symétriques?

**9539.** (Professor HANUMANTA RAO, B.A.)—In Question 9316 (Vol. XLIX., p. 28), if P is defined by the equations  $x = a \cos^2 \theta \sin 2\theta$  and  $y = a \sin^2 \theta \cos 2\theta$ , the locus of Q will be the curve  $r = \frac{1}{4}a \sin 4\theta$ .

**10196.** (D. BIDDLE.)—Two equal circles, A, B, are described at random within a given circle C. The line joining their centres is produced at each end to meet the particular circumference, and upon the line so produced, as major axis, an ellipse is described having the centres of A and B for its foci. Find the average area of this ellipse.

**10319.** (Professor RAMASWAMI AIYAR.)—The density at any point of an arc of a logarithmic spiral varies inversely as the distance of the point from the pole. Determine the centroid of the arc geometrically.

**10342.** (Professor NASH, M.A.)—A variable circle passes through a fixed point A on a conic, and meets the conic again in B, C, D; the SIMSON-line of A with respect to the triangle BCD passes through a point whose position is independent of the position and magnitude of the circle. This point lies on the diameter through the image of A with respect to the axis; in the rectangular hyperbola it coincides with the centre.

READY SHORTLY.

**CASSELL'S NEW FRENCH DICTIONARY.**

(French-English—English-French.)

Edited by JAMES BOIELLE, B.A.,

Officier d'Académie; sometime Examiner in the University of London.

1,220 pages, strongly bound in cloth, 7s. 6d.;  
or in half leather, 10s. 6d.

Whilst this Dictionary is based on the present edition of "Cassell's French Dictionary," which has had a circulation of more than 600,000 copies, it is virtually a new work. For over four years Prof. Boielle has been engaged in its preparation, and during that time has expended enormous labour in the compilation of a volume which, it is believed, is far in advance of any Dictionary of its size ever published.

**Cassell's Unrivalled Dictionaries.****CASSELL'S FRENCH DICTIONARY.**

(French-English and English-French.)

615th Thousand. 1,150 pages. Cloth, 3s. 6d. Half-morocco, 5s.

**CASSELL'S GERMAN DICTIONARY.**

(German-English and English-German.)

277th Thousand. 1,120 pages. Cloth, 3s. 6d. Half-morocco, 5s.

**CASSELL'S LATIN DICTIONARY.**

(Latin-English and English-Latin.)

132nd Thousand. Cloth, 3s. 6d. Half-morocco, 5s.

*Cassell's Educational Catalogue will be sent post free on application.*

CASSELL &amp; COMPANY, Limited, La Belle Sauvage, London; and all Booksellers.

ON AN ENTIRELY NEW PRINCIPLE.

## THE GRAPHIC MARK BOOK AND REDUCING SCALE.

Invented and designed by

**C. MARSH, M.A., and H. W. ORD, M.A.,***Assistant Masters at Blackheath School.*

Every MARK BOOK is complete in itself and contains a Reducing Scale.

Printed on good paper, bound in stiff boards with cloth sides.

Published price, 1s. 4d. each.

All Masters in charge of the Marks will find their labour **simplified and reduced**, as the periodical laborious **addition of the daily marks is obviated** and the relative position of each Pupil shown automatically.

A simple mechanical process dispenses with the proportion sums usually employed to reduce the marks to a given standard.

For sample book, sent post free on receipt of 1s. in stamps, apply to—

Price 1s. net. Part I. now ready.

**SOCIAL ENGLAND.****A HISTORY OF THE PROGRESS OF THE PEOPLE.****From the Earliest Times to the Present Day.**

WRITTEN BY EMINENT AUTHORITIES.

Edited by H. D. TRAILL, D.C.L., and J. S. MANN, M.A.

With about 2,500 Illustrations from authentic sources, and numerous Coloured Plates and Maps.

"One of the most important historical undertakings of the last quarter of a century is Messrs. Cassell's great work on 'Social England.' Described as 'a record of the progress of the people in religion, laws, learning, arts, industry, commerce, science, literature, and manners, from the earliest times to the present day,' it amply fulfils the promise and purpose of the projectors. Messrs. Cassell are now bringing out an edition with no less than 2,500 admirably executed illustrations, giving a pictorial representation of the national life from its dim beginnings to the end of the nineteenth century."—*Contemporary Review*.

# THOMAS NELSON & SONS' ROYAL SCHOOL SERIES THE NEW METHOD OF TEACHING MODERN LANGUAGES.

THE confessed excellence of commercial education in Germany is no doubt due in part to the use of modern scientific methods of instruction. Especially is this the case in the teaching of modern languages. Teachers in this country will find in the following books of "NELSON'S SCHOOL AND COLLEGE SERIES" manuals which not only follow the methods most approved in Germany, but which are in many respects in advance of any text-books hitherto published at home or abroad. The method adopted is—

1. **Conversational**, as suits a spoken language.
2. **Systematic**, keeping in view both the form and the meaning of words.
3. **Concrete**, being based throughout on objects and pictures and actions.

To facilitate class teaching and revisal work, the pictures in each book are issued separately in the form of **large Wall Sheets**.

**Elementary Object Lessons in French (Book I.)**. By ALEC CRAN, M.A., Senior French Master, Royal High School, Edinburgh; Examiner in French and German for the University of Aberdeen. Post 8vo, cloth. With many Illustrations. Price 1s. 6d.

**Phonetic Drill Sheets**. For use with Cran's Elementary Object Lessons in French.

A Series of 7 Sheets, 39½ in. by 28 in., printed on strong Manilla paper, and mounted on roller. Price 15s.

**Object Lessons in French (Book II.)**. By ALEC CRAN, M.A., Senior French Master, Royal High School, Edinburgh; Examiner in French and German for the University of Aberdeen. Post 8vo, cloth. With many Illustrations. Price 1s. 6d.

This book contains a series of somewhat more advanced conversational lessons, which are fully illustrated by pictures and diagrams.

**Elementary Object Lessons in German (Book I.)**. Being a Translation of "Elementary Object Lessons in French," by ALEC CRAN, M.A. By J. J. TROTTER, M.A., German Master, Royal High School, Edinburgh. Post 8vo, cloth. With many Illustrations. 2s.

**Object Lessons in German (Book II.)**. Being a Translation of "Object Lessons in French," by ALEC CRAN, M.A. By J. J. TROTTER, M.A., German Master, Royal High School, Edinburgh. Post 8vo, cloth. With many Illustrations. Price 2s.

**Nelson's First German Reader**. Edited by J. J. TROTTER, M.A., German Master, Royal High School, Edinburgh; Author of "Object Lessons in German." Post 8vo, cloth. Price 2s.

**Elementary French and German Object Lesson Wall Sheets**. A Series of 11 Sheets, 21 inches by 31 inches, printed in Tints on strong Manilla Paper, and mounted on Roller. Price 15s.

These Sheets contain the pictures from "Elementary Object Lessons in French," printed without the text, to serve as subjects for oral conversation.

**French and German Object Lesson Wall Sheets**. A Series of 11 Sheets, 21 inches by 31 inches, printed in Tints on strong Manilla Paper, and mounted on Roller. Price 15s.

These Sheets contain the pictures from "Object Lessons in French," printed without the text, to serve as subjects for oral conversation.

*A New French Class-book on Modern Scientific Principles.*

**Méthode Naturelle pour apprendre le Français**. Fondée sur l'Enseignement Intuitif.

By GEORGE HOGGEN, M.A., formerly Scholar and Prizeman, St. Catharine's College, Cambridge; late Inspector of Schools, North Canterbury, New Zealand; Head Master of the Timaru High School, New Zealand. Post 8vo, cloth. Illustrated. 332 pages. Price 3s. 6d.

## LITERATURE FOR SENIOR PUPILS. NELSON'S LITERATURE READERS.

A New Series of Literary Readers, selected from the Classical English Writers. The work of compilation and annotation has been performed by

**Dr. R. GARNETT, C.B. (late Librarian, British Museum),**

whose unique acquaintance with English Literature will be a guarantee that these books reach the highest level of literary excellence.

BOOK I. With 30 full-page Illustrations. Price 1s. 6d.

BOOK II. *In preparation.*

**\*\* Complete Catalogue of the Royal School Series post free on application.**

# EDUCATIONAL TIMES,

AND

Journal of the College of Preceptors.

Vol. LV.] New Series, No. 499.

NOVEMBER 1, 1902.

{ Price to Non-Members, 6d.  
By Post, 7d.

## COLLEGE OF PRECEPTORS.— (Bloomsbury Square, W.C.)

The next Monthly Evening Meeting of the Members will take place on Wednesday, the 12th of November, when the Rev. J. O. BEVAN, M.A., F.G.S., F.C.P., will read a Paper on "The Equipment of the Teacher."

The Chair will be taken at 7.30 p.m., and a discussion will follow the reading of the Paper.

Members have the privilege of introducing their friends.

C. R. HODGSON, B.A., Secretary.

## COLLEGE OF PRECEPTORS.— EXAMINATIONS, 1902.

1. **DIPLOMAS.**—The next Examination of Teachers for the Diplomas of the College will commence on the 30th of December, 1902.—At the *Midsummer* Examination, persons who have previously passed in Theory and Practice of Education at the Diploma Examination may be examined practically for Certificates of Ability to Teach.

2. **CERTIFICATE EXAMINATIONS.**—The Christmas Examination for Certificates will commence on the 9th of December, 1902.

3. **LOWER FORMS EXAMINATIONS.**—The Christmas Examination will commence on the 9th of December, 1902.

4. **PROFESSIONAL PRELIMINARY EXAMINATIONS.**—These Examinations are held in March and September. The next Examination will commence on the 3rd of March, 1903.

5. **INSPECTION AND EXAMINATION OF SCHOOLS.**—Visiting Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

## COLLEGE OF PRECEPTORS. (Bloomsbury Square, W.C.)

### LECTURES FOR TEACHERS

ON THE SCIENCE AND ART OF EDUCATION.

### THE PRACTICE OF EDUCATION.

To be delivered by the Rev. Canon EVAN DANIEL, M.A., formerly Principal of the Battersea Training College.

The Second Course of Lectures (Thirtieth Annual Series) commenced on Friday, September 26th, at 7 p.m. The Course is mainly based on criticism lessons actually given before the Lecturer, and will draw attention to the more serious errors that young teachers commit, and to the ways in which they may be avoided. Special pains will be taken to connect the Art with the Science of Education, and to refer success and failure in teaching to the observance and violation respectively of natural laws.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

The Lectures will be delivered on Friday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C.

Members of the College have Free Admission to the Course.

C. R. HODGSON, B.A., Secretary.

### UNIVERSITY DIPLOMA FOR WOMEN.

**THE UNIVERSITY OF ST. ANDREWS** grants Diploma and Title of L.L.A. to WOMEN.

60 Examination Centres in Great Britain and abroad. For Prospectus, apply to the SECRETARY, L.L.A. Scheme, The University, St. Andrews, N.B.

Other Teachers and Lecturers.  
Provides a practical course of professional training for Teachers in Secondary Schools, with a special opportunity for class teaching in the Datchelor (400 pupils) and other Schools.

Students prepared for the Cambridge Teachers' Certificate and London Teaching Diploma.

Free Studentship awarded annually to a University Graduate in September or January, when the College courses begin.

Also a Kindergarten Division preparing for the Examinations of the National Froebel Union. Also a Preparatory Division preparing for Inter. Arts, or Cambridge Higher Local Examination.

Fees £15 to £20 a year for Non-residents.  
A comfortable Hall of Residence. Terms moderate.

**HOME AND COLONIAL SCHOOL SOCIETY.**

(Incorporated for Examination and Certificate purposes with the National Froebel Union.)

**Training College (non-Government Branch) for KINDERGARTEN TEACHERS and LOWER FORM MISTRESSES IN HIGH SCHOOLS.**

HIGHBURY HILL HOUSE, N.

Principal—Rev. D. J. THOMAS, M.A.  
Vice-Principal—Miss M. M. PENSTONE.

Head of Kindergarten—Miss G. JOHNSON.

Students trained for the Examinations of the National Froebel Union.

Special arrangements made for Students who wish to qualify as Mistresses in the Lower Forms of High Schools.

There is a House of Residence under the sanction of the Committee.

A High School for Girls under the Inspection of London University, with Transition Classes and a Kindergarten, is attached to the College for purposes of Demonstration and Practice.

Apply—THE SECRETARY, Highbury Hill House, N.

**JOINT AGENCY FOR WOMEN TEACHERS.**

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, and Private Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Head Mistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Office hours—9.50 a.m. to 5.30 p.m. Hours for interviews are from 10.30 a.m. to 1 p.m., and 2 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only, when the Office is closed.

**JOINT AGENCY FOR ASSISTANT MASTERS.**

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A. Cantab.

Low Commissions. Liberal Discount.

Head Masters having vacancies on their staffs, and Assistant Masters seeking appointments, are asked to communicate with the REGISTRAR.

Office Hours—10 a.m. to 5 p.m.; Saturdays, 10 a.m. to 1 p.m. Interviews generally between these hours or by special appointment.

**ROYAL HOLLOWAY COLLEGE.**

UNIVERSITY OF LONDON.

The Lent Term begins on January 10, 1903.

The College prepares Students for the London Degrees in Science and Arts, and for the Oxford Honour Examinations.

Ten Entrance Scholarships, from £40 to £75 a year, tenable for three years, will be offered for competition in July, 1903.

For further particulars, apply to the SECRETARY, Royal Holloway College, Englefield Green S.O., Surrey.

**KING'S COLLEGE, LONDON**

(UNIVERSITY OF LONDON).  
DEPARTMENT FOR TRAINING TEACHERS FOR SECONDARY SCHOOLS.

The Course, which is intended to meet the requirements of the Teachers' Registration Council, is both Practical (including properly directed work in a Secondary School) and Theoretical (preparing for the London Teachers' Diploma and the Certificate of the Teachers' Training Syndicate).

The Course occupies a year, beginning in October or January. The fee is £30 for the year if paid in advance, or £10. 10s. per Term (three Terms).

For further particulars apply to the SECRETARY, King's College, Strand, W.C.

**THE INCORPORATED**

**FROEBEL EDUCATIONAL INSTITUTE.**

Chairman of the Committee—Sir W. MATHER, M.P.  
Treasurer—Mr. C. G. MONTEFIORE, M.A.

Secretary—Mr. ARTHUR G. SYMONDS, M.A.

TRAINING COLLEGE FOR TEACHERS,

School, Tottenham Road, Balls Pond Road, N. (Man); special qualifications: History and French. Marylebone P.T. School, Burchley Road, Highgate Road, N.W. (Man); special qualifications: Physics and Chemistry. Southwark P.T. School, the "Alma" School, Southwark Park Road, S.E. (Woman); special qualifications: Needlework, English, and French.

In the case of the appointment to the Hackney P.T. School, the Teacher accepted will be subject to transfer to another School, not necessarily a P.T. School, at the end of about twelve months, at the salary he shall then be receiving.

### SALARY.

Man, £150 per annum, rising by annual increments of £5 to £200 per annum. Woman, £130 per annum, rising by annual increments of £5 to £165 per annum.

Applications to be made on Form 40 P.T., on which, with other information, copies only of three testimonials must be given. A copy of this form can be obtained from the Acting Clerk of the Board. If a written application is made for one, it must be accompanied by a stamped addressed envelope or wrapper.

Applications must be received by the ACTING CLERK OF THE BOARD, School Board Offices, Victoria Embankment, W.C., not later than the first post on Monday morning, 10th November, 1902.

Women applicants who applied for the recently advertised vacancies for Assistants in the Board's Pupil Teachers' Schools can have the Form 40 P.T. they then submitted placed before the Committee on informing the Acting Clerk of the Board on or before 10th November.

All communications on the subject of this notice should be marked outside "P.T. Schools."

Candidates from the country invited to attend the Committee will be allowed third-class return railway fare to London, and, if necessary, hotel expenses not exceeding ten shillings a day for two days. If application for such payment is made, it must be accompanied by receipted vouchers; but, if a candidate, after being nominated, refuses to take up the appointment, these expenses will not be allowed. Applicants who do not receive, on or before 15th November, a summons to attend before the Committee on 17th November, will understand that they have not been included in the list of candidates to be seen by the Committee, and will not be further communicated with.

**PRIVATE SCHOOL for Sale, Board-**  
ers and Day Boys. Good sound investment. Old-established and permanent. Address—Z. X. P., c/o "Educational Times," 89 Farringdon Street, London, E.C.

## JACKSON'S SYSTEM OF UPRIGHT PENMANSHIP FOR BOTH HANDS.

WHAT IS SAID ABOUT IT BY THOSE WHO KNOW:

- "Has no Rival," "Perfect," (H.M. INSPECTORS.)  
 "Scientific," "Natural," (SECONDARY TEACHERS.)  
 "The Ideal System," "The Best," (ELEMENTARY TEACHERS.)  
 "Incomparably Superior," (COLONIAL TEACHERS.)

If you wish to get

- "THE BEST RESULTS" in  
 "THE SHORTEST TIME" with  
 "THE LEAST LABOUR"

Adopt Jackson's System and you will certainly have them.

Send for Illustrated Pamphlet to the Publishers,

# HOUSEHOLD FURNITURE FOR TEACHERS

FOR CASH OR DEFERRED PAYMENTS (1, 2, or 3 Years).

Best Quality. Low Prices. Free Life Assurance.

## RODNEY & CO., Ltd.

(Associated with the Educational Supply Association),

Offer Members of the Scholastic Profession the means of obtaining *sound, reliable, and artistic* Furniture (whether for Cash or Credit) on exceptionally advantageous terms.

RODNEY & CO. have been established to supply Teachers with Household Furniture and other Requisites at wholesale prices, in the same way as the E.S.A. supplies them with general School Material. The want of such a firm has long been felt—a firm with whom teachers may do business with every confidence—thus avoiding the excessive charges but too often made, and the unscrupulous methods of business but too often pursued, by many of the advertising Furniture houses.

RODNEY & CO.'S connexion with the E.S.A. will, it is thought, be sufficient guarantee of their superior methods of doing business. One price only charged, the Cash Purchaser having a liberal allowance made him for immediate payment and the Credit Purchaser being charged only a reasonable rate of interest for the convenience afforded him.

**FREE LIFE ASSURANCE** (To Credit Customers) covering Unpaid Instalments in the event of Death.

Rodney & Co.'s Popular and Unique System of Furnishing

Is fully described in a Booklet, which may be had post free on application to the MANAGER.

**RODNEY & CO., Ltd.,**  
45 Holborn Viaduct, London, E.C.

# EDUCATIONAL REVIEW.

Edited by NICHOLAS MURRAY BUTLER.

"We find the 'Educational Review' absolutely indispensable at every turn."—MICHAEL E. SADLER, Director of Special Inquiries and Reports, Board of Education, London, England. September 13, 1901.

"I wish I could tell you how much of stimulus and inspiration I get from reading the 'Educational Review.' The educational world can never repay you for the work you have put into that richly stored magazine. I have just gone through the entire twenty-one volumes in order to get some things that I especially desired, and I am simply amazed at what I find in those volumes."—WILBUR P. GORDY, High School, Hartford, Conn. September, 1901.

"To men like myself it is a sort of working library. Its volumes stand always at my elbow."—Prof. PAUL H. HANUS, Harvard University.

"The broadest and most able of the American periodicals devoted to education."—*New York Times*.

"An educational magazine of which the teaching profession may well be proud. There is nothing better in educational journalism in any country. And it has an editor who has convictions, and the courage of them."—*School and Home Education*, Bloomington, Ill.

"The 'Review' has from the first issue taken its place at the head of American periodicals devoted to education. It is, indeed, the first educational paper in America to win for our country the respect of educationalists abroad."—*Journal of Pedagogy*, Ypsilanti, Mich.

14s. 6d. a Year, 1s. 10d. a Copy. Ten Numbers, none being issued for July and August. Current numbers kept in stock.

## ROBERT BOYLE,

INVENTOR AND SANATARIAN

(Founder of the Profession of Ventilation Engineering).

By LAWRENCE SAUNDERS.

New and Enlarged Edition. Price 10s. 6d.

"ROBERT BOYLE was the author of many brilliant inventions."—*Academy*.

"A little book with much in it to suggest thoughts. It is a biographical sketch of the two BOYLES, father and son, who have made their names famous by their system of ventilation. More enthusiastic, simple-hearted men it would be hard to find. The history of their lives, their genius, and their inventions is most interesting."—*Life*.

"The record of an earnest, energetic, and untiring life; a life governed by high principle and devoted to noble ends. Self-culture and help to others were his most marked traits. He was foremost in all social and sanitary movements."—*Sanitary Engineering*.

"ROBERT BOYLE bore a distinguished name in science, and proved himself worthy of it."—*Edinburgh Courant*.

"A man of indubitable inventive genius, and strong philanthropic zeal."—*Scotsman*.

"A sketch—rather too brief—of the lives of ROBERT BOYLE, father and son, who have brought the question of ventilation and sanitation to a science by the discoveries of their inventive genius."—*Christian World*.

"A bright story of true Christian heroism. As we read through these pages of the insurmountable difficulties overcome by the BOYLES, father and son; of the good done; the sanitation achieved; the inventions perfected; we see men whose sole aim was to serve God, benefit mankind, and whose example should be held up to all our boys beginning life."—*Christian*.

"An excellently written biography of the eminent inventor and philanthropist, ROBERT BOYLE. . . . The work is practically a biography of the late ROBERT BOYLE and of his son ROBERT, who is still living and carrying on his father's great work as a sanitary engineer. Both are characters such as Samuel Smiles might well apply his genius to describing."—*Hull Express*.

**ROBERT BOYLE & SON, LTD.,**

**Shakespeare.—Julius Cæsar.** Edited by A. W. VERITY, M.A. 1s. 6d. [Juniors and Seniors.]

**Milton.—Paradise Lost, Books V. and VI.** Edited by A. W. VERITY, M.A. 2s. [Seniors.]

**Geography, Elementary Commercial.** A Sketch of the Commodities and the Countries of the World. By H. R. MILL, D.Sc. New Edition, enlarged. 1s. 6d.

**An Atlas of Commercial Geography.** By J. G. BARTHOLOMEW, F.R.G.S. With an Introduction by Dr. H. R. MILL. 3s.

**A Short History of the Expansion of the British Empire.** By W. H. WOODWARD, Christ Church, Oxford. With 7 Maps. Cloth, 4s. Cloth extra, gilt top, 5s.

**An Outline History of the British Empire from 1500 to 1870.** By the same Author. 1s. 6d. net.

### Latin

**Caesar.—De Bello Gallico, Books II. and III.** Edited by A. G. PESKETT, M.A. 2s. [Preliminary and Juniors.]

**Caesar.—De Bello Gallico, Books II. and III.** Edited by E. S. SHUCKBURGH, M.A. 1s. 6d. each. [Preliminary and Juniors.]

**Vergil.—Aeneid, Book X.** Edited by A. SINGWICK, M.A. 1s. 6d. [Juniors and Seniors.]

Another Edition, by the same Editor, with Vocabulary. 1s. 6d. [Immediately.]

**Cornelius Nepos.—Lysander, Alcibiades, Thrasylbulus, Conon, Dion, Iphicrates, and Chabrias.** Edited by E. S. SHUCKBURGH, M.A. 1s. 6d. [Preliminary.]

### Latin (continued).

**Livy, Book V.** Edited by L. WHIBLEY, M.A. 2s. 6d. [Seniors.]

**Cicero.—Pro Sulla.** Edited by J. S. REID, Litt.D. 3s. 6d. [Seniors.]

**Horace.—Odes, Book III.** Edited by J. Gow, Litt.D. 2s. [Seniors.]

### Greek.

**Xenophon.—Anabasis, Book II.** Edited by G. M. EDWARDS, M.A. 1s. 6d. [Juniors.]

**Xenophon.—Anabasis, Book II.** Edited by A. PRETOR, M.A. 2s. 6d. [Juniors.]

**Thucydides, Book VII.** Edited by the late H. A. HOLDEN, M.A., LL.D. 5s. [Seniors.]

**Aeschylus.—Prometheus Vincetus.** Edited by H. RACKHAM, M.A. 2s. 6d. [Juniors and Seniors.]

**Homer.—Odyssey, Book IX.** Edited by G. M. EDWARDS, M.A. 2s. 6d. [Seniors.]

**Herodotus, Book VIII., Chaps. 1-90.** Edited by E. S. SHUCKBURGH, M.A. 2s. 6d. [Seniors.]

**Herodotus, Book VIII. complete.** By the same Editor. 4s.

### French.

**Ferrault.—The Fairy Tales of Master Perrault.** Edited by WALTER RIPPMMANN, M.A. 1s. 6d. [Preliminary.]

**About.—Le Roi des Montagnes.** Edited by A. R. ROPES, M.A. 2s. [Juniors and Seniors.]

**Sandeau.—Mademoiselle de la Seiglière.** Edited by A. R. ROPES, M.A. 2s. [Juniors and Seniors.]

### German.

**Schiller.—Wilhelm Tell.** Edited by KARL BREUL, Litt.D., Ph.D. 2s. 6d.

Abridged Edition, by the same Editor. 1s. 6d. [Juniors and Seniors.]

**\*Grimm, Twenty Stories from.** Edited by WALTER RIPPMMANN, M.A. 3s. [Preliminary and Juniors.]

\*This volume contains all the Tales selected for the Preliminary and Junior Examinations.

**Goethe's Boyhood. Goethe's Knabenjahre (1749-1761).** Arranged and Annotated by W. WAGNER, Ph.D. New edition, revised and enlarged, by J. W. CARMELL, M.A., Fellow of Christ's College. 2s. [Seniors.]

### Mathematics.

**Euclid's Elements of Geometry.** Books I.-VI., and XI., XII. Edited by H. M. TAYLOR, M.A. 5s. Books I. and II., 1s. 6d. Books III. and IV., 1s. 6d. Books V. and VI., 1s. 6d. Books XI. and XII., 1s. 6d. Also Books I.-IV., 3s. Books I.-VI., 4s.

**Elementary Algebra.** By W. W. ROUSE BALL, M.A. 4s. 6d.

**An Elementary Treatise on Plane Trigonometry.** By E. W. HODSON, Sc.D., F.R.S., and C. M. JESSOP, M.A. 4s. 6d.

**Plane Trigonometry.** By S. L. LONEY, M.A. Fifth Edition. 7s. 6d.

Or in Two Parts:  
PART I.—Up to and including the Solution of Triangles. 5s.  
PART II.—Analytical Trigonometry. 3s. 6d.

**Elements of Statics and Dynamics.** By S. L. LONEY, M.A. Seventh Edition. 7s. 6d.

PART I.—Elements of Statics. 4s. 6d.  
PART II.—Elements of Dynamics. 3s. 6d.

**Elements of Hydrostatics.** By the same Author. 4s. 6d.

**Mechanics and Hydrostatics.** By R. T. GLAZEBROOK, M.A., F.R.S. 8s. 6d.

Also separately:  
Dynamics, 4s. Statics, 3s. Hydrostatics, 3s.

### Drawing.

**Geometrical Drawing.** With Notes and Examples. By W. H. BLYTHIE, M.A.

PART I.—Plane and Elementary Solid. 2s. 6d.  
PART II.—Solid or Descriptive Geometry. 2s.

### Natural Science.

**Heat and Light.** An Elementary Text-Book, Theoretical and Practical, for Colleges and Schools. By R. T. GLAZEBROOK, M.A., F.R.S. Crown 8vo, 5s.

Also separately:  
Heat, 3s. Light, 3s.

## The Educational Times.

### The Secondary Problem.

THERE is always a certain fascination in the idea of killing two birds with one stone. But the idea is not always practical. Well trained candidates for the Mathematical Tripos know that it is better to concentrate on one problem than to leave it half-solved and pass to another to be left in the same condition. By the Report of the Royal Commission on Secondary Education statesmen had a definite problem set before them, to supply the long-delayed answer to Matthew Arnold's challenge: "Organize your secondary education." The Endowed Schools Commission, afterwards merged in the Charity Commission, had already been working steadily, if slowly, at the first steps of organization. The accidental appropriation of the "whisky-money" to technical education and the Board of Education Act mark further stages of progress. A driving-force was created in the new-born zeal of the County Councils, guided as it was, in some cases—for example, in Staffordshire and Norfolk—by men who combined administrative ability with long experience as practical schoolmasters. Moreover, many of the endowed schools, whose houses had been already set in order, were brought into touch with a Government Department rapidly learning its business and able to enforce its wishes by the power of the purse. Then came the Cockerton decisions, raising grave questions, but questions surely not beyond the power of statesmen to settle by judicious legislation in detail, without recourse to heroic measures. Everything seemed to point to a supplementary Bill or succession of Bills to complete the slowly growing fabric of organized secondary education.

On the other hand, it is urged that the unsolved problems of primary education were so pressing, and that primary and secondary education were so interdependent, that nothing short of a revolutionary measure would meet the case, even at the expense of rousing one of the bitterest political conflicts of our time. Be that as it may, it is incumbent on us to point out how far the present Bill, unless supplemented by additional clauses, falls short of grappling with some of the most pressing problems of secondary education.

In the first place, the addition of the care of primary schools to the multifarious duties of the County and Borough

Councils is likely to divert their energies from the good work they are doing in the secondary field. It is to be hoped that they will not follow the proverbial advice to be off with the old love before they are on with the new. The temptation will be great. They should at least have some guidance from headquarters, perhaps even some form of compulsion to secure efficiency. Again, a review of existing educational machinery, optional under the Board of Education Act, should be universally enforced. No point has been more urgently pressed by experts during the last few years. Then comes the difficult question of fitting private schools into our educational machinery. This is of importance, not only on the ground of doing justice to existing interests, but also because such schools afford the best field for experiments in education. Mixed education is an example, and so are the principles of schools like Abbotsholme, Bedales, and Clayesmore. When our great public schools were un-reformed, private schools, carried on by enlightened teachers, did much to fill the gap and point the way to improvements. Dr. Arnold himself gained his experience in his private school at Laleham. More recently the efficient preparatory schools, all due to private enterprise, have done much to advance education, and might have done more had they been less fettered by the slowly diminishing want of elasticity in the public-school system. At this moment, perhaps, schools under public management are not less receptive of progressive ideas in education than private schools; but it may not always be so, and, in any case, competition is healthy. In particular there is, apart from boarding schools, a field in which the encouragement of private enterprise is, in all probability, distinctly for the benefit of the community. In a small town a private school run by a master prepared to make it his life's work stands a good chance of success; a small endowed school, farmed by a head master who can barely make ends meet and who is naturally on the look out for promotion, often in another profession, may easily languish. There seems to be no adequate reason why the one should be debarred from the full public recognition which is granted to the other. Even to subsidize a good private school may, in many cases, be the cheapest and most efficient way of promoting secondary education as a part of the national machinery. "To him that hath shall be given" is not necessarily a statesmanlike maxim. But enough has been said to

show that no Education Bill can be complete which does not at least lay down the general lines on which private schools can be worked into our machinery for secondary education. Lastly, one must never forget that

*Quicquid delirant reges, plectuntur Achivi;*

and the "Achivi" include not only the children, who have the first claim, but also the hard-worked, struggling race of schoolmasters.

*The Cambridge Conference.*

We look forward with much hope to the Conference that meets at Cambridge in the middle of the month to discuss the training of teachers in secondary schools for boys. The Vice-Chancellor of the University, by authorization of the Senate, has invited some fifty representatives of Universities and of associations of teachers, and others, to confer on this important and urgent question. The principal subject of discussion is found in the Order in Council relating to the Registration of Teachers:—the alternative systems of professional training recognized by the Order, namely (1) a course of training at a University or training college, and (2) a period of probation as a teacher at a recognized secondary school. The possibility of combining the two systems will also be discussed. And attention will, we understand, be devoted to financial and other economic questions connected with the training of teachers as affecting Local Education Authorities, governing bodies and head masters of schools, and candidates for masterships. There is no lack of materials, and the members of the Conference will substantially represent all really important opinions on the subject. We may take the opportunity of referring to our January number, which contained a report of Mr. P. A. Barnett's lecture before the College of Preceptors and the Metropolitan Sections of the Teachers' Guild, with the debate thereon, as well as suggestive correspondence, and other discussion. The College of Preceptors, whose efforts in this matter do not need to be recited in these columns, will be represented at the Conference by the Dean (Mr. H. W. Eve) and Dr. Wormell. It is refreshing to find one of our ancient Universities giving a strong lead on a question that so intimately concerns the future of their students, as well as their own and the public interest.

### NOTES.

THE educational oratory of the recess was more voluminous and impetuous than discriminating; the orators for the most part firing past each other. Mr. Balfour promptly disposed of the rather absurd rumour that the Bill was to be dropped, and expounded frankly, and with some warmth, the main points in dispute. Mr. Chamberlain's difficulties with his supporters in the Midlands, though at first wearing a promising aspect for his opponents, have been substantially relieved by amendments on Clause 8, which, however, seem to have raised anxiety in other quarters. On the whole the Bill seems very likely to go through entire, with more or less essential modification—enough, it is to be hoped, to disarm the professed wreckers among its opponents. In the practical working of the measure the good sense of the people may be

trusted to damp down smouldering ashes of passion. Elsewhere we indicate points on which amendment on report is still urgently necessary in the interests of secondary education.

CLAUSE 8, so far as it has been settled at the time of writing, has been laboriously reformed so as to express more clearly the intentions that Mr. Balfour has stated to be in the minds of the Government, and to satisfy suspicions and doubts of adversaries. The Local Education Authorities are distinctly laid under compulsion to maintain and to keep efficient the elementary schools within their jurisdiction, and they are vested with full control of their own expenditure on such schools. Moreover, their directions as to secular instruction must be complied with by the managers; and, if not, they "have power themselves to carry out the direction in question as if they were managers." Mr. Balfour readily accepted Mr. Charles McArthur's motion that such directions should expressly include "any directions with respect to the number and educational qualifications of the teachers to be employed for secular instruction, and with respect to the dismissal of any teachers on educational grounds." Provision is also made for school inspection, and for audit of managers' accounts. Much of this detail may be really superfluous, but it at least will have the great merit of allaying distrust and dissatisfaction.

THE inaugural address of Prof. Adams was well worthy of the occasion, though it kept in beaten ways and offered no fresh departures. It was none the worse for that, and the Professor is known to have stores of goods that he does not display in the front window. The formidable array of high officials both from the County Council and from the University of London, all primed with speeches pertinent to the special circumstances of the establishment of the College, inevitably reduced the prominence of the new Professor in the inaugural scene. That over, Prof. Adams will have elbow room, and all educationists will wish him every success in the important work committed to his charge.

IN view of all that Dr. Otto Beyer has told us of manual instruction in Germany (in the third volume of the Board of Education's Special Reports), it is somewhat reassuring to find another German expert in the subject acknowledging a certain superiority in one part of this benighted country. Dr. Pabst, the Director of the Manual Training College for Teachers in Leipzig, has been visiting the West of Scotland, and is reported to have pronounced the opinion that the work he saw in elementary and secondary schools in drawing, manual training, Nature study, and practical science was much in advance of that done in similar German schools. We hope that this is something more than an expression of politeness liberally interpreted. We confess we regard with uneasiness a particular case of comparison: there are eleven centres of manual training in Glasgow and only one in Leipzig. That may be, but we should not infer from it the superiority of Glasgow, without further information. We shall be interested to see Dr. Pabst's considered and formally expressed conclusions.

PREBENDARY BERNARD REYNOLDS makes some suggestive points in his report on religious instruction in training colleges. He states, for instance, that "far too many students come into college without having given or received any religious instruction"—a sufficiently striking remark. Then he urges that the difficulties of men pupils in regard to religious belief should be treated with sympathy: "there is nothing worse in a youth's training than to give him the impression that he cannot think." One can only marvel that any ground for such a criticism should be found in these days in any training college. Again, he writes:

There is not evidence of any large number of such students who, for reasons of conscience, cannot get trained; there are far more who call themselves members of the Church of England when they are only nominally so, in order to get trained. I heard recently of a man who changed his "religion" three times in order to get into college, and even then did not succeed.

But, even if there be no "large" number, there is a practical difficulty, which appears to lead, at least on occasion, to a shocking expedient. The Prebendary does not think that the remedy is difficult. His solution is this:—

The Nonconformists might provide hostels, where necessary, where their students would attend such religious services and instruction as they desire, while the Church students are similarly occupied. It is, however, quite out of the question to introduce a conscience clause inside the colleges, or to put our students at the great disadvantage of competing with those whose whole time is devoted to secular work; many of the undenominational colleges have religious instruction and services, and their students would be equally handicapped. Moreover, does anybody pretend that it is a right thing to train teachers who will soon be amongst our boys and girls, without giving them religious instruction? The Church cannot fairly be expected to help atheists to become teachers.

The proposal is not new, and the Nonconformist attitude is hardly encouraging. And "atheist" is a strong word.

"THE new Matriculation Examination," said Sir Arthur Rücker in his address to St. Mary's Hospital Medical School on the reorganized University of London, "is not intended to be easier than the old form: it is intended to be more elastic, . . . to leave more to the teacher and less to the examiner." The reduction of the obligatory number of subjects and the narrowing of the range, however, do seem to make it easier, and that in a very legitimate way. But no doubt the standard in the particular subjects will not be lowered, and the general value of the examination will stand as high as ever. The freedom of the teacher is highly important, but examiners are masterful.

THE activity of the young Faculty of Commerce in the University of Birmingham is commendable, and may become inspiring. Not content with the formal exercises of the lecture room, Prof. Ashley has arranged and set going a series of external lectures on commercial subjects. The series aims at two objects: first, to supplement the instruction given to the University students of commerce by the permanent staff, and to bring them into touch with the men acquainted with the several industries of the country; and, second, to give information and suggestions to prominent business men with regard to lines of trade outside the immediate range of their observation. Prof. Ashley has in view "managers, buyers, the heads of departments, chief clerks, and persons occupying similar positions, as well as their principals." The programme is varied, and the lecturers are capable men of practical experience. The useful results

may probably be expected less in the way of systematic and detailed information than in the form of suggestion and impulse. A single lecture can convey but limited particulars, but it may touch the imagination to large issues.

MR. MORLEY has offered the Acton Library as a gift to the University of Cambridge, through the Duke of Devonshire, the Chancellor, who properly acknowledges "the splendid donation" as an "act of rare generosity." "In this way," says Mr. Morley, "Cambridge will have the most appropriate monument of a man whom, though she thrice refused him as a learner, she afterwards welcomed as a teacher—one of the most remarkable men of our time, extraordinary in his acquisitions, extraordinary in the depth and compass of his mind." The library will be not merely "a valuable instrument of knowledge," but also "to the ardent scholar a powerful stimulus to thought." And, as Mr. Morley recalls, "it was Acton himself who said that the gifts of historical thinking are better than historical learning." It will be interesting to watch for the fruits.

THE commemoration of Sir Thomas Bodley's foundation of the great Oxford library three centuries ago has been dutifully and worthily celebrated. When Bodley went to Oxford in 1560, a boy of sixteen, that seat of learning was destitute of a library—in the sense of books, for, if we mistake not, there still survived a building, eviscerated by the well intentioned fanaticism of ultra-Protestant vandalism. Duke Humphrey's library was no more—a library that had probably (as Mr. Lewis Einstein, in his fresh and distinctively able work on "The Italian Renaissance in England," thinks) encouraged the desire for learning that urged the Oxonian pioneers to cross the Alps in search of the new humanism. It was a shrewd sagacity that withdrew Bodley from the diplomatic service "to set up his staffe at the Library door in Oxford." He himself justly said of his project:

Without some kind of knowledge, as well in the learned and modern tongues, without some purse ability to go through with the charge, without very great store of honourable friends to further the design, and without special good leisure to follow such a work, it could but have proved a vain attempt and inconsiderate.

But happily Bodley had all these material aids at his command in competent measure, and he had the foresight to devise arrangements efficient to conserve his efforts and to promote his purposes. The library was opened with 2,000 volumes—a great collection for the time; now it has some 600,000 volumes and 30,000 manuscripts. Yet, strange to say, in these days of material prosperity, it is hampered for lack of funds! Is there no second Bodley among our public-spirited citizens?

OUR contemporary *Engineering* gives expression to the dissatisfaction alleged to be generally prevalent among practical engineers with the system of awarding the valuable Whitworth Scholarships. The award is made by competitive examination, and the competition is keen; but it is not every competitor that can, or will, take the "royal road" of South Kensington, and "the staff of the Royal College are, to a considerable extent, the examiners for the Board of Education Examinations, on the results of which the scholarships

are awarded." There is no suggestion whatever of improper practices, but it is felt that the students of the examiners somehow must have the better chance.

Unless the examination for these scholarships be conducted by independent examiners, drawn from various sources, all students other than those at South Kensington are necessarily handicapped. Perhaps this is inevitable: but, if the subjects of examination, and the weight attached to each separate subject, were such as is common in most engineering courses in the institutions providing technical or scientific instruction in this country, this handicap would not be nearly so heavy as it is at present.

The chief objection appears to be an excess of pure physics. In any case, when the subjects and the marks for the subjects are known, why cannot teachers outside the Royal College work up to the syllabus? Is there any explanation of the success of the Royal College to be found in the quality of the professors? We do not venture on an opinion, but it is important that the alleged dissatisfaction should be removed, or shown to be groundless.

THE new reform of secondary instruction in France, to which we refer elsewhere, appears to be favourably received by educational experts. It introduces options: the student may choose any one of four different routes to the Bachelor's degree. It is motived in the main by practical, if not purely economical or commercial, considerations. The teaching of modern languages is to be directed to mastery of the current speech, not to familiarization with the beauties of literature. German is said to be declining in importance in French eyes, and English and Spanish to be recognized as the two commercial languages *par excellence*. Modern methods will inevitably acquire a great impulse. The ascendancy of practical ideas is not to be disputed, but it does not necessarily follow that literary interests will eventually suffer.

It may be true enough, as the *Spectator* adventures to remark, that

Clean paint cannot a scholar make,  
Nor "soft-toned rugs" a sage.

But it is probably just as true that the absence of these things is not any more effective for the purpose, and it is quite certain that people accustomed to such things are offended by their opposites, and that it is not quite fair argument to pooh-pooh the revulsion as the sensitiveness of luxury. The "American Mother" that criticized the upholstery of undergraduates' rooms at Oxford adversely, and sent her son to Harvard instead, may or may not have had unduly luxurious notions of cleanliness or comfort, or, as an ex-College Bursar suggests, she may have committed the mistake—venial in the present case—of generalizing from one or two particular cases. The quarrel is a pretty one as it stands, and we do not want to interfere in it. We are more interested in the views that the American lady's criticism has elicited. An "Undergraduate" appears to confirm part at least of her animadversions, and puts the blame on the "incorrigible scout." An "incorrigible scout" at once replies, shifting the blame—if blame there must be—upon the Bursar, and suggesting the efficacy of surprise visits by that officer. We now await with interest the champion of the Bursars. The determination of the facts in question—that will naturally come last, if at all.

## SUMMARY OF THE MONTH.

THE Parliamentary recess has let loose a flood of speeches on the Education Bill in the constituencies, and the great educational institutions have been opened by addresses from many eminent men in different departments. Our space compels us to make a severe selection.

MR. CHAMBERLAIN discussed the Education Bill in conference with 105 representative members of the Birmingham Liberal Unionist Association (October 9). He at once declared that the Government would not withdraw the Bill. He defended himself from the charge of inconsistency by urging the difference of circumstances. He said:

While then [1870] I tried for an ideal which I still believe to be the right one, I have convinced myself that, whatever strength of support I may gain from individuals who accept logical conclusions in these matters, I have no hope whatever of persuading the majority of my fellow-countrymen, to whatever party they belong, to accept these ideas, and I for one will not waste my life and time upon what I have found to be absolutely impossible and beyond the scope of reasonable aspirations, but will devote myself to what I believe will serve, at all events, the main interests of the nation and will do justice to all classes in the controversy, although it will not, perhaps, exactly carry out my own view of the situation.

After considerable discussion, Mr. Chamberlain put to the meeting four questions:

(1) Are you or are you not in favour of popular control of secular instruction, whilst safeguarding the religious instruction in accordance with the views of the founders?—This was answered in the affirmative by a large majority, the noes numbering ten. (2) With a view of safeguarding this instruction, are you ready to leave the election of the head teachers in the hands of the managers?—Answered in the affirmative by a large majority, the noes numbering sixteen. (3) Are you in favour of the abolition of the Cowper-Temple clause?—Answered in the negative, the ayes numbering four. (4) Should the Council appoint a majority of the Education Committee from its own body?—Answered in the affirmative, there being but one no.

At the request of Mr. Titterton and Mr. Harry Payton, another question was put:

(5) Are you in favour of the proposal that the majority of the Management Committee of each of the voluntary schools, so far as secular instruction is concerned, should be popularly elected?—This was carried by a large majority, the number of noes being two.

MR. BALFOUR, at Manchester (October 14), scouted the notion that the Education Bill is "the offspring of some dark clerical intrigue," and scorned the "insensate clamours from north to south, and from east to west," "loud-mouthed speeches," and "mendacious pamphleteers." He said:

I am brought, as regards secular education, to the single Authority, that Authority being the County Council or the Borough Council; and, as regards religious education in this country, I believe that we must, as part of our system, so long as we maintain the Cowper-Temple Clause, maintain the right to have the children of that party which desires it taught in voluntary schools.

On the term "managers" he remarked:

I think it is very natural that anybody who saw the term "managers" in the Bill would say, "These are the people who have got control of the schools." It is a mistake; but it is a natural mistake. I do not think it is a mistake for which either the Government draftsman or the Government are responsible, because we have borrowed the term "manager" from the preceding Act of 1870, and in the Act of 1870 "management" and "manager" are terms which do not carry with them the idea of control. . . . The theory of our Bill is that the control should be not with the managers, but with the Borough Council or with the County Council, as the case may be; and I would say to the friends of the Bill that, if they desire, as the Government most heartily desire, that public control should be made a reality—and it should be adequate to the amount of support given out of public funds—I would earnestly ask them to turn their attention not to the balance of power among the managers for secular education, but to increasing the authority of the Borough Council or County Council, as the case may be.

Mr. Balfour insisted that it would be "a profound delusion" to suppose that the voluntary schools have everything to gain and nothing to lose by the Bill on the point of authority of the existing managers:—"No doubt there are schools to whom this Bill will be very little but pure gain from the managers' point of view, but there are many others who will come into it with grave misgivings and much reluctance."

THE ARCHBISHOP OF CANTERBURY, speaking at Ashford (October 15), said Mr. Chamberlain was right in maintaining that there were only two alternatives, either to have no religious instruction in elementary schools at all or to have schools which did impartial justice to every denomination alike. He (Dr. Temple) was bound, however, to say that Nonconformists had a right to complain that the Education Bill was not absolutely just to them, for there were not a few instances of Church schools that were the only schools available in certain districts. In such places children of Nonconformists had to receive the religious instruction given by the Church authorities, or no religious teaching at all. He would have been prepared himself to suggest means of obviating this injustice, but it was unnecessary, because Mr. Balfour had already taken notice of the grievance, and had implied that he would consider how to deal with it. Where the Bill is indefinite as to the burden of repairs, he had no doubt it would be made clear. Changes were much needed in the curriculum of secular instruction in the elementary schools, though violent alterations would be unwise. He was overjoyed that the Government was making an honest and sagacious attempt to deal with education as a whole. He did not think his speaking out on the subject would make Nonconformists any hotter than they were, for they had already over-roasted their goose.

SIR JOHN GORST, in the *Nineteenth Century and After* for October, insists on five main considerations:

(1) Not a moment should be lost in dealing with the present state of public instruction in England and Wales. (2) One public Local Authority should have jurisdiction over schools of all kinds. (3) Parliament should not halt between two opinions, but adopt at once either Municipality or School Board as that Authority. (4) The secular instruction in all elementary schools should be given at the public expense, and be under the absolute control of the public Authority. (5) In the case of certain voluntary schools public security for the maintenance of their religious character must be given.

He regards the Cowper-Temple clause as a fetish, and thinks the religious difficulty has no practical existence in the schools. "It is no exaggeration," he says, "to call the state of public instruction in England an emergency. The danger is imminent. Teachers and schools cannot be created in a moment by Act of Parliament." The Board schools in towns are the best part of the system, but the best voluntary schools are better than the best Board schools. The worst elementary schools are to be found among rural Board schools. Most voluntary schools, however, are "inefficient for lack of proper means"—buildings, staff, apparatus, &c.

In the same review, the Bishop of Hereford sets out "a plea for mutual concessions." While enumerating various plans of compromise, he offers a concordat formulated by himself and the Rev. Dr. Paton. The provisions are:

(1) That the denomination which owns a school shall appoint one-third of the managers, the Local Education Authority one-third, and the parish the remaining third, either in parish meeting or through the Parish Council; (2) that the managers appointed by the denomination shall have the right, if they choose to exercise it, whenever the office of head teacher is vacant, to require that candidates must be members of the denomination, all other posts being open to members of any religious denomination; (3) that the clergy or ministers of the denomination shall have free access to the school at suitable times for the purpose of giving denominational instruction to the children of parents who desire such instruction. Subject to these provisions the necessary rules as to prayers, hymns, and general Biblical instruction would be made by the Local Education Authority for all schools under its administration.

THE BISHOP OF MANCHESTER, addressing the Diocesan Conference (October 22), denied that the Bill would increase clerical influence and promote taxation without representation. Its only effect upon clerical influence was demonstrably to diminish that influence. Taxation under the Bill would far more closely correspond to representation than it had ever done, and the more one examined the Bill the more one was amazed and confounded by the unscrupulous misrepresentation and savage outburst of anger and scorn of certain political Nonconformists. Quiet extinction and concealed confiscation was the future planned by Nonconformists for voluntary schools. Hence their rage at the Bill. On the same day the Bishops of Rochester and Winchester, addressing their Diocesan Conferences, spoke to like effect.

THE BISHOP OF BARKING, speaking at Southend (October 22) said:

We must put ourselves in the place of the man who conscientiously objects to definite Church teaching, such as the sacramental portion of our Catechism. If there is to be a permanent settlement, it behoves Churchmen in future to be much more considerate than some have been. There must be facilities offered, whether they are accepted or not, for children whose parents object to our definite Church teaching to receive religious instruction such as they approve. I do not consider the "conscience clause" meets their case at all satisfactorily. It would not satisfy me if I were living in a place where the only school was a Roman Catholic school. Let us be absolutely fair in making allowance for other people's religious scruples. If, as stated on high authority, there are eight thousand places where the children of Nonconformists can have no religious teaching such as their parents desire, it is a great and legitimate grievance, and we ought to do all we can to remove it. The Nonconformist minister, or a teacher trusted by the parents, should be at liberty, if parents desire it, to give the teaching they wish, either in a class-room or elsewhere—with no sort of prejudice to the children—of course at fixed times and under reasonable conditions, so as not to upset the regular teaching or discipline of the school. As it seems to me, until we have done this we have no right to ask—as I should like to ask—that this same religious liberty should prevail all round.

THE subject of Mr. Andrew Carnegie's rectorial address at St. Andrews (October 22) was "The Industrial Ascendency of the World." He concluded:

That ascendency, once yours, has now passed to your lineal descendant, who bears the industrial crown. The old home is too small to produce, under any conceivable conditions, material things rivaling in amount those of a continent almost as large as Europe. All thought of material ascendency, even with the Empire united, must be abandoned. But, gentlemen, in this audience, assembled in Scotland's oldest University, the thought that fills your heart and appeals to mine is: of what value is material compared with moral and intellectual ascendency, supremacy not in the things of the body, but in those of the spirit! what are the barbarous triumphs of the sword compared with those of the pen! . . . what the action of the thews and sinews against that of the God-like reason, the murdering savage armies of brutal force against the peaceful armies of Literature, Poetry, Art, Science, Law, Government, Medicine, and all the agencies which refine and civilize man, and help him onward and upward! . . . What matters what part of the world makes the most steel, iron, cloth, or ships, if you produce the highest poets, historians, philosophers, statesmen, inventors, teachers? There is an ascendency of the world, and that the highest, where neither unbounded fertile territory, immense store of minerals, nor numbers, nor sought material are of value, where megalomania reigneth not. For the crown of this realm you have no cause to struggle. It is already yours; it has never been lost; it remains here in the old home. Nor has the blast yet been blown of any challenger from either of the four winds of heaven. . . . See to it that you do your best to guard it well against all comers, men of St. Andrews, for precious it is beyond all others, and blessed among and beyond all other nations is she whose brow it adorns. Let other nations, therefore, distribute among themselves as they may the victories of materialism. Precedence for Britain, the dear old home of our race, in the things of the spirit, the modern Greece, and more than Greece ever was to her world, at whose shrine all that is highest and best of the nations of the whole world will dutifully attend to testify their gratitude, admiration, reverence, and love!

LORD LONDONDERRY assembled the Chief Inspectors of Elementary Schools at the Board of Education (October 17), to consult them about recent allegations of a falling off in the thoroughness and accuracy of the work done in some of the elementary schools. His lordship said there were many village schools in England that did not possess the latest system of desks, the best lighting and heating, large cloak rooms and hat pegs, or accommodation of a luxurious character, like some of the large Board schools in London. And yet these village schools, comparatively incomplete as they were in equipment, were giving the very best education to the children. This was because the teacher was in absolute sympathy with the interests of the children. He was an ardent advocate of the practical education of children in the wants and requirements of their future life, and was anxious to promote by every means in his power the development of physical training for both boys and girls as a very important element of education. A conference was held in private.

SIR ARTHUR W. RÜCKER delivered the opening address of the new session at the Birkbeck Institution (October 1). He pointed out that the Institution was established, in part, by those through whose energy and zeal the University of London was founded. Referring to its relations with the University, he said that

a great effort had been made to maintain a University standard, avoiding, at the same time, too rigid a system, and leaving as much as possible to

the initiative of the teacher. Thus, in fixing the number of hours during which students had to attend lectures and classes, they had put the minimum as low as was consistent with a thorough training. In the case of evening students, who were employed during the day, a substantial reduction in the number of hours had been made, though the evening students would probably find it necessary to extend the degree course over four years.

In short, there was a most earnest desire on the part of the Senate to maintain a University standard, and to make arrangements as convenient as possible both to teacher and to student.

ADDRESSING the students of St. Mary's Hospital Medical School (October 3), Sir Arthur Rücker explained that

the new Matriculation Examination was deliberately framed so as to leave the schoolmaster a wide latitude of choice of subjects. It must not be taken as indicating that in the opinion of the University a school curriculum should embrace five subjects only, or that any of the permitted combinations of five subjects were in ordinary cases equally suitable. For himself he thought that a boy looking forward to a scientific career would be wise not to neglect Latin. He thought it desirable that all boys should be taught some science; but very much doubted if the kind of science which was the best counterpoise to a too exclusively literary education was that in which proficiency could best be tested by examination. For the moment, however, he wished only to point out that the new examination made it possible for London medical students to enter upon the University course whatever their previous educational history might have been. After matriculation, the question arose whether it was not desirable that the students' preliminary medical studies should be carried on in an institution specially devoted to these subjects and not in connexion with a particular medical school. On this point he would not presume to lay down any general rule. In such matters it was the business of the University not to act on any *a priori* hypothesis, but to find out what those most competent to judge believed to be desirable, and then, if possible, to assist in carrying out their wishes. He could, therefore, only say that there was no reason why, even if some medical schools preferred to teach physics and chemistry in their own laboratories, others should not combine to teach them in common; and, further, that, as the efficiency of medical training was a matter of the highest public importance, public support would be more readily given to improve that part of the curriculum which was not necessarily associated with a hospital, if the teaching were concentrated in a few central institutes under the direct control of the University. This matter was receiving the most careful consideration.

PRINCIPAL MACKINDER opened the eleventh session of Reading University College (October 3) with a comprehensive address on "Bases of Empire, Past and Present." He declared mobility to be the essence of empire; and with mobility must go organization. As to education:

Education should be placed by the nation above all party. We ought to sink small differences and come together with English practical common sense. We might hold strong opinions upon many subjects, but one thing which was essential was to decide with a single eye on education in its broadest sense. At the present moment he feared that the real educational interests were thought of by comparatively few people. He feared that party cries without much depth of meaning upon one side or the other occupied too great a place. It ought to be driven home that the Germans were no better than ourselves, and that, if better, it was because of their better education. The Scotch for several generations past had recognized the value of education, and that was the reason they occupied such an important position in the Empire. With regard to America, we should have learned very little of the events which had recently occurred without recognizing that America had changed in every outlook within the last ten years. The Americans and the Germans were educated. He believed in the legacy which has been left us, but insisted that we must cultivate scientific method, while retaining all that is broadest and finest in our traditions.

THE application of Owens College for an independent University charter will be heard by the Privy Council early this month. The Corporation of Manchester is working cordially with the college authorities, and other local corporations are reinforcing them. At a meeting of the Court of Governors (October 7), Principal Hopkinson said:

They had also communicated copies of their petition to the Local Authorities in Lancashire, Cheshire, and part of Derbyshire, as well as to the various Education Authorities in the district from which they drew their students. The reply to this had been entirely satisfactory. From no Local Authority or educational body had they received any refusal to support the policy which they had undertaken, but from a great many they had received expressions of hearty good will and of a determination to support that policy. To those who at one time regarded the steps taken by Liverpool and by the Owens College with some degree of anxiety these two things had been causes of the greatest congratulation, because every one felt that, if a new University was to be started, it must

be started with the good will of the whole district. Salford, like Manchester, had given its most hearty support to the movement, other municipalities had followed suit, and it was most satisfactory that they should set out with all this good will and with such a general determination to make the movement a success.

AN important development of the Sheffield University College (says the *British Medical Journal*) will before long, it is expected, take place. For many years it has been only too apparent that the present buildings have been inadequate and unsuitable for the requirements of such a college. This remark applies to all its branches—Science, Arts, and Medicine. A sum sufficient for the erection of an entirely new college has now been collected. An excellent site has been procured, and plans are being prepared. The Faculties of Science, Arts, and Medicine will all find accommodation in the building. The benefits accruing from the erection of the new college will be felt in all departments. On the medical side every effort will be made to obtain provision for an entirely up-to-date and properly equipped medical school.

MR. BALFOUR opened the Manchester School of Technology (October 15), which has been erected by private benefactions and public funds, at a cost of £300,000. He said true theory and true practice could never be divorced, and the ideal we had to aim at was not imitation of the processes of those that went before us, but imitation of their anxiety to take the best the world had to give in abstract knowledge and manual dexterity.

PROF. ADAMS delivered (October 6) his inaugural address—on "The Training of Teachers"—at the London School of Economics, in Clare Market, where the London County Council Day Training College is temporarily accommodated. Sir John McDougall presided, and the Vice-Chancellor and the Principal of London University, Mr. Henry Ward (Chairman of the Technical Education Board), Mrs. Bryant, Mr. Sidney Webb, and Mr. A. J. Shephard, took part in the proceedings. Sir John McDougall sketched the history of training colleges, and recapitulated the events that led to the establishment of the institution now opened. As to day training colleges, he said:

The first training college was that established by the Home and Colonial School Society in 1830; ten years later there were nine training colleges carrying on their work, and a few years ago there were no fewer than thirty-four residential and fourteen day training colleges scattered throughout the kingdom. . . . The difficulty of providing sufficient accommodation in the residential colleges to meet the demand for trained teachers in public elementary schools had in 1890, under the administration of Sir William Hart Dyke, led to the establishment of the day training college, an institution sanctioned by the Board of Education on the condition that it formed part of a University or an institution of University rank. There were, at least, two arguments in favour of the day training system—in the first place, the financial difficulty of largely increasing the accommodation provided in the residential colleges; and, secondly, the desirability, on educational grounds, of allowing the students under training, most of whom had been pupils and pupil-teachers at public elementary schools up to the time of their entering a training college, to associate with the other University students drawn from all ranks of life, who were looking forward to nearly every variety of professional and industrial occupation. Day training colleges were now conducted in connexion with nearly all the Universities and University colleges of England and Wales, and it was believed that they were doing an extremely useful work, especially in the training of teachers for the higher classes in the elementary and continuation schools. The provision of training college facilities was far from sufficient to meet the growing demand for trained teachers, and the fact that many of the colleges were of a strictly denominational character further increased the difficulty. London alone required the services of more than 20,000 trained teachers in its various schools; and in the schools directly associated with the London County Council there were about 2,000 teachers.

We give the leading points of Prof. Adams's address on another page.

THE eighth annual distribution of prizes at the City of London School for Girls was held in the great Hall of the City of London School on October 8. The Lord Mayor and the Sheriffs attended in state, and the prizes were distributed by the Lady Mayoress. The report of the Head Mistress stated that, for the first time, open scholarships have been gained for Newnham, Holloway, and Westfield Colleges. The Lord Mayor subsequently gave a short history of the school, stating that it has steadily progressed to an important position among the institutions for the education of girls.

THE Sisters of Notre Dame at Mount Pleasant were visited (October 6) by the Lord Mayor and Lady Mayoress, who inspected the normal college and showed interest in the coming bazaar, which "is to encourage and support not only higher education and secular studies, but also, and chiefly, to help in training teachers for the work of educating the poor. More than two thousand such teachers are said to have been sent out from the college to such work. The institution comprises the higher-grade elementary school, with girls' and infants' departments; a pupil-teachers' centre, attended by 100 pupil-teachers, 60 of whom lodge in the house; a training college for elementary teachers, numbering upwards of 120 students in first, second, and third years of training; a secondary high school for 180 girls in all stages; and a training college for students destined to teach in secondary schools. The Sisters teach, besides, eight of the largest elementary day schools in the city, and three or four evening schools, one of which has an attendance of over 400 girls and women.

THE National Federation of Assistant Teachers held their annual Conference at Reading (September 27), with great success. Mr. Goldstone, Sheffield, presided. He said the Education Bill was far from a perfect measure; but, as the basis of a possible solution, it was the most complete attempt since 1870 to remedy the fearful hotch-potch of English education. The best guarantee of a high level of general education was an adequate supply of fully qualified teachers, the corner stone in the educational edifice. The first necessity was that the teaching profession should be exalted to that honourable status which the importance of the calling demanded.

THE new programme of secondary education in France came into operation on October 1. It is pronounced in competent quarters, says the Paris correspondent of the *Morning Post* (October 9), to be "the greatest advance of the kind accomplished in France for a full century."

Clause 1 of the decree [May 31] declares that secondary education shall be co-ordinated to primary education in such a manner as to create an easy and natural sequence to a four years' course of primary studies. By Clause 2, the course of secondary education studies is to embrace a period of seven years, divided into "cycles" of four and three years respectively. In the first cycle the students may choose between two sections, the one rendering Latin obligatory, while Greek is optional, and the other excluding both Latin and Greek but allowing for greater development in the sciences, drawing, and French. The student is supposed to be in possession of a complete set of *connaissances*, as far as they go, at the end of the first cycle in either section, and he may earn a "certificate of secondary studies in the first degree." In the second cycle four groups of courses are offered to the students' option, viz., (1) Latin with Greek, (2) Latin with living languages, (3) Latin with a more ample study of sciences, (4) Living languages combined with the sciences, but without Latin. Pupils, however, who do not desire to graduate as Bachelors will be enabled at the close of the first cycle to follow a course of studies of which the principal features will consist of living languages and the applied sciences.

Compared with the curriculum it replaces, the new plan assigns double the time to the study of a foreign living language in the first cycle, somewhat increases in the second cycle the amount of time given to that language, and provides that no second foreign language shall be entered upon until the commencement of the second cycle.

THE *Guardian*, discussing "Our Public and Private Schools," says:

Our public schools are accused of clinging too exclusively to the old classical curriculum, of ignoring history and modern languages, and of giving scant encouragement to science. To a certain extent this may be true. The teaching of modern languages, especially at the public schools, leaves a good deal to be desired. But the supply of teachers and the methods of teaching are as yet imperfect, and the fault, if fault there is, lies as much with the Universities. Public-school teaching is much what University requirements make it. And public-school masters may be excused if they have been slow to modify the traditional basis of a liberal education by the introduction of subjects in which as yet there are no well defined standards of teaching or of examination. They have, however, modified it very considerably, as the Oxford and Cambridge Certificate Examination lists testify. Perhaps the main defect of a public-school education at present is that by the public opinion of boys and parents alike play, rather than work, is encouraged. But for the boy who will work there is, take it all round, no better education than that of an English public school.

THE Annual General Meeting of the London Branch of the British Child Study Association was held at the Sesame Club on October 10, Dr. Fletcher Beach in the chair. Dr. Kimmins was elected President, Mr. Mark Judge Hon. Treasurer, and Miss K. Stevens Hon. Secretary. Dr. Beach, in his presidential address, mentioned that the membership had increased to 226, and that the handbook and other new departures had given satisfaction; referred to the successful Conference at Hampton Wick; and congratulated the Branch upon its growing influence. (See also "Fixtures.")

WE record with much regret the death of Dr. J. H. Gladstone. He took great interest in the work of the College of Preceptors; and nowhere was he held in higher esteem for his acquirements, his character, and his unobtrusive labours. The London School Board (October 9) passed the following resolution:—

That the Board, having heard with great regret of the death of Dr. J. H. Gladstone, F.R.S., who was a member of the Board from December, 1873, to November, 1894, a period of twenty-one years, and was Vice-Chairman of the Board from December, 1888, to November, 1891, desire to place on record their respectful sympathy with the members of his family in their bereavement; and hereby request the Chairman of the Board to forward to them a copy of this resolution.

The Chairman (Mr. Lyulph Stanley) said Dr. Gladstone took great part in the introduction of science into their schools, and also did a good deal in the direction of establishing economy. He was enthusiastic in the spread of good and rational methods of teaching, and in securing better teachers than they had before. In fact, there was no department of the Board in which he did not labour. He was a man of broad views in connexion with religion, and took great interest in the religious education of children.

#### UNIVERSITIES.

For the undergraduate world the Michaelmas Term Oxford. has begun much like any other Michaelmas Term.

So far our Oxford poet's words remain unfulfilled. "All Australia" has not come "to boil its billy in the quad," and as yet "the German compound verb" does not "delight the listening ear." It is too soon to know whether any really striking new development in customs or habits is to mark the beginning of the new University year; but doubtless already the freshman is beginning to learn some of the important, though small, rules of etiquette. He knows already whether he may carry a cane; whether he must discard a cap, even though the disuse of any head-covering entail the acknowledgment of a bow by the simple method of approaching the hand to the forelock, and whether he may venture to ride a bicycle with inflated tyres, even though that should lay him open to the indecent suspicion of having made the necessary exertion involved in blowing them up.

But, for the merely stipendiary part of the University (to use an expression once employed to distinguish the residentiary from the honorary canons of a cathedral chapter)—the Heads of Houses and the Fellows—the introduction of the new year has been marked by an event over and above the annual number of college gaudes—the Bodleian Tercentenary. Wednesday and Thursday, October 8 and 9, were devoted to celebrating the foundation, three hundred years ago, of the present University Library; the older library, which Oxford owed to the munificent Humphrey, Duke of Gloucester, had been dispersed during the Reformation, though its home still forms the most venerable part of the Bodleian Rooms. As Dr. Ince, the Senior Curator of the Bodleian Library, said in his speech at Thursday's banquet, the University of Oxford, which can give no certain date for her own beginning, has often found it hard to know in what way to return the hospitality of other seats of learning who have bidden her representatives to join in their rejoicings over the anniversaries of their own foundations. It was a happy thought, therefore, to use, as an occasion of gathering together the delegates of Universities and libraries and learned institutions from all parts of the world, the tercentenary of the time when Sir Thomas Bodley "set up his staff," as he said "at the Library door in Oxon," and formed the nucleus of what is now the second library in the British Empire.

It was on the whole a great celebration of a great occasion, and the residents felt, as Sir William Anson said, that they were not putting on their smartest academical robes merely, as sometimes, to add to the enjoyment of the frivolous. They were taking

part in a festival of learning wherein the republic of letters had become a visible thing.

The proceedings began with a reception by the Vice-Chancellor in the University Galleries. All alike wore full academical or official dress, and the stream of gorgeous colours on the great staircase was truly memorable. Most splendid of all perhaps were the yellow robes of the members of the Faculty of Letters of the University of Paris, and among them in particular those of M. Croisset, Dean of the Faculty. Among the great number of eminent persons present Mr. John Morley was prominent in his doctor's scarlet gown, wearing the cross of the Order of Merit. Among the French guests was M. Gabriel Monod, the historian, who took so prominent a part in the movement for the revision of the sentence on Captain Dreyfus.

The weather on Thursday was too characteristic of Oxford to do full justice to the procession to the Sheldonian Theatre, and it was the more gracious and courteous of M. Paul Meyer to say in his speech at the dinner that he had seen Oxford in wet weather and in fine, and did not know in which he liked it best. The ceremony in the Sheldonian, which consisted of the conferring of honorary degrees, the presentation of addresses, and the delivery of a Latin discourse by the Public Orator, might perhaps have been better arranged. Neither historical nor ceremonial considerations seem to have influenced the order in which the names were called out, and it was unfortunate that delegates should often have had to scramble over the knees of others to reach the Vice-Chancellor. It is no doubt difficult to arrange these matters, but certainly the difficulty cannot be said to have been overcome. Elsewhere, I daresay, you chronicle the eminent recipients of degrees. One amusing incident occurred. Dr. von Laubmann, who was in uniform, had not provided himself with an Oxford Doctor's gown. Prof. Bywater, however, promptly borrowed one, and threw it over Dr. von Laubmann's shoulders, saying: "Cedant arma togæ."

The final ceremony was a dinner in the Hall of Christ Church, when there was another gorgeous display of robes and uniforms. The speeches were rather long, but Sir Richard Jebb made a really eloquent one, proposing "The Pious Memory of Sir Thomas Bodley," and the toast was drunk standing and in silence.

The resolutions concerning compulsory Greek are not expected to come before Congregation for some weeks. Committees are at work on both sides, and a pamphlet controversy has already begun.

The History Lists this year attained the episcopal dignity of ending the procession. The Greats List was perhaps some compensation to New College for the triumph of Balliol in the Hertford Scholarship Examination. Of the nine New College men examined, six were placed in the First Class, two in the Second, and one in the Third—a good record. Of the ten Balliol men three were placed in the First Class and seven in the second. The name of one of the First Class New College men, Mr. Ley, late scholar of Winchester and New College, appeared last month at the head of the long list of candidates for the Civil Service Examination. These things may perhaps render it unnecessary for the New College man, for example, to protest against the recalling of the fact that an eminent Fellow of the College was once an undergraduate of Balliol, on the grounds that it is unfair to rake up a man's past.

Two women only were examined in *Literæ Humaniores*—both students of Somerville College. One was placed in the First Class and one in the Second. As usual, and for obvious reasons, the number of women placed in the First and Second Class in the History School compared with the number examined was greater than that of the men.

To recall events of the vacation other than the appearance of Class Lists, University College crew, though criticized by some for entering for the Ladies', after beating King's College, Cambridge, and Radley, won the final heat with Eton by half a length, a faster race than the final heat of the Grand. In the latter competition the Canadians beat the victorious University College crew, and the Oxford Leander in the last heat were beaten by the conquerors of the Canadians—Third Trinity. Both University College and Leander appeared at Cork, where the former beat Leander, but were beaten by Berlin, who fell afterwards to Leander. Mr. Kelly, of Balliol, won the Diamond Sculls at Henley.

It is of some interest in connexion with the new Registration Order for Teachers that the "Church Education Corporation, Limited," has started a Secondary Training College for Women Teachers at Cowley Grange, over Magdalen Bridge. Lady Wimborne has been instrumental in the undertaking, and the

college is, of course, strictly denominational. It has no official status. It has been christened "Cherwell Hall."

COMPARATIVELY few changes have occurred in Cambridge. the Long Vacation, but one noticeable figure has passed away. Dr. Searle, the Master of Pembroke, died after a long and lingering illness, to the great regret of many generations of Pembroke men. The late Master was associated with the college from its less prosperous days, and to him was due in no small measure the credit of having raised Pembroke to its present position of usefulness. The appointment of Sir George Stokes to succeed Dr. Searle shows that the college wishes to honour the most illustrious of its members and to do itself honour thereby. The selection of Mr. Beck to succeed the late Dr. Latham as Master of Trinity Hall is another example of the recognition by a body of the work done in its interests by the most patriotic of its members. Whatever may be the ideals of this particular college, it is certain that, next to the late Master, Mr. Beck can be trusted to carry out the traditions of the past in a prosperous future.

The vacancy in the Secretaryship for Local Lectures has been filled by the appointment of the Rev. D. H. Cranage, who has had much experience in the actual work of the Extension system; his predecessor, Dr. Roberts, has left us for London, where he takes up work of a similar character for the metropolitan association. The Meeting of Extension students which took place this year at Cambridge during the Long Vacation was an unqualified success; our visitors are fortunate enough to see the place without the people, and carry away ideas of our single-hearted efforts, our thirst for knowledge, and our devotion to ideals, which nothing but a visit during term time can dispel.

Dr. Ward, Master of Peterhouse, is succeeded in the Vice-Chancellorship by Dr. Chase, who now becomes a distinguished pluralist, filling with distinction the offices of President of Queens', Norrisian Professor of Divinity, and Vice-Chancellor. However, the man is equal to the burden, and Dr. Chase is only given one more chance of administering an important office with his usual tact and courtesy.

The numbers in our Medical School show a large increase this year; the solid work of the past is now beginning to show its effect, and the position of Cambridge as a centre of scientific medical work is practically assured. Oxford had its chance and scouted its opportunities; Cambridge took what Oxford left and out of the waste products of University life has evolved a thriving and profitable industry. Even Universities feel the pinch of poverty, and it is quite as dignified to take parlour boarders as to ring the area bell and ask for alms.

A meeting was held in Cambridge early in the term to give an opportunity to the University and town representatives to state their views on the Government Education Bill. Sir Richard Jebb alone of the three exercised any control over a somewhat unruly audience. Sir John Gorst, well as he is known outside Cambridge, does not bulk so large in town or University circles; while Sir Richard Jebb, after winning all the distinctions that scholarship can offer him, has developed politically into a first-class fighting man, who, beginning by preaching political pamphlets, proceeded to deliver orations, and soon will become a good speaker, if not a skilled debater.

The Report on Military Education contained some pleasing references to University life. A recent article in a high-class publication contained a scathing indictment of University finance. How little the outside world knows of the inner cells of our academic hive! How can it be true that our leaders are financial idiots when they can make the callow undergraduates contribute on an average a pound a day for the privilege of being among us, while endowments of deceased benefactors provide as much again to further the great cause of education? With respect to the military education question, the University has done nothing, but will probably throw the sop which has been offered us into the gutter.

The number of freshmen is unusually large this year. One college has excited remark by limiting the number of men it will take; why should not the others in common honesty follow so good a lead? One or two colleges are strong enough to do this, and have done so, but to admit the intellectual rag-tag of the schools can do no good to any self-respecting college.

The football team has not been peculiarly fortunate so far, but it will turn out a really good one later on. Our rowing prospects are rosy for next year. The new golf links, thanks to the energy of Mr. Caldwell, the captain, are actually in play, and promise to be good before very long.

## THE REGISTRATION OF TEACHERS.

### OFFICIAL EXPLANATION.

THE Teachers' Registration Council has issued the following statement:—

The widespread confusion as to the meaning of "registration" and "recognition" seems to call for an authoritative explanation. The former term applies to *teachers*, and is the function of the Registration Council; the latter applies to schools, and is the concern of the Board of Education. But registration is the avenue to recognition; or, rather, an application for registration is the proper method of applying for recognition. In plain words, if a school desires recognition, it must send in to the Registration Council an application for registration from a teacher on the staff, either head or assistant. The name of the school is then forwarded to the Board of Education for recognition, and the matter passes out of the hands of the Registration Council until the reply of the Board of Education is received. It is obvious that in many cases considerable time must elapse before the Board can satisfy itself as to the merits of schools; hence delay, and even delay of some length, is unavoidable. It should be especially noted that it is of no avail to send in to the Registration Council an application for recognition of a school apart from an application for a teacher for registration.

Nor is it of use to forward to the Registration Council prospectuses and information about schools. The Council has no power to pass judgment on schools except for those teachers who apply under Regulation 4 (2) (ii.) of the Registration Order in Council, and, in some cases, under Regulation 5 (2).

As to the results of recognition or non-recognition, they must be fairly obvious. The former will secure a school the stamp of Government approval as a worthy secondary school.

## REWARDS AND PUNISHMENTS.

MR. R. E. CHOLMELEY, of St. Paul's School, read a paper on "Rewards and Punishments" at the City of London School (October 25) to members of the Metropolitan Branches of the Incorporated Association of Assistant Masters. The following is an outline of his argument:—

The discipline of fifty years ago is obsolete; what have we instead of it? The school, like the nursery, has shared in a general advance in civilization; children are taken into the amusements of their elders, and their souls are investigated by the serious; but "civilization has to be paid for, and you are lucky if you do not pay for it in morals." One consequence of this development is that the schoolmaster finds himself with an increased responsibility. What does he exist for? To do what parents would do if they could (or, in many cases, could do if they would)—get the idea of duty into his pupils. In this part of his business, at any rate, he has not been superseded by text-books, and it is with this part of his business that rewards and punishments are concerned. How is he to use rewards and punishments to teach duty? The answer is that he must regard them only as part of the "language of praise and blame." This involves two consequences, that the distinction between discipline and morality vanishes, and that each man must make his own system for himself, since without sincerity he cannot be effective, and borrowed discipline, like borrowed language, smacks of insincerity—or, at any rate, of affectation. Praise is more difficult than blame, for it is easier to hurt than to please; but the art of praising must be learnt, for to praise foolishly is to bring the thing praised into contempt, and encourage the *Βαυκαλοποιήσις*, the boy who boasts of his folly, even when he has not been foolish, because his teeth have been set on edge by imbecile praise. Blame is less easy than it seems, for the mere giving of pain is apt to be either too much or not enough; punishment, whether by look, word, or act, must express the real mind of him who inflicts it, and be directed to the mind of him who is punished. Sarcasm is as bad in one direction as a mere formal tariff of penalties is in the other: in the former case the master's own personality is obtruded, in the latter it is not employed. Personality should be employed only to drive home right principles: never for the acquiring of influence or making duty a matter of pleasing this or that person. The principles of school education ought to be drawn from those of family life, and the tendency to antagonism between school and home tradition ought to be repressed; true discipline can be obtained in no other way.

## CORRESPONDENCE.

[We do not hold ourselves responsible for the opinions expressed by our correspondents.—ED. E.T.]

### THE TENURE OF HEAD MASTERS.

To the Editor of the Educational Times.

SIR,—The letter which appears in this month's *Educational Times* on the subject of the tenure under the Teachers' Registration Council should draw the attention of all who are interested in the improvement of the teacher's *status* to the declaration which so many masters and mistresses have to sign on their appointment as head.

Whether or no the declaration by which a head master or mistress "acquiesces in removal," should such be resolved upon by the governors, and thus forfeits legal redress, obtains in all schemes of schools under the Central Welsh Board I am unable to say, but I do know that this obnoxious declaration is to be found in the scheme which governs the intermediate schools in the county from which this letter is written.

No right-minded master would desire inefficiency or immorality to be possible in our schools; but an inefficient or immoral teacher would, if he had a right of appeal, which at present is denied him, probably only make his case worse.

The doctrine of the dismissal of teachers when they are in the right and their dismissers in the wrong is monstrous.

The declaration which at present is found in so many schemes precludes to those who sign it a right of appeal in cases of dismissal, and so renders an unjust dismissal possible.

Which of your readers will come forward and say a good word in favour of its retention?—I am, Sir, &c.,

A HEAD MASTER OF A WELSH COUNTY SCHOOL.

September 22, 1902.

### THE USE OF THE TERM "EMPIRICAL."

To the Editor of the Educational Times.

SIR,—It is bad form to reply to reviewers as a rule, but I must plead for a word of expostulation on one point in your review (in October) of my book on *Class Teaching*:—"It is hardly fair to dismiss Sir Joshua Fitch's 'Lectures on Education' [*sic*] with a patronizing compliment as the most favourable specimen of the 'frankly empirical.'" Now, Sir Joshua was good enough in more than one way to show sympathy with my work in lecturing at the College of Preceptors: many of the Council know this, and, as I cannot rely upon their reading the original, they may believe your reviewer that I have written something like impertinence about an elder for whom all teachers of my generation have the sincerest respect.

Your reviewer makes two mistakes: firstly, like so many people who discourse on education, he is taken up with the history of education, and regards these sentences in my preface as a contribution to biography; he thus resents my supposed "dismissal" of a writer whom it serves my purpose to allude to in a sentence. Now no reader would censure me here, unless he were trying to read biography into that preface. I submit that my reference to Sir Joshua's *Lecture on Teaching* is entirely *à propos* and expresses the regard of a disciple. If it had been my intention to write a commentary upon "predecessors," surely I ought to have introduced not only Quick (whom he charges me with slighting!) but Prof. Laurie's name, and many others in foreign countries.

But your reviewer's censure is due also to his misapprehension of the term "empirical." Oddly enough, to-day's *Times* contains a leader on the study of education, and uses the same contrasted terms, "empirical" and "scientific," in my sense—neither term conveying a shadow of contempt. They express a difference of standpoint, but no censure either way. If your reviewer had taken the trouble to read Sir Joshua's own preface (page vi.), he would have found that the author expressly describes his own work in terms similar to those I adopt. But when a reviewer, like an obstinate schoolmaster, seeks for what is not to be found in his victim, and then scolds the victim, he is sure to get astray. There was plenty to blame in my poor chapters, without blaming me for what I do not profess to do.

I should not have troubled you, however, if it were not for the personal aspect of the matter.—I am, Sir, &c.,

October 14, 1902.

J. J. FINDLAY.

[We readily print Dr. Findlay's "word of expostulation." We regret, however, to scent the "red herring" on the trail. Dr. Findlay has been playing with a two-edged tool, and blames our reviewer for noting the consequences. When a disciple calls his own work scientific, and his master's "empirical," even a casual usage in the *Times* will scarcely obviate the natural implication. Moreover, Dr. Findlay ignores this material point in "the personal aspect of the matter": Is not Prof. Bain, equally with Sir Joshua Fitch, "an elder for whom all teachers"—all teachers that recognize scientific acumen and pedagogical earnestness—"have the sincerest respect"? It is for Dr. Findlay to draw the inference. One word more: No reviewer of ours "seeks for what is not to be found in his victim."—Ed. *E.T.*]

#### PRIVATE SCHOOLS AND PUBLIC COMPETITION.

To the Editor of the *Educational Times*.

SIR,—I beg, through the medium of your columns, to call the attention of the majority of justice-loving Englishmen to the misappropriation of the ratepayers' money under the guise of so-called technical education. In many towns throughout the country private enterprise is of no account whatever, and, in direct detriment to other schools in the town, they have set on foot both day and preparatory schools of a precisely similar character to those which are carried on by men who have to pay the school rates used for cutting their own throats.

Having been a teacher for nearly a quarter of a century, I feel bound, amid my other numerous and important duties, to sound a clarion note to arouse all teachers in private schools throughout the length and breadth of the land to a sense of their duty in the matter. Let them agree upon a combined policy of action for their own protection, and indirectly for the future welfare of the rising generation. I should like to ask, through you, Sir, whether there are other persons who realize the unfairness of this procedure equally with me.—I am, Sir, &c.,

THE PRINCIPAL OF A PRIVATE SCHOOL.

October 18, 1902.

#### MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on October 18. Present: Mr. H. W. Eve, Dean, in the Chair; Rev. J. O. Bevan, Mr. Butler, Mr. Charles, Mr. Chettle, Miss Crookshank, Mr. Holland, Miss Jebb, Mr. Leatham, Mr. Millar Inglis, Mr. Pinches, Mr. Rushbrooke, Mr. Storr, and Mr. Walmsley.

The minutes of the last meeting were read and confirmed.

The diploma of Associate was granted to Mr. W. E. Bower, who had passed the required examination.

Mr. Eve and Dr. Wormell were appointed representatives of the College at the Cambridge Conference on the Training of Teachers, to take place on November 14 and 15.

The report of the Finance Committee was adopted.

The report of the Examination Committee was adopted.

The following persons were elected members of the College:—

Mr. E. F. Marx, M.A. Lond., Rolandseck School, Ealing.

Mr. A. Telfer, B.A. Lond., L.C.P., Wreight's School, Faversham.

Mr. J. A. Tribe, 51 Joseph Street, Gosport.

The following books had been presented to the Library since the last meeting of the Council:—

By Mr. A. E. C. DICKINSON.—Descartes's Discourse on Method and Meditations; Hamilton's Discussions on Philosophy, &c.

By G. BELL & SONS.—Bottin's Horace's Odes, Book II.; Tuckey's Examples in Algebra.

By BLACKIE & SON.—Chaytor's Selections from Buffon; Preston's Daudet's La Mule du Pape.

By the CLARENDON PRESS.—Allen's Elementary Greek Grammar; Skeat's Lay of Havelok the Dane.

By C. J. CLAY & SONS.—Holden and Shuckburgh's Xenophon's Cyropaedia, Book I.; Nicol's Cicero in Catilinam; Ropes's Erckmann-Chatelain's Histoire d'un Conscient de 1813.

By MACMILLAN & Co.—Jones's Introductory Chemistry for Intermediate Schools; Robson's Practical Exercises in Heat.

By MRTHUEN & Co.—Beard's Junior Arithmetic Examination Papers; Tyler's Junior Chemistry; Williamson's Junior English Examination Papers.

By WHITTAKER & Co.—Jeffrey's Bechstein's Ausgewählte Marchen. Calendars of Queen's College, Cork; Aberdeen University; Yorkshire College, Leeds; University College, Liverpool; Birmingham University.

## FROM MR. MURRAY'S EDUCATIONAL LIST.

NEW VOLUMES of the Home and School Library.

Edited by LAURIE MAGNUS, M.A.

**HEROES OF THE WEST.** A Biographical Sketch of Modern History. By A. J. CARLYLE, M.A., R.M. CARLYLE, and F. S. MARTIN, M.A. With Four Illustrations. 2s. *Just out.*

This volume traces the course of European history and thought, from the end of the Roman Empire, through Charlemagne, Hildebrand, Godfrey of Bouillon, St. Louis, Wycliffe, Joan of Arc, Columbus, Raphael, Luther, and William of Orange, to the end of the Sixteenth Century, and will be followed by a Second Volume, continuing the narrative from Henry IV. of France to the Nineteenth Century.

**ELECTRIC WIRING.** A Primer for the use of Wiremen and Students. By W. C. CLINTON, B.Sc. Lond. With 80 Illustrations and a Selection of Worked Examples. 1s. 6d. *Just out.*

Adapted to the requirements of the Preliminary Examinations of the City and Guilds of London Institute.

**THE FACE OF NATURE.** Popular readings in Elementary Science. By the Rev. C. T. OXENDEN, D.D., Canon of St. Patrick's, Rector of Enniskillen. With numerous Illustrations. Fcap. 8vo, 2s.

**A FIRST COURSE OF CHEMISTRY.** (Heuristi.) By J. H. LEONARD, B.Sc. Lond., Author of "A First Course of Practical Science." 1s. 6d. *Just out.*

This volume is compiled on the same lines as the author's "First Course of Practical Science," published in 1901, and now being reprinted, which is "strongly recommended to science masters" by the *Guardian*, and of which the *Lancet* says: "Such books as the one before us should be scattered broadcast."

"It is written in simple and comprehensive language, free from technicalities, except such as are duly explained in the course of the text. . . . the section on jointing being exceptionally good. . . . This little book is replete with useful information to those engaged in electrical wiring."—*Electricity.*

NEW VOLUMES of the Secondary Education Text-Books.

Edited by LAURIE MAGNUS, M.A.

**CHRONIQUE DU RÈGNE DE CHARLES IX.** By PROSPER MÉRIMÉE. Adapted and Edited by ERNEST WEEKLEY, M.A., Professor of French at University College, Nottingham. 2s. 6d. *Just out.*

**FRENCH COMMERCIAL CORRESPONDENCE.** By CHARLES GLAUSER, Ph.D., Professor at the Academy of Commerce, Vienna. Adapted and Arranged by W. MANSFIELD POOLE, M.A., Instructor in French to the Channel Squadron, formerly Assistant Master in Merchant Taylors' School. 4s. 6d. *Just out.*

This volume concludes the course of "Commercial French" by Poole and Becker, to which the *British Trade Journal* awards "the palm of merit," and of which the *School World* says: "We know of no better book to serve as an introduction to the more strictly technical study of Commercial French."

**COMMERCIAL GERMAN.** In Two Parts. By GUSTAV HEIN, Lecturer in German (Honours) to the University of Aberdeen, and MICHEL BECKER, Professor of Modern Languages in the Ecole Alsacienne, Paris. PART I. With a Map of Germany. 3s. 6d. *Just out.*

This volume is uniform with Part I. of "Commercial French," and has been compiled with a like intelligent appreciation of recent reforms in modern language teaching.

*Schoolmasters and others are invited to apply for specimen pages (in 16-page pamphlets) of any of the volumes in the above series, which will be sent post free to any address.*

THREE NEW BOOKS. JUST PUBLISHED.

**PRACTICAL SPANISH.** A Grammar of the Spanish Language, with Exercises, Materials for Conversation, and Vocabulary. PART I.—Nouns, Adjectives, Pronouns, &c. PART II.—Verbs, &c., with copious Vocabulary. By DON FERNANDO DE ARTEAGA, Taylorian Teacher of Spanish in the University of Oxford. Two Parts. Crown 8vo, 7s. 6d.

**A GREEK GRAMMAR FOR SCHOOLS AND COLLEGES.** Accidence and Syntax. By JOHN THOMPSON, M.A., formerly Scholar of Christ's College, Cambridge; Senior Classical Master, The High School, Dublin. Crown 8vo, 6s.

**A BOOK OF BRITISH SONG.** For Home and School. Edited by CECIL J. SHARP, Principal of the Hampstead Conservatoire. With Pianoforte Score and Words. Small folio, 7s. 6d. net.

Also a small crown 8vo Edition, with Words and Airs only, 2s., cloth; 1s. 6d. paper.

JOHN MURRAY, ALBEMARLE STREET, W.

"There should be a very large audience for the illustrated edition of Dr. Traill's 'Social England,' which Messrs. Cassell have begun issuing in fortnightly parts. The work itself is too well known to all lovers of English history and English sociology to need any further recommendation from us; but we may adjure all who have not seen the volumes of the illustrated edition to obtain this first part of ninety-six pages, and we are sure that they will not rest satisfied till they have acquired the whole work in this charming and incomparable edition."—PALL MALL GAZETTE.

**ILLUSTRATED EDITION.**

**Revised and partly Rewritten. In Fortnightly Parts.**

Price 1s. net.

# SOCIAL ENGLAND.

**A History of the Progress of the People from the Earliest Times to the Present Day.**

Written by Eminent Authorities and Edited by H. D. TRAILL, D.C.L., and J. S. MANN, M.A.

With about 2,500 ILLUSTRATIONS from authentic sources, and numerous Coloured Plates and Maps.

**A GREAT WORK FOR SCHOOL AND REFERENCE LIBRARIES.**

**What School Masters and Mistresses think of it:—**

"It is a beautiful, interesting, and useful book."—W. H. F., Cheltenham.  
 "I was already acquainted with the book in its original form, and had a great admiration for it, but certainly as it is published now it is far more valuable, and indeed I do not know of any book likely to be more instructive and interesting."—E. S. S., Whitchurch (Salop).  
 "It is a splendid re-issue of a very fine book."—Rev. J. W., Leicester.  
 "If the rest of the work is up to this sample, it will be a most valuable book."—R. F., Brigg.  
 "I am delighted with your illustrated edition of 'Social England.' I think it will be a most valuable addition to our school library."—W. M., Woodbridge.  
 "I like it so much that I shall introduce it to the pupils of this school. The book should be read by all who take an interest in the British Empire."—G. S. M., Wallingford.  
 "This is the real history of England, and is full of interest in every page."—A. F. G., Caistor.  
 "It appears to be a most valuable contribution to English History."—W. A. C., Exeter.  
 "In every way excellent and worthy of a place in every library."—J. C., Leicester.  
 "In its present form it ought to be an invaluable addition to a school library."—H. B. R., Sandwich.

"I am very much pleased with, and greatly appreciate it. I shall order same through my bookseller."—J. B. N., Worcester.  
 "Very interesting, and I intend to get a copy for the school library."—G. D., Attleboro.  
 "Very interesting, and an excellent work for reference."—A. H. V., Birmingham.  
 "Very interesting, well written and illustrated."—C. M. S., Woodford Green.  
 "An admirable book for schools."—M. A., Mundesley.  
 "Its utility will be enormously increased by the addition of such illustrations as I see in the number sent. I am a thorough believer in such aids to education."—M. H. P., Wakefield.  
 "An admirable book, and fills a void in the history of England which has long been felt."—R. W., Solihull.  
 "It looks as if it should be a necessary part of the apparatus of every history teacher."—A. T., Faversham.  
 "It seems to me excellent, and I hope we may be able to secure it for our school library."—C. W. B., Wimbledon Common.  
 "I have ordered it from my bookseller at once, as I am so much pleased with it."—A. W. T., Bakewell.  
 "I am much pleased with it, and shall certainly get the book for my own library, probably for that of the school also. I shall also recommend its purchase for the Public Library."—A. J. M., Liscard.

**THE LATEST AND BEST ENCYCLOPÆDIA AND DICTIONARY BROUGHT UP TO THE PRESENT DATE.**

**PART I. NOW READY. PRICE 6D. NET.**

**A NEW AND ENLARGED EDITION.**

# THE ENCYCLOPÆDIC DICTIONARY.

*An Original Work of Reference to the Words in the English Language, with a Full Account of their Origin, Meaning, Pronunciation, and Use.*

**ILLUSTRATED THROUGHOUT.**

**To be Published in Weekly Parts.**

For this New Edition, a large number of

**ORIGINAL COLOURED PLATES**

have been prepared, and by means of a Supplementary Volume it will contain about

**28,000 MORE WORDS**

than any previous edition, and the work will be printed on

**PAPER OF SUPERIOR QUALITY.**

*A detailed Prospectus, with specimen of the Coloured Plates, will be sent post free on application.*

**CASSELL & COMPANY, Ltd., La Belle Sauvage, London: and all Booksellers.**

### CURRENT EVENTS.

THE next monthly meeting of members of the Fixtures. College of Preceptors will take place on Wednesday, November 12, at 7.30 p.m., when the Rev. J. O. Bevan, M.A., will read a paper on "The Equipment of the Teacher."

ARRANGEMENTS are being made for the forthcoming Winter Meeting of Teachers at the College of Preceptors, to commence on Tuesday, the 6th of January, 1903.

A CONFERENCE on the training of teachers in secondary schools for boys will be held at Cambridge on November 14 and 15.

THE first of the Henry Sidgwick memorial lectures will be given at Newnham College, Cambridge, by Mr. Bryce on November 29. The subject will be "The Philosophic Life among the Ancients."

Two "external lectures," under the auspices of the Birmingham University Faculty of Commerce (November 6 and 13), will be delivered by Mr. Elijah Helm, Secretary to the Manchester Chamber of Commerce. Mr. Helm will expound "The Present Position of the Cotton Industry."

PROF. MACDONELL's lectures on "Public International Law" at University College, London, are delivered on Mondays at 5 p.m. They are "intended not only for lawyers, but for students of political economy, political science, and sociology." They are open to the public without fee.

DR. KIMMINS will address the London Branch of the British Child Study Association (November 14) on "Preparation for Child Study—a suggested Course of Reading."

THE next examination for cadetships at the Royal Military Academy, Woolwich, begins on November 25. There are fifty vacancies.

On the occasion of the Bodleian Tercentenary Honours. (October 9), the following honorary degrees were conferred in Convocation of Oxford University:—

D.C.L.: On the Hon. Andrew Dickson White, of Yale University, Ambassador of the United States of America at Berlin; the Right Hon. Lord Strathcona and Mount Royal, G.C.M.G., Chancellor of McGill University, Lord Rector of Aberdeen University, and High Commissioner for the Dominion of Canada; Dr. Frederick de Martens, Privy Councillor and Permanent Member of the Council of the Minister for Foreign Affairs, Professor of International Law in the University of St. Petersburg, and a member of The Hague Arbitration Tribunal; and Prof. Vinogradoff, of Moscow.

D.LITT.: On Conte Ugo Balzani, of the Accademia dei Lincei and of the Società Romana di Storia Patria, Rome; Dr. John B. Bury, Regius Professor of Greek at Trinity College, Dublin; Dr. J. H. Canfield, Librarian of Columbia University; Mr. John Willis Clark, M.A., Registrar of the University of Cambridge; Mr. Francis J. H. Jenkinson, M.A., Librarian of the University Library, Cambridge;

Geheimrat Dr. von Laubmann, Director of the Munich Library; M. Omont, Member of the Institute of France, of the Bibliothèque Nationale, Paris; Geh. - Regierungsrat Dr. E. Sachau, of the Royal Academy, Berlin; Hofrat Dr. J. Schipper, Rector of Vienna University; Dr. S. G. de Vries, of Leyden University Library; Mr. G. F. Warner, M.A., Assistant Keeper of Manuscripts at the British Museum; and Prof. A. F. West, of Princeton University.

ST. ANDREWS UNIVERSITY, on the occasion of the installation of Mr. Andrew Carnegie to the Lord Rectorship, conferred the honorary degree of LL.D. upon him, and upon his Excellency the Hon. Joseph Choate, United States Ambassador; the Right Hon. John Morley, M.P.; the Right Hon. James Bryce, D.C.L., M.P.; Mr. Alex. Graham Bell, of Washington, U.S.A., inventor of the telephone; Lord Carnegie; Mr. Thomas Shaw, K.C., M.P.; Mr. John Ross, solicitor, Dunfermline; his Excellency Mr. Andrew D. White, United States Ambassador to Germany; and Mr. Henry White, of the United States Diplomatic Service.

ALREADY the subscriptions promised for the completion of the buildings of the University of Durham College of Science in memory of Lord Armstrong amount to £31,000; and an anonymous donor has promised £10,000 additional if the total should reach £50,000 by the end of the year.

MR. ANDREW CARNEGIE, Rector of St. Andrews University, has promised £1,500 for a union for the women students attending the University.

MR. SPARKE EVANS and Mr. J. L. Evans have each given £500 to the Western College, Bristol; and Mr. T. J. Leonard, the Treasurer, promises £1,000.

THE old students of the Institution of Mining and Metallurgy propose to give two scholarships of £50 for three years to students the Royal College of Science proceeding to complete their training in mines.

THE Annual Preliminary Examination for London School Board scholarships will be held on December 2 and 3. There will be 77 scholarships and exhibitions—52 for boys and 25 for girls. Candidates must have made at least 250 attendances (150 in case of half-timers) in each of three or more years ended last day of October. The scholarships vary in annual value of from £15 to "not less than £50," tenable from three to four years. Further particulars and application forms may be obtained at the Offices of the Board, or by written application to the Clerk of the Board, School Board for London, Victoria Embankment, W.C. Application forms duly filled up must be received on or before November 6, 1902. In addition there is a "Sarah Terry" Prize, preferentially for a child the offspring of indigent parents of any class in the community.

EXAMINATIONS for scholarships at Trinity, Clare, Trinity Hall, Pembroke, Gonville and Caius, King's, Jesus, Christ's, St. John's, and Emmanuel, Cambridge, begin on December 2; at Peterhouse and Sidney on December 16.

WE understand that, in consequence of the resignation of Miss Cooper, the Committee of the Joint Registry for Women Teachers, 74 Gower Street, are about to appoint a new Registrar. Applications to be made, by letter, to the Hon. Treasurer, 1 Gordon Square, W.C., by the 15th November.

THE MARQUIS OF LONDONDERRY, K.G., President of the Board of Education, has appointed Mr. W. R. Davies his Private Secretary.

SIR WILLIAM R. ANSON, Bart., M.P., Parliamentary Secretary to the Board of Education, has appointed Mr. William Loring as his Private Secretary.

THE President of the Board of Education has reappointed as members of the Consultative Committee (from September 30) the Right Hon. Sir W. Hart Dyke, Bart., M.P.; Mr. Ernest Gray, M.P.; Mr. A. C. Humphreys-Owen, M.P.; the Hon. and Rev. E. Lyttelton; the Ven. Archdeacon Sandford; and the Rev. D. J. Waller, D.D.; and has appointed Mr. T. H. Warren, President of Magdalen College, Oxford, as a member of the Committee in place of Sir W. R. Anson, Bart., M.P., resigned.

THE following gentlemen have been appointed Junior Inspectors:—Mr. H. E. Boothroyd, demonstrator and tutor at Cambridge University; Mr. C. Boutflower, science and mathematical master at Fettes College, Edinburgh; Mr. E. H. H. Bruce, temporary Inspector under the Board; Mr. E. H. Carter, County Council lecturer; Mr. H. T. Holmes, chemistry master at Merchant Taylors' School; Mr. A. T. Kerslake, chemistry master at Bradford Grammar School; and Mr. G. McFarlane, master at Dulwich College.

AT University College, Reading, Mr. John Percival, Vice-Principal of the South-Eastern Agricultural College at Wye, has been appointed Lecturer in Agricultural Botany and Director of the Agricultural Department; Mr. J. O. Peet Lecturer in the Practice of Agriculture; Mr. C. W. Walker-Tisdale Lecturer in Dairy Farming and Dairy Bacteriology; Mr. Frederick Keeble, Lecturer in Botany at the College, Director of the Horticultural Department; and Mr. W. H. Patterson Lecturer in Horticulture and Keeper of the Gardens.

AT Cambridge, Mr. J. B. Peace, M.A. of Emmanuel, has been reappointed Demonstrator of Mechanism and Applied Mechanics for five years, and Mr. R. C. Punnett, M.A. of Gonville and Caius, has been appointed Demonstrator of Comparative Anatomy for one year.

MISS H. L. POWELL, head mistress of the Leeds High School for Girls, has been appointed Principal of the Cambridge Training College for Women Teachers, in succession to Miss Punnett, who has been appointed normal mistress to the new Day Training College under the London County Council.

MR. R. W. H. T. HUDSON, B.A. St. John's College, Cambridge, has been appointed Lecturer in Mathematics at University College, Liverpool.

MR. E. SHERWOOD SMITH, M.A., Head Master of Whitchurch Grammar School, succeeds the Rev. J. Atkins as Head Master of Newbury Grammar School.

MR. L. LOWNDS, B.Sc. (Lond.), Ph.D. (Berlin), and Mr. J. C. Crocker, B.A. (Camb.), have been appointed Demonstrators in Physics and Chemistry respectively at the South-Western Polytechnic.

MR. L. HANSEN BAY, B.Sc. (Lond.), F.C.S., chief mathematical and science master at Carlisle Grammar School, has been appointed Head Master of Deacon's School, Peterborough.

MR. WYNDHAM has been elected Lord Rector of Glasgow University by twenty-nine votes over Mr. Morley.

MR. S. O. ANDREW, M.A., has been appointed Head Master of Whitgift Grammar School.

THE Head Mastership of the King's School, Warwick, is vacant through the resignation of the Rev. R. Percival Brown, M.A.

**Literary Items.** MR. FISHER UNWIN announces for the middle of November the "Memoirs of President Paul Kruger," in two volumes, with photogravures and map. The work will no doubt throw fresh light on the recent history of the Transvaal, as well as furnish a most interesting personal record and criticism.

MR. R. BRIMLEY JOHNSON is issuing the "Hampshire Edition" of Miss Austen's works, each novel in a separate volume, "with the original feature of an experiment in illustration never before applied with any thoroughness to fiction."

MR. HEINEMANN publishes a new and revised—and cheaper—edition of "The Eternal City" by Mr. Hall Caine, with a new preface by the author, giving "the history of the present story." The original version will be "kept in print as long as the public calls for it."

MESSRS. FREDERICK WARNE & Co. announce "The Little Folks' Picture Natural History," by Mr. Edward Step, dealing with interesting points in the forms and habits of wild creatures, in easy language, and containing over 200 illustrations, mostly in colours.

THE Walter Scott Publishing Company announce "The Music Story Series," under the editorship of Mr. Frederick J. Crowest—"an entirely fresh and novel series of literary-musical illustrated monographs." The first issue will be "The Story of Oratorio," by Annie W. Patterson, B.A., Mus. Doc.

IN the November number of the *Leisure Hour* the Rev. William Mottram, a cousin of George Eliot and a grand-nephew of Adam and Seth Bede and Dinah Morris, begins a series of papers on the originals of these characters and on certain of the influences that inspired the best work of the great novelist.

MR. FISHER UNWIN has just added to his "Library of Literary History" Prof. E. G. Browne's "Literary History of Persia from the Earliest Times until Firdausi." The work includes in its scope religious, philosophical, and scientific speculation.

MESSRS. JACK announce about a dozen volumes of "The Century Bible" in the Old Testament as preparing for early publication after the completion of the New Testament series, which will close with Dr. Salmond's commentary on St. Mark, to be issued shortly.

MRS. ALICE MEYNELL is editing for Messrs. Blackie & Son "The Red Letter Library"—"a new series of selections from the great masters of English literature," to be issued monthly. Two volumes—from Tennyson and Mrs. Browning—are promised immediately.

**General.** THE Calendar of University College, London, for 1902-3 exhibits a remarkable activity in all branches of study, with a great many fresh developments. If our wealthy citizens were to study the

volume for half an hour with understanding, the College would promptly get the million it so sorely needs.

KING'S COLLEGE, London, offers free courses for teachers, on Saturdays, in Mathematics, French, Theory of Education, Practical Physics, and Practical Physiology. In the Theological Faculty the courses have been adjusted to the B.D. degree of the University of London. The evening classes prepare for "internal students'" degrees. The ordinary and post-graduate classes are now in full swing.

THE London Chamber of Commerce (10 Eastcheap, E.C.) has organized, at a nominal fee, courses of lectures in Commercial Geography and History, Banking and Currency, Commercial and Industrial Law, and (in co-operation with the foreign Chambers of Commerce in London) classes in French, German, Spanish, and Italian.

THE Board of Education has issued the Regulations and Syllabus of the Certificate Examination for Acting Teachers, which begins on July 8, 1904.

UNIVERSITY COLLEGE, BRISTOL, is thinking of ways and means of further extension, and even mooted a project of development into a University for the West of England.

NOTTINGHAM UNIVERSITY COLLEGE has just celebrated its 21st anniversary (October 2).

THE jubilee of Sydney University was celebrated with great enthusiasm on October 1.

THE seventy-fifth anniversary of the opening of St. David's College, Lampeter, was commemorated on October 2. The Archbishop of Canterbury was present, and spoke with great spirit and geniality.

MR. CHARLES WADE HASKINS, Dean of the School of Commerce of New York University, concludes, from his summer studies of the facilities for commercial education afforded in European countries, that his own University holds the lead.

### THE TEACHING OF GEOGRAPHY.

ON Wednesday, October 15, at the Monthly Meeting of members of the College of Preceptors, Mr. H. W. EVE in the Chair, Mr. L. W. LYDE, M.A., gave a lecture on "The Teaching of Geography" with special reference to examinations.

The lecturer said he wished to speak, not as a special pleader for geography, but simply as a teacher and an examiner. And, if he ventured to offer advice which did not correspond with that sometimes given by distinguished geographers in this country, he could at least claim for it the benefit of considerable practical experience; for seven out of the last ten years he had been teaching geography week after week to at least two hundred different boys, and in the same time he had examined about fifty thousand candidates of various ages and nationalities.

He would submit the results of his experience in this way: he was disappointed, as a teacher, if he got more than 2 per cent. of failures in any of the ordinary examinations, e.g., the Oxford Locals, and he was astounded, as an examiner, by the constant absence of the *minimum* necessary for a pass.

If a typical geography paper were analyzed, it would be found that the questions might roughly be classified under four heads—(a) mechanical matters, such as maps and definitions; (b) physical, some being general, and others being confined to a particular area set for the particular examination; (c) political, especially with reference to towns; (d) commercial, especially with reference to the products of the particular area set.

As a rule, one of the "mechanical" questions, e.g., the map, was compulsory. In any case, these questions were the ones on which the duller pupils could be guaranteed against actual failure. If they did enough mapping, they ought to make certain of having all their definitions absolutely accurate, with

exact knowledge of instances. The only real trap here lay in the possibility of careless teachers allowing the pupils constantly to give the same instance, sometimes a most misleading one. For example, if pupils were habitually allowed to give "Salisbury Plain" as the instance of a *plain*, they must not be expected to realize that a plain was essentially low.

Putting these mechanical questions on one side, there were left physical, political, and commercial questions. The mass of the candidates considered physical questions to be questions which required pictorial illustration, political questions to be those which involved lists of places, and commercial questions to be those which involved lists of things. He did not propose to go into the idea at the back of all this, but simply to suggest to any teacher who found the geography lesson a worry, and who did not get satisfactory results in the geography paper, some practical lines which, within his knowledge, had given help to many teachers in similar circumstances. He frequently received communications from teachers who were anxious for advice as to methods of teaching geography. He proposed to deal with some of the questions asked—not in the order of their importance, but in the order in which they arose naturally in connexion with a lesson.

The first was: "What appliances should I have?" And the answer was that some were absolutely necessary, and the rest very useful but not indispensable. Amongst the absolutely essential for general class use were (a) a globe; (b) a very large wall "Mercator," on which currents of wind and water could be indicated; and (c) a blackboard, on which he recommended that coloured chalks should never be used *during a lesson*. Then each individual pupil should have (a) a coloured atlas, in which every place mentioned should be underlined; (b) outline maps, to be filled up in various ways; and (c) a text-book.

Amongst the things which were very useful but not essential he would reckon (a) a "museum" collected by the class, and including newspaper cuttings; (b) pictures of what the pupils were naturally unfamiliar with, but *never* to be given with a lantern in class; and (c) relief maps, exaggerated. Convey artistic truth rather than accuracy of proportion.

With such appliances, every term should be begun with a lesson or two on (a) the shape and motions of the earth; (b) the chief currents of wind and water; (c) the great phenomena of the science—*e.g.*, rivers and mountains; (d) the bare "necessaries" of human life; and (e) some standards of judgment for size, distance, height, &c. With regard to the last point, it was notorious that many people would hesitate to say whether a certain place was inside the Tropics, though they would have no doubt whether it was north of Havana or Calcutta, or south of Rio or Rockhampton. In these preliminary lessons all illustrations should preferably be taken from the particular area set, so that by the time the area itself was reached it would be already really familiar. In treating a set area a definite order of subjects should be rigidly adhered to, so that as each new area came up for treatment the class would approach it from exactly the same point of view.

The first subject was position, which included the latitude and longitude of a representative town or district, and the character of the surroundings—especially if water. The second subject was surface, with special reference to the relation of highland and lowland. And the first and second supplied all data for the third—climate, with special reference to the relation of sea and land. Along with these great "generalities," there should be constant, but rough, mapping of typical forms of the land—*i.e.*, making sure that the class should get, on the map question and the definition question, the necessary minimum of marks to prevent total failure. And, this once assured, the next point to be dealt with should be "particular" subjects—the vegetation, mineral wealth, and population of the area. The vegetation would follow naturally on the climate; and, if special attention were paid to those plants which provide necessities and those which provide luxuries for the inhabitants, the subject would be connected with previous knowledge about the distribution of "necessaries" in the world, and the personal interest of the class would be aroused. "Minerals" would bear a similar subdivision—fuel and machinery coming under "necessaries," and any other typical minerals being treated separately. The distribution of towns would follow naturally on the distribution of plant life and minerals, and special stress should be laid on those towns for the existence of which a reason could be given—especially a reason directly connected with the plants or minerals.

The lecturer concluded by remarking that the methods he had sketched out would be useful, not only in preparing for examinations, but also in developing the pupils' own power of thought.

Mr. LANGLER remarked that the whole lecture from beginning to end had been a definition of what geography really is. In his own school-days geography lessons meant simply the learning by heart of lists of names and terms. He assumed that teachers when preparing candidates for examination were guided by the questions set on previous occasions, and it was therefore in the power of the examiner to determine, to a very large extent, the character of the studies which should be pursued from time to time, and he felt convinced that, if teachers followed the lines indicated by Mr. Lyde, they would be able not only to secure success at examinations, but also to accomplish something of real educational value in the teaching of geography.

Mr. ORCHARD thought that the method advocated by Mr. Lyde was of great educational value, because it enlisted from the first the co-operation of the pupil with the teacher and involved the psychological principle of the association of ideas. Not only did this principle make the teaching of geography itself easier, but other subjects were being taught indirectly at the same time.

Miss MOLD considered that the remarks of the lecturer, although founded only on his experience in the teaching of boys, applied with equal force to the teaching of girls.

A vote of thanks to the lecturer concluded the proceedings.

## THE NEW DAY TRAINING COLLEGE.

PROF. ADAMS'S INAUGURAL LECTURE.

PROF. ADAMS delivered an address on "The Training of Teachers" at the opening of the London County Council Day Training College (October 6). He said that training of teachers is no longer a speculative subject, but one that must be faced and dealt with in some practical way. It can no longer be set aside. The question is not now "Shall teachers be trained?" but "How shall teachers be trained?"

### WHAT IS "TRAINING"?

Put in the shortest form, training may be described as the process of deliberately guiding or modifying the development of an organism. Only an organism can be trained, and all our views of training must take account of this fact. To begin with, then, training implies capacity: not necessarily a capacity that will naturally develop in the direction the trainer may select, but a capacity that renders development in that direction possible. A dog may be trained to walk on his hind legs—he has the capacity; though, if left to himself, he would probably never exercise it. The second element in the connotation of training is the presence of an external force guiding an internal. The creature trained has certain inherent powers which, if developed at all, must be developed according to the laws of their own nature. The working of these laws exemplifies the internal force. It is only by following the laws of dog nature that the trainer can get the animal to do such an undoglike thing as to walk on his hind legs. In some quarters we find emphasized a third element in the connotation of training. It is said that training is, on the whole, more concerned with physical processes than intellectual. We have tutors for the schools, but trainers for the river or field, while "to be in training" has an unequivocal reference to the body. The distinction is real to the extent that we must admit that it is recognized and acted upon in real life. But it has no psychological sanction. The mind can be trained just as the body can; only the process is both more difficult in itself and less easily demonstrable to outside observers. In direct proportion to the teacher's knowledge of the laws according to which a child's mind acts, and of the contents of the mind of the particular child acted upon, can he determine the action of that mind. The discussion of this matter belongs to the course of University Lectures on Education. Here it is enough to state the principle, and to draw the inference that the training of the teacher consists primarily in his acquiring this knowledge of child-nature and the materials upon which that nature works. The science of education must begin and end with the child.

### PAST ERRORS OF SYSTEM.

We who have been responsible for the working of the training-college system in the past have gone wrong along two main lines—(1) We have magnified methodology at the expense of true educational science. It is futile to say that there must be a right way and a wrong way of teaching everything. . . . We must recognize the need for different treatment of the same subject, and even the same part of the same subject, according to the differences in teacher, pupil, and attendant circumstances. The teacher must not be a machine, working in narrow, though carefully adjusted, grooves. (2) Our second line of weakness has lain in devoting too much time to mere teaching of subjects, and too little to the teaching of how to teach. For our pedantry and our over-elaborated methodology we must ourselves bear the blame; for the preponderance of subject-teaching circumstances are responsible. . . . At the beginning the training colleges really justified their name: they gave their chief attention to training how to teach. Unfortunately, many candidates came forward who knew neither the subjects to be taught, nor how to teach them. Naturally, these had to be taught their subjects first. The examiner then made his appearance, and all was lost. The colleges

soon developed into not very advanced secondary schools, in which a very little professional training was added to an intolerable deal of mere school study. In spite of all this, the training colleges succeeded in producing the kind of teachers the country wanted—thanks mainly to the pupil-teacher system. . . . This state of affairs has passed away since the establishment of pupil-teacher centres, the curtailment of the pupil-teacher's hours of actual teaching, and the freer scope allowed to the training colleges. Our college opens at an auspicious time. . . .

#### SECONDARY TEACHERS IN THE PAST.

The secondary teacher has always been worse off than the elementary in respect of opportunities for learning his profession. If the master of method in the training college got his pupils too late, the secondary teacher did not come under a master of method at all. He was plunged, without any preparation, right into the work of the school. He had the better preliminary culture-training, and thus could feel his way a little better than the pupil-teacher. Unfortunately his more important position while he was learning his business exposed him to keener criticism. He was placed at once in charge of a class, and held responsible for its progress. The irresponsible pupil-teacher made his serious blunders, no doubt, but he had behind him the assistant master and the head master to keep him in the right way, or, at the very least, to bear the blame of his deficiencies. The secondary man had not only to learn his profession for himself, but had himself to be responsible for the blunders by which he stumbled on to success.

#### "THE CRUX OF THE WHOLE QUESTION."

These initial blunders form the *crux* of the whole question. There are two ways in which the public can pay for the training of its teachers: it can pay in money, or it can pay in children. Given a certain large number of children each year to be injured intellectually, and to some extent morally, and the question of the training of teachers settles itself. All that is required is a sufficient number of subjects upon which raw teachers may experiment. . . . Let it be cordially admitted that there are a few—a very few—favoured men and women that require very little training. . . . These, however, are the last to deny the need of training. . . . At the other end of the profession there is a correspondingly small group—those whom no amount of training will ever turn into teachers. Between these two extremes we have the great body of average candidates for the profession, who all can, and do, in various degrees, profit by training. Further, the process of training is itself a process of sifting. The naturally gifted teachers lose nothing by being forced to make as many as possible of their initial blunders by proxy. The public are entitled to be protected from having even a few children sacrificed unnecessarily.

#### TRAINING NEED NOT INJURE THE PUPILS.

It must not be supposed that training is impossible without injury to the pupils. . . . In spite of the presence of students in training, practising schools are not noted for their inefficiency. It is possible for the carefully guided student to do quite as little harm as the ordinary teacher under ordinary circumstances. In other words, the inexperienced student makes up for his lack of technical skill by long and careful preparation, and by the concentration that the special circumstances of his case develop. The average student at his very best is equal to an experienced teacher at his average. It is assumed here that the practice lessons are so arranged as to fit in with the ordinary work of the school, though they need not necessarily form a part of it. The interests of the children are further guarded by the presence of the master of method. The student will make blunders—serious blunders—but at the end of the lesson the master of method can not only prevent the blunder having an evil effect upon the children: he can actually turn it to good account with pupils and teacher alike.

#### TRAINING OF SECONDARY TEACHERS.—THE REGISTER.

For secondary teachers training is no longer something in the air. On the 6th day of March was issued an Order in Council providing for the formation and keeping of a Register of Teachers. . . . To meet the increased demand for training that must necessarily arise from the operation of this Order, the Technical Board of the London County Council have made arrangements for the admission to this college of students who purpose becoming teachers in secondary schools. . . . A beginning will be made in January. The students will be under the direct supervision of the Principal, who will fix their course, and prescribe from time to time studies in observation, analyses of characters and temperaments, problems in school discipline, and similar matters, and discuss the results with them. . . . In addition to attending the full course of lectures by the Professor of Education and working the exercises prescribed by him, secondary students in training will be called upon to go through a course of study of the more practical parts of school and class management, and to attend various short courses on the teaching of the more important subjects of the secondary-school curriculum. In many cases these short courses will be delivered by specialists in the various subjects, and will in all cases be illustrated by examples of actual teaching in schools of typical excellence. . . . Arrangements will be made by which teachers at present engaged in their profession may obtain a course of training suited to their needs. . . . The University lectures

will not, as a rule, have special reference to the subjects of the examination for the Teachers' Diploma in London University. The professor must be left free to treat his subject in his own way. But tutorial classes will be conducted by the staff of the college so as to prepare the students for this examination, in order that the year's training may end with the official recognition that is necessary to secure a place on the Register.

#### A UNIVERSITY SCHOOL OF EDUCATION.

By Dr. J. P. GORDY,  
Professor of the History of Education in the School of Pedagogy of  
New York University.

IN connexion with the opening of the London County Council Day Training College attached to the University of London, it may be useful, as well as interesting, to note the most advanced American views on the work of such an institution. The following paper appeared in the *Journal of Pedagogy* for March, and the editor said of it that "a more lucid and forceful outline of the scope of an institution whose function it is to prepare teachers for their work has never been made."

The appointment of a faculty for the study and teaching of education by New York University is one of many indications that society is at last becoming dimly conscious of the place which the school ought to fill among the agencies of civilization. The world has been talking for a long time about the importance of education, but it has been very slow to learn that, if education is important, then the training of the teacher must be equally important. If, as Goethe said, life itself is the end of life, then education as preparation for life is the most important thing in the world; and, if education is of supreme importance, then the institution whose one function it is to prepare teachers for this work ought to occupy the foremost place among the institutions of civilization.

Why, indeed, should not the intending teacher receive special preparation for his work? Is his task so simple or so unimportant as to make the successful performance of it a matter of no consequence? A mind intent only on getting at the true relations of things, a mind which asks not what has been but what ought to be, in determining whether special preparations should be made by those who are to undertake a given work, would ask two questions only: Is the work important? and: Is it difficult?

Is then the teacher's work important? Upon the right training of the child, it has been truly said, all good causes depend. Is it difficult? No less difficult than that of so manipulating and modifying the manifold impulses that have been inherited from countless generations as to give supremacy to those that make for the well-being of man and of society. Schools for the study of veterinary surgery, and no school for the study of education; schools for the study of engineering, commerce, agriculture, pharmacy, dentistry, medicine, law, theology, and no school to show how to deal wisely with the growing mind! The time will come when such facts as these will seem among the most remarkable in the history of civilization. They are only one more example of the truth which has so often been illustrated: that which is first in the order of truth and of logic is last in the order of discovery.

Upon what plea—to take a particular case—can special preparation for the work of the physician be urged that does not apply with greater force to that of the teacher? Is it that the health of the body is important? But the body derives its entire importance from the mind. Apart from the mind, the body signifies no more than the tree that grows by the wayside. Is it that the work of the doctor is difficult? Who would venture to assert that the restoring to health of a diseased body, bringing it into a condition in which each organ performs its proper function, is more difficult than the work of the teacher—the work of so influencing the mind that it may develop to the point where each faculty can and will perform its proper function? The work of the physician consists for the most part in helping the body to resume its natural functions; the work of the teacher, on the other hand, is so dealing with the mind as to change the functions which are natural to it in its undeveloped condition, so that it may become natural for it to do that which it ought to do.

It would be equally easy, if one had the time, to show the superior claims of schools for the study of education to those of all other professional schools. With a single exception, all of them are trying to increase our command over the means of life. But schools for the study of education are primarily concerned with the enrichment of life itself. Even schools for the study of theology must be judged from the standpoint of education, using the term in its largest, truest sense. Do they tend to make life better, nobler, richer? Their value for civilization, in a word, consists in the light they throw on the needs of the human mind, on the sublime art of living. But it is the function of a school for the study of education to show how all the needs of the human mind may be most helpfully supplied, to consider the art of living from the most comprehensive point of view. The pagan Plato, the first and greatest of the philosophers of education, saw very clearly that not only religion,

but art, science, literature, government, life itself, may be utilized in the education of man.

We are then, I think, justified in concluding that schools for the study of education have at least as vital a relation to the well-being of society as any other professional schools whatever.

What can such schools do? Their work, in the last analysis, will consist of their attempts to answer three questions: What is the nature of the developing mind? What ought it to become? How, and under what circumstances, can it be best helped to grow from what it is to what it ought to be? We lay great stress on the various subdivisions of psychology, physiological, analytical, genetic, because it is from them that we hope to learn with constantly increasing accuracy what the "living, learning, playing child" is; we cross-question ethics and philosophy in the hope of learning what the ideal nature of the child is, in the hope of learning in what the true good of man and of life consists; we would go to anthropology and the history of education and of civilization not merely to gather inspiration for our work, not merely that we may become acquainted with the heroes who have lighted the torch of civilization and have passed it on with a brighter and brighter light to the present, but in order to learn what ideals beckoned them onward and inspired them to efforts which enabled them to raise themselves above the monotonous life of use and wont, and what methods they followed in the education of their fellows; and we would learn these things in order that our own ideals may be clarified and enriched, and our own knowledge of human development be made more accurate and discriminating. We would go to the great literatures of the world, to the dramas of Æschylus, Sophocles, and Euripides, to Dante's great poem, to the masterpieces of Shakespeare and Goethe, of Browning and Ruskin, to learn all that they have to tell us about education and life. We would go to the various branches of science, not merely to learn the conditions as to light, heat, and ventilation, under which the work of the school may be most successfully done, but also in order to learn how these departments of knowledge may be most effectively utilized in the interests of the developing mind. In a word, we would levy tribute on all the resources of civilization in order to learn all that they have to teach about the nature and ideal of human life, and the methods by which that ideal can be most successfully realized.

Do we claim to be trying to do all that is possible in these directions? Assuredly not. The contrast between the real and the ideal constitutes three-fourths of the tragedy—I had almost said of the comedy—of life. No one—not even Aristotle—ever saw more clearly in what the true greatness of a people consists than did Horace Mann. "The narrow strip of half-cultivated land that lies between her eastern and western borders is not Massachusetts," he once said; "but her noble and incorruptible men, her pure and exalted women, the children in all her schools whose daily lessons are the preludes and rehearsals of the great duties of life, and the prophecies of future eminence—these are the State." And no one ever saw more clearly the relation between the best that human life may be and the training of teachers. "I believe normal schools," he said, "to be a new instrumentality in the advancement of the race. I believe that without them free schools themselves would be shorn of their strength and healing power and would at length become mere charity schools and thus die out in fact and form. Neither the art of printing, nor the trial by jury, nor a free press, nor a free suffrage can long exist to any salutary purpose without schools for the training of teachers; for, if the character and qualification of teachers be allowed to degenerate, the free schools will become pauper schools and the pauper schools will produce pauper souls, and the free press will produce a false and licentious press, and ignorant voters will become venal voters, and through the medium and guise of republican forms an oligarchy of profligate and flagrant men will govern the land. . . . Coiled up in schools for the training of teachers as in a spring there is a vigor whose uncoiling may whirl the spheres."

Think of this lofty ideal, and then think of the pitiful reality which confronted Horace Mann when the first normal school that ever existed in this country opened in Lexington, Massachusetts, with three students! But his enthusiasm did not abate; he did not feel that the struggling was unavailing. He knew that in the never-ending struggle between the real and the ideal, although the real is always victorious, the ideal is unconquerable; that ideals are immortal, while the real of to-day is but the real of to-morrow; that each new real, in the course of time, must meet the fate of its predecessors and succumb to a real which is a closer approximation to the ideal.

It is this faith which inspires us to-day. And even if we should prove unfaithful to our trust, if the authorities of New York University should weary of the service they are trying here to render to society, this faith makes us believe that that work would not remain undone. For, while institutions come and institutions go, ideals go on forever. And the high ideal of the proper training of teachers is sure, in the course of time, to find a home in a larger and larger number of the great institutions of the country.

But, under such favourable circumstances as surround us, we shall not, cannot, fail. At the very heart of the largest centre of population in the United States, in a city that is doing more to dignify teaching and make it a profession than any other in the country, we have an unsurpassed opportunity for making an institution which will do all that is possible to gather into one great beam all the scattered rays of light which civilization can throw on the solution of its greatest problem—the education of man.

## REVIEWS.

### THE ETON SCHOOLMASTER.

*The Schoolmaster: a Commentary upon the Aims and Methods of an Assistant Master in a Public School.* By Arthur Christopher Benson. (Murray.)

Mr. Arthur Benson is a first-rate schoolmaster; on that point we need no further evidence than the present volume affords. But he is himself untrained, and he does not believe in the training of teachers, which seems to him "like training people to become good conversationalists." And in this view he is not singular. Dr. Bradley, Dr. Gow, Dr. James, Mr. Frederick Walker (we might extend the list indefinitely)—all of these are, or have been, excellent teachers, and all of them are profoundly sceptical as to the advantages of training. At first sight this appears a crushing argument against the College of Preceptors, which was founded for the express purpose of "affording facilities to the teacher for the acquiring of a sound knowledge of his profession"; but a little reflection will dispose of the paradox. "They that be whole need not a physician, but they that are sick." If we could ensure that none but Bradleys and Bensons entered the profession, we will not say that there would be no need of training colleges; for the best natures are bettered by nurture. But the need of training would not be apparent, as it now is, even to the ordinary member of Parliament. It is quite true that "a brisk idle man with a knack of exposition can be a scandalously effective teacher"; true also that "a man may have conducted classes satisfactorily at a training college, where the disciplinary difficulty is non-existent [Mr. Barnett and Prof. Withers would hardly agree to this]; but when he is face to face with a class of his own he may find that he has no real control." But it is not true that "the method of conducting a lesson must be a matter of idiosyncrasy." Still less true is it that "the boys who have been through a public school themselves have practically been trained as teachers as far as training can be given." It is, indeed, astounding, at the present day, to see this theory of "apostolic succession" once more trotted out—a theory which is again and again refuted in these very pages. "What is still needed is that schoolmasters should have a more definite aim—a theory of their art, and it seems a pity that so many of us schoolmasters should do our work in so fortuitous a way." This quotation, which concedes the very point to which we are contending, is not taken from Prof. Laurie or Mr. Findlay, or any "educational faddist," but from the author's preface. One other quotation which is still more to the point: "The Eton masters of the last century were virtuous and even godly men; but they let continue under their eyes a state of things in Long Chamber which was a positive disgrace to civilization. . . . I have no doubt at all that there are points to which we are blind that will rouse the wonder and wrath of good men after us." With this frank avowal can Mr. Benson seriously maintain that to have been flogged by Dr. Keate or lectured by Mr. William Johnson is all the training that a schoolmaster requires?

But, as we have already shown, Mr. Benson's practice is far better than his theory. He has the natural aptitude which, as we should be the first to allow, no training can impart, and, what is equally important, he has the gift of literary expression. As his sponsor, Roger Ascham, is read for the sake of such purple patches as the story of Lady Jane Grey reading the "Phædo," and as the "Tractate," which a colleague of Mr. Benson's pronounced "something that Milton wrote in his dotage," is still studied by other than candidates for a teaching diploma, so Mr. Benson's "Schoolmaster," by reason of the glimpses it gives of the life of, and the anecdotes about, Mr. Gladstone and Bishop Westcott, will find favour with masters to whom "The Education of Mankind" and "Apperception" are books with seven seals. And, though the cup of absinthe is cunningly mixed with honey, it is none the less a true tonic that will brace and stimulate. The chapters that have struck us most are those on the Boarding-house and on Moralities; but, instead of discussing them, which would take us too far afield, we prefer to give two or three extracts, grave and gay, as samples of Mr. Benson's happy vein.

I declare I believe that one of the most useful qualities I have found myself possess, from the point of view of teaching, is the capacity for being rapidly and easily bored myself.

A boy was sent to his tutor by the master of his school division with a complaint of serious insubordination. Little by little the story came out, and it appeared that he had put a dormouse down the master's

back, between his neck and his collar, as he sat correcting an exercise. "How was I to know that he drew the line at a dormouse?" said the boy tearfully, giving a dreadful glimpse of what had been tolerated.

Readers of "Elia" will recall a close parallel to this story in Lamb's "Reminiscences of Christ's Hospital."

One of the best disciplinarians I have ever seen put an end to what tended to be a disagreeable scene by saying to an ill-conditioned boy who had lost his temper, in a voice of unruffled suavity: "Smith, I don't think we see you at your best on this occasion."

It used to be asserted that athletics were valuable from a moral point of view, and kept physical temptation at bay. I do not think that this can be maintained, and I am sure that the personal popularity which the athlete enjoys, the almost admiration with which he is regarded, is of itself a great danger if a boy is prone to sensual faults.

We had marked other passages for quotation; but our object is to whet the appetite, not to satisfy it.

#### A GERMAN SURVEY OF ENGLISH LITERATURE.

*A History of English Literature, 600-1900.* By E. Engel.

Translated by Rev. H. Bent. (Methuen.)

This volume contains a biographical notice of the chief writers of English literature, together with extracts from their works. The notices are concise, clear, and accurate, and the extracts generally very well chosen. The writer has, however, aimed at a much more difficult object, namely, as he indicates in the introduction, to trace how a history of literature is at the same time a history of national character. We must confess that in the earlier part of the work it is difficult to see that this has been done to any striking extent, but the idea is worked out admirably by means of introductory notes to each chapter, from the seventeenth century onwards.

The first chapter, on "The English Language," is, perhaps, somewhat unnecessary in a work on literature, even for foreign students, as, in the first place, the subject must of necessity be so very briefly treated; and, secondly, it does not seem probable that changes in the forms of expression have had any very great influence on the evolution of national thought, but rather that the reverse process would more truly illustrate the influence of thought on form. The introductory sketch of the main characteristics of English literature is very valuable and suggestive, and brings out clearly its many-sided genius, its atmosphere of freedom, its national tone, and its imaginative vigour due to perpetual contact with Nature. It is observed that the poetry of the nineteenth century is less powerful in religious fervour and the passion of love than in the time of Elizabeth, and that this is probably owing to the severe check which our literature received from the Puritanism of the seventeenth century. Its adaptability and many-sidedness of poetic form are noted as owing to the fusion of various races in our population. In his account of our early literature up to Chaucer, Prof. Engel has aimed at a careful selection of the most striking works, and has illustrated many of these by a brief notice and an extract, thus avoiding the multiplicity of names and titles which only bewilder the student, without conveying any real meaning. The bibliography at the end of every chapter is useful for reference throughout the book. We are glad to note a special chapter on the Old English national ballad, as this is a feature of our literature to which too little attention is often given. The chapter on Shakespeare is carefully compiled, and, although it is difficult to bring forward much that is new on such a theme, the section on the study of Shakespeare in Germany and France gives us a somewhat fresh point of view, while the section on the Bacon "craze" is of special interest, in the light of its recent revival. The "craze" is thus succinctly stated: "Shakespeare's works reveal much knowledge and much wisdom. Bacon possessed much knowledge and much wisdom; consequently he alone can have composed Shakespeare's works."

The decline of English literature, and especially the drama, in the seventeenth century, is traced (1) to the effect of the Civil War, which caused the ruin of the literary revival; (2) to the influence of Puritanism, which produced a radical change in the national feeling; (3) to the prevailing tone of immorality, which came in with Charles II. The criticisms on poets of this period, more especially Dryden, are refreshing in their fearlessness, vigour, and impartiality. In the eighteenth century England succeeds to the leadership of the intellectual world; the Revolution of 1688 exercises an improving influence on the moral behaviour of the upper classes, and we observe in poetry the absolute supremacy of form and the disappearance of genuine deep feeling. The rise of the Free Thought movement is then traced, and its incalculable influence on France and Germany is noted. The

founding of the English Press by Defoe constitutes public opinion as a lever of civilization. The latter half of this century is marked by the great poetic revival of which the chief feature is the return to Nature. This principle is traced through the work of the historians and the rise and development of the novel, and finds its complete expression in the poems of Burns. The criticism of nineteenth-century literature is extremely interesting; but a proportionately fair estimation of the various writers is, of necessity, most difficult. Thus, a whole chapter is devoted to Byron as a poet; while the poems of Scott receive the briefest passing mention. Considering that, in our school public examinations, Scott's poems are often set as alternatives to Shakespeare's plays, while Byron's "Childe Harold" is only occasionally and fragmentarily studied, this estimate shows a vast difference from that of prevalent popular opinion. In the sketch of our modern novelists, also, Jane Austen is somewhat harshly dealt with; while the list of more recent authors is very incomplete. Where, for instance, are our writers on Scottish life, yachting, the sea, on life in Manxland, Italy, India, our English counties, or present-day social questions? It would be hard, indeed, perhaps almost impossible, to include a comprehensive survey of nineteenth-century fiction within the compass of the present handbook. We therefore gladly welcome this translation of a work which, on account of its carefully compiled information, well chosen extracts, and thoughtful criticism, forms a valuable aid towards the study of the evolution of our national literature.

#### SEMITIC HISTORY AND THEOLOGY.

"The Semitic Series."—(1) *The Early History of Syria and Palestine.* By Lewis Bayles Paton, Ph.D., Professor of Old Testament Exegesis and Criticism, Hartford Theological Seminary. (2) *The Theology and Ethics of the Hebrews.* By Archibald Duff, M.A., LL.D., B.D., Professor of Old Testament Theology, Yorkshire College, Bradford. (5s. each. Nimmo.)

(1) Prof. Paton limits Syria to the territory between the Taurus and Mount Hermon, and applies the name of Palestine to the remaining portion of the East Mediterranean coast. He presents the story of the West Semitic peoples during the period of the development of the Semitic nationalities—that is to say, from the earliest times down to the establishment of the Persian Empire. He has utilized most diligently the available historical materials, worked in the results of the most recent explorations, and set forth the essential points in a lucid and popular form. The central position of Syria and Palestine and the lines of trade routes establish a constant contact with Babylonia, Assyria, Egypt, and Arabia, so that all the discoveries in the Orient furnish assistance. The tables of Oriental kings, the bibliography, and the maps for different periods will be very welcome to students.

The earliest recorded inhabitants, Prof. Paton finds, were Semites—a race ethnologically and linguistically allied to the Hebrews—and their original home "was probably Arabia," though some other scholars still point to Central Asia, or even Africa; but he also deals with the indications of a pre-Semitic race. He narrates critically the old Babylonian supremacy (B.C. 3200-2500), the Amoritic migration (B.C. 2500-2230), the rule of the city of Babylon (B.C. 2230-1700), the Canaanitic migration (B.C. 1700-1553), the Egyptian supremacy (B.C. 1553-1392), the Hittite and the Aramaean migration (B.C. 1392-1376), the rise of the Aramaean nations (B.C. 1376-1160), the period of the Hebrew Judges (B.C. 1160-1020), the period of the early Hebrew Kings (B.C. 1020-885), the advance of Assyria (B.C. 885-745), the Assyrian supremacy (B.C. 745-625), and the new Babylonian supremacy (B.C. 625-539). "The Babylonian period closes with an almost complete disintegration of the nations that had come into existence in consequence of the Aramaean migration," and the new States that rose under the stimulus of Persia and of Greece belong to the next, the medieval, period of the history of Syria and Palestine. The mere enumeration of the stages of Prof. Paton's narrative will indicate the interest and the importance of his work. While handling the subject with the freedom of an historian, Prof. Paton is consistently wary and reverent; he exhibits a constant reluctance to rely on philological arguments, and he often defends impugned passages with skill and success (e.g., Gen. xiv., in his third chapter). The book is a most able, judiciously critical, and instructive addition to a valuable series.

(2) Prof. Duff's work will well reward a careful perusal. The earlier chapters, however, are very thin, and throughout the book the author maintains the attitude of an enthusiastic *cicerone*

rather than that of a severe critical expounder. Of course, he is well equipped for the inquiry, and he presents the evolution of the main elements and principles with great fervour and sympathetic appreciation; and that is a most important achievement. The chapters, however, must be read with a critical eye; there is a tendency to extremes in opinion without supporting proofs, or without adequate recognition of divergent views, and the attentive reader is not always compelled to assent to the train of argument. Still, neither these faults nor fancy qualities of style should be allowed to obscure the essential value of the main treatment. Prof. Duff gives "especial attention to Deuteronomy," and sets out in useful appendices an analysis of the Yahwistic and of the Elohist narrative, as well as the outlines of the original "D" documents and outline analyses of the oracles of Jeremiah.

#### THE "ENCYCLOPEDIA BRITANNICA."

*The New Volume of the "Encyclopædia Britannica."* Vol. VI. (being Vol. XXX. of the complete work). (A. & C. Black and the *Times*.)

The present volume runs from "Kabadian" (a bekdom of South Bokhara) to "Morvi" (a native Kathiawar State)—845 pages, with the usual abundance of maps, plates, portraits, diagrams, and other illustrations. The quietly persistent effort to keep up to date is evident in many of the articles: for example, Mr. John Morley's biography includes the gift of the Acton Library to him, and the "Monroe Doctrine" refers to Sir Frederick Pollock's recent article in the *Nineteenth Century and After*. Among the notices of living personages is a full and appreciative article on Lord Lister (with portrait). The large subject of "London" is amply outlined, the geography and statistics by Mr. H. B. Wheatley, the government and administration by Mr. F. F. Liddell—a great repertory of facts without comment. Mr. Macmorran, K.C., presents a very able sketch of "Local Government in England and Wales"; Lord Davey and Mr. Justice Baldwin of Connecticut deal at some length with "Law" in England and in the United States respectively; and Miss Anderson and the Hon. Carroll D. Wright treat similarly of "Labour Legislation." Territories and towns have their usual prominence: Kafiristan (by Sir G. Scott Robertson), Kashmir (by Sir T. H. Holdich), Korea (by Miss Bishop), Lagos (by Sir W. Macgregor); Liverpool (by Mr. W. F. Irvine), Madrid (by Mr. A. E. Houghton), Manchester (by Dr. W. E. A. Axon), Melbourne (by Mr. F. D. Fitzgerald); and so forth. Many scientific and social subjects are treated in concise monographs: Lifeboats, Light, Lighthouses, Liquid Gases (Prof. Dewar), Logic (Prof. Case), Machine Guns, Magnetism, Mathematical Instruments (Prof. Henrici), Measuring Instruments (Prof. Fleming), Medical Education, Martial Law, and Military Law, and so on. Among the more striking personal notices, we may mention (besides Mr. Morley) Kossuth, Leighton, De Lesseps, Liszt, Lowell, Sir John Macdonald, Cardinal Manning, Dr. Martineau, Marx, Millais, Moltke, and William Morris.

The prefatory essay, by Mr. Birrell, reviews "Modern Conditions of Literary Production." Though necessarily but a general sketch, it is incisive and suggestive, pungently critical, yet broadly tolerant. Mr. Birrell starts from the Copyright Act of 1842. It is an extraordinary change that he pictures, with very mixed features of advantage and disadvantage, the results of multiplied influences; and, "if it would be difficult to name these influences, to seek to estimate their several strengths would be clearly impossible." After all, "we may congratulate ourselves that wherever we look we see all the symptoms of life and activity in a people striving to get quit of the clogs of ignorance, and to enter upon the glorious inheritance that belongs by right to every cultivated intelligence."

#### SCOTTISH PHILOSOPHY.

*Scottish Philosophy in its National Development.* By Henry Laurie, LL.D., Professor of Mental and Moral Philosophy in the University of Melbourne. (6s. net. Maclehoze.)

"The history of Scottish philosophy begins, curiously enough, with an Irishman"—Hutcheson, whose grandfather, however, had migrated to Ulster from Ayrshire. Prof. Laurie, who has evidently come across Dr. W. R. Scott's excellent monograph on Hutcheson, does not handle the question raised by Dr. Scott as to what the "Scottish Philosophy," or the "Scottish School," precisely means. He speaks, however, of "the philosophy of

Scotland" and of "the course of philosophy in Scotland," and he follows the line of "national development," apparently without any dread of a charge of provincialism. We daresay the blood of the race was always well charged with corpuscles of speculation and argumentation; and Prof. Laurie, in his introduction, does refer to Duns Scotus and other Scottish doctors that were skilful in splitting hairs in scholastic philosophy, and admits that "the national genius was peculiarly favourable to philosophy and theology." However, there are good reasons enough for beginning with Hutcheson, and reviewing the more prominent teachers of philosophy, in the Universities or through the press, in Scotland, being Scotsmen, down to Ferrier. And, reasons or no reasons, Prof. Laurie justifies his work by his careful and able account of the individual philosophers and his correlation of their various achievements and tendencies. He keeps his eye on the "national" development, but he recognizes freely that the philosophy of Scotland "bore the impress of the methods which had been prescribed by Bacon, by Newton, and by Locke." He notes the psychological cast of Scottish speculation, but properly discerns that "the most deeply cherished aims of these thinkers were philosophical rather than psychological," and it is on this aspect of their thought that he concentrates attention, leaving aside their psychology wherever it is not inextricably intertwined with their philosophy. He claims justly, and demonstrates, that "the philosophy of Scotland is memorable for the impulse which it has given to modern thought." The volume is pleasantly and lucidly written, and the criticism is not so technical as to discourage the general reader. It is a very useful and suggestive work.

#### AN AMERICAN GUIDE TO GERMAN HISTORY.

*A Short History of Germany.* By Ernest F. Henderson. In two Volumes (pp. 518 and 472). (17s. Macmillan.)

Though Mr. Henderson's work occupies two comfortable volumes, spaciouly printed, it is still a "short" history of Germany; for he has kept the details severely in hand, and presented the main stream of facts in bold relief. The style is no part of the attraction. The value of the book lies in its presentation of events in due proportion and with the accuracy that comes of first-hand study of the documents. The author's "Select Historical Documents of the Middle Ages" was already favourably known, and now he tells us that the work was "compiled with the idea of laying a foundation for the present history." This incidental sidelight shows that the book has not been hastily put together, but is the result of prolonged and serious labour. The argument for German history, in opposition to French history, "as a guiding thread through the intricacies of general European history," looks like an afterthought. In any case, it seems unnecessary; it is not easy to see why there should be any rivalry, when both are so much needed. The work is to be cordially welcomed on its intrinsic merits, and that is enough.

The first volume takes us from the early Germans, huddled together in "refuge from beasts of prey and from the greed of man" in their lake-dwellings, down to the fall of Wallenstein and the Peace of Westphalia. Interwoven with the fortunes of the successive dynasties, and with the story of the wars of Charles V. and the Thirty Years' War, are luminous sketches of the age of chivalry, of the Hanseatic League, of the rise and progress of the Reformation, and of the Roman Catholic reaction. The second volume opens with the rise of the Prussian monarchy, passes on to the aggressions of Louis XIV. and the Spanish War of Succession, follows Frederick the Great in war and in peace, traces the downfall and the regeneration of Prussia, describes the struggle for constitutional government, and closes with the humiliation of Austria and France and the attainment of German unity. Plainly as the story is set forth, the author has an eye for dramatic effect, and he often lightens his sober page with incidental anecdotes—not always readily verifiable, yet generally helpful in impressing an incident or a situation. The series of maps illustrate the territorial changes most usefully. It would be ungrateful to carp at small details of language or of statement where the general history is lucidly and effectively presented, the life and spirit of the times is well caught and fixed, individual personages are characteristically limned, and the virtues of care, discrimination, and impartiality are fully manifested. These volumes are primarily for the library, and the student's attention should be directed to them there; but may we not hope for an early edition in a single volume at a price within a wider reach?

## GENERAL NOTICES.

## CLASSICS.

"Blackwoods' Classical Texts."—*Arrian, Anabasis, Books I. and II.*  
By H. W. Auden, M.A.

Mr. Auden has done well in venturing on the annexation of Arrian's "Anabasis of Alexander." The matter is of great historical importance, and centres in a great personality; and, if "Arrian's Greek is hardly more un-Attic than that of Xenophon," and is but a shade more difficult, it usefully extends the range of elementary study—an advantage of much more consequence than a pedantic restriction to Attic purism. The introduction furnishes a sufficient account of the historical position and of the leading personalities, and the appendices contain much useful information about Alexander and his army, Alexander in legend, Arrian's language and style, &c. The text is beautifully printed, though marred by occasional blunders: ἀρχουτος (page 2, third Greek line), αὐτῶ (page 76, line 7 from bottom), and general disorganization of the accentuation of καί (and ἐπὶ?) on pages 84-85—all which can readily be corrected. The notes are adequate and judicious. The index is not complete—perhaps is not intended to be complete; but we think it should be completed. Why is Αἴλιος given in the index, when Αἴλιος is the uniform reading of the text? The plans, portraits, and other illustrations are well chosen and good; but we miss a map of the Anabasis. There is listed, however, a "map of Alexander's Empire," which may supply the desideratum; only the binder has omitted it from our copy.

*The Elements of Greek.* By F. Kingsley Ball, Ph.D. (Price 6s. Macmillan.)

Dr. Ball has laboured hard to make the way easy for beginners, graduating the materials with fair success, and setting out the terminations in thick type. He gives exercises from the very start, and promptly submits complete sentences, fortifying the pupils with the necessary vocabulary. There is obvious reason for taking the accents from the first; but, on the whole, they carry with them a good deal of complication, and might be dealt with more easily at a later stage. "Paroxytone and Properispomenon Feminine Nouns" seems a rather formidable heading so early as page 35. There are general vocabularies and an index; also a number of serviceable illustrations. The work is competently done, and the printing and get-up are excellent.

## SCIENCE.

*Class-Book of Geology.* By Sir Archibald Geikie. Fourth Edition. (Macmillan.)

The author's position as an eminent authority on his subject and his particularly charming literary style combine to make him very popular as a text-book writer. This particular volume has had a very wide circulation, and the new edition is largely rewritten, rearranged, and extended, especially with reference to the leading facts of American geology. It would be hard to improve Parts I. and II., dealing respectively with "The Materials for the History of the Earth" and "The Structure of the Crust of the Earth." In Part II. (Rocks, &c.) we should like to see a little more on the symmetry of crystals, and an explanation of such common terms as "dome" and "pinnacoid," together with a few more illustrations of rock sections; and in the stratigraphical part it is disappointing to find the Ordovician included in the Silurian, while there is no figure of *Olenellus* and no allusion to Graptolite zones. These, however, are small matters; but the "thorough revision of the Table of the Vegetable and Animal Kingdom," supplied by Dr. F. L. Kitchin, is very faulty in many respects. *Selaginella* belongs to the Lycopodiina, not to the order Lycopodiaceæ. No proper distinction is made between Algæ and Fungi. To include Tunicates under Molluscoidea is a grave error. Pteropods are no longer considered a distinct class, but rank as specialized Gasteropods; while to suggest that *Hyolithes*, &c., perhaps belong here is a very doubtful procedure indeed. And the claim of *Amphioxus* to rank as a primitive Vertebrate is not now disputed by expert zoologists.

## MATHEMATICS.

*An Elementary Treatise on Kinematics and Dynamics.* By Prof. James Gordon Macgregor, M.A., D.Sc., LL.D., &c. (10s. 6d. Macmillan.)

A new edition of Prof. Macgregor's work will be welcomed by the many that are already acquainted with the great value and excellence of it in its original form. A notice of the appearance of the new issue is all that is needed, for in the preface the author states that very few alterations and corrections have been found requisite.

*Easy Mathematical Problem Papers.* By Charles Davison, Sc.D. (Blackie.)

It is likely that this series of more than a hundred short problem papers will prove of great value to teachers as fresh material for class purposes. Questions on arithmetic, on algebra—as far as the binomial theorem—on Euclidian geometry, and on the more elementary portions of trigonometry are included in the author's scheme. The question

papers are followed by a further collection of miscellaneous problems on the same branches.

*First Stage Mathematics.* Edited by William Briggs, LL.D., M.A., F.C.S., &c. (2s. Clive.)

This volume will be especially acceptable to students preparing in Mathematics for the South Kensington examinations (Elementary Stage). It includes all the Euclid and algebra required, and, in addition, the papers in arithmetic set at the examinations during the past twenty years. The methods of treatment present little that is fresh; and, in dealing with the propositions of Euclid, the language of the earlier writers and the older forms of proof have generally been preserved. The individuality of the book will be found in the many very helpful notes and explanations, all of which tend to give the student a clear idea of the theory and an insight into the best way of studying it methodically. Although the writer always gives precedence to the orthodox demonstrations of Euclid's propositions, he in many cases submits alternative proofs, notably in dealing with the celebrated I. 47, on which several lines of argument are indicated. The latter portion of the volume is devoted to the algebra prescribed; and following this section is a very useful appendix on synthetic division and on the factorization of symmetrical expressions in three symbols.

## MODERN LANGUAGES.

*Intermediate French Grammar.* By G. H. Clarke, M.A., and L. R. Tanqueray, B.-ès-L. (3s. 6d. Murray.)

"C'est un cours intermédiaire"—more than elementary and less than complete—"qui vise à être un répertoire des formes usitées de nos jours, un résumé de celles de l'ancien français, et à expliquer brièvement les principales difficultés syntaxiques." All this it does simply and pleasantly, "outlines of historical accidence" being dropped in by the way, and syntax being treated in friendly fashion along with accidence under each of the parts of speech. We should have liked to see a clearer realization of the difference between pronouns and adjectives. For instance, where is the logic of teaching that *chacune* and *le même* are "pronouns" in "Chacune de ces cannes" and "Je lui demande un autre verre, il me rapporte le même"? Again, it seems a gratuitous complication to say that the infinitive is used "as complement" in "La patience est l'art d'espérer" and in "Défense d'afficher." There are no exercises; but the selection of grammatical points is judicious, and the presentation is clear.

*English and Portuguese Grammar and Commercial Handbook.* By the late Prof. C. Mascarenhas, L.J.A., E.C.B. Revised by John C. Mascarenhas, F.C.S., R.P.A. (Hirschfeld.)

The matter of this book, it appears, was left in manuscript by the late Prof. Mascarenhas, and has been "carefully revised and brought up to date," and specially adapted to the commercial requirements of the day," by his son, who is Professor of Portuguese at the City of London College. Moreover, "the whole of the work is published on the authority of the Royal Portuguese Academy." For all that, it would be the better for further revision, preferably by some one with a stronger grip of English, and of grammatical and educational principles. An intelligent and industrious student would, no doubt, pick up a working knowledge of Portuguese from the book. But it seems superfluous to talk of genitive (or rather "genetive"), dative, and ablative cases, whether of nouns or of pronouns. The pronoun, we are told, is "one of the most difficult of the parts of speech in the language," and there are no fewer than eight classes. The "conjunctive" pronouns turn out to be "reflective," and the first example is "*elle me fallou, he spoke to me,*" where *me* is not "reflective" (in any ordinary sense), and need not be labelled "conjunctive" for any conceivable grammatical purpose. *Se in diz-se or se diz* ("it is said") "becomes a particle, giving the verb the passive voice." While there is a class of "relative" pronouns, the "possessive" pronouns are "of two kinds, relative and absolute." Then there are "mixed" pronouns—*m'o, t'o, &c.* (as "*eila m'o deu, he gave it to me*"). This is sheer logical chaos. What can be the use of teaching a pupil that "verbs of motion govern the dative or ablative: *vou á cidade, venho da cidade*"? Or that "passive verbs require the ablative after them, as *Os máos são abominados por Deus*"? There are numerous misprints; an unfortunate one in the noun declension (page 8), where the "accusative" and "ablative" forms are interchanged.

## HYGIENE.

(1) *Hygiene: a Manual of Personal and Public Health.* By Arthur Newsholme, M.D., F.R.C.P. Lond. (Gill.) (2) *The Hygiene of Schools and Scholars.* By H. Beale Collins, D.P.H., &c. (Ralph. Holland, & Co.) (3) *The Imperial Health Manual.* Edited by Prof. Antony Roche, M.R.C.P.I., &c. (Baillière, Tindall, & Cox.) (4) *Life and Health.* By Albert F. Blaisdell, M.D. (4s. 6d. Ginn.) (5) *The Normal School Hygiene.* By S. Slefrig, B.Sc. (3s. 6d. net. Normal Correspondence College Press.)

(1) Dr. Newsholme's volume, which has been in high favour for some twenty years, has been almost entirely rewritten; a considerable quantity of new matter (including new chapters dealing with dietetics, rade nuisances, meteorological observations, tuberculosis, disinfection, and vital statistics) has been added; and the treatment has been

adapted to the requirements of medical students, without prejudice to the interests of science students and general readers. There are many useful illustrations. The book is a thoroughly good piece of work—comprehensive, lucid, practical, well informed, and trustworthy.

(2) Dr. Collins addresses himself specially to teachers and parents. He is anxious to dissipate "the deep-seated belief that the ills which sanitary officers endeavour to remove are part of the dispensation of Providence," and to "teach the young that 90 per cent. of the illness and trouble in this world is due to man's own fault, mostly carelessness and selfishness." Basing his work on a general knowledge of the child's physique, he arranges his exposition "round the scholar's body to begin with, roughly entering on the anatomy and physiology of the different parts"; then he deals with ventilation and warming, both theoretically and in application to building, &c.; and he concludes with a chapter on school accidents. The illustrations are appropriate. A very sensible and useful book.

(3) Prof. Roche presents "the authorized English edition of the official health manual issued by the Imperial Health Department of Germany"—the "second English edition, revised from the latest German edition." The work explains the structure of the human body, together with the organic functions; examines the necessities of life for the individual man—air, water, food, clothing, the dwelling, exercise and recreation; deals with man in his social relations—settlements, commerce, rearing of children (home and school), employment and wages; and reviews the multiplied dangers to health from climate, disease, and accident, with a supplement on sick nursing and an appendix containing some of the German laws relating to health. The work is able and instructive.

(4) Dr. Blaisdell offers "a text-book on physiology for high schools, academies, and normal schools"—a shorter and simpler book than his "Practical Physiology," on which he has drawn for some of the material and many of the figures (169), the latter being exceptionally good. The treatment is lucid and judicious, and "lays marked emphasis upon such points as bear directly upon personal health." About 150 experiments are given. The book is notably well printed. It should be exceedingly useful.

(5) Mr. Slefbrig deals in minute detail (480 pages) with the hygiene of the school premises and with the hygiene, physical and mental, of the scholar. His exposition is sound and lucidly arranged, with useful summaries, questions to each chapter, and various official regulations. There are numerous illustrations. A very comprehensive and serviceable manual.

#### MISCELLANEOUS.

*More Tales of the Birds.* By W. Warde Fowler. (Macmillan.)

There are nine tales, told by a consummate story-teller, all charming in tone, in suggestion, and in literary deftness. They are primarily addressed to young people, but they will equally delight elder generations, and the moral lessons will take hold of every reader incidentally, without obtrusion or even mention. Mr. Fowler knows all about the birds, and his tales cannot but attract his readers to know and care more about them and about all other animals. The stories are conceived and expressed with remarkable literary skill, but the art is cunningly veiled and the narrative is perfectly simple and natural. There are eight excellent full-page illustrations by Frances L. Fuller. This should be a very favourite prize book; and every reader will hope that there are still more such tales to follow.

"The Great Public Schools."—*Westminster.* By Reginald Airy, B.A. (Bell.)

Mr. Airy writes with the affectionate interest befitting a former Queen's Scholar, tracing the most salient lines in the development of the school from its foundation, recording the most prominent of the great names connected with it, and interspersing not a few perennial anecdotes. The mightiest of the Westminster potentates is, of course, Busby; and there are some—and probably Mr. Airy among them—that would rank Dr. Rutherford's head mastership "not much lower than that of Busby." A capital specimen of the prologues and epilogues represented with the Latin play, and lists of deans, head masters, &c., are given in appendices. The work is well and carefully done, and the illustrations, which are mostly from admirable photographs taken by Mr. William Rice, are abundant and effective.

#### MAPS, CARTOONS, AND WALL SHEETS.

The school-children of these days know not their good fortune in comparison with elder generations. Here are Messrs. W. & A. K. Johnston's *Imperial Maps of Africa and Scotland* (21s. each), the like of which (even of the same firm's construction) have never been seen on school-room walls. They are ample, clear, detailed, accurate, up to date, and finished in the highest style of workmanship. They are fit to teach geography without a teacher. Smaller, but equally well finished, is Messrs. Johnston's special *Map of South Africa* (41 x 50 in.), showing all the electoral divisions, and marking the towns according to their importance. This, too, of itself compels the learner. Nothing better could reasonably be desired. By the way, there is a *Geographical Handbook* (price 3d.), which supplies full and lucid explanations;

and the publishers offer to send it gratis to any teacher on application—an offer that teachers will do well to avail themselves of. From the same publishers we have received also a sample of their "Everyday Life Series of Object Lesson Pictures"—*The Breakfast Table*, a simple, natural, and artistic representation (though the girl at the table might honestly have been made more attractive); a sample of their "Types of Nations"—*The Spaniard*; a sample of their "Natural History Plates"—*British Game Birds*; and samples of their "Illustrations of Trades"—*Aerated Water Manufacture, Salt Manufacture, and The Potter*. The size is 28 x 31½ in.; and the price is 3s. 6d. each. It is a fastidious teacher that would wish for anything better in design or in execution, or more likely to fix the children's interest.

Messrs. Stanford's *New Orographical Map of Europe* is a very careful and elaborate production, which should prove highly instructive. It comes to us in the form of four sheets (25 x 19 in. each), which constitute an imposing whole.

Messrs. Philip send us Set 1 of their *Series of Map-Building Sheets*—four maps containing the British Isles, printed on special blackboard paper, and attached to slip, 6s. The maps may be had separately, eye-letted, 1s. 6d. each. The size is 40 x 34 in. They are excellently adapted to their purpose.

Messrs. Bacon's *Interesting Drawing Charts* (16 x 22 in.) contain twenty-four outline drawings of mammals and birds. The lines are bold and effective, and the selection is judicious as well as varied. 5s. 6d. on strong paper; 10s. 6d. cloth.

Messrs. Chapman & Hall show *Examples of Elementary Drawing and Design for Schools* in two sets (23 x 15½ in., inside margins). Set 1 contains twelve autolithographs of plant forms; set 2, twelve autolithographs of natural forms (frog, sea-horse, shell, butterfly, &c.). In each set half the subjects are in outline, and half are tinted. "The primary object . . . is to teach elementary freehand and the elementary principles of light and shade"; and the subjects are "selected with the view of illustrating some ornamental motif or principle of design." They are admirably drawn and printed, and should prove very attractive. The author is Mr. G. Woolliscraft Rhead, R.E., Art Director, Southwark Polytechnic. 12s. net, each set.

Messrs. Nelson's "Royal Portfolio—Geographical Series"—has received a capital addition in *The Suez Canal: Troopship passing through* (coloured, 16½ x 24 in.). This picture will do more than much description to enable pupils to realize the actual conditions.

Messrs. E. J. Arnold & Son, Leeds, have just published a considerable series of "A. L." History Pictures" (40 x 35 in., in full scale of colours; from 4s. net, each). We have No. 1, *Ancient British Life*; No. 10, *Battle of Hastings (Death of Harold)*; No. 30, *Dismissal of Wolsey*; No. 40, *The Armada in the Channel* (cloth, mounted); No. 50, *The Landing of the Pilgrim Fathers*; and No. 80, *Nelson at Trafalgar—The Fatal Shot*. A descriptive slip accompanies each picture. The style is bold, and the colouring vivid; and the series represents important events or incidents in the history of the country, while illustrating national life, dress, architecture, manners and customs. The pictures are by Mr. W. S. Stacey, the distinguished cartoonist; and they have all been "selected by one or other of H.M.I.'s, and all are correct in regard to matters of detail, dress, armour, &c." They should be attractive and impressive.—Messrs. Arnold also publish *The "A. L." Genealogical History Chart* (42 x 35 in., in full scale of colours; 5s. net), by L. Williams, State School, Surat, Queensland. The coloured portraits of all the English sovereigns circle round the chart, and inside are the lines of descent in corresponding colours, with maps showing the British Isles in Saxon times and the extent of the British possessions now. Certainly a suggestive device cleverly and clearly executed.

The Society for Promoting Christian Knowledge have made twelve additions to their series of "Biblical Wall Diagrams" (31½ x 24 in., printed in colours; from 1s. each). The subjects are *Mistletoe, Water Plantain and Cuckoo Pint, Coconut Palm, Nettle, Fungus, Barley, &c.* They are all carefully and effectively presented.

The Religious Tract Society issue two fresh "Scripture Cartoons"—No. 30, *Jesus and the Little Child*, and No. 31, *The Nativity* (45 x 35 in.; from 1s. 4d. each)—fine additions to the series, and effective on the schoolroom wall.

Messrs. George Bell & Sons publish in their series of "The Fitzroy Pictures" for schools four prints (19 x 36 in.; 10s., on stout paper, or 3s. each, net), representing *The Months*, three months on each print. The pictures are designed by Mr. Heywood Sumner, and reproduced in colours by Mr. James Akerman. Design and execution are alike successful.

Messrs. Blackie offer a series of eight "French Conversational Sheets"—*French in Pictures and Talk*—several French words being prominently printed under each picture to be worked into conversation upon the scene depicted. The size is 23 x 18 in. The sheets are judiciously conceived and skilfully executed. There is also a manual for teachers' use (2s. 6d.).—Messrs. Blackie also publish *The Phonic Reading and Word-Building Sheets* (30 x 26 in., inside margins; 6s.)—seven sheets of three-letter syllables formed by varying combinations of consonants with the vowels in succession. They provide very useful matter for intelligent exercise.

## GIFT-BOOKS AND PRIZES.

## I.

## HISTORICAL TALES.

Prominent among the many Christmas books provided by Messrs. Nelson & Sons is *Stanhope* (3s. 6d.), by E. L. Haverfield, whose previous stories are very favourably known. It is "a romance of the days of Cromwell." The religious and political divisions of the time are broadly influential, and the reader passes through the Battle of Naseby; but there is also a mysterious element of private romance. The characters are ably drawn, and the spirit of the time very capably presented. The tone is very fine throughout, and the interest is well sustained.

In *Fallen Fortunes* (Nelson, 3s. 6d.), E. Everett-Green narrates "the adventures of a gentleman of quality in the days of Queen Anne," the opening scene being the field of Ramillies. Thanks to a scheming kinsman, the pastimes of London town, a startling discovery, and fickle fortune, the hero is kept in a whirl of interest, and social life is presented in many aspects. The volume is worthy of the author.

*The Last of the Cliffords* (Nelson, 5s.), by Eliza F. Pollard, takes us back to the Civil War, in which John of Linton, an adopted son of Lady Anne Clifford, bears an active part. Hampden, Prince Rupert, Fairfax, and other leaders cross the pages, which are kept lively with private as well as with public interest.

Mr. Herbert Hayens is now a prolific writer. *At the Point of the Sword* (Nelson, 5s.) is one of his new stories, packed full of adventure, much of it sufficiently astonishing, during the Peruvian war of liberation towards the end of the first quarter of last century. Bolivar himself is introduced. The hero, however, is always to the front; and there are gallant Spaniards as well as gallant Englishmen and Peruvians.

*Ralph Wynward* (Nelson, 2s. 6d.) belongs to the time of Elizabeth. Ralph runs away from a hard home, with a friend, to join Drake, but lands in worse troubles. There is much adventure in Ireland, culminating in the sack of Youghal; and there is an outcome of manliness and unselfishness.

The story of *The Adventures of Captain John Smith*, "captain of two hundred and fifty horse, and sometime President of Virginia" (Longmans, 5s net), is rewritten by E. P. Roberts from the writings of the doughty warrior and his contemporaries. It includes the romantic episode of Pocahontas, on which historians are now looking gravely askance; indeed it appears to be quite uncritical. It lacks the charm of Smith's own writing, and contents itself with a poor literary standard.

## STORIES OF ADVENTURE.

To be sure, the tales that we have just noticed, though strung on an historical thread, are brimful of adventure. The present group, chronicle "adventures" without any particular historical setting; and "adventures" must be taken in a very comprehensive sense.

Thus, *Sala's Sharpshooters* (Nelson, 3s. 6d.), by Harold Avery, who is now getting to be voluminous, does not take the reader into any historical field of battle, though suggested by the South African War. It professes to be "the historical records of a very irregular corps"—a corps formed by schoolboys, with all the available paraphernalia of war. There is an armoured train, night manoeuvres, attacks on forts, and all the rest of it; and there is a nursing staff. The corps is abundantly adventurous; and its doings will be followed with amused interest to the last page.

Then here is a very fine story of "the travels and adventures of two cherubs"—*All Astray* (Black, 3s. 6d.)—by the indefatigable Ascott R. Hope. It opens with the startling phenomenon of "running away to school"; after that, anything. But it was a prolonged and complicated effort, and the heroes took a still longer way in coming back for the holidays. Mr. Ascott R. Hope is a past master of escapades and episodes, quietly humorous, and deftly suggestive; and his healthy tone, charming ease of style, and sympathetic intelligence are as fresh as ever, while his cunning in the ways of boys seems inexhaustible.

The very title of *The Lost Squire of Inglewood* (Nelson, 2s.), by Thomas Jackson, prepares us for adventures. Accordingly we are led into adventures of a surprising character, even "in the caves of Robin Hood." One would scarcely anticipate a football match of Notts v. Aston Villa by the way. The hero belongs to "John Peel's country." Of course, he runs away from school, and finds adventures, devises stratagems, "bags" a policeman, discovers Robin Hood's treasure-chamber—and something even more important—and lives happy ever afterwards. A capital story of its kind.

If you want to go afloat, then there is *The Cruise of the "Katherina"* (Nelson, 1s.), by John A. Higginson, "late Royal Mail Steam Packet Company," who has presumably smelled salt water and kamana about the world a bit. The "Katherina" sails from Melbourne for Kamana Island, and there is a South Sea crime with incidental matters to clear up and settle. A breezy story, with a tender chord as well as manly strands running through it.

## STORIES OF ROMANCE.

Mr. Rudyard Kipling turns aside from high Imperialistic themes to tell *Just So Stories* to little children, appending to each story some verses, and furnishing quaint and curious illustrations of his own drawing (Macmillan, 6s.). He tells "How the Camel got his Hump," "How the Leopard got his Spots," "How the Alphabet was made," and so on—a dozen marvellous tales. It will be good mental gymnastics to attempt to follow these fresh efforts of Mr. Kipling's flexible imagination. A pretty, attractive, and unconventional volume.

Mr. Andrew Lang's annual is *The Book of Romance* (Longmans, 6s.), an entirely delightful book in matter and in get-up. It contains a score of the old romances—about half the volume being occupied with "Tales of the Round Table," after which there are "The Battle of Roncevalles," "The Pursuit of Diarmid," "William Short Nose," "Wayland the Smith," "Robin Hood," and "Grettir the Strong." All the romances except the last are written by Mrs. Lang. There are eight coloured plates, thirty-five full-page plates, and a number of insets; and the binding is handsome and charming. The illustrations are by Henry Ford. "Omne tulit punctum," &c.

*The Story of the Sword* (Dent), by T. S. Peppin, with ten capital illustrations by G. W. C. Hutchinson, tells in its own way the adventures of "a boy called Jack," who lived "once upon a time, long and long ago." The author has found much curious matter about this personage in "the Ancient Records," especially about the birthday gift of a sword to him by his aunt. "It is thy making and thine undoing. It is thy glory and thy shame. It is thy friend and thine enemy." So Jack, aged twelve, went forth, girded with his sword, to the Dark Wood, where lived the Red Necromancer; but the great enemy was the Black Necromancer, who lived on a hill, and with whom Jack tried conclusions at the mature age of fifteen. Charmingly told and attractively got up.

## FOR GIRLS.

We group these volumes together under this head simply because the authors say they are "for girls." But, for our own part, we fancy that girls will find much to interest them also in the historical tales and the stories of adventure and romance which are supposed to be primarily written for boys; and it is likely enough that boys will find interest in some of these books "for girls."

Now here is a big and pretty volume about *Two Little Travellers* (Nelson, 2s. 6d.), by Ray Cunningham—that is to say, Mrs. Frances Browne Arthur. They are the motherless children—boy and girl—of Captain Dene, who goes to the war in South Africa, leaving them with his two aunts. Of course they go amissing, and have strange adventures. Perhaps the Satellite Circus Company fell in with them. Let us hope they were recovered. Once you begin you will read till you find out.

*Fifine and her Friends* (Nelson, 1s. 6d.), by Sheila E. Braine, takes us over to Normandy and the Château de la Marguerite, an "owl's nest" on the cliff. Friend Robineau is a prolific creator of events, and is involved in the mystery of the gold thimble. Then there are the grown-up friends, and especially the artist, with whom Fifine explores the Wolf's Hole and the Secret Passage. And eventually is evolved and cleared up the great aristocratic mystery of the family of Fifine. A bright and interesting story.

*Three Scottish Heroines* (Nelson, 1s. 6d.), by Elizabeth C. Traice, is a series of stories founded on the facts of the lives of Grizel Hume (1684), Grizel Cochrane (1684), and Winefred Countess of Nithdale (1715). Mrs. Traice tells the stories in simple language and sympathetic tone, without violence to the history and without letting the history overbear the tale. A charming book.

*A Happy Failure* (Nelson, 1s. 6d.), by Ethel Dawson, tells how three daughters, brought up in good circumstances, but suddenly left poor by the death of their father, contrived to start a business—ran a boarding house at St. Kerrans, as servants to their mother—and what came of it. The story is well managed, and the interest is kept fresh throughout.

## VARIOUS.

*The Coronation Book of Edward VII.* (Cassell, 10s. 6d.), by W. J. Loftie, B.A., F.S.A., is a magnificent memorial of the great historical ceremony. Mr. Loftie tells all about crowns and thrones, the regalia, coronations and coronation preparations, processions, and celebrations, having special regard, of course, to the Coronation of Edward VII. There are twenty-four coloured plates, and somewhere about two hundred illustrations, many of them in colours. A most handsome and charming volume.

Messrs. Cassell have also just issued the second volume of *The Nation's Pictures* (12s. cloth, 15s. half leather), containing admirable reproductions of forty-eight notable pictures—a splendid collection, well fitted for a Christmas gift. Nor should we forget *Living London*, edited by George R. Sims, the first volume of which we mentioned two months back. It offers an extraordinary variety of interesting matter, with lavish illustration.

Mr. George Allen, too, has brought out the second volume of *The Living Rulers of Mankind* (7s. 6d.), by the Rev. H. N. Hutchinson, B.A., F.G.S., &c., with 240 illustrations. The subjects run from Japan to the

United States, and the rulers, with their families and palaces and yachts and so forth, are liberally represented. The work is well written and delightfully got up.

*The Pothunters* (Black, 3s. 6d.), by P. G. Wodehouse, recalls us to the common earth, at Aldershot, and entertains us with varieties of schoolboy sports, and a mystery of lost cups (or "pots"). It is written with acuteness and verve, but lacks refinement.

*The Other Boy* (Macmillan, 4s. 6d.), by Evelyn Sharp, is for younger readers. The other boy is projected from London into a country family, and, after varied tests, is voted "an absolute rotter: he can't do anything but *grind!*" Well, see what comes of it. The story is worked out with great spirit and a strong dash of humour, in full intelligence with boy-and-girl life.

*Our Little Patients* (Nelson, 1s.), by Ellen A. Fyfe, is a series of five stories written from the point of view of a children's hospital nurse, and presented with dramatic effect. The tone is deeply sympathetic and religious.

*In Flora's Realm* (Nelson, 3s. 6d.) is "a story of flowers, fruit, and leaves," prettily written by Edward Step, F.L.S., with 133 illustrations, several of them coloured. Flora is not the goddess, but a small inquisitive girl of twelve, "ever asking the reason of all things," and "the garden was Flora's delight." A charmingly simple and instructive book.

*Peterkin* (Macmillan, 4s. 6d.) is a delightful new story woven by the deft fingers of Mrs. Molesworth. It has its adventures, stratagems, and mysteries, but all after a quiet fashion; and, though it is a story about a child and for children, it will be read with close interest by boys and girls that we must not call children, and by grown folk as well. It is beautifully conceived, and it is worked out with the dexterity of experience and with the insight that comes of love of children.

#### FOR CHILDREN.

*The Friend of Little Children* (Nelson, 3s. 6d.) is a short life of Christ, written by M. A. Hoyer in simple language, with good illustrations by John Lawson, twenty of them full-page, and coloured plates (large quarto). An excellent companion volume is *Sunday Afternoon* (Nelson, 2s. 6d.), containing "the sweet stories of old retold"—Bible stories—with twenty full-page coloured pictures (oblong quarto). The language is simple and the telling is skilful; and the pictures are capital. Both these volumes are beautifully printed and attractively bound in picture boards.

Messrs. Nelson also provide picture books in abundant variety. There is *Mother Hubbard's Cupboard of Nursery Rhymes* (1s.); and *Red Riding Hood's Picture Book*, *Sunny Hours*, *Pet's Playtime*, *Beaks and Bills* (My Birdies' Book), and *Fur Coats* (6d. each); also *Ride a Cock Horse*, *Red Indians*, *The House that Jack Built*, *Pick-a-Back*, *Country Cousins*, and *What's O'Clock?* (3d. each). All these examples are interesting in matter and full of capital illustrations. It may concern some folk to know that Messrs. Nelson's picture books "are entirely designed and printed in Great Britain."

Messrs. Methuen offer *The Visit to London*, told in easy verses by E. V. Lucas and presented in two dozen full-page coloured pictures by F. D. Bedford. The visitors had a good time and saw a great deal. The get-up is substantial as well as pretty.

#### NEW EDITIONS AND REPRINTS.

Messrs. J. M. Dent & Co. provide two admirable reward books—*A Child's History of England* (5s. net), narrated with much insight as well as with simplicity and picturesqueness by Charles Dickens, and furnished with about a hundred illustrations (many of them full-page) by Patten Wilson; and the immortal *Adventures of Don Quixote of La Mancha* (5s. net), "specially adapted for young people," and provided with forty or fifty full-page illustrations by W. Heath Robinson. They are both capitally got up, and each contains some five hundred pages, more or less.

Messrs. Macmillan issue a timely reprint of Miss Yonge's *Unknown to History* (2s. 6d.), a favourite story of the captivity of Mary Queen of Scots, with illustrations by W. J. Hennessy; and a dainty edition of Mrs. Gaskell's charming story *Cranford* (2s.), with a preface by Mrs. Anne Thackeray Ritchie, and Hugh Thomson's illustrations.

Mr. Elliot Stock brings out a cheap edition (2s. 6d. net) of *Tom Andrews*, a vigorous story of Board-school life by Bishop Chandler, of Bloemfontein, who gained ample experience of his subject as Rector of Poplar.

#### ANNUALS.

The yearly volumes of *Chums* (Cassell) and the *Boy's Own Annual Religious Tract Society* are known to all boys as immense repertoires of the most varied matters that interest them, with countless illustrations.—*Tiny Tots* (Cassell) is steadily establishing itself as "a magazine for very little folks," nicely written, specially printed, and lavishly illustrated.—Volume XXIII. of *Work* (Cassell, 4s. 6d.) and Volume XI. of *The House* (Fisher Unwin, 3s. 6d.) should be welcome to handy boys.

## FIRST GLANCES.

### CLASSICS.

Clarendon Press Series.—*Eumenides* (Æschylus). Edited by A. Sidgwick, M.A. 3s.

[Third Edition. "The critical notes are somewhat fuller." Account of MSS., scholia, and editions of the play. Judicious and thorough.]

Dent's First Latin Book. By Harold W. Atkinson and J. W. E. Pearce. 2s. 6d. net.

[Reader (gradual; much dialogue; quantities marked in pages 1-40), exercises, explanatory grammar, vocabularies; phonetic transcript of pages 1-16. 12 excellent coloured illustrations by M. E. Durham.]

Pitt Press Series.—Xenophon's *Cyropædeia*, Book I. Edited by E. S. Shuckburgh, M.A. 2s. 6d.

["Introduction and Notes, founded on those of H. A. Holden, LL.D." "Complete vocabulary." Thorough.]

Tatham, M. T., M.A.: *Virgil's Æneid*, III. 1s. 6d. Arnold.

[Introduction (translation of Latin Life of Virgil prefixed to the commentary by Ælius Donatus; language, metres, subject of "Æneid"); notes (not "merely elementary"); index of proper names; vocabulary; map of wanderings of Æneas. Competent and careful.]

Temple Series of Classical Texts.—*Cæsar's Gallic War*, Book I. Edited by A. S. Wilkins, LL.D. 1s. net. Dent.

[Introduction (the Gauls and the Romans; Cæsar; the Roman Army); notes, brief and judicious; vocabulary. Maps (2), capital illustrations (19), frontispiece coloured. Excellent.]

### ENGLISH LANGUAGE AND LITERATURE.

Blackie's English Classics.—*Milton's English Sonnets*. Edited by E. H. Blakeney, M.A. 2d.

Longmans' British Classics.—*Macaulay's Essay on Chatham*. Edited by the Rev. H. Wesley Dennis, M.A. 1s. 6d.

[Introduction, notes, chronological chart. 11 illustrations.]

McDougall's Alexandra Readers.—(1) Primary. 9d. (2) Elementary. 10d. (3) Junior. 1s. (4) Senior. 1s. 6d.

[Lessons well graded, attractive, and instructive. Brief and judicious notes. Appendices in 4 (grammar, Latin and Greek roots, dictation exercises) out of place. Many good illustrations, often coloured. Strongly bound.]

Moffatt's English School Series.—(1) Goldsmith's *The Traveller*. 3d. (2) Gray's *Poems*, Part I. 4d. (3) Cowper's *Expostulation*, Part I. (lines 1-363). 4d. All edited by Thomas Page.

[Introduction and notes, "intended for the use of classes in schools, pupil-teachers, and students generally." Carefully edited, and nicely got up.]

Murray's Home and School Library.—*Introduction to Poetry*. By Laurie Magnus, M.A. 2s.

[On poetic expression, poetic truth, and the progress of poetry.]

Nelson's Literary Readers.—No. 1. By Dr. R. Garnett, C.B. 1s. 6d.

[Varied and judicious selections; concise notes. Numerous good illustrations.]

Nield, Jonathan: *A Guide to the best Historical Novels and Tales*. 5s. net. Elkin Mathews.

[Suggestive and useful. Discriminating introduction.]

Normal Tutorial Series.—*Shakespeare's Julius Cæsar*. Edited by A. E. Roberts, M.A. 1s. 6d. net. Normal Correspondence College Press.

["All the outside information necessary." "Especial attention to the grammatical peculiarities." Very full and capable handling.]

Page, Thomas: *Shakespeare and Milton Reader*. 1s. 4d. Moffatt & Paige.

[Scenes and other extracts, with introductory explanations and notes, and chapters relating to the lives and works of the authors. Judicious selection; useful commentary; good illustrations; excellent get up.]

### NATURAL SCIENCE.

Bell's Science Series.—*Injurious and Useful Insects*. By Prof. L. C. Miall, F.R.S. 3s. 6d.

["An introduction to the study of economic entomology."]

Bidgood, John, B.Sc.: *Elementary Physics and Chemistry for the use of Schools*. Book I.: *Elementary Physics*. Book II.: *Physics and Chemistry*. 1s. 6d. each. Longmans.

[Two of three books "intended to serve as reading-books as well as lesson books." "As simple as possible," but "strictly on scientific lines."]

Boys-Smith, Miss W. L.: *Nature Note Book*. Allman.

[With hints to observers, and questions from recent examinations of the National Froebel Union. Useful.]

Bower, Prof. F. O., Sc.D., F.R.S., and D. T. Gwynne-Vaughan, M.A.: *Practical Botany for Beginners*. 3s. 6d. Macmillan.

[Second edition, revised, re-arranged; additional examples.]

Buckley, Arabella B. (Mrs. Fisher): *Eyes and No Eyes*. 3s. 6d. Cassell.

[The six books of the series in one volume, handsomely bound, gilt edges. Original pictures in colours, forty-eight full-page coloured plates, and other illustrations, by A. Fairfax Muckley. Instructive and delightful gift book.]

Harrison, W. Jerome, F.G.S.: *Junior Chemistry and Physics*. 1s. 6d. Blackie.

[“An introduction to elementary science.”]

Hill, Leonard, M.B., F.R.S.: *Physiology for Beginners*. 1s. Arnold.

[Illustrated. Effective type. Well got up.]

Hiorns, Arthur H.: *Metallography*. 6s. Macmillan.

[“Introduction to the study of the structure of metals, chiefly by the aid of the microscope.” 96 original illustrations. Laborious, careful, and able.]

Murray's Home and School Library.—*A First Course of Chemistry (Heuristic)*. By J. H. Leonard, B.Sc. 1s. 6d.

[“Heuristically and in historical order.”]

#### BOOK-KEEPING.

Hooper and Graham: *Series of Modern Manuals of Commerce.—Modern Book-keeping and Accounts*. In three parts. By William Adgie, F.C.A. Part II.: Intermediate. 2s. Part III.: Advanced. 2s. 6d. Macmillan.

[Lucid exposition; exercises. Able and practical.]

Logan, J.: *School and Examination Book-keeping*. 2s. 6d. Longmans.

[Double-entry system. Questions, numerous exercises, and examination papers with outline keys. Simple, clear, and full evidently the work of a practised teacher.]

Thornton, J.: *Key to Easy Exercises in Book-keeping*. 10s. 6d. Macmillan.

[Clear, neat, and concise. Helpful.]

#### HISTORY AND GEOGRAPHY.

Macmillan's New History Readers.—Senior. 2s.

[Numerous good illustrations. The first sentence we chance upon is disconcerting: “Edward marched a great army into Scotland, and won a decisive victory over Wallace at Stirling.” Is this history? It will be very “new history” to Scotsmen, we apprehend.]

Macmillan's Summary of English History on the Concentric Plan.—Senior. 4d.

Murché, V. T., F.R.G.S.: *The Teacher's Manual of Object Lessons in Geography*. 3s. 6d. Macmillan.

[“By a series of easy and natural stepping-stones.”]

Oman, Charles, M.A.: *Seven Roman Statesmen of the Later Republic*. 6s. Arnold.

[The Gracchi, Sulla, Crassus, Cato, Pompey, Cæsar. Portraits and busts of Julius Cæsar and Pompey; illustrations (Roman coins).]

Thomson, C. Linklater: *A First History of England, Part III., 1272-1485*. Horace Marshall & Son.

[Based on first-hand studies. Attractively written; lavishly and usefully illustrated.]

Wilmot-Buxton, E. M.: *Makers of Europe*. 3s. 6d. Methuen.

[Outlines of European history, for middle forms. 12 maps.]

Youth's Companion Series.—*Geographical Readers*:—(1) *The Wide World*. (2) *Northern Europe*. (3) *Under Sunny Skies*. (4) *Towards the Rising Sun*. 1s. each. Ginn.

[The first “presents vivid scenes from many countries.” The second “brings into prominence those features which seem to the visitor striking and characteristic.” The third illustrates life in Spain, Italy, Greece, Turkey, and Africa. The fourth takes us to Eastern lands. Nicely written; well printed and illustrated.]

#### MISCELLANEOUS.

Bull's (John) *Guinea-Pigs; or The World at War*. 6d. Bradley.

[“England is saturated with guinea-pigism.”]

Century Document Band. 2s. per box (assorted lengths). Glasgow: Duncan Campbell & Son.

[Very handy and strong. Simple device.]

Cornish, Herbert: *The Code for Day Schools, 1902-1903 (School Board Chronicle Edition and Manual)*. 1s. Grant; or Knight.

[Historical introduction; full documents and notes; latest changes. Laborious and useful.]

Deaf, Second International Report of Schools for the deaf: made to the Volta Bureau (Washington). Also *Statistics of Speech-teaching in American Schools for the Deaf for 1901*, gathered by the American Association to promote the Teaching of Speech to the Deaf (Mt. Airy, Philadelphia).

Dent's Temple Encyclopædic Primers.—(1) *The Venetian Republic*. By Horatio Brown. (2) *Northern Hero Legends*. By Dr. Otto L. Jiriczek; translated by M. Bentinck Smith. 1s. net each.

[Admirable compends; charmingly got up.]

Dollars, Table for converting American, into English pounds. 6d. Fairbanks Co.

House, The: *a Journal of Home Arts and Crafts*. Vol. XI. 3s. 6d. Fisher Unwin.

[Practical articles; abundant and good illustrations.]

Hutton, Edward: *Studies in the Lives of the Saints*. 3s. 6d. net. Constable.

[Engagingly sympathetic; shrinking from criticism.]

Ireland, *Agricultural and Industrial*. 5s. net. Dublin: Browne & Nolan.

[Very valuable survey of the resources of Ireland.]

Layard, G. S.: *The Gentle Art of Book-lending*. Malvern Federated Library.

[“A suggestion and an experiment.” “Free copies will be sent to those who are desirous of experimenting in the Pooling of Private Libraries.”]

Lovell, Arthur: *Ars Vivendi*. Fourth edition, revised and enlarged. 2s. net. The Author: 5 Portman Street, W.

[Much good sense, with some blundering dogmatism.]

Normal Tutorial Series.—*General Information Test-Papers*. By Lyddon-Roberts and Denney. Second edition. 6d. net. Key, 1s. net. Normal Correspondence College Press.

[Formidable queries; yet we have seen more unreasonable collections. But who would “correct” the expression: “Who should I meet to-day but him you are talking of” into “Whom should I meet, to-day, but him of whom you are talking” ?]

Photographs, *Classified List of*. 1s. 6d. Mansell.

[“Taken from the original pictures in the public galleries and private collections in Great Britain.” Classified under the names of the artists, and showing the sizes and styles of publication, and the prices. 197 illustrations. Laborious; useful for reference.]

Technical Instruction Committee, Essex County Council: *Report and Handbook, Session 1901*. Chelmsford: County Offices.

Williamson, William, B.A., F.R.S.L.: *A Class-Book of Easy Dictation and Spelling*. 1s. Methuen.

[Graduated; interesting passages; word lists. Useful.]

*To those who love good literature, and to those who treasure good books the appearance of the Red Letter Poets should be a red-letter event.*

# The Red Letter Library.

WRITE FOR  
DETAILED  
PROSPECTUS.

MESSRS. BLACKIE & SON have pleasure in announcing the issue of a new and, in many respects, unique series of selections from the great masters of English literature. The RED LETTER LIBRARY makes a double claim—literary and artistic. It selects from the vast treasury of our literature the brightest and purest gems, the priceless heirlooms of the language, and these it presents in a setting which it is hoped will be found as worthy as the arts of printing and bookbinding can compass.

The first four volumes consist of poems from the works of—

- (1) ALFRED LORD TENNYSON.
- (2) ELIZABETH BARRETT BROWNING.
- (3) WORDSWORTH.
- (4) ROBERT BROWNING.

Each of these four volumes is edited by Mrs. ALICE MEYNELL, who contributes a vignette introduction, biographical and critical. It is scarcely necessary to add that Mrs. Meynell is not only by general consent among the most eminent of our modern poets, but occupies an equally high place as a critic.

Size: Length 6 in., width 4½ in., thickness ½ in.

Price: Cloth, 1s. 6d. net; Leather, gilt top, 2s. 6d. net.

WRITE FOR DETAILED PROSPECTUS.

London: BLACKIE & SON, LTD., 50 OLD BAILEY, E.C.

# BLACKIE & SON'S NEW LIST

WRITE FOR EDUCATIONAL CATALOGUE.

**A FIRST GREEK READER.** By R. A. A. BERESFORD, M.A., Author of "A First Latin Reader," and R. N. DOUGLAS, M.A., of Uppingham School.

This Reader (a companion to Mr. Beresford's popular First Latin Reader) consists of two parts: in the first part each lesson consists of one page, containing an illustration explained by eight or nine simple sentences; the second part consists of stories and anecdotes of greater length, carefully graduated, and freely illustrated with full-page plates and photographs of famous statues and busts. The text is set at the Clarendon Press in a large and bold type.

**THEORETICAL AND PRACTICAL GEOMETRY FOR BEGINNERS.** By RAWDON ROBERTS, Crown 8vo, cloth, 1s. 6d.

This is a text-book of Geometry on modern lines, and should be welcomed by those teachers who, while wishing to adopt modern methods, seek to secure for their pupils a mental training similar to that afforded by a study of Euclid's Elements. It is an eminently practical book, being replete from the very beginning with exercises requiring the use of the straight-edge, the pencil, the compass, and the protractor. The definition and the axiom receive a somewhat more extended application than is the case in Euclid. All the essentials of the earlier books of Euclid are here reduced into a small number of propositions, but the spirit of the book, its coherence, and the rigid logic with which the propositions are developed is quite Euclidian. The figures and illustrations are plentiful and are carefully drawn.

**A GEOGRAPHY OF EGYPT AND THE ANGLO-EGYPTIAN SUDAN.** By HENRY W. MARDON, of the Egyptian Training College.

This volume contains a bright and up-to-date account of the Geography of Egypt, written by an authority of especial competence, and fully illustrated with maps and plans specially prepared under the direction of authorities in Egypt. 2s.

\* \* \* Specimen Copies of this book will be sent to teachers post free on receipt of 1s.

**BLACKIE'S COMPLETE HISTORIES.** A New and beautifully Illustrated Series of History Reading-Books arranged on the Concentric Method.

As indicated by the title, each book covers the whole course of British History, is illustrated by a series of paintings of historical subjects reproduced in colour, and many pictures, maps, and portraits in black-and-white.

No. III.—A bright, anecdotal sketch specially written for young pupils. 1s. 2d.

No. IV.—In the press.

No. V.—In point of difficulty this book is suited admirably for use in Form III.

**A SKELETON GERMAN GRAMMAR.** By Professor H. G. ATKINS, of King's College. Printed in red and black. Cloth, 1s. 6d.

This new book is intended to give the "irreducible minimum" of grammar requisite for reading German texts. It is not intended as a manual for the study of grammar after the old fashion, that is to say, for grammar's sake, but rather as a guide for the beginner who proceeds direct to the translation of a German text, or begins by grappling with the difficulties of real German in a similar way by any direct method. A feature of the book is the use of red ink to emphasize points of special importance.

**A SKELETON FRENCH GRAMMAR.** By Professor H. G. ATKINS, King's College, London. 1s. 6d. Similar in scope and arrangement to the "Skeleton German Grammar."

## Blackie's Little French Classics.

Interesting Selections from great French Writers, well edited, well printed, well bound. **Fourpence** each book.

### Poems for Recitation.

## Practical Book-keeping.

### For Commercial Classes.

With Exercises, Examination Papers and Answers.

By WALTER GRIERSON.

This is a thoroughly interesting and practical work. The real purposes and objects of Book-keeping are clearly and lucidly explained, and the method by which they are emphasized is one of the chief features of the book. The Exercises are particularly well adapted for Students preparing for Oxford and Cambridge Local, College of Preceptors', Society of Arts, and other Examinations. All teachers of book-keeping should see this new and highly practical work. Crown 8vo, cloth, 1s. 6d.

## A Brief Introduction to Commercial Geography.

(RALEIGH GEOGRAPHY, No. VII.)

A bright, interesting, and well-arranged account of the Commerce of the English-speaking race. With **Eight Coloured Maps**, numerous Sketch Maps, and a Synopsis. The book forms an excellent and readable conclusion to political geography. Crown 8vo, cloth, 1s. 9d.

LONDON: BLACKIE & SON, LIMITED, 50 OLD BAILEY, E.C.  
GLASGOW; DUBLIN; BOMBAY.

**MATHEMATICS.**

**9773.** (B. PEIRCE.)—A un certain jeu, le joueur A. gagne un point chaque fois qu'il tire une boule blanche d'une urne qui contient 3 boules blanches et 2 boules noires; chaque fois qu'il tire une boule noire, il perd tous ces points, et B., qui ne fait jamais de tirage, en gagne un. Quelle est la probabilité pour A., de faire  $h$  points le premier? Cas particulier où  $h = 3$ .

*Solution by H. M. TAYLOR, M.A., F.R.S.*

Let  $a$  and  $1 - a$  be the respective chances of A. and B. gaining a point at any specified drawing. Let  $f(r)$  be the chance of B. winning the set when he has just gained his  $r$ -th point. The chance then that B. gains his  $(r+1)$ -th point equals the chance that A. does not gain  $h$  points consecutively  $= 1 - a^h$ . Hence

$$f(r) = (1 - a^h)f(r+1).$$

Now  $f(h) = 1$ ; therefore  $f(r) = (1 - a^h)^{h-r}$ . Similarly, we see that, if  $f(p, r)$  be B.'s chance of winning the set at the time when B. has gained  $r$  points and A. has gained  $p$  points, then

$$f(p, r) = (1 - a^h)^{h-r} f(r+1),$$

and A.'s chance then of winning the set is  $1 - f(p, r)$ . In the special case of the Question  $a = \frac{2}{3}$  and  $h = 3$ . Hence when no drawing has yet taken place A.'s chance of winning the set to B.'s chance is 1011933 to 941192.

**15183.** (A. F. VAN DER HEYDEN, M.A.)—If a mass  $m$  be placed at the centre of a sphere S, the potential due to  $m$ , at any point external to S, will be equal to that due to a distribution over S, equal in sum to  $m$ . Hence deduce that, if  $n$  surfaces S include any number of particles, and if N be the change in the normal force due to these particles on crossing the surface, a distribution over S of density  $N/4\pi$  will produce the same potential throughout all space external to S as the masses referred to.

*Solution by the PROPOSER.*

If a surface S include a number of particles  $m_1, m_2, \dots, m_i, \dots$ , and if N be the change in the normal force due to these masses in crossing the surface, a distribution over the surface S of density  $N/4\pi$  will produce the same potential throughout all space external to S as the masses referred to.

(1) Let S be a sphere enclosing a single particle  $m$  at its centre O. Let Q be an external point, P a point on the sphere.

$$OP = r : OQ = a : PQ = \rho.$$

Density of distribution  $= m/4\pi r^2$ .

$$\text{Potential at Q} = \iint \frac{m d\sigma}{4\pi r^2 \rho},$$

where  $\iint d\sigma$  denotes integration over the sphere. Taking OQ as axis of spherical coordinates, we get

$$\iint \frac{d\sigma}{\rho} = \int_0^\pi \int_0^{2\pi} \frac{r^2 \sin \theta d\theta d\phi}{(a^2 + r^2 - 2ar \cos \theta)^{3/2}} = 2\pi \int_0^\pi \frac{r^2 \sin \theta d\theta}{(a^2 + r^2 - 2ar \cos \theta)^{3/2}} = \frac{4\pi r^2}{a};$$

therefore potential at Q  $= m/a =$  potential due to mass  $m$ .

(2) Let the surface S be any closed surface, including any number of particles.

It follows from the preceding that we may replace any particle by a spherical distribution equal in amount to the mass of the particle. Let this be done for each point, then for each point on each sphere thus obtained, and so on, the radius of each sphere being such that its least distance from S is a small quantity  $\epsilon$ . We shall thus finally obtain a system of small spheres whose centres are at distances from the given surface S, each less than some quantity  $\epsilon'$  which may be made as small as we please by sufficiently diminishing  $\epsilon$ .

Now, let each such sphere be replaced by a particle at its centre. This gives us a surface which will ultimately coincide with the surface S.

Moreover, the potential over the surface and throughout external space will, by the preceding, remain unaltered. Accordingly, the variation N in the normal force, in crossing the surface S, will be the same as before.

Let  $d$  be the density of the new distribution at any point. Then

$$N = 4\pi d;$$

therefore  $d = N/4\pi$ .

The analytical statement of the general question is a: follows:

$$\iint \sum \frac{m_i \cos \phi_i}{4\pi r_i^2 \rho} d\sigma = \sum \frac{m_i}{a_i}.$$

**15058.** (Professor NANBON.)—If OP, OQ are small equal arcs of a curve and its circle of curvature at O, show that the difference of the chords of these arcs is  $\frac{1}{24}\kappa^2 OP^4$ , where  $\kappa$  is the curvature and  $\kappa' = d\kappa/ds$ .

*Solutions (I.) by Professor SANJANA, M.A.; (II.) by A. M. NESBITT, M.A.*

(I.) Refer the curve to the tangent and normal at O as axes, and let the co-ordinates of P be  $x, y$ . Then

$$x = s - s^3/6\rho^2, \quad y = s^2/2\rho - (s^3/6\rho^2) (d\rho/ds) \text{ approximately}$$

(J. EDWARDS, § 357). Hence

$$(\text{chord OP})^2 = s^2 - \frac{1}{3}s^4/\rho^2 + \frac{1}{3}s^4/\rho^2 \text{ (approximately)} = s^2 - \frac{1}{3}s^4/\rho^2;$$

therefore

$$OP = s - \frac{1}{24}s^3/\rho^2.$$

Also chord

$$OQ = 2\rho \sin \frac{1}{2}\theta = \rho\theta - \frac{1}{24}\rho\theta^3 = s - \frac{1}{24}s^3/\rho^2.$$

Thus chord OQ - chord OP  $= -\frac{1}{24}s^3/\rho^2$ . But

$$\kappa = \rho^{-1}, \quad \kappa' = -\rho^{-2} d\rho/ds = -\rho^{-2} \rho/s \text{ (approximately)} = -(1/\rho s);$$

hence

$$\frac{1}{24}\kappa\kappa'OP^4 = \frac{1}{24} \frac{1}{\rho} \frac{(-1)}{\rho s} s^4 = -\frac{1}{24}s^3/\rho^2.$$

[Rest in Vol.

*Problems whose Arithmetical Solutions are indicated by a Knowledge of Algebra.*

*By W. R. WORTHINGTON, M.A.*

*Lemma.*—Let  $a$  and  $b$  be two numbers,  $a$  the greater. Given their difference  $a - b$ , and the difference between their reciprocals  $1/b - 1/a$ , to find  $a$  and  $b$ .

$$1/b - 1/a = (a - b)/ab, \quad (a - b) \div (a - b)/ab = ab,$$

$$ab + [\frac{1}{2}(a - b)]^2 = [\frac{1}{2}(a + b)]^2, \quad \frac{1}{2}(a + b) \pm \frac{1}{2}(a - b) = a \text{ and } b.$$

So that, (i.) if the difference between two numbers is divided by the difference between their reciprocals, the quotient is the product of the numbers; (ii.) if the product be increased by the square of half the difference between the numbers, the total is the square of half the sum of the numbers; (iii.) the sum and difference of the roots of the two squares are the two numbers.

Let

$$a - b = 12 \text{ and } (a - b)/ab = \frac{1}{24},$$

$$12 \div \frac{1}{24} = 2880; \quad 2880 + 6^2 = 2916 = (54)^2,$$

$$54 \pm 6 = 60 \text{ and } 48 = a \text{ and } b.$$

*Ex.*—A bicyclist, being asked at what rate he had ridden a certain distance, replied that, if he had taken 48 seconds longer over a mile the whole way, he would have lost  $2\frac{1}{2}$  miles per hour. Required his rate of riding.

A body moving at the rate of (i.)  $a$  miles per hour moves 1 mile in  $1/a$ -th of an hour, (ii.)  $b$  miles per hour moves 1 mile in  $1/b$ -th of an hour; and therefore  $1/a - 1/b$  is the fraction of an hour lost or gained in 1 mile by the substitution of one rate for the other.

In the question the difference of 48 seconds or  $\frac{4}{5}$  hour in a mile makes a difference of  $2\frac{1}{2}$  miles in an hour.

$$2\frac{1}{2} + \frac{4}{5} = \frac{13}{5} = \frac{13}{5} = \frac{13}{5} = \frac{3}{5} \times \frac{2^2}{5}.$$

*Ans.* 15 miles an hour.

**9946.** (Professor GENESE, M.A.)—Through a point within a parallelogram four circles are described containing the sides as chords. If any two of these circles through the same vertex be equal, all four are.

*Solutions (I.) by A. M. NESBITT, M.A., and J. H. TAYLOR, M.A.;*

*(II.) by C. A. LAIBANT.*

(I.) If two adjacent circles, say OAB, OBC be equal (but not coincident), we must have  $\angle OAB = \angle OCB$ . Therefore also  $\angle OAD = \angle OCD$ , and the other two circles are also equal. Draw OG equal and parallel to BC. Therefore

$$\angle OGB = \angle OCB = \angle OAB,$$

or the four points O, A, G, B are concyclic.

Hence  $\angle COD = \angle AGB =$  supplement of  $\angle AOB$ , or circle AOB = circle COD.

N.B.—If we are given circle AOB = circle COD, and  $\angle AOB + \angle COD =$  two right angles, a modification of the above proof will show  $\angle BAO = \angle BCO$ , and the four circles are equal.

(II.) Soient  $AB = a, BC = b, OA = \alpha; OB = \beta; OC = \gamma; OD = \delta$ . Si  $R_1, R_2, R_3, R_4$  sont les rayons des quatre cercles OAB, OBC, OCD, ODA, on a, d'après les notations de la figure,

$$2R_1 = \frac{\beta}{\sin \lambda} = \frac{\alpha}{\sin(A + \phi)} = \frac{a}{\sin(A + \phi - \lambda)};$$

$$2R_2 = \frac{\gamma}{\sin \phi} = \frac{\beta}{\sin \mu} = \frac{b}{\sin(\mu + \phi)};$$

$$2R_3 = \frac{\delta}{\sin(A - \mu)} = \frac{\gamma}{\sin \theta} = \frac{a}{\sin(A + \theta - \mu)};$$

$$2R_4 = \frac{\alpha}{\sin(A + \theta)} = \frac{\delta}{\sin(A - \lambda)} = \frac{b}{\sin(\theta + \lambda)}.$$

Si  $R_1 = R_2$ , on a donc  $\lambda = \mu$  [l'hypothèse  $\lambda + \mu = \pi$  entraînerait en effet cette conséquence, que les deux cercles OAB, OBC seraient confondus en un seul, et non distincts, comme on les suppose], d'où  $R_3 = R_4$ .

En outre, 
$$\frac{\alpha}{\gamma} = \frac{\sin(A + \phi)}{\sin \phi} = \frac{\sin(A + \theta)}{\sin \theta},$$

d'où en général  $\theta = \phi$ , et par suite  $R_2 = R_3$ .

**15068.** (R. W. D. CHRISTIE.)—Solve generally the following Christmas puzzle:—Find four integers  $a, b, c, d$ , such that

(1)  $ad = bc = 1 \pmod p$ , (2)  $a^2 + b = c + d^2 = 0 \pmod p$ ,  
 (3)  $a^2c + 1 = bd^2 + 1 = 0 \pmod p$ , (4)  $bc^2 + a^2 = 0 \pmod p$ ,

where  $p =$  prime of form  $4m - 1$ , and give all the solutions.

Solution by Lt.-Col. ALLAN CUNNINGHAM, R.E.

Out of the seven congruences to be simultaneously satisfied, only three are independent, e.g.,  $ad \equiv 1, bc \equiv 1, a^2 + b \equiv 0$  will be found to involve the rest. The number of incongruous solutions in + integers, all  $< p$ , will first be found.

One obvious solution is  $a = d = 1, b = c = p - 1$ . By (2),  $b, c$  must both be 2-ic non-residues of  $p$ ; and have therefore  $\frac{1}{2}(p-1)$  values; these must be paired together so as to satisfy  $bc \equiv 1$ . One of these ways is  $b = c = p - 1$ ; excluding this, it is known that the remaining  $\frac{1}{2}(p-3)$  quantities can be paired together in  $\frac{1}{2}(p-3)$  ways, so as to satisfy  $bc \equiv 1$ , wherein  $b \neq c$ .

Next, by (2), every value of  $b$  gives two values of  $a$ ; and its conjugate  $c$  gives two values of  $d$ : these values of  $a, d$  will be found to form two conjugate pairs satisfying  $ad \equiv 1$ , as required.

Thus each of the  $\frac{1}{2}(p-3)$  conjugate pairs of  $b, c$  yields two conjugate pairs of  $a, d$ , wherein  $a \neq d$ ; this gives therefore  $\frac{1}{2}(p-3)$  solutions, to which must be added the special solution  $a = d = 1, b = c = p - 1$ ; total  $\frac{1}{2}(p-1)$  solutions in + integers, all  $< p$ , and incongruous.

An example will make this clear; take  $p = 19$ .

$$\left. \begin{array}{l} b = 2 \quad ; \quad 3 \quad ; \quad 8 \quad ; \quad 14 \quad ; \quad 18 \quad ; \\ c = 10 \quad ; \quad 13 \quad ; \quad 12 \quad ; \quad 15 \quad ; \quad 18 \quad ; \\ a = 6, 13; \quad 4, 15; \quad 7, 12; \quad 9, 10; \quad 1; \\ d = 16, 3; \quad 5, 14; \quad 11, 8; \quad 17, 2; \quad 1; \end{array} \right\} \text{total } 9.$$

The total number of solutions (asked for in Question) is, however, infinite; for, if  $(a', b', c', d')$  be a particular solution, so are  $(\pm p + a', \pm mp + b', \pm np + c', \pm rp + d')$ .

**15199.** (Professor NEUBERG.)—Trouver le lieu du centre d'une quadrique passant par quatre points fixes et dont les axes sont parallèles à des droites données.

Solutions (I.) by the PROPOSER; (II.) by the Rev. J. CULLEN.

(I.) Soient  $F = 0, G = 0, H = 0$  les équations de trois quadriques de la question. Une quadrique quelconque satisfaisant aux conditions données a pour équation  $F + \lambda G + \mu H = 0$ , où  $\lambda, \mu$  sont des coefficients indéterminés. Le centre étant donné par

$$F'_x + \lambda G'_x + \mu H'_x = 0, \quad F'_y + \lambda G'_y + \mu H'_y = 0, \quad \dots,$$

le lieu du centre est représenté par

$$\begin{vmatrix} F'_x & G'_x & H'_x \\ F'_y & G'_y & H'_y \\ F'_z & G'_z & H'_z \end{vmatrix} = 0.$$

(II.) Taking the coordinate axes to have the same direction as the given lines, then the equation of any of the quadrics is of the form

$$ax^2 + by^2 + cz^2 + 2px + 2qy + 2rz + 1 = 0 \dots\dots\dots(1).$$

The centre is given by

$$ax + p = 0, \quad by + q = 0, \quad cz + r = 0 \dots\dots\dots(2).$$

Now substituting the coordinates  $(x_1, y_1, z_1)$ , &c. of the four given points in (1), we obtain four equations, and these together with the equations (2) enable us to eliminate  $a, b, c, p, q$ , and  $r$ , the result being

$$\begin{vmatrix} x, & 0, & 0, & 1, & 0, & 0, & 0 \\ 0, & y, & 0, & 0, & 1, & 0, & 0 \\ 0, & 0, & z, & 0, & 0, & 1, & 0 \\ x_1^2, & y_1^2, & z_1^2, & 2x_1, & 2y_1, & 2z_1, & 1 \\ x_2^2, & y_2^2, & z_2^2, & 2x_2, & 2y_2, & 2z_2, & 1 \\ x_3^2, & y_3^2, & z_3^2, & 2x_3, & 2y_3, & 2z_3, & 1 \\ x_4^2, & y_4^2, & z_4^2, & 2x_4, & 2y_4, & 2z_4, & 1 \end{vmatrix} = 0,$$

which shows that the locus of the centre is a cubic surface of the form

$$Axyz + Byz + Cxz + Dxy + Gx + Fy + Hz + K = 0.$$

**14988.** (The late Professor CAYLEY, F.R.S.)—If

$$l^2 + m^2 + n^2 + \dots, \quad l'^2 + m'^2 + n'^2 + \dots$$

are each = 0, and  $s, s'$  denote positive integers, show that the integral

$$\int (lx + my + nz + \dots)^s (l'x + m'y + n'z + \dots)^{s'} dx dy dz \dots,$$

over the interior of the hyper-sphere  $x^2 + y^2 + z^2 + \dots = 1$  is = 0 or = a numerical multiple of  $(l' + mm' + nn' + \dots)^s$ , according as  $s'$  is not, or is, =  $s$ .

Solution by G. H. HARDY, B.A.

It is convenient to write  $x_1, x_2, \dots, l_1, l_2, \dots, l'_1, l'_2, \dots$  for  $x, y, \dots, l, m, \dots, l', m', \dots$ ;  $\Lambda$  for  $l_1x_1 + l_2x_2 + \dots$ ; and  $\Lambda'$  for  $l'_1x_1 + l'_2x_2 + \dots$ . And we suppose that  $n$  is the number of variables. Now

$$\int \Lambda^s \Lambda'^{s'} dv = \frac{1}{s + s' + n} \int \Lambda^{s-1} \Lambda'^{s'} dS,$$

the latter integral being extended over the surface of the unit sphere. Also

$$\Lambda^s \Lambda'^{s'} = (l_1x_1 + l_2x_2 + \dots)^{s-1} \Lambda'^{s'},$$

and, as  $x_1, x_2, \dots$  are the direction cosines of the outward normal at  $(x_1, x_2, \dots)$ ,

$$\int \Lambda^s \Lambda'^{s'} dS = \int \left( \frac{\partial}{\partial x_1} (l_1 \Lambda^{s-1} \Lambda'^{s'}) + \frac{\partial}{\partial x_2} (l_2 \Lambda^{s-1} \Lambda'^{s'}) \dots \right) dv.$$

But  $\sum \partial/\partial x_i (l_i \Lambda^{s-1} \Lambda'^{s'}) = (s-1) \Lambda^{s-2} \Lambda'^{s'} \sum l_i^2 + s' \Lambda^{s-1} \Lambda'^{s'-1} \sum l_i l'_i$ ;

so that 
$$\int \Lambda^s \Lambda'^{s'} dv = \frac{s'}{s + s' + n} \sum l_i l'_i \int \Lambda^{s-1} \Lambda'^{s'-1} dv.$$

The same reasoning shows that it is also equal to

$$\frac{s}{s + s' + n} \sum l_i l'_i \int \Lambda^{s-1} \Lambda'^{s'-1} dv;$$

it is therefore equal to 0 unless  $s = s'$ . And, if  $s = s'$ ,

$$\begin{aligned} \int \Lambda^s \Lambda'^s dv &= \frac{s}{2s + n} \sum l_i l'_i \int \Lambda^{s-1} \Lambda'^{s-1} dv = \frac{s}{2s + n} \frac{s-1}{2s + n - 2} \dots \frac{1}{n+2} (\sum l_i l'_i)^s \\ &= \frac{s(s-1) \dots 1}{(2s+n)(2s+n-2) \dots (n+2)} \frac{[\Gamma(\frac{1}{2})]^n}{\Gamma(\frac{1}{2}n+1)} (\sum l_i l'_i)^s \\ &= \frac{\pi^{1/2n}}{2^n} \frac{\Gamma(s+1)}{\Gamma(s+1+\frac{1}{2}n)} (\sum l_i l'_i)^s. \end{aligned}$$

This result may easily be verified for small values of  $n$ . If  $n = 2$ , we

obtain 
$$\int (lx + my)^s (l'x + m'y)^s dv = 0$$

or 
$$= \frac{\pi}{2^n (s+1)} (l'l' + mm')^s.$$

The volume integral is

$$\frac{1}{s + s' + 2} \int (lx + my)^s (l'x + m'y)^{s'} dS = \frac{l'^s m'^{s'}}{s + s' + 2} \int_0^{2\pi} e^{\pm i l' x \pm i m' y} d\theta$$

(since  $m = \pm il, m' = \pm il'$ ). This is 0 unless  $s = s'$  and the signs are different. In this case it is

$$\frac{2\pi (l'l')^s}{2^s (s+1)} = \frac{\pi (l'l' + mm')^s}{2^s (s+1)}$$

If the signs are the same,  $l'l' + mm' = 0$ ; so that the formula still holds.

**14881** (Corrected form). (V. DANIEL, B.Sc.)—Determine in Cartesian co-ordinates the family of plane curves related to two focal points P and Q, such that a particle projected through P shall, after rebounding from any point on one such curve, proceed in the line joining Q to that point. Coefficient of rebound =  $e$ ;  $PQ = 2a$ . Taking for origin the middle point of PQ, show that the lines  $x \pm y \sqrt{e} = a$  are common tangents at the focus Q.

Solution by the PROPOSER.

If  $\beta$  and  $\beta'$  are the angles of incidence and reflection, it follows geometrically that

$$\tan \beta = \frac{dx/dy + y/(x+a)}{1 - y/(x+a) dx/dy}, \quad \tan \beta' = \frac{dy/dx - (a-x)/y}{1 + (a-x)/y dy/dx}$$

Then 
$$e = \frac{\tan \beta}{\tan \beta'} = \frac{y^2 - x^2 + a^2 - y(x-a) dy/dx + y(x+a) dx/dy}{-y^2 + x^2 - a^2 - y(x-a) dx/dy + y(x+a) dy/dx}$$
;

therefore 
$$\frac{1-e}{1+e} \equiv \sin \alpha = \frac{x^2 - a^2 - y^2 + xy(dy/dx - dx/dy)}{ay \{dy/dx + dx/dy\}}$$
;

therefore 
$$y^2 (dy/dx)^2 (x - a \sin \alpha) + y dy/dx (x^2 - a^2 - y^2) - y^2 (x + a \sin \alpha) = 0.$$

Writing  $y^2 = Q$  and solving for  $dQ/dx$ ,

$$(x - a \sin \alpha) dQ/dx = Q + a^2 - x^2 \pm \{ Q + a^2 - x^2 + 4Q(x^2 - a^2 \sin^2 \alpha) \}^{1/2}$$
;

an equation which may be transformed thus:—

$$(x - a \sin \alpha) dQ/dx + 2(x^2 - a^2 \sin^2 \alpha) = Q + x^2 + a^2 \cos 2\alpha \pm \{ (Q + x^2 + a^2 \cos 2\alpha)^2 - 4a^2 \cos^2 \alpha (x^2 - a^2 \sin^2 \alpha) \}^{1/2}$$
;

Let 
$$Q + x^2 + a^2 \cos 2\alpha = a \cos \alpha (x^2 - a^2 \sin^2 \alpha)^{1/2} \{ \theta + \theta^{-1} \} \dots\dots\dots(1)$$

Then, if  $x - a \sin \alpha \neq 0$ , we obtain the linear equations

$$\frac{dQ}{dx} + 2(x + a \sin \alpha) = 2a \cos \alpha \left\{ \frac{x + a \sin \alpha}{x - a \sin \alpha} \right\}^{\frac{1}{2}} \theta,$$

or  $2a \cos \alpha \left\{ \frac{x + a \sin \alpha}{x - a \sin \alpha} \right\}^{\frac{1}{2}} \theta^{-1}.$

Also, differentiating (1),

$$dQ/dx + 2x = a \cos \alpha \cdot d/dx \{ (x^2 - a^2 \sin^2 \alpha)^{\frac{1}{2}} (\theta + \theta^{-1}) \};$$

therefore  $2 \tan \alpha + \frac{d}{dx} \{ (x^2 - a^2 \sin^2 \alpha)^{\frac{1}{2}} (\theta + \theta^{-1}) \} = 2 \left\{ \frac{x + a \sin \alpha}{x - a \sin \alpha} \right\}^{\frac{1}{2}} \theta,$

or  $2 \left\{ \frac{x + a \sin \alpha}{x - a \sin \alpha} \right\}^{\frac{1}{2}} \theta^{-1}.$

Writing  $2k_1$  and  $2k_2$  for the right-hand expressions gives one and the same differential equation

$$2 \tan \alpha + d/dx \{ k(x - a \sin \alpha) + k^{-1}(x + a \sin \alpha) \} = 2k;$$

i.e.,  $dx/dk - x \{ k - 2 \tan \alpha / (1 - k^2) \} = -a \sin \alpha (1 + k^2) / (k - k^{-1} - 2 \tan \alpha).$

Its solution is

$$x e^{-H} = -a \sin \alpha \int e^{-H} \frac{1 + k^{-2}}{k - k^{-1} - 2 \tan \alpha} dk + C_1 \dots \dots \dots (2),$$

where

$$H = \int \frac{dk}{k - 2 \tan \alpha / (1 - k^2)};$$

$$e^{-H} = k^{-1} \left\{ \frac{\sec \alpha - \tan \alpha - k^{-1}}{\sec \alpha + \tan \alpha + k^{-1}} \right\}^{-\sin \alpha} (\sec \alpha + \tan \alpha)^{-\sin \alpha}.$$

Writing (2) thus,  $x e^{-H} = I \cdot a \sin \alpha (a \sec \alpha + \tan \alpha)^{-\sin \alpha} + C_1$ , we have

$$I = - \int \frac{1 + k^{-2}}{k - 2 \tan \alpha - k^{-1}} \left\{ \frac{\sec \alpha - \tan \alpha - k^{-1}}{\sec \alpha + \tan \alpha + k^{-1}} \right\}^{-\sin \alpha} k^{-1} dk$$

$$= \int \frac{1 + k^{-2}}{1 - 2k^{-1} \tan \alpha - k^{-2}} \left\{ \frac{\sec \alpha - \tan \alpha - k^{-1}}{\sec \alpha + \tan \alpha + k^{-1}} \right\}^{-\sin \alpha} dk^{-1};$$

or, since  $(1 - 2 \tan \alpha k^{-1} - k^{-2}) = \sec^2 \alpha \{ 1 - (\sin \alpha + k^{-1} \cos \alpha)^2 \}$   
 $\equiv \sec^2 \alpha (1 - K^2)$ , say,

$$I = \sec \alpha \int \left( \frac{1 - K}{1 + K} \right)^{-\sin \alpha} \left\{ -1 + \frac{1 - \sin \alpha}{1 - K} + \frac{1 + \sin \alpha}{1 + K} \right\} dK.$$

Now

$$\int \left( \frac{1 - K}{1 + K} \right)^{-\sin \alpha} dK = K \left( \frac{1 - K}{1 + K} \right)^{-\sin \alpha} - \int \frac{2K \sin \alpha}{(1 + K)^2} \left( \frac{1 - K}{1 + K} \right)^{-1 - \sin \alpha} dK$$

$$= K \left( \frac{1 - K}{1 + K} \right)^{-\sin \alpha} + \int \left( \frac{1 - K}{1 + K} \right)^{-\sin \alpha} \times \left\{ \frac{1 - \sin \alpha}{1 - K} + \frac{1 + \sin \alpha}{1 + K} - \frac{2}{1 - K^2} \right\} dK.$$

Hence  $\int \left( \frac{1 - K}{1 + K} \right)^{-\sin \alpha} \left\{ -1 + \frac{1 - \sin \alpha}{1 - K} + \frac{1 + \sin \alpha}{1 + K} \right\} dK$   
 $= -K \left( \frac{1 - K}{1 + K} \right)^{-\sin \alpha} + \int 2 \left( \frac{1 - K}{1 + K} \right)^{-\sin \alpha} / (1 - K^2) dK,$

i.e.,  $I \cos \alpha = \left( \frac{1 - K}{1 + K} \right)^{-\sin \alpha} \{ \operatorname{cosec} \alpha - K \}.$

Equation (2) may now be written, after dividing by a constant,

$$x (K - \sin \alpha) + a (K \sin \alpha - 1) = C_2 \left( \frac{1 - K}{1 + K} \right)^{\sin \alpha},$$

or, reconstituting the value  $K = \sin \alpha + k^{-1} \cos \alpha$ ,

$$(x \sec \alpha + a \tan \alpha) k^{-1} = a \left\{ 1 + \lambda \left( \frac{\sec \alpha - \tan \alpha - k^{-1}}{\sec \alpha + \tan \alpha + k^{-1}} \right)^{\sin \alpha} \right\} \dots (3),$$

where  $\lambda$  is an arbitrary constant.

Equation (1), on substituting

$$\theta = k \left\{ \frac{x - a \sin \alpha}{x + a \sin \alpha} \right\}^{\frac{1}{2}},$$

becomes  $x^2 + y^2 + a^2 \cos 2\alpha = k a \cos \alpha (x - a \sin \alpha) + k^{-1} a \cos \alpha (x + a \sin \alpha)$ ,  
 or  $-y^2 \sec^2 \alpha = \{ k(x \sec \alpha - a \tan \alpha) - a \} \{ k^{-1}(x \sec \alpha + a \tan \alpha) - a \} \dots (4).$   
 Combining this with (3), we obtain an equation of similar form with (3), and the  $k$ -eliminant of these gives the family sought. [Rest in Vol.]

**15131.** (C. E. YOUNGMAN, M.A.)—Given a semicircle on diameter BC, draw an ordinate PN, and on NP produced take A such that  $BA^2 = BC(BN + NP)$ . Prove that the triangle ABC has

$$\tan^2 A = \tan B \tan C;$$

BROCARD angle  $90^\circ - A$ ; BROCARD axis parallel to BC, &c.

Solutions (I.) by R. TUCKER, M.A.; (II.) by Professor SANJANA, M.A.; (III.) by D. BIDDLE.

(I.) Let O be the centre, ON, PN =  $x, y$ ; radius =  $a$ , and AN =  $Y$ . Then, from the data,

$$y^2 = a^2 - x^2, (a + x)^2 + Y^2 = 2a(a + x + y), \text{ i.e., } Y^2 = y^2 + 2ay \dots (i, ii.)$$

Now  $\tan A = -\tan(B + C) = 2aY / (Y^2 - y^2) = Y/y \dots \dots \dots (iii.),$

and  $\tan B \tan C = Y^2 / (BN \cdot NC) = Y^2 / y^2 = \tan^2 A,$

$$\cot \omega' = \cot B + \cot C + \cot A = (2a + y) / Y = Y / y = \tan A;$$

therefore  $\omega' = 90^\circ - A.$

Again, LEMOINE point perpendicular  $= \frac{1}{2} a \tan \omega' = R \sin A \cot A = R \cos A;$

hence BROCARD line is parallel to BC. [Rest in Vol.]

QUESTIONS FOR SOLUTION.

**15223.** (Professor NANSON.)—If  $u$  be a homogeneous quadratic function of the  $n$  variables  $x$ , and  $v$  the same homogeneous quadratic function of the  $n$  variables  $y$ , eliminate the  $2n + 1$  quantities  $\theta, x, y$  from the  $2n$  equations of the types  $du/dx = \lambda x + \theta y, dv/dy = 0.$

**15224.** (Rev. Prebendary WHITWORTH.)—If

$$1/x + 1/y + 1/z = 0 \text{ and } x + y + z = 1,$$

show, by simple algebra, that for all positive integral values of  $n$ ,

$$x^n + y^n + z^n = 1 + nxyz + \frac{1}{2} [R_1^{n-5} n (xyz)^2] + \frac{1}{4} [R_2^{n-8} n (xyz)^3] + \frac{1}{8} [R_3^{n-11} n (xyz)^4] + \dots,$$

the number of terms in the series being one more than the greatest integer in  $\frac{1}{2}n, e.g.,$

$$x^3 + y^3 + z^3 = 1 + 3xyz, \quad x^7 + y^7 + z^7 = 1 + 7xyz + 7x^2y^2z^2.$$

**15225.** (R. W. D. CHRISTIE.)—Resolve  $5, 17, \text{ or } 41$  into a sum of five cubes, and give a general form for a cube equal to the sum of five integral cubes.

**15226.** (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—If  $p, q, r$  be different odd primes, and if  $y, y'$  be roots ( $< p$ ) of  $y^n - 1 \equiv 0, y^{m'} + 1 \equiv 0 \pmod{p}$ , prove that

- i.  $\Sigma y \equiv -1, \Sigma y' \equiv +1 \pmod{p},$  if  $n = q;$
- ii.  $\Sigma y \equiv 0, \Sigma y' \equiv 0 \pmod{p},$  if  $n = q^2;$
- iii.  $\Sigma y \equiv +1, \Sigma y' \equiv -1 \pmod{p},$  if  $n = q^r,$

where each summation ( $\Sigma$ ) includes all the incongruous roots  $< p$ . Give an example of each case.

**15227.** (G. HEFFEL, M.A.)—If the roots of  $x^3 - px^2 + qx - r = 0$  are the sines of the angles of a triangle, then  $p^4 - 4p^2q + 8pr^2 + 4r^3 = 0.$  If they are the squares of the sines,  $p^2 - 4q + 4r = 0.$

**15228.** (Rev. T. ROACH, M.A.)—Show that the sum of the series

$$\frac{1}{2} - \frac{1}{3} + \frac{1}{4} - \frac{1}{5} + \dots = \frac{1}{15} \log 3 - \frac{1}{3} (\sqrt{3} \pi).$$

**15229.** (JAMES BLAIKIE, M.A.)—If  $u_0, u_1, u_2, \dots, u_n, \dots$  represent the "contiguous" series  $1, 1, 2, 3, 5, 8, \dots$ , where  $u_n = u_{n-1} + u_{n-2}$ , prove the following relationships:—

- (1)  $u_{2k} = u_k (u_{k-1} + u_{k+1}),$  (2)  $u_{2k+1} = u_k^2 + u_{k+1}^2,$
- (3)  $u_{rk} = u \{ u_{(k-1)k+1} + u_{k-1} u_{(r-2)k+1} + u_{k-1}^2 u_{(r-3)k+1} + \dots + u_{k-1}^{r-1} \}.$

**15230.** (D. BIDDLE.)—A spherical ball of wool is transfixed by a knitting-needle of infinitesimal thickness. ## SEELEY & CO.'S NEW BOOKS.

**OLD ST. PAUL'S CATHEDRAL.** By the Rev. Canon BENHAM, D.D., F.S.A. With a Frontispiece in Photogravure, 4 Plates printed in Colour, and many other Illustrations. Super royal 8vo, sewed, 5s. net; or cloth, gilt top, 7s. net.

**STORIES OF CHARLEMAGNE and the Twelve Peers of France.** From the Old Romances. By the Rev. A. J. CHURCH, Author of "Stories from Homer." With 8 Illustrations in Colour from Drawings by G. MORROW. 5s.

"A delightful rendering of the doughty deeds of the Paladins, Roland and Oliver, the four sons of Aymon, the giant Fierabras, the traitor Ganelon, and others. Professor Church has well kept the chivalric spirit of the Charlemagne romances whilst putting them into simple terse English."—*Graphic*.

**THE SIEGE OF YORK.** A Story of the Days of Thomas Lord Fairfax. By BEATRICE MARSHALL, Author of "Old Blackfriars." With 8 Illustrations. 5s. [Shortly]

**THE KIDNAPPING OF ETTIE,** and other Tales. By BRYN LYNNE, Author of "Widow Wiley." With 16 Illustrations. 5s. "A book which should be read with an equally strong interest by young readers and by old."—*Scotsman*.

#### JUST PUBLISHED.

**THE NATURALIST ON THE THAMES.** By C. J. CORNISH, Author of "Life at the Zoo," "Wild England of To-day," &c. With 38 Illustrations. Demy 8vo, 7s. 6d.

"Mr. Cornish's latest book is in every way equal to his former work, and after reading it we confess to an even greater love for our Father Thames. . . . We have read nothing brighter and more entertaining in its own particular line during recent years."—*St. James's Gazette*.

**NEW CHINA AND OLD.** Personal Recollections and Observation of Thirty-three Years. By Archdeacon MOULE. With 30 Illustrations. Third and Cheaper Edition, Enlarged, 5s.

"The revised and enlarged edition of 'New China and Old' will be heartily welcomed. . . . Those who have not read the earlier edition will be strongly attracted by the descriptions of Chinese country life, ancestral worship, superstitions, Buddhism and Taoism, &c."—*Daily News*.

**THE LIBERATION OF ITALY.** By the Countess E. MARTINENGO CESARESCO. With Portraits on Copper. Second Edition. 5s.

**OXFORD.** Brief Historical and Descriptive Notes. By ANDREW LANG. With many Illustrations. Cheaper Edition, 3s. 6d.

**CAMBRIDGE.** By J. W. CLARK. With many Illustrations. Cheaper Edition, 3s. 6d.

#### POPULAR EDITIONS, EACH SIXPENCE NET.

**THE STORY OF THE ILIAD.** By the Rev. A. J. CHURCH. With 17 Illustrations.

**THE STORY OF THE ODYSSEY.** By the Rev. A. J. CHURCH. With 17 Illustrations. "One of the most beautiful pieces of prose in the English language."—*Spectator*.

#### PROF. CHURCH'S BOOKS.

**Helmet and Spear.** Stories of the Wars of the Greeks and Romans. With Illustrations. 5s.

**Stories from Homer.** With Illustrations. 24th Thousand. 5s.

**Stories from Virgil.** With Illustrations. 17th Thousand. 5s.

**Stories from the Greek Tragedians.** With Illustrations. 5s.

**Stories from the Greek Comedians.** With Illustrations. 5s.

**Stories of the East from Herodotus.** With Illustrations. 5s.

**The Story of the Persian War, from Herodotus.** With Illustrations. 5s.

**Stories from Livy.** With Illustrations. 5s.

**Roman Life in the Days of Cicero.** With Illustrations. 5s.

**The Story of the Iliad.** With Illustrations. 5s.

**The Story of the Odyssey.** With Illustrations. 5s.

**Heroes of Chivalry and Romance.** Beowulf, Arthur, and Siegfried. With Illustrations. 5s.

**The Count of the Saxon Shore.** With Illustrations. 5s.

**With the King at Oxford.** With Illustrations. 5s.

**The Hammer.** A Story of Maccabean Times. With Illustrations. 5s.

**The Story of the Last Days of Jerusalem, from Josephus.** With Illustrations. 3s. 6d.

**Three Greek Children.** With Illustrations. 3s. 6d.

**The Stories of the Iliad and the Aeneid.** With Illustrations. 1s. 6d.

#### NEW EIGHTEENPENNY SERIES.

"These are new editions of works of established favour. But it is something new as well as something to practical purpose to comment upon their reappearance in such well-bound, well-illustrated, daintily pretty volumes, and at so low a price."—*School Board Chronicle*.

**To the Lions.** A Tale of the Early Christians. By the Rev. A. J. CHURCH. With 8 Illustrations.

**The Old Looking Glass and The Broken Looking Glass.** By M. L. CHARLESWORTH. In One Volume.

C. R. HODGSON, B.A., *Secretary.*

## WINTER MEETING FOR TEACHERS (JANUARY, 1903).

Conducted by the

### COLLEGE OF PRECEPTORS.

(Bloomsbury Square, London, W.C.)

The Fourth Winter Meeting for Teachers will take place at the College of Preceptors in the first week in January, 1903.

The Programme will include Lectures on general principles of education, and on methods of teaching various school subjects.

The Fee for the whole Meeting is 10s.

Tickets may be obtained from the Secretary of the College of Preceptors, and should be applied for on or before December 21.

Tickets (not transferable) will also be issued AT HALF FEES (i.e., 5s. for the whole Meeting) to members of the following Teachers' Societies:—The Teachers' Guild (Central Guild and Branches), The Birmingham Teachers' Association, The Liverpool Teachers' Guild, The Training College Association, The Head Masters' Conference, The Incorporated Association of Head Masters, The Private Schools' Association, The Assistant Masters' Association, The Association of Assistant Mistresses, The Froebel Society, The National Union of Teachers. Tickets at half fees will also be issued to candidates at the Diploma Examination of the College of Preceptors (Dec. 30-Jan. 3).

Members of the College of Preceptors will receive a ticket (not transferable) without charge, on applying for it to the Secretary of the College on or before Dec. 21.

Tickets, price 1s., for any single Lecture, may also be had at the College on the day of the Lecture, if the available seats are not already occupied.

The detailed Programme will be ready early in December.

C. R. HODGSON, B.A., *Secretary.*

**MESSRS. BELL'S NEW LIST.**

*Educational Catalogue Post Free on application.*

Now Ready, Second Edition Revised. Crown 8vo, 2s. 6d.; also Book I., separately, 1s.

**Elementary Geometry.**

By **W. M. BAKER, M.A.,**

Head Master of the Military and Civil Department at Cheltenham College; and

**A. A. BOURNE, M.A.,**

Head Mathematical Master on the Classical Side at Cheltenham College.

\* \* A Volume containing the substance of Euclid, Book II., the rest of Book III., and Books VI. and IX. is in the press and will be published shortly.

This volume is written on the lines recommended by a Committee of the Mathematical Association, which was formed at the suggestion of the British Association for the purpose of making reforms in the teaching of Elementary Mathematics.

Crown 8vo, with or without Answers, 3s.

**Examples in Algebra.**

By **C. O. TUCKEY, B.A.,**

Assistant Master at Charterhouse, late Scholar of Trinity College, Cambridge.

These Examples are intended to provide a complete Course of Elementary Algebra for classes in which the bookwork is supplied by the teacher.

In the choice of the subjects included and in their arrangement the recommendations of the Committee on the Teaching of Mathematics appointed by the Mathematical Association have been followed throughout.

Crown 8vo, 4s. 6d.

**DIFFERENTIAL CALCULUS FOR BEGINNERS.**

By **ALFRED LODGE, M.A.,** late Fereday Fellow of St. John's College, Oxford; Professor of Pure Mathematics at the Royal Indian Engineering College, Coopers Hill; with an Introduction by **SIR OLIVER LODGE, D.Sc., F.R.S., LL.D.,** Principal of the University of Birmingham.

Second Edition, Revised. Crown 8vo, 2s.

**AN INTRODUCTION TO CHEMISTRY.**

By **D. S. MACNAIR, Ph.D. (Wurzburg), B.Sc. (London),** late Lecturer in Chemistry at the Glasgow and West of Scotland Technical College and the East London Technical College.

Crown 8vo, 2s.

**KINGSLEY'S HEROES.**

Edited, with Notes and Appendixes, by **A. E. ROBERTS, M.A.,** Classical Scholar of St. Catharine's College, Cambridge. With Illustrations and Maps.

Crown 8vo, 3s.

**MILITARY AND NAVAL EPISODES.**

Selected for Translation into German, and edited, with English-German Vocabulary and Notes, by **ALOYS WEISS, Ph.D.,** Professor of German at the Royal Military Academy, Woolwich; President of the London Branch of the General German Language Association, &c.

The extracts forming the text of this volume have been selected from recent standard works on the military and naval history of the eighteenth and nineteenth centuries. Some of the most thrilling episodes in British warfare are brought before us in masterly descriptions written by leading strategists and well-known professional writers. All matters usually discussed in notes have been incorporated in the vocabulary, where, besides biographical, historical, and geographical notes, idiomatic expressions are translated, and hints for punctuation, grammatical rules, &c., are also given.

London: **GEORGE BELL & SONS, York Street, Covent Garden.**

# SWAN SONNENSCHN & CO.

## THE SCHOOLMASTERS YEAR-BOOK AND DIRECTORY.

Part I. supplies copious information relating to Societies, Examinations, Magazines, connected with **Secondary Education**; Universities, Colleges, Medical Schools, with particulars of Scholarships, Teaching Diplomas, and Courses of Training for Secondary Teachers; the Parliamentary Year; the Legal Year; List of Educational Publishers; List of Scholastic Agents; Recent Acts of Parliament and Orders in Council; Notes on Degrees, Diplomas, &c.; Official Bodies; Work of County Council Technical Education Committees, &c., &c.

Part II. contains the names, degrees, experience, &c., of Secondary School Masters and others connected with the work of Secondary Education. The number of entries exceeds 6,500. In addition, there is a list of Secondary Schools and their Masters.

Part III. includes 15 articles on important questions by W. H. D. ROUSE, M.A., CLOUDESLEY BRERETON, M.A., Rev. R. S. DE COURCY LAFFAN, M.A., Prof. MINCHIN, F.R.S., J. OLDFIELD, M.D., T. M. MAGUIRE, LL.D., F. STORR, B.A., G. F. BRIDGE, B.A., and other expert writers; as well as Reviews of Books of the year on Education.

The work will contain about 1,000 pages, and be published early in December at **5s.** net.

*Fourteenth Year of Issue.*

## THE PUBLIC SCHOOL YEAR-BOOK FOR 1903.

# HOUSEHOLD FURNITURE FOR TEACHERS

FOR CASH OR DEFERRED PAYMENTS (1, 2, or 3 Years).

*Best Quality. Low Prices. Free Life Assurance.*

## RODNEY & CO., Ltd.

*(Associated with the Educational Supply Association),*

Offer Members of the Scholastic Profession the means of obtaining *sound, reliable, and artistic* Furniture (whether for Cash or Credit) on exceptionally advantageous terms.

RODNEY & CO. have been established to supply Teachers with Household Furniture and other Requisites at wholesale prices, in the same way as the Educational Supply Association supplies them with general School Material. The want of such a firm has long been felt—a firm with whom teachers may do business with every confidence—thus avoiding the excessive charges but too often made, and the unscrupulous methods of business but too often pursued, by many of the advertising Furniture houses.

RODNEY & CO.'S connexion with the Educational Supply Association will, it is thought, be sufficient guarantee of their superior methods of doing business. One price only charged, the Cash Purchaser having a liberal allowance made him for immediate payment and the Credit Purchaser being charged only a reasonable rate of interest for the convenience afforded him.

**FREE LIFE ASSURANCE** (To Credit Customers) covering Unpaid Instalments in the event of Death.

Rodney & Co.'s Popular and Unique System of Furnishing

Is fully described in a Booklet, which may be had post free on application to the **MANAGER.**

**RODNEY & CO., Ltd.,**

**45 Holborn Viaduct, London, E.C.**

## CUSACK'S PATENT GEOMETRIKON.

**A Box of Apparatus for simplifying the study of Solid Geometry. 3 6 net, post free 3/10.**

In the Study of **SOLID** Geometry experience has shown that Students who have actually handled representative planes, solids, &c., retain a more vivid and lasting impression of them than if their acquaintance had been made on paper only. In the latest Geometrical **SYLLABUS** of the **BOARD OF EDUCATION** it is recommended that "**MODELS** should be freely used, **ESPECIALLY** in **SOLID** Geometry." In the **GEOMETRIKON**, provision has been made for the student, under the guidance of the Text-Book (Solid Geometry), to work out for himself the methods and processes under consideration, and by the tangible aids of mahogany, **HINGED, PLAN AND ELEVATION PLANES; SOLIDS; TRANSPARENT** Xylonite, and **OPAQUE** Cardboard **PLANES**; auxiliary **DIAGRAMS** on Xylonite, Card, &c., to obtain such a firm grasp of the truth involved as eventually to be able to dispense with all such aids.

The whole is designed to illustrate all the essential principles of Science Subject I from the most elementary to the most abstruse.

"I cannot speak too highly of the idea of the Geometrikon; it is, I consider, the best thing of its kind that I have seen."—J. T. COOK, School of Art, Sheffield.

"I have carefully looked through 'Cusack's Solid Geometry,' and have decided to use it as a text-book in this School. The 'Geometrikon' is a most useful addition to the book."—JOHN FISHER, Art Master, Kensington Government School of Science and Art, Berkeley Square, Bristol.

## EDUCATIONAL REVIEW.

Edited by NICHOLAS MURRAY BUTLER.

"We find the 'Educational Review' absolutely indispensable at every turn."—MICHAEL E. SADLER, Director of Special Inquiries and Reports, Board of Education, London, England. September 13, 1901.

"I wish I could tell you how much of stimulus and inspiration I get from reading the 'Educational Review.' The educational world can never repay you for the work you have put into that richly stored magazine. I have just gone through the entire twenty-one volumes in order to get some things that I especially desired, and I am simply amazed at what I find in those volumes."—WILBUR P. GORBY, High School, Hartford, Conn. September, 1901.

"To men like myself it is a sort of working library. Its volumes stand always at my elbow."—Prof. PAUL H. HANUS, Harvard University.

"The broadest and most able of the American periodicals devoted to education."—*New York Times*.

"An educational magazine of which the teaching profession may well be proud. There is nothing better in educational journalism in any country. And it has an editor who has convictions, and the courage of them."—*School and Home Education*, Bloomington, Ill.

"The 'Review' has from the first issue taken its place at the head of American periodicals devoted to education. It is, indeed, the first educational paper in America to win for our country the respect of educationalists abroad."—*Journal of Pedagogy*, Ypsilanti, Mich.

**THE OLD SENATE AND THE NEW MONARCHY.** 60 B.C. to A.D. 14. (Reader.) With 14 Illustrations. Price 2s.  
 By T. S. POSTER, B.A.  
**PUERORUM LIBER AUREUS.** A First Latin Translation Book. With 15 Illus. Price 1s. 6d.  
**PHYSICS.**  
 By A. F. WALDEN, M.A., F.C.S., and J. J. MANLEY.  
**INTRODUCTION TO THE STUDY OF PHYSICS.**  
 Vol. I. **General Physical Measurements.** With 76 Illustrations. Price 3s. 6d.  
 Vol. II. **Heat, Light, and Sound.** [In prep.]  
 By W. J. DOBBS, M.A.  
**A TREATISE ON ELEMENTARY STATICS.** With 191 Illustrations. Price 7s. 6d.

A. & C. BLACK, SOHO SQUARE, LONDON, W.

# CAMBRIDGE UNIVERSITY PRESS.

## A List of Books suitable for the Preliminary, Junior, and Senior Cambridge Local Examinations, 1903.

- PART I.** **Arithmetic for Schools.** By C. SMITH, M.A. With or without Answers. 3s. 6d. Also in two parts, separately. 2s. each.
- PART II. Religious Knowledge.** **The Church Catechism Explained.** By the Rev. A. W. ROBINSON, B.D., Examining Chaplain to the Bishop of Wakefield. 2s.
- The Prayer Book Explained.** By the Rev. PERCIVAL JACKSON, M.A. PART I.—The Daily Offices and the Litany. 2s. 6d.
- The Cambridge Companion to the Bible.** With Glossary, Maps, and Concordance. Edited by the Rev. Prof. LUMBY, D.D. Large type Edition. 5s. Editions in smaller type, 3s. 6d., 2s. 6d., and 1s.
- The Second Book of Samuel.** Edited by the Rev. A. F. KIRKPATRICK, D.D., Regius Professor of Hebrew. 2s. net. Smaller Edition. 1s.
- The Gospel according to St. Luke.** Edited by the Very Rev. F. W. FARRAR, D.D., Dean of Canterbury. 3s. net. Smaller Edition. 1s.
- The Acts of the Apostles.** Edited by the Rev. Prof. LUMBY, D.D. With 4 Maps. 3s. net. Smaller Edition. 1s.
- The Second Epistle to the Corinthians.** Edited by the Rev. J. J. LIAS, M.A. 1s. 6d. net.
- The Gospel according to St. Luke in Greek.** Edited by the Very Rev. F. W. FARRAR, D.D. 6s.
- Cambridge Bible for Schools.** **The Elements of English Grammar.** By A. S. WEST, M.A. 2s. 6d.
- English Grammar for Beginners.** By A. S. WEST, M.A. 1s.
- Key to West's Elements of English Grammar and English Grammar for Beginners.** By A. S. WEST, M.A. 3s. 6d. net.
- Outlines of the History of the English Language.** By T. N. TOLLER, M.A. 4s.
- Pope's Essay on Criticism.** Edited by A. S. WEST, M.A. 2s. *[Seniors.]*
- Kingsley.—The Heroes.** With Illustrations from Greek Vases, &c. Edited by E. A. GARDNER, M.A. 2s. *[Preliminary.]*
- Scott.—The Lord of the Isles.** Edited by J. H. FLATHER, M.A. 2s. *[Preliminary and Juniors.]*
- Shakespeare.—Julius Cæsar.** Edited by A. W. VERITY, M.A. 1s. 6d. *[Juniors and Seniors.]*
- Milton.—Paradise Lost, Books V. and VI.** Edited by A. W. VERITY, M.A. 2s. *[Seniors.]*
- Geography, Elementary Commercial.** A Sketch of the Commodities and the Countries of the World. By H. R. MILL, D.Sc. New Edition, enlarged. 1s. 6d.
- An Atlas of Commercial Geography.** By J. G. BARTHOLOMEW, F.R.G.S. With an Introduction by Dr. H. R. MILL. 3s.
- A Short History of the Expansion of the British Empire.** By W. H. WOODWARD, Christ Church, Oxford. With 7 Maps. Cloth, 4s. Cloth extra, gilt top, 5s.
- An Outline History of the British Empire from 1500 to 1870.** By the same Author. 1s. 6d. net.
- Latin.** **Caesar.—De Bello Gallico, Books II. and III.** Edited by A. G. PESKEIT, M.A. 2s. *[Preliminary and Juniors.]*
- Caesar.—De Bello Gallico, Books II. and III.** Edited by E. S. SHUCKBURGH, M.A. 1s. 6d. each. *[Preliminary and Juniors.]*
- Vergil.—Aeneid, Book X.** Edited by A. SIDGWICK, M.A. 1s. 6d. *[Juniors and Seniors.]*
- Another Edition, by the same Editor, with Vocabulary. 1s. 6d. *[Immediately.]*
- Cornelius Nepos.—Lysander, Alcibiades, Thrasylulus, Oconon, Dion, Iphicrates, and Chabrias.** Edited by E. S. SHUCKBURGH, M.A. 1s. 6d. *[Preliminary.]*
- Latin (continued).** **Livy, Book V.** Edited by L. WHIBLEY, M.A. 2s. 6d. *[Seniors.]*
- Cicero.—Pro Sulla.** Edited by J. S. REID, Litt.D. 3s. 6d. *[Seniors.]*
- Horace.—Odes, Book III.** Edited by J. GOW, Litt.D. 2s. *[Seniors.]*
- Greek.** **Xenophon.—Anabasis, Book II.** Edited by G. M. EDWARDS, M.A. 1s. 6d. *[Juniors.]*
- Xenophon.—Anabasis, Book II.** Edited by A. PRETOR, M.A. 2s. 6d. *[Juniors.]*
- Thucydides, Book VII.** Edited by the late H. A. HOLDEN, M.A., Litt.D. 5s. *[Seniors.]*
- Aeschylus.—Prometheus Vincetus.** Edited by H. RACKHAM, M.A. 2s. 6d. *[Juniors and Seniors.]*
- Homer.—Odyssey, Book IX.** Edited by G. M. EDWARDS, M.A. 2s. 6d. *[Seniors.]*
- Herodotus, Book VIII., Chaps. 1-90.** Edited by E. S. SHUCKBURGH, M.A. 2s. 6d. *[Seniors.]*
- Herodotus, Book VIII. complete.** By the same Editor. 4s.
- French.** **Perrault.—The Fairy Tales of Master Perrault.** Edited by WALTER RIPPMMANN, M.A. 1s. 6d. *[Preliminary.]*
- About.—Le Roi des Montagnes.** Edited by A. R. ROPES, M.A. 2s. *[Juniors and Seniors.]*
- Sandeau.—Mademoiselle de la Seiglière.** Edited by A. R. ROPES, M.A. 2s. *[Juniors and Seniors.]*
- German.** **Schiller.—Wilhelm Tell.** Edited by KARL BREUL, Litt.D., Ph.D. 2s. 6d.
- Abridged Edition, by the same Editor. 1s. 6d. *[Juniors and Seniors.]*
- Grimm. Twenty Stories from.** Edited by WALTER RIPPMMANN, M.A. 3s. *[Preliminary and Juniors.]*
- \*This volume contains all the Tales selected for the Preliminary and Junior Examinations.*
- Goethe's Boyhood. Goethe's Knabenjahre (1749-1761).** Arranged and Annotated by W. WAGNER, Ph.D. New edition, revised and enlarged, by J. W. CARTMELL, M.A., Fellow of Christ's College. 2s. *[Seniors.]*
- Mathematics.** **Euclid's Elements of Geometry.** Books I.-VI., and XI., XII. Edited by H. M. TAYLOR, M.A. 5s. Books I. and II., 1s. 6d. Books III. and IV., 1s. 6d. Books V. and VI., 1s. 6d. Books XI. and XII., 1s. 6d. Also Books I.-IV., 3s. Books I.-VI., 4s.
- Elementary Algebra.** By W. W. ROUSE BALL, M.A. 4s. 6d.
- An Elementary Treatise on Plane Trigonometry.** By E. W. HOBSON, Sc.D., F.R.S., and C. M. JESSOP, M.A. 4s. 6d.
- Plane Trigonometry.** By S. L. LONEY, M.A. Fifth Edition. 7s. 6d.
- Or in Two Parts:  
PART I.—Up to and including the Solution of Triangles. 5s.  
PART II.—Analytical Trigonometry. 3s. 6d.
- Elements of Statics and Dynamics.** By S. L. LONEY, M.A. Seventh Edition. 7s. 6d.
- PART I.—Elements of Statics. 4s. 6d.  
PART II.—Elements of Dynamics. 3s. 6d.
- Elements of Hydrostatics.** By the same Author. 4s. 6d.
- Mechanics and Hydrostatics.** By R. T. GLAZEBROOK, M.A., F.R.S. 8s. 6d.
- Also separately:  
Dynamics, 4s. Statics, 3s. Hydrostatics, 3s.
- Drawing.** **Geometrical Drawing.** With Notes and Examples. By W. H. BLYTHE, M.A.
- PART I.—Plane and Elementary Solid. 2s. 6d.  
PART II.—Solid or Descriptive Geometry. 2s.
- Natural Science.** **Heat and Light.** An Elementary Text-Book, Theoretical and Practical, for Colleges and Schools. By R. T. GLAZEBROOK, M.A., F.R.S. Crown 8vo, 5s.
- Also separately  
Heat, 3s. Light, 3s.

## The Educational Times.

### The Cambridge Conference.

THE barrenness of conferences is proverbial; it is aptly expressed in the history of Rasselas and his Conference on the Choice of Life. At the end of all the talk the Princess declared her wish to found a college of learned women, the Prince desired to see all the parts of government with his own eyes, and their learned friends were contented to be driven along the stream of life without directing their course to any particular port. "Of these wishes that they had formed," however, "they well knew that none could be obtained"; so "they deliberated awhile what was to be done, and resolved when the inundation should cease to return to Abissinia." This has been the usual end of recent conferences, whether they were the means of formulating resolutions to be forwarded to those in power or whether the conditions imposed forbade resolutions altogether. After the deliberations the members returned to Abissinia—that is to say, to chaos, lethargy, and the barren waste of inefficiency. Though undoubtedly this has been the rule, there have been exceptions, and no one who attended the Conference on the Training of Teachers at Cambridge would deny that this was one of the most striking exceptions. There will be no going back to the old haze and uncertainty as to the need of training. The progress of the Conference was marked by an unmistakable clearing away of both uncertainty and indecision and the fixing of a general consensus of opinion. At the conclusion members on all sides admitted that at last they understood the problem.

The first hour of the Conference produced the usual academic arguments in favour of an impracticable ideal. A post-graduate training involving an expenditure of time and money which few aspirants for the honour of teaching could possibly afford was the favoured scheme. It seemed to be assumed that one kind of training was to be imposed on all, and any suggestion of a partial remedy was met by the question: How can you expect to recruit sufficiently the army of teachers by such a method? Gradually it became clear to all that the requirements first proposed were far too high, and also that various methods concurrently offered to teachers of different kinds of schools or of different subjects

formed the best, and indeed the only, workable method. At the close of the first sitting Sir Oliver Lodge, in a statement of what he considered he had learnt from the discussion, very accurately enunciated the points on which at that stage all seemed to be agreed:—

1. Training is necessary for teachers of all grades. It should be made compulsory by the condition of registration.
2. For the acquirement of skill in the discipline of large classes and in the teaching of the elementary subjects the primary school is the best practising school.
3. Fresh methods of training would be required as the knowledge of principles advanced.
4. The training colleges should be associated or affiliated to the Universities.
5. Training can never be a substitute for the learning of the subjects to be taught, and therefore training could not possibly shorten the University course.
6. A year as a student-teacher was a desirable preliminary.
7. The importance of pedagogy was not sufficiently recognized, but the time had arrived when it ought at least to be recognized by the Universities.
8. Pecuniary help should be given to the practising schools to secure the necessary aid and attention for the students under training.
9. There should be a wise selection of those who would most profit by training, and greater pecuniary attraction should be offered in the way of assistant masters' salaries.

The opening of the second day's debate showed that it was clear there might be three stages in the training: first, that of the student-teacher, who had decided to take to the work and had been approved by a skilled schoolmaster, and who would spend three terms or less in a school doing a little teaching and observing others teach, preferably in the school in which he had been educated; second, that of the college or University student; third, that of a probationer, at the same time on trial and under guidance. These three parts would assume different proportions in different cases, and they ought not all to be essential for registration in any individual case. The advantages of the combination were most clearly laid before the Conference by Canon Bell, of Marlborough, and Canon Glazebrook, of Clifton.

The financial difficulties of the problem were ably dealt with at the close of the sitting, and some of the greatest impediments in the way of general training were shown to be removable.

The University of Cambridge has rendered a great service to the whole community in calling and organizing a Conference which has completely cleared away all doubts as to the necessity of training and as to the possibility of arranging the conditions so as to meet the requirements of all schools.

## NOTES.

THE provisions of the Education Bill may now be taken as substantially settled. They will scarcely suffer disturbance in the House of Lords, excepting the Kenyon-Slaney amendment, which is tolerably sure to be rejected, or at least to be essentially modified. The vigorous application of the closure, and, still more, the introduction of fresh provisions under its operation, have tended to exacerbate feeling among the opponents of the measure. The discontent in the country has been strenuously manifested and fostered during the month, and the refusal to pay rates has in some places taken the initial practical form of signing rolls to that effect at local meetings. We cannot but repeat our expression of regret that the secondary portion of the Bill remains without some very desirable amendments. At the same time, it may be hoped that the new system will receive a fair trial, uncomplicated by attempts at "wrecking" or making "unworkable," or even by a morose aloofness. The actual work of education should be the first interest of good citizens.

THE resignation of Sir George Kekewich was somewhat unexpected, and the reasons assigned are by no means reassuring. Sir George is still three years short of the age limit; there is no impeachment of his physical or intellectual competence; and there has been nothing of the nature of friction between his office and the profession or the educational administrators throughout the country. He has been, and is, universally respected. He is to be succeeded, when the new Act comes into operation, by Mr. R. L. Morant, who has gone up like a rocket in the official sphere over the heads of a dozen distinguished seniors. "It is an open secret," we are authoritatively informed, "that Mr. Morant has had a very large share in the framing of the Education Bill," and so we are led to infer that no one is "more competent to give the measure a fair start and to watch its workings with a vigilant eye." Yes; but the explanation does not explain. However, Mr. Morant will, no doubt, have an unprejudiced reception by the profession.

THE important meeting in support of the appeal of King's College, London, for an endowment of half a million ought to have effective results; though past experience does not encourage immediate hopefulness. The appeal has three objects: the liberation of the college from its existing debt; the maintenance of its efficiency in laboratories and equipment for higher teaching and research; and the adequate remuneration of its professors. It should not be necessary to say that these objects, one and all, are most laudable, and even urgent. The college can point to a highly honourable record of usefulness—beyond all proportion to its resources, for, apart from scholarships and prizes, it is practically without endowment. Such a position of such an institution is anything but creditable in an intelligent and wealthy community. The college has shown a very reasonable disposition to come into line with modern ideas, and notice has just been given (November 21) that it will apply to Parliament next Session for leave to bring in a Bill for the abolition of religious tests (except in

theology) and other important practical reforms in its organization. We sincerely trust that the appeal will meet with a worthy and generous response.

THE classical question just debated—not for the last time—at Oxford is raised in a wider form by Dr. Postgate in the November number of the *Fortnightly Review*. Dr. Postgate holds it to be "necessary that the study of Latin should be kept as an integral part of all higher education, and that of Greek as an integral part of the higher literary training." He makes no quarrel over the claims of French and German; though he thinks they "do not furnish so valuable a mental training." Some of his examples of the results of examinations in classics are sufficiently appalling. However, Dr. Postgate would cut down the amount of elementary work (unusual and irregular vocables and forms); and he would call for improvement in methods (in text-books, pronunciation, and the teaching of grammar). "If the 'dead' languages and literature are not to retire into the background, they must be taught as if they were alive": that, he thinks, is "the cardinal point of all." And here are "Some Reflections on a Classical Curriculum" (Oxford: Blackwell), by a modestly anonymous writer, who tells his Oxford *confrères*: "We are framing our examinations for the specialist; and the 'hungry sheep' who do not want to be specialists, but only to have a good education, 'look up and are not fed,' or, rather, they are overfed with a diet of minute studies which they do not desire and cannot digest." All this reveals somewhat serious symptoms, and emphasizes the educational prudence of a stitch in time.

IN the current number of the *Teachers' Guild Quarterly* a cautious writer urges the Universities to take the lead in the necessary reformation of educational studies on the lines of a school curriculum "such as has been tried and found to be at once feasible and fruitful of good in other countries, and to some extent in our own."

It is they that are responsible for Latin at seven and a half and Greek at nine and a half years of age, whereas it seems almost certain that equal proficiency in both subjects at the age of eighteen can be attained by pupils embarking on them three to four years later. Their responsibility for what they exclude, by not requiring it, is still greater. In this way they starve the teaching of history and literature in schools, as to time given to it, if not as to quality of teaching, and make the thorough teaching of science and of modern languages throughout the schools difficult, if not impossible, to arrange.

It is their "academic aloofness" that is chiefly to blame. "They do not deliberately seek to cramp education; but they do not rise to the full sense of their own national importance and responsibility." The writer "pleads with them to recast entirely their conditions of matriculation."

Cannot Oxford and Cambridge insist on this: that no one shall be admitted to the benefits of their degrees, whether as a scholar or as a passman, who cannot satisfy the highest practicable standard of requirement as to education in language (dead or living), in the history and literature of his own country, in the general laws of science (we know that the syllabus for this latter examination will be difficult to draw up), and in mathematics?

The difficulties, we apprehend, lie in the standpoint of the authorities, and the writer but partially recognizes them. But we join with him in laying emphasis upon the national importance and responsibility of the Universities.

in the Birthday Honours List has been supplemented by a faint sigh from the schools. We are pleased to observe, however, that the thin end of the wedge has been pushed on behalf of teachers by the appointment of Mr. J. Macleod, H.M.I.S., to the Companionship of the Imperial Service Order. Mr. Macleod's headquarters are at Elgin, and a local paper, the *Northern Scot*, expresses more than a local gratification:

That the able and cultured recipient, who is exceedingly popular in a wide constituency, is deservedly placed in the front rank of his profession, and merits so high a distinction, will be acknowledged by all.

We add our cordial congratulation all the more freely that Mr. Macleod has long been a valued contributor to our mathematical columns.

In spring and summer of this year Prof. Adams spent some nine or ten busy weeks in examining carefully the educational system of the Protestant schools of the Province of Quebec. His report, which has just been published in a considerable pamphlet (Longmans, 1s. net), forms a valuable contribution to the comparative study of education. Apart from the city schools, Protestant education labours under "peculiarly unfavourable conditions." As to buildings, the district schools generally are "very bad" (in spite of excellent regulations), and the model schools generally "have a broken-down look"; the Academies, however, are "excellently provided," and the city schools "can stand comparison with similar buildings elsewhere." The furniture and apparatus are generally in consonance with the buildings. It is the country schools, then, that bear the brunt of condemnation. The teachers are left to raise money to pay for cleaning, glazing, and general repairs, by means of school entertainments. "In one school the chair on which the teacher sat, the desk at which she wrote, the dictionary to which she referred, the drinking-can, the wash-hand basin, and the foot-mat at the door were all the produce of a couple of school concerts."

The teacher, however, is "the *crux* of the whole question." The attitude of the School Commissioners, "evidently intelligent and progressive men in their own business," may be gathered from an argument that Prof. Adams often encountered:

We have only to advertise in the Montreal papers, and we'll get fifty candidates eager to come to us at 15 dols. a month. Why should we pay more? That wouldn't be business.

The question is, not how to get a good teacher, but how cheaply to get a teacher—a teacher. There is constant shifting of teachers; Prof. Adams found that 82 per cent. of the teachers had changed their school at the beginning of the year. In Quebec "the engagement of the teacher shall be for the term of a school year." As for salaries, "I should think," says Prof. Adams, "that teachers are worse paid in the Province of Quebec than in any other part of the world." It certainly is apt to take the stiffening out of a man's backbone when he wants to speak proudly of a people that are content with this. The regulations for the training of teachers are "excellent as far as they go"; but where is the good of regulations that are not carried out? "It is illegal to employ a teacher without a diploma"; yet, says Prof. Adams, "nearly 10 per cent. of the teachers I met in district

schools had no diploma." There are good points, however, here and there: for example, a man must have been a teacher for at least five years before being appointed an inspector.

A NEW method of impressing on educational authorities the delinquency of neglecting to provide sufficient accommodation for studious youth has been discovered and put in operation at the Technical High School, Vienna. When Prof. Czuber entered his class-room to lecture on mathematics the other day, he found not only full benches, but a multitudinous audience perched on ladders placed against the walls, the students "demonstrating" noisily "as if they were Deputies in the Reichsrath." A like demonstration was proceeding contemporaneously in another class-room. The Rector, Prof. Kraft, came upon the scene and appears to have acquitted himself judiciously: he fully sympathized with the complaint of the students, but he regretted that they should overstep the bounds of decorum. But they determined to start a strike. The method seems rather crude and inconvenient, and it cannot be recommended. Still there must be some natural element in it; it is not without notable analogies in other departments of public business, in Vienna and elsewhere.

## SUMMARY OF THE MONTH.

THE discussion of the Education Bill has been running its natural course throughout the country, the well worn arguments being repeated with more or less warmth of expression. The Albert Hall meeting was the most important; it probably had influence upon the later stages of the Bill. There are still fanatical declarations against payment of rates, and in some quarters rolls have been signed by way of pledge.

In answer to questions by Mr. Plummer, Sir William Anson (October 27) made the following statement with regard to "the position of women in the work of public education in the future":—

Under the Education Bill, women will be eligible for the boards of managers of public elementary schools. They will also be eligible for places on the Education Committee of the Local Education Authority. This is plain from the terms of the Bill. It has always been the declared intention of the Government. I may refer the hon. member to an answer given by the First Lord of the Treasury to a question in this House on the 10th of April of this year.

THE Executive Committee of the Association of School Boards (England and Wales) have embodied in resolutions their objections to the Education Bill. (1) Regretting that the principle of one Local Authority is not directly elective, they protest against the abolition of the popularly elected School Boards. (2) The areas proposed are still frequently too large for the efficient control of primary education. (3) The Local Authority should have control, in respect of elementary schools, over the secular instruction, the staffing, and the salaries of all teachers. (4) The severance of evening schools from the elementary day schools, with which they are organically connected, and the day schools age limit of fifteen, will irreparably damage the best interests of both classes of schools.

INFERENCES as to the possible composition of the Education Committees to be formed under the Education Bill (says the *Daily News*) may be drawn from a return which was issued by the Board of Education on November 15. This shows the number and composition of the Technical Committees in counties and county boroughs in England and Wales established under the Technical Instruction Acts. The general result is that, out of 129 counties and county boroughs in England and Wales, 59

have Committees which consist solely of councillors; and in 67 cases the Technical Committees consist partly of councillors and partly of outside members; while in three cases no Committee has been appointed. In most instances where the Committees consist partly of councillors and partly of outside members the councillors are in a majority, but in 13 cases the outsiders form the majority—at Chester, Gateshead, Blackburn, Burnley, Liverpool, Bath, Burton-upon-Trent, Hanley, Ipswich, Hastings, Coventry, Denbigh County, and Swansea. The co-opted members come within six categories:—(1) Members of School Boards and school managers; (2) grammar schools and other educational institutions; (3) trades and industries; (4) the teaching profession; (5) Town Councils and other local bodies; and (6) educationists and others.

DR. J. J. FINDLAY, in one of the series of timely and able articles on Education in the *Morning Post*, writes:

As far as secondary education is concerned, the nation's need at this moment is a public-spirited Board of Education. The Act of 1899, passed with so little controversy, may prove, in time to come, to have done for English children more than the Act of 1902. If Germany teaches us one thing most unmistakably, it is that the expert officers of Government hold the destinies of secondary education in their hands, and that we have a right to demand from them a national service of the highest order, backed up by generous support from the Treasury.

THE recent Educational Conference under the auspices of the Private Schools' Association proved highly successful. The President (Mr. Bartley, M.P.) said their great aim was to secure a highly efficient system of secondary education, while safeguarding the existence, the work, and the rights of efficient private schools and of those that teach in them. The Bishop of Rochester bore testimony to the excellence of the work of many of the private schools. The main subjects of discussion were Co-education (the advantage of which in the case of pupils over thirteen or fourteen was generally held not to have yet been demonstrated), the Relations of Parents and Teachers, and Examination and Inspection.

THE REV. W. C. EPPSTEIN, of Reading School, said on speech day (October 24) he must once more raise his voice against those needlessly multiplied examinations from which schoolmasters and boys alike suffered so much, and which led to a very unnecessary waste of time, the immense number of special examinations being all nearly of the same standard, but differing sufficiently to necessitate special machinery:

When we got an Education Act he hoped one of the first things would be to try and co-ordinate examinations. As to the study of Latin and Greek, it seemed to be generally thought that because a large number of public-school masters were classical men, in their own interest they tried to preserve the study of so-called "dead languages." He assured them that was not the case. Head masters of public schools were very anxious to meet the requirements of the age, and had constantly urged the Government to introduce some measure which would co-ordinate education and reduce the waste which now went on. The truth was that schoolmasters were practically obliged to fall in line with the wishes of parents, and, if they did not always go to the extremes parents would wish, it was merely because they were anxious to proceed on safe lines, and not go from one swing of the pendulum to the other without seeing their course. Reading School had been influenced by the modern spirit; for, while eight years ago there were more than half, that day they had not one quarter of the boys of the school on the "classical" side. While schools all over the country were being changed from classical to modern schools, the Universities had not yet felt the pressure severely; but they would feel it ere long.

PRINCIPAL BODINGTON's recent report on the past session's work at the Yorkshire College states:

Of the technical departments, those of agriculture and electrical, civil, and mechanical engineering show increased numbers; those of dyeing, leather industries, mining, and textile industries some decrease. But in leather industries the trifling diminution is much more than counterbalanced by a marked growth of the evening classes. Those who believe that high technical education is one of the chief factors which have contributed to the recent development of American and German industrial enterprise will regret that there is still too much disposition in our own districts to regard such education as the luxury of the few rather than as of essential importance to all young men who aspire to leadership or important positions in business life.

The work of the college in training secondary teachers, it is added, is rendered very difficult by the paucity of schools in

Leeds to which women students can gain admission for purposes of practical work while they are reading for the diploma.

At the annual meeting of the Governors of the University College of Wales, Aberystwyth, Principal Roberts presented the report of the Council, which referred to the great and urgent need of financial assistance. The new science buildings were estimated to cost £20,000, and this was only one of several developments requiring large additional funds. The number of students in the college was 440, which showed a reduction of 36 upon the corresponding period—a decrease chiefly accounted for by a smaller entry of students in the advanced short course in agriculture. Notwithstanding, the proportion of those pursuing full University courses, as compared with those of last year, was fully maintained. The work of the college in all its parts continued to be such as to deserve the enthusiastic support of the Welsh people, and he felt that the appeal for help would be met. Mr. Edgar Jones, on behalf of the Old Students' Association, presented to the college a portrait of the late Mr. T. Ellis, M.P., which was unveiled by Mr. Humphreys Owen.

THE annual report of the Swansea Training College states that the mention of training colleges in the Bill is valuable as an admission of the fact that they are institutions towards the establishment of which public funds may rightly be applied. Nevertheless, the effect of making local rates the source of these funds will probably be to keep the word of promise to the ear but break it to the hope. Since the colleges meet the needs of the nation as a whole, the nation as a whole should contribute to their establishment. This would be nothing more than the revival of an old practice. Before 1870 the State gave nearly £120,000 in grants towards the erection of training colleges. Mr. Balfour (with whom the Principal has had correspondence on the subject) thinks such grants now out of date; but, if they were legal before 1870, they are still legal and, even if they be contrary to law, they do not seem to the Council to be contrary to good policy.

A MEETING in aid of the Association for Promoting the Employment of High-School Girls in Elementary-School Work was held in Westminster Town Hall on November 12. Since the Association was formed (May, 1897) the Committee have received applications for advice and information from 267 persons. Sixty of these have since taken up the work, and are now teachers in elementary schools and pupil-teacher centres or are preparing to become such. The cause was advocated by the Bishop of Rochester (who presided), Sir Joshua Fitch, Dr. M. E. Sadler, Miss Bishop (Principal of St. Gabriel's College, Kensington), Miss Montgomerie Hunter, and Sir Charles Elliott.

MR. W. H. WILKINSON, General Secretary of the "United Foreign Circles" at Bradford, gives an interesting account of a movement in that town to facilitate the acquisition of foreign languages:

Four years ago there were in Bradford three "foreign circles" for French, German, and Spanish, each meeting one evening a week in a room hired for the purpose. A paper was read in the language, followed by discussion and conversation, French, German, or Spanish ladies or gentlemen assisting the English members. These three sections are now amalgamated into one institution with a club house of its own, and a programme of lectures and discussions once a week in each of the three foreign languages, with one evening a week in English for the benefit of foreigners studying our language. A moderate subscription (7s. 6d. and 10s. for ladies, 10s. and 12s. 6d. for gentlemen) gives admission to all or any of the lectures, with the use of the club-rooms furnished with English, French, German, Italian, and Spanish newspapers and a library of foreign books. Mr. Wilkinson claims that "Bradford youths are now undoubtedly to the front as linguists," partly owing to the facilities afforded by this institution, which might with advantage be imitated in other large commercial centres pending the long-demanded but long-delayed reforms in our secondary education. The Englishman is not necessarily a worse linguist than the German; but at present he lacks opportunity.

DR. C. W. KIMMINS addressed the London Branch of the British Child-Study Association (November 14) on "Preparation for Child Study." He said:

Child study has come to stay: in all directions one sees signs of new development; teachers and even parents are awakening to a sense of their responsibility. An important side of the society's work should be the

formation of a trained body of investigators. The first essential is sympathy, to open the child's mind; then some fair knowledge of psychology and physiology is fundamental to good work; and a careful study of the history of education, particularly a study of one or two men—their experiments, failures, successes—would be invaluable for inspiration.

Mr. H. Holman, H.M.I.S., addressing the Cheltenham Branch (November 21), argued from his recent investigations that definite exercises in exact thinking should be begun about the tenth year. No pupil should leave a secondary school or enter a University without having gone through a course of elementary logic.

WE regret to record the death of Mr. G. A. Henty, who has been, perhaps, the most prolific of writers of books for boys during the past generation. He may not have been always technically accurate with his broad brush, but he was always fresh and spirited; he had wide personal experience as military official, war correspondent, and journalist, and he knew how to carry his boy along with him. Since his first boys' book—"Out on the Pampas" (1868)—his stories number somewhere about seventy or eighty, and most of them have been published by Messrs. Blackie in handsome style. In the present issue we notice half a dozen of them—three or four representing his usual Christmas output. A tall, burly, bluff figure, he was a charming companion, and he will be much regretted beyond, as well as within, the wide circle of his boy readers. Of many anecdotes one: A soldier that won the V.C. in South Africa wrote home to his mother: "It's all through reading Mr. Henty's books, which taught me to behave like a man, and I'd like you to tell him"—which she did.

A DEPUTATION from the Society of Art Masters waited upon Lord Londonderry (November 24). Mr. Lawrence, M.P., who introduced the deputation, explained that its members were head masters of schools of art in the country who wished to point out that the actual teaching side of the subject of art education was, under present circumstances, improperly represented. Lord Londonderry replied that he understood the deputation's opinion was that, in view of the recent introduction of the block grant, which created the necessity for more complete inspection, the inspectors in schools of art, art classes, polytechnics, secondary and elementary schools must be experts in art instruction. A detailed inspection at long intervals had been arranged for. As to the deputation's suggestion that it was desirable to coordinate the instruction in drawing and art in primary schools with that given in schools of art, and that Local Authorities be encouraged in this direction, Lord Londonderry agreed that this was a very important point, but for the present it was necessarily mainly a matter for local arrangement. Respecting the deputation's desire for representation on the Teachers' Registration Council and on the Council of Advice for Art, his lordship said that the regulations governing the matter were under the consideration of the Consultative Committee, and the recommendation of the deputation to include the Royal College of Art on the same lines as the Royal College of Science should be submitted to it.

## UNIVERSITIES.

(From our Correspondents.)

To those who remember the feeling excited by the debate on vivisection or on the women's examination, the momentous question decided at Oxford on November 11 may seem to have aroused inadequate interest. In spite of constant letters and some pamphlets, the warfare of words has been far less active than at the time of the controversy on women's degrees, when 73 distinct documents heralded the debate; the poll was not strikingly large—355 out of about a possible 477; only one of the speeches evoked any general applause; and, on the whole, the atmosphere of the Theatre was one of comparative apathy. Nevertheless, these things were in a measure but the symptoms of the real seriousness of the occasion. Opinion was curiously divided: academic liberals voted *non placet*, and even Science men were ranged in opposite camps; and anticipation had not guessed how even the voting would be—*placets* 166, *non placets* 189—majority for the retention of compulsory Greek only 23.

Mr. Matheson, of New College, on behalf of the Hebdomadal Council, proposed the resolution on whose fate hung the discussion of the other five: "That candidates shall not be required to offer both Greek and Latin in the examination in stated sub-

jects in Responsions." In a very moderate speech, somewhat discursive, yet perhaps the best made, he declared that, if Oxford was to be a national University (is her aim to be national or to be cosmopolitan?), she must show herself more in sympathy with modern studies; that Responsions should offer a wider choice of subjects with a heightened standard; and that co-ordination in schools must become more common, and that, instead of all schools trying to teach everything, some should be able to specialize in one direction and some in another. Mr. Phelps, of Oriel, replied in a clever and amusing speech. He scored the real point, that it is impossible to make so great a change as this and then limit the effects to the boundaries that the framers of it may desire to set.

Probably there will be found agreement on one point among many who take a different view of Tuesday's vote, viz., that Oxford has remained true to her traditions. But as to the character and value of those traditions they will be less unanimous. Now, as ever, one may say, Oxford makes haste slowly. Tuesday's vote has not decided the question. It is pretty certain to come up again at no very distant date and in a modified form—a form that the correspondence has partly foreshadowed. Mr. Bourne, of New College, has perhaps most clearly and cogently put the case in favour of the exclusion of Greek, while Mr. Grundy, of Brasenose, has stated the case for the moderate party who, though voting against the resolution, wish for some reform. For, in spite of the *non-placet* majority of 23, it is admitted by most that in the case of men—chiefly those who have taken mathematical or science scholarships or exhibitions—who come up to Oxford prepared, after Responsions, to abandon the study of Greek altogether, it is an undesirable reflection that they are obliged, as Mr. Grundy says, to put "the coping-stone on their pre-University education by learning by heart Collis's Greek verb card and the cribs to two plays of Euripides." But for the ordinary Pass man is not some knowledge of Greek and Greek literature necessary to qualify him, not, indeed, to earn his bread and butter (for a Pass degree does not aim at that), but to become a "capable citizen who can take an educated view of the ordinary problems of life"? Pass men bear the stamp of Oxford almost as markedly as Honours men, and it may be supposed that stamp is imparted by some acquaintance with Greek thought. Is this type of man worth preserving? If so, then the suggestion made by Mr. Spooner seems to offer a solution, viz., that Congregation should now consider a resolution that "All candidates should not be required to offer both Greek and Latin in the examination in stated subjects"—that, while the scientific men and mathematicians should be exempt, Greek should still be required of the historian, the lawyer, and the passman. Anyhow, one may safely agree with the Warden of Keble that, while a good liberal education can be given without Greek, the best liberal education demands it. But let the reader take the prophecy for what it is worth—we think that Greek as compulsory for all men who come to Oxford is doomed, and that soon.

To come to the pursuits of Oxford's sons—shall we say more or less compulsory than the study of Greek? The Rugby team has done fairly well. It lost to the Old Merchant Taylors—chiefly owing to the bad play of one of the men—but it has beaten the London Scottish, Moseley, R.I.E.C., and Bristol. The three-quarters work well together; C. B. Buck and A. D. Stoop make a good pair of halves. The forwards are coming on well, and a respectable back has been found in Glover. Oriel has been beaten by Balliol in the Association Cup; the winners may be looked for among Magdalen, University, and New College. New College rather unexpectedly won the Fours, beating University in the Finals. The river is now given up to Trial Eights and College "Togger" Fours.

Dr. Parkin, the organizing agent for the trustees of the Rhodes Scholarships, has lately spent a fortnight here to consult the University and college authorities before framing for the approval of the trustees a scheme for the election of the scholars. He addressed a set of questions to all the heads of colleges concerning arrangements for the reception of scholars. The University may expect from seventy to seventy-five scholars the first year, about the same number the second, and for the third about thirty, the numbers continuing from year to year in much the same proportions. The reason why the numbers coming up the third year will be so much smaller, Dr. Parkin explained, is that, as each State in the American Union has only two scholarships allotted to it, every third year no fresh scholars will be elected. It appears likely that Mr. Rhodes's wish will be fulfilled, and the colleges will each receive some of the scholars, who thus will be spread over the University. Meanwhile his old

University seems following his wishes in other ways, for graduates continue to go out to South African appointments, to fill what the irreverent call "Lord Milner's crèche of young Oxford men."

THE "General" is doomed! Such was the cry of Cambridge. the man in the street a year ago. A Syndicate was appointed amid much pomp and circumstance to give the ill-used institution the *coup de grâce*; but, lo! the Syndics are but men, and by a majority they have decided that decay may be inevitable, but unreasoning change may be averted. In plain English the Syndicate created to consider what changes, if any, are needed in the scheme of our poll examinations have, in a singularly laconic report, told us that they consider the "General" ought to be retained, and that alternative subjects should not be allowed in that ordeal. All who in their daily work have to deal with the poll man were convinced of this long ago, but the anti-Greek party are ingenious and persevering; this time they made a flank attack and have been routed.

The election to the Council of the Senate gave rise to rather a sharp contest, noticeable for the fact that the Progressive party received some rather hard knocks. Dr. D. MacAlister lost his seat after a membership of the Council extending over many years, being displaced by Mr. J. H. Gray, of Queens', who received the votes of those who are firm on the question of Greek and are opposed to meddling with our examination system; Mr. Beck, the new Master of the Hall, displaced Mr. Chawner, of Emmanuel; Sir Robert Ball joins the Council for the first time, and will doubtless enrich the proceedings of that august body with his genial and irrepressible humour. Some day, it may be, a candidate will be put up avowedly in the interests of the common or garden undergraduate, but it is very unlikely that such a bold person would secure any considerable number of votes.

Mr. John Morley, as all the world knows, has given to the University, or rather to the University Library, the famous Acton Library, collected by our late Professor of History, and has been duly thanked by the University in a Latin epistle, drawn up according to rule by our Public Orator. When will common sense put an end to the absurdity of presenting for degrees and delivering addresses in a tongue not understood of the people, and as incomprehensible to the audience as it would be ridiculous to the Imperial Roman, were he to come among us on a May term degree day? English surely is good enough; but perhaps the difficulty would be to find a Public Orator who could do justice to the manifold subjects of the Senate House.

The new Licensing Act is likely to create some little fluttering in the Cambridge dove-cotes. The Vice-Chancellors of both Universities were asked if any exceptional legislation was desired in reference to the registration of clubs. The man of Oxford said: "Yes"; and the man of Cambridge: "No." And we are sorry. Friction between the town officials and University societies is always to be deprecated, and in this case whatever friction may arise will do so from the want of quite ordinary caution.

The police have lately developed extraordinary vigour in the prosecution of cyclists. To ride at the same rate as a Cambridge hansom driver takes a fare to the station is to court an appearance before the Bench and a ten-shilling fine. All this, too, when the traffic in our streets is perhaps worse than that of any other town in England. For years Trinity Street has been the evening resort of crawling cabs, while a cab rank at the very door of the Senate House affords a standing object lesson of how not to do it.

Arrangements for fire extinction are utterly inadequate, roads, as a rule, are badly kept, and the members of the Town Council are thoroughly pleased with themselves, and, to crown it all, our local representatives, whose duty it is to see that our sewers are clear and our dust-bins empty, call upon us magniloquently to "vote for our party" at the annual elections.

The new Vice-Chancellor is doing well. Queens' Lodge is an ideal place for entertaining, and is being used for that purpose.

The football team is getting into shape and is not as bad as journalists make out. There is abundance of good material on the river, and the unbroken run of success achieved by Third Trinity has been brought to a conclusion by R. H. Nelson winning the Colquhoun Sculls in record time. "Third" have now earned the distinction of doing everything that a college boat-club can desire; yet nobody grudges the Eton and Westminster men their numerous laurels.

A lecture-room story: A well known but absent-minded bishop was adding a final question to a critical paper set by his examining chaplain; the last question ran: "10. Translate and explain"—then followed the bishop's signature. What was it?

## CURRENT EVENTS.

THE next Winter Meeting for Teachers will be held at the College on January 6 to 10, 1903. The programme will include lectures on the principles and practice of education, and on methods of teaching the principal subjects of instruction in secondary schools.

THE Christmas Examination of Pupils will commence on December 9, and the Examination of Teachers for Diplomas on December 30.

THE Annual Meeting of the Geographical Association will be held in the Hall of the College of Preceptors in Bloomsbury Square on Friday, January 9, at 3.30 p.m. The President, Mr. Douglas Freshfield, will occupy the Chair. An address on "The Australian Commonwealth" will be delivered by the Hon. Sir John A. Cockburn, K.C.M.G., M.D., formerly Prime Minister and Minister of Education of South Australia, and Chairman of the Australasian Chamber of Commerce, London. An exhibition of the various styles of Ordnance Survey maps will be arranged through the kindness of the Southampton Geographical Society, and, in connexion with it, Mr. A. W. Andrews will show a number of lantern slides.

MISS ALICE WOODS will read a paper on "Co-education" to the London Branch of the British Child-Study Association at the Sesame Club on December 12 (8 p.m.).

A JOINT CONFERENCE of the British Child Study Association and the Froebel Society on "Home Life in relation to the School" will be held in January.

THE incorporation of the Bedford College for Women is to be celebrated by a Ball at Prince's Hall, Piccadilly, on December 10.

THE Old Boys' complimentary dinner to the Rev. C. G. Gull, to celebrate the completion of his twenty-first year as Head Master of the Grocers' Company's School, takes place at the London Tavern on December 5.

THE following members of Trinity College, Cambridge, have been elected honorary Fellows:—Mr. Balfour, Mr. Francis Galton, Sir William Harcourt, Lord Macnaghten, and Prof. F. W. Maitland.

THE Royal University of Ireland has conferred the honorary degree of D.Lit. upon M. Edouard Cadic, Chevalier de la Légion d'Honneur.

MR. J. MACLEOD, H.M.I.S., Elgin, has been appointed a Companion of the Imperial Service Order.

SIR ROBERT B. FINLAY, K.C., M.P., the Attorney-General, was elected Lord Rector of Edinburgh University by 295 votes (916 to 621) over Sir Edward Grey. Sir Robert is an M.D. of the University.

MR. C. T. RITCHIE, M.P., the Chancellor of the Exchequer, was elected Lord Rector of Aberdeen University by 28 votes (360 to 332) over Mr. Asquith.

A SIR ALFRED JONES Chair of Tropical Diseases and Parasitology has been instituted at University College, Liverpool, at a cost of £10,000. King Leopold, of Belgium, contributed £500.

UNIVERSITY COLLEGE, LONDON, makes an immediate appeal for £108,000 to place the Medical School on a proper footing. For the incorporation of the College with the University £92,000 has already been subscribed.

UNDER the will of the late Mr. John Milne, advocate, Aberdeen University obtains some £21,000 to provide scholarships for post-graduate study.

At University College, Aberystwyth, Mr. A. Brigstocke has provided three exhibitions of £10 each in agriculture; and Mr. Parry Thomas, a student of the College, and members of his family, have jointly offered £1,000 towards a gymnasium.

MR. FRED PHILIPSON STOW, of London, has subscribed £10,000 towards the foundation of a South African College.

THE Town Council of Edinburgh has promised £1,500 to the Heriot-Watt College on condition that the Government contribute a like sum.

SIR ERNEST CASSEL, K.C.M.G., and the Drapers' Company, have each contributed £100 to the Commercial Education Expenses Fund of the London Chamber of Commerce.

Scholarships. AN examination for classical scholarships and exhibitions at New College, Magdalen, and Corpus Christi Colleges, Oxford, begins on December 9.

Appointments and Vacancies. SIR WILLIAM MUIR, K.C.S.I., has resigned the Principalship of Edinburgh University, which he has held since 1885. He is eighty-three years of age.

LEE's Readership in Chemistry at Christ Church, Oxford, is vacant through the resignation of Dr. A. G. V. Harcourt, F.R.S., after forty-three years' service.

At Cambridge Dr. Rodgers has been reappointed Demonstrator of Anatomy for five years, and Mr. J. S. Gardiner, M.A., has been appointed Demonstrator in Animal Morphology for five years.

MR. H. S. CARSLAW, Fellow of Emmanuel College, Cambridge, and Lecturer in Mathematics in the University of Glasgow, has been appointed Professor of Mathematics in the University of Sydney.

MAJOR RONALD ROSS has been appointed to the new Chair of Tropical Medicine in University College, Liverpool.

MR. GREGG WILSON, M.A., Ph.D., D.Sc., of Edinburgh University, has been appointed to the Chair of Natural History in Queen's College, Belfast.

MR. DAVID PHILLIPS, B.A., has been appointed Assistant to the Professor of Moral Philosophy at St. Andrews.

MR. FRANK FLETCHER, B.A., has been appointed Assistant to the Professor of Education, University College, Liverpool.

MR. D. T. MACKINTOSH, M.A., of Edinburgh University,

Mr. J. Purves, M.A. of Edinburgh University, Mr. T. Rudmose Brown, M.A. of Aberdeen and Edinburgh Universities (son of the late Dr. Robert Brown), and Mr. D. H. Low, of Edinburgh University, have been appointed Lecturers in the English Language and Literature in the Universities of Toulouse, Lyons, Grenoble, and Dijon respectively.

COLONEL G. MALCOLM FOX, late Inspector of Army Gymnasia, Aldershot, has been appointed Inspector of Physical Training under the Board of Education.

MR. JOHN ALISON, M.A., head mathematical master, George Watson's College, Edinburgh, succeeds Prof. Adams as Rector of the United Free Training College, Glasgow.

MR. JOHN HOPKINS, M.A., Head Master of Fordoun School, has been appointed Rector of Hutton Hall Academy, Dumfries.

MR. CHARLES S. MACPHERSON, Head Master of Aberlour Public School, has been appointed Rector of Banff Academy.

MESSRS. SWAN SONNENSCHN & Co.'s forthcoming "The Schoolmaster's Year Book and Directory" will run to about 1,000 pages. Part I. will contain comprehensive information about secondary education; Part II., the names, degrees, experience, &c., of some 7,000 secondary-school masters; and Part III., some fifteen articles on important questions by expert writers, as well as reviews of books on education published during the year. Women teachers are excluded on the ground of limited space.

MR. MURRAY will publish shortly the Life of Field-Marshal Sir Donald Stewart—"mainly in his own words"—and Lord Goschen's "Life and Times of Georg Joachim Goschen," the famous Leipzig publisher and printer.

MESSRS. LONGMANS & Co. will publish immediately "The Discovery and Decipherment of the Trilingual Cuneiform Inscriptions," by A. J. Tooth, M.A., and "The Composition of the Hexateuch," by J. Estlin Carpenter, M.A.

MESSRS. A. & C. BLACK announce "Egypt, painted and described by R. Talbot Kelly," a companion volume to Mr. Mortimer Menpes's "Japan," with some seventy full-page illustrations in colour.

MESSRS. OLIPHANT ANDERSON & FERRIER have in the press Prof. Knight's "Personal Recollections" of "Some Nineteenth Century Scotsmen," and the Rev. John Willcock's "The Great Marquess" (of Argyll). The latter "is based upon the original sources, and is in no sense a mere compilation."

PROF. F. C. MONTAGUE has prepared a completely annotated edition of Macaulay's Essays for Messrs. Methuen's "Standard Library."

MR. E. LATHAM has compiled a collection of historic and memorable sayings, which will be presently published in Sonnenschein's "Quotations Series."

*Hazell's Annual* will be published on January 20, so as to include the record of the complete year. Improvements in arrangement and an unusually large number of new features are promised.

SIR PHILIP MAGNUS'S Report on the work of the Department of Technology, City and Guilds of London Institute (Murray, 9d. net; post free ls.), is an interesting and hopeful record.

THE Taylorian Lecture (Oxford) was delivered (Nov. 5) by Mr. J. Fitzmaurice Kelly. The subject was "Lope de Vega and the Spanish Drama."

ABERDEEN UNIVERSITY COURT has appointed a committee to take immediate steps for the foundation of a Chair of History.

MRS. JEVONS has presented the valuable library of the late Prof. Jevons in Economics, Logic, and Philosophy to Owens College.

MRS. TAIT has presented to the Natural Philosophy Laboratory in Edinburgh University a number of mathematical and physical works and a large collection of scientific papers from the library of her late husband, Prof. Tait, and also many of his scientific instruments.

A READERSHIP in Celtic is to be established in University College, Liverpool. The Reader-designate is, of course, Dr. Kuno Meyer, who will still retain his Professorship of German, but will be relieved of the weight of the elementary work.

ETONIANS (and others) will be interested in Mr. O. C. Williams's article on "Collegers and Oppidans" in the *National Review* for November.

THE annual concert given by the pupils of the North London Collegiate School for Girls proved a gratifying success, especially the pianoforte-playing.

MR. CHAMBERLAIN unveiled a memorial tablet at University College (London) School (November 5) to old students (12) that fell in the South African War. He is himself an "old boy."

THE stained glass windows in Margate College chapel in memory of the old boys that went to the front (over 250) were unveiled and dedicated by the Bishop of Dover.

IN the *Record* (of Technical and Secondary Education) for October, Mr. Wilfred M. Webb, F.L.S., gives an elaborate and instructive summary of "Opinion and Experience from the Nature-Study Exhibition."

## THE TRAINING OF SECONDARY TEACHERS.

### CONFERENCE AT CAMBRIDGE.

THE Cambridge Conference on Training was held on November 14 and 15, and brought together a thoroughly representative body of schoolmasters and others interested in education. The arrangements, under the skilful direction of Mr. Oscar Browning and Dr. Keynes, were most businesslike; and the Vice-Chancellor made an excellent chairman. Of the kindly hospitality shown by members of the University it is needless to speak, except in terms of grateful acknowledgment; the evening gathering in the quaint rooms of Queens' Lodge and its newly decorated hall was a treat not to be forgotten. The proceedings began with a paper by Sir Richard Jebb, containing a lucid sketch of the history of the movement for registration, a summary of the Order in Council, and some suggestive remarks on the problems raised by it. The historical review did full justice to the efforts of the College of Preceptors, the initiators, and for more than forty years the consistent supporters, of the movement, for which during a considerable part of the time they struggled almost single-handed. The general discussion on methods of training fell under four heads: University training, training at a residential professional college,

training as a student-teacher at a recognized school, and a combination of the first and third methods. Speaking generally, the needs of "Conference schools" were rather too much present in the minds of many who took part in the discussion. From one point of view, this is a healthy sign. It argues a genuine desire on the part of the leading schoolmasters and of the Universities to make training a reality. On the other hand, it showed some want of appreciation of the vastness of the problem that faces us, and of the necessity of solving it in many ways.

Mr. Arthur Sidgwick's opening paper dealt with some of the difficulties attending training at Oxford, incident to the length of residence required if it is to be entirely post-graduate. He advocated a concurrent system in the case of men who had taken Honours in Moderations, and might then be contented with a Pass in the Final Examination. Mr. Eve offered a somewhat similar suggestion in regard to Cambridge, urging that intending teachers of moderate abilities should take the First Part of their Tripos, or complete the Poll examination, at the end of their second year, and devote the third year of residence entirely to professional work, including the revision of some of the elementary subjects with a view to teaching them. Mr. Sidgwick also dealt with the possibilities of providing practising schools—a difficulty felt everywhere—but even more acutely at Oxford and Cambridge than in larger centres of population. Mr. Oscar Browning gave an interesting account of the system of the Cambridge Day Training College, which includes both primary and secondary teachers, and which in the case of the former is concurrent with the preparation for a degree. It should be mentioned that the post-graduate students of the college during the five years that part of it has been in operation include several First Class men, and that some of its *alumni* have become masters at Harrow, Charterhouse, and the City of London. In the course of the discussion which followed, Dr. Findlay spoke strongly in favour of post-graduate training as essential to the status of secondary education, and dwelt on the necessity of placing the academic study of pedagogy on a level with that of the most important University subjects. Much, he urged, had to be done before we had anything like a complete science of education. Prof. Adams, of London University, took the same line: education as a science, he said, must justify its position. He deprecated the Scotch plan of concurrent training and preparation for the degree, while admitting that the last year was usually devoted to the latter purpose. Mr. Keatinge called attention to the want of knowledge on the part of intending teachers of some of the elementary subjects; as regards geography, something was done at Oxford to meet the want. Both he and Mr. Jenkyn Thomas, of the Welsh County Schools' Association, opposed the combination of primary and secondary teachers in the same classes. Prof. Muirhead from his Birmingham experience was in favour of it, and Mr. Fletcher, of the Cambridge Training College, pointed out that secondary training must necessarily cover a good deal more ground than primary. Mr. Fletcher also appealed to the analogy of the Engineering School, which, like pedagogic training, combined theory and practice. Mr. Barber, of the Leys School, dealt with the difficulty of securing practising schools; he believed that in the long run schools willing to be used for the purpose would be able to take up a strong position towards parents who might demur to their children being made the subjects of experiment. The President of Magdalen College, Oxford, wound up the discussion with a protest against any attempt to limit the full Oxford Honour course in favour of intending teachers. The general trend of the debate was in favour of post-graduate as against concurrent training.

Next came a paper by Mr. P. A. Barnett, whose departure for Natal deprived the Conference of the pleasure of listening to him in person. In it he deprecated the foundation of residential training colleges for secondary teachers outside the direct influence of the Universities. Such colleges would, he urged, tend to become narrow and technical; and their establishment, after the efforts made to bring a considerable number of primary teachers under academic influence, would be a retrograde step. There was no discussion on the paper, but it was clear that the Conference shared Mr. Barnett's view. The question of student-teachers was opened by Mr. Lyttelton, who gave an interesting account of his own experience with three young men whom he had received in that capacity at Haileybury. He pointed out the many attractions that such a position offered to men leaving college, and remarked on the advantage to the schools of the criticism from outside involved in the occasional visits of a peripatetic master of method to the student. Dealing with the pro-

blem of finding places for enough student-teachers, he expressed the opinion that schools were too numerous, and that concentration would mean fewer and more efficient masters. A paper by Dr. Gow dealt largely with some of the influences tending to make schoolmastering less attractive than it used to be, especially the inadequacy of salaries, the small chance of material advance as men grew older, and the risk of being thrown out of the profession at an age when other men are in the full tide of work. Dr. Wormell threw out a useful suggestion as to a totally different kind of student-teachers. In schools where boys left young it was often possible for the head master to pick out promising lads at the head of the school and entrust them, under supervision, with junior work. Such boys, he thought, entered, in a year or two, on their academic studies with a good idea of the needs of their future profession. The suggestion was taken up by Prof. Armstrong on the following day. Mr. Sidgwick admitted the value of the student-teacher system as a makeshift, but urged strongly the importance of academic training, quoting a remarkable letter from a head master who testified to what he had gained from such training in the way of enlargement of view and definiteness of aim. Sir A. Rücker quoted the experience of the College of Science, where a number of demonstrators were employed, but pointed out the difficulties of making the training complete enough in an ordinary school. Mr. Arthur Acland impressed upon the Universities the necessity, if they were to direct the movement, of securing the ablest men as professors of pedagogy. As for concurrent training, he looked upon it as far inferior to post-graduate training, but felt that it was undesirable to proceed too fast, and that it might be some time before an ideal system was reached. Mr. M. E. Sadler added an inspiring speech; and Sir Oliver Lodge summed up in a lucid way what appeared to him the general outcome of the debate.

The second day's discussion was opened by Mr. Bell (Marlborough), with a fourth alternative system. He put forward "a plea for a partition of the year of training between (1) student-teachership at a recognized school and (2) a course of training at a University or a non-University training college." If the year were divided, there were strong reasons for assigning the first term of it, and no more, to student-teachership. The Warden of Bradfield (Dr. Gray) wrote to say that he thoroughly agreed with the scheme, but would make it obligatory. Mr. Glazebrook (Clifton) dwelt on the wide difference between a voluntary and a compulsory system, and thought the intellectual and spiritual side of University training more valuable than the practical side. Mr. W. Edwards (University of Wales) held that it would be a retrograde step to establish residential training colleges for secondary teachers, whether in connexion with the University or not. Mr. Moss (Shrewsbury) foresaw considerable difficulty in inducing many head masters in the first instance to take student-teachers. Prof. Armstrong was concerned for the preliminary training of teachers, and insisted on "scientific methods." Mr. Phillpotts (Bedford) dwelt on the importance of not imposing too heavy a burden on the ablest men entering the profession, the attractions of which for such men were hardly what they had been. He gave details as to the best way of utilizing the services of a visiting master of method for student-teachers working at a school. Mr. Lyttelton (Haileybury), Prof. Woodward (Victoria University), Mr. P. E. Matheson and Mr. M. W. Keatinge (Oxford), Mr. H. G. Fordham (County Councils Association), and others followed.

On financial and other economic questions there were three papers—by Mr. H. Hobhouse, M.P., on Local Education Authorities; by Mr. Swallow (Chigwell), on Governing Bodies and Head Masters of Schools; and by Mr. J. L. Holland (St. Olave's), on Candidates for Masterships. Mr. Hobhouse suggested various modes of dealing temporarily with the serious financial difficulties, and thought it would be difficult to organize satisfactorily a local system of training teachers of any grade unless the Government offered substantial inducements to Local Authorities to take up a task that ought by rights to have been borne by central rather than by local funds. Mr. Swallow effectively represented the difficulties of head masters unless the training college system were accepted. Mr. Holland dealt pointedly with the steadily increasing demand for competent assistant masters, and the steadily diminishing supply. "There never was a time when the teaching profession was less attractive than now." Mr. Storr (Teachers' Guild) declared without hesitation that he would sooner forgo training altogether than give up the last year of a University course or convert a class man to a pass man. Mr. J. B. Blomfield (Private Schools'

Association) having spoken, and Sir Oliver Lodge having summarized the points of agreement, Dr. R. P. Scott expressed the hope that a permanent committee would be formed to carry on the movement to a more successful issue.

Sir John Gorst proposed the appropriate votes of thanks, remarking that, if the Universities intended to remain at the head of a movement of this kind, they must be progressive. The Vice-Chancellor made a cordial reply.

## CORRESPONDENCE.

[We do not hold ourselves responsible for the opinions expressed by our correspondents.—Ed. E.T.]

### THE COLLEGE OF PRECEPTORS: A MEMBER'S FRIENDLY CHALLENGE.

To the Editor of the "Educational Times."

SIR.—I trust that the importance of a plea for more energy and strenuousness amongst our members will gain it a welcome in the columns of the journal of the College of Preceptors.

Those who have either read the recent reports or attended the general meetings of our Corporation must have observed of late that more time has been taken in its deliberations, that there has been an increased attendance of members, and that our "government" has been freely criticized as to its record and programme. A corporation that allows its rulers to become an almost autocratic oligarchy, through its own lethargy and *laissez-faire*, is on the sure road to decay, the signs thereof being made manifest in the growth of kindred associations around it, which tend to choke its progress, obscure its objects, and arrest its right development. The keynote of Nature is struggle, with a survival of the fittest, and therefore I think that with advantage there are many members amongst us who should test themselves with these questions, now that education in all its bearings is at last brought into the region of practical politics:

1. Have I endeavoured to attend regularly at General Meetings? If not, why not?

2. Have I either thanked or criticized our Council for what has been done, or left undone, to further the best interests of the Corporation?

3. Have I attempted to strengthen and uphold the hands of our "Cabinet" where possible?

4. Have I ever read a report of the doings of the College of Preceptors in the London daily papers? If not, why not?

The next General Meeting of Members is held in January, 1903, and I write thus early that opinion may be brought to a focus on these points that I have mentioned.

One last suggestion, often repeated, and many times, doubtless, debated: Has not the time now arrived for the fusion of the many bodies I have hinted at above into one strong secondary organization, with its headquarters in our own fine premises? I would that any whose sympathy I may have enlisted would communicate to me their views.—I am, Sir, &c.,

C. BAYLEY GUTTERIDGE, M.A., F.R.G.S., &c.

Alley's School, Dulwich, November 1, 1902.

### THE BODLEIAN ORATION.

To the Editor of the "Educational Times."

SIR.—It is nothing less than a stultification of Oxford scholarship and an insult to the tercentenary visitors that the Latin oration should have been delivered with the ridiculous so-called "English" pronunciation. Such childish jargon must have been quite unintelligible, not only to the foreign delegates, but also to the Americans, Scots, Irish, and even those English auditors who had been accustomed to a more rational and enlightened method.

Whatever may be the arguments for bolstering up a senseless and misleading pronunciation in the class-room, and for students who are too stupid to acquire a correct one, there can be no two rational opinions as to the absurdity of it in a public and international harangue, in which it is important not only that a recognized standard vocalization shall be followed, but that the language shall be given its natural euphony and sonority, and not be degraded to a simpering and affected gibberish. . . .

The continued propagation of this puerile pedantry in Oxford, almost alone among the Universities of the world, is the more to be deplored as the scientific system of transliterating Oriental

names is making such rapid progress. . . . It is a libel on average English people to take for granted that they are unwilling or unable to pronounce foreign words correctly, if given the chance. . . . English children taught French on the colloquial system speak it as if to the manner born, and I have heard Latin recited in English and American schools, especially by girls, in such a way that even an Italian professor could hardly find fault. Only last night I heard a young woman, apparently of the servant class, singing the Litany at a Catholic Church with scarcely a mistake, save occasionally such as "dokyumentum" for "documentum." It is the professors, not the people, who are to blame.—I am, &c.,

EVACUSTES A. PHIPSON.

151 Strand, London, October 18, 1902.

[We have omitted Mr. Phipson's numerous illustrations of pronunciation.—ED.]

### "EMPIRICAL" AND "SCIENTIFIC."

To the Editor of the "Educational Times."

SIR,—I am sure you do not mean to be unfair, but you compel me to protest again—(1) "When a disciple calls his own work scientific" you say. But *my words* are: "The combination of scientific method and practical experience was lacking at that time, and it would be very presumptuous in the present writer if he were to hope that he has adequately achieved such a combination here." (2) I proved that I have spoken with the utmost regard of Sir J. Fitch's work; so you turn to my criticism of Bain and argue that, because I hold Bain cheap, therefore I may be presumed, in spite of my words, to despise Fitch! My book places the two apart—most decisively. But, in any case, there is no personal aspect as far as Bain is concerned. He had ceased to be personally known in English circles before men of my age left the University. I have the strongest distrust of his book, and my view is widely shared. Sir J. Fitch, on the other hand, is intimately known, especially in the College of Preceptors' circle, and I regret that you will not gracefully admit that your reviewer has gone astray. I wrote and revised every line of that Preface with the utmost care, and I confidently appeal from your reviewer to pages xii. to xiv. in that Preface.

I shall be lecturing at the College in January, and shall then be able to restate the principles which underlie my distrust of Bain's exposition.—Yours, &c.,

J. J. FINDLAY.

[We certainly have not the remotest intention "to be unfair," but we do think it is not profitable to argue with an antagonist that will not apprehend our plain meaning, and we decline to be drawn away from the original point, which seems to remain unchanged—except that Dr. Findlay has explicitly acknowledged "the utmost regard" for Sir J. Fitch's work. "No personal aspect as far as Bain is concerned": is it possible?—ED.]

### THE NEEDS OF SMALL ENDOWED SCHOOLS.

To the Editor of the "Educational Times."

SIR,—I was very much pleased to learn from the *Times*' report of the Training of Teachers Conference at Cambridge that Mr. Humphreys-Owen, M.P., emphasized "the inadequacy of the provision which was at present made for the salaries both of the head and of the assistant masters." When the endowment is small and fees are low, how can the salaries be adequate? The question arises whether, in many cases, the fees should not be raised.

But there is another thing which is much needed in most, if not all, schools under schemes of the Charity Commission, and that is reasonable security of tenure. What the tenure of heads is your readers have learned in some degree from two letters which have recently appeared in your columns. What assistant masters think of theirs can be gathered from what the representatives of the Association of Assistant Masters urged before the Royal Commission on Secondary Education, when they stated that: "The system of dismissal at pleasure is felt by the assistant masters as the keenest disability under which they suffer. Their salaries are low, but they feel much more keenly this system of dismissal at pleasure."

Parliament has already unanimously conceded to teachers in primary schools the principle of a right of appeal in case of dismissal. You have already inserted an article in favour of a right of appeal for assistants in case of dismissal. Surely the time cannot now be far distant when both heads and assistants in secondary schools will enjoy reasonable security of tenure.—I am, Sir, &c.,

THOMAS ALLEN.

Woodbury, Malvern Link, November 19, 1902.

## HANDSOME ILLUSTRATED GIFT BOOKS.

**The Dominion of the Air.** The Story of Aërial Navigation. By the Rev. J. M. BACON. With 24 Illustrations and Photographs. 6s.

**Pictures of Many Wars.** By FREDERIC VILLIERS. Illustrated. 6s.

**The Coronation Book of Edward VII.,** King of All the Britains and Emperor of India. By W. J. LOFTIE, B.A., F.S.A. With 24 Coloured Plates and numerous Illustrations. Sumptuously Illuminated in Gold and Colours. 10s. 6d.

**Royal Academy Pictures.** Yearly Volume. Price 7s. 6d.

**The Real Siberia.** By JOHN FOSTER FRASER. With 48 pages of Illustrations prepared from Photographs. 6s.

**Familiar Wild Flowers.** By F. E. HULME, F.L.S., &c. In 7 Volumes. With 40 Full-page Coloured Plates in each, and Descriptive Text. 3s. 6d. each.

**Chums.** Yearly Volume. With 13 Coloured Plates, and upwards of 1,000 Illustrations.

**Little Folks.** Christmas Volume. There are innumerable Stories and Articles by the most popular writers for Children. With Pictures on nearly every page, together with 6 Full-page Coloured Plates and numerous Illustrations. Boards. 3s. 6d.; cloth, 5s.

**Bo-Peep: A Treasury for the Little Ones.** Yearly Volume. With 8 Full-page Coloured Plates and numerous other Pictures in Colour. Picture boards, 2s. 6d.; cloth, 3s. 6d.

**Tiny Tots.** For the Very Little Ones. Yearly Volume. With Coloured Frontispiece, and Illustrations on nearly every page. Picture boards, 1s. 4d.; cloth, 1s. 6d.

**Bear Cavern.** By EDWARD S. ELLIS. With 6 Illustrations. 1s. 6d.

**The Ten Travellers.** By S. H. HAMER. Illustrated by HARRY B. NEILSON. With 4 Coloured Plates and numerous Illustrations. 1s. 6d.

**Birds, Beasts, and Fishes.** By S. H. HAMER. With 4 Coloured Plates and numerous Illustrations. 1s. 6d.

### READY NEXT MONTH.

## Cassell's New French Dictionary.

French-English—English-French.

Edited by JAMES BOÏELLE, B.A.,

Officier d'Académie; sometime Examiner in the University of London.

1220 pp., demy 8vo, strongly bound in cloth. 7s. 6d.; or, in half leather, 10s. 6d.

## CASSELL'S EDUCATIONAL BOOKS.

THE BEST AND CHEAPEST DICTIONARIES.

**Cassell's Latin Dictionary.** (Latin-English and English-Latin.) 132nd Thousand. Cheap Edition, 3s. 6d.; half-morocco, 5s.

CASSELL'S EDUCATIONAL CATALOGUE will be sent, post free, on application.

CASSELL & CO., LTD., LONDON, AND ALL BOOKSELLERS.

# MACMILLAN & CO.'S LIST.

**Latin Elegiacs and Prosody Rhymes for Beginners.** By C. H. ST. L. RUSSELL, M.A. Globe 8vo, 1s. 6d.

*Educational News.*—"Thoroughly deserves our heartiest commendation."

**The Poems of Ovid. Selections.** Edited by Prof. C. W. BAIN. With Illustrations. Crown 8vo, 6s.

*Educational News.*—"The extracts are copious and carefully graduated; the matter is interesting, and the aids are both full and judicious."

**An Ancient History for Beginners.** By G. W. BOTSFORD. With Maps and numerous Illustrations. Extra crown 8vo, 7s. 6d.

*Educational News.*—"It is impossible to exaggerate the importance of this publication. It is altogether unique."

**The First Principles of Ratio and Proportion, and their Application to Geometry.** By H. W. CROOME SMITH, B.A. Crown 8vo, sewed, 1s.

*Schoolmaster.*—"We commend the book."

**Applied Mechanics for Beginners.** By J. DUNCAN, Wh. Ex. A.M.I.M.E., Head of the Department of Civil and Mechanical Engineering at the Municipal Technical Institute, West Ham. Globe 8vo, 2s. 6d.

*School World.*—"The book is well arranged and suitable to the wants of teachers and students."

**Light for Students.** By EDWIN EDSER, Associate of the Royal College of Science. Globe 8vo, 6s.

**Macmillan's Short Geography of the World.** A New Handbook for Teachers and Students. By GEORGE F. BOSWORTH, F.R.G.S. With Maps. Globe 8vo, 2s. 6d.

NEW EDITION NOW READY, containing the Report of the British Association Committee,  
*British Association Meeting at Glasgow, 1901.*

**Discussion on the Teaching of Mathematics.** Which took place on September 14th at a Joint Meeting of two Sections. Section A—Mathematics and Physics. Section L—Education. Chairman of the Joint Meeting, the Right Hon. Sir JOHN E. GORST, K.C., M.P., President of Section L. Edited by JOHN PERRY. To which is now added the Report of the British Association Committee, drawn up by the Chairman, Prof. FORSYTH. Crown 8vo, stiff boards, 2s. net.

Uniform with "The Boy's Odyssey."

**The Boy's Illad.** By WALTER COPLAND PERRY. With Illustrations by G. P. JACOMB HOOD. Crown 8vo, gilt edges, 6s.

**Introductory Chemistry for Intermediate Schools.** By LIONEL M. JONES, B.Sc., A.R.C.Sc., (Lond.), Head Master of the Municipal Technical Day School, Birmingham. Globe 8vo, 2s.

*Royal College of Science Magazine.*—"Excellent arranged, and described in detail. Its author has made an attempt also to unite the two branches of theoretical and practical chemistry, so long divorced, and, we may add, has succeeded admirably. We welcome this primer of chemistry."

**Practical Exercises in Heat:** Being a Laboratory Course for Schools of Science and Colleges, suitable for students of Physics, Chemistry, and Engineering. By E. S. A. ROBSON, M.Sc. (Vict.), Associate of Owens College, Manchester. Globe 8vo, 2s. 6d.

*Educational News.*—"We have not met with any book of this kind so entirely suited to its purpose. We strongly recommend it to the attention of masters who have to teach this or kindred subjects."

## LONDON MATRICULATION (NEW REGULATIONS).

**The Acts of the Apostles.—Authorised Version.** With Notes. By T. E. PAGE, M.A., and Rev. A. S. WALPOLE, M.A. 2s. 6d. [Junior.]

**—The Greek Text.** With Notes. By T. E. PAGE, M.A. 3s. 6d. [Junior.]

**Scott—Marmion and The Lord of the Isles.** Edited by F. T. PALGRAVE. 1s. [Preliminary and Junior.]

**Kingsley—The Heroes.** With Notes by H. B. COTTERILL, M.A. 1s. 6d. [Preliminary.]

**Shakespeare—Julius Cæsar.** With Introduction and Notes. By K. DEIGHTON. 1s. 9d. [Junior and Senior.]

**Pope—Essay on Criticism.** With Introduction and Notes. By J. CHURTON COLLINS, M.A. 1s. 9d. [Senior.]

**About—Le Roi des Montagnes.** Edited by Professor WREKLEY. 2s. 6d. [Junior and Senior.]

**Sandean—Mademoiselle de la Seiglière.** Edited by H. C. STEEL. 1s. 6d. [Junior and Senior.]

**Schiller—Wilhelm Tell.** Edited by G. E. FASNACHT. 2s. 6d. [Junior and Senior.]

**Schiller—Wilhelm Tell.** Edited by W. H. CARRUTH, Ph.D. 3s. 6d. [Junior and Senior.]

**Nepos—Lives.** Vol. I. With Notes and Vocabulary. By H. WILKINSON, M.A. 1s. 6d. (This Edition contains the Lives of Lysander, Alcibiades, Thrasybulus, Conon, Iphicrates, and Chabrias.) [Preliminary.]

**Cæsar—De Bello Gallico.** Books II. and III. With Notes and Vocabulary. By Rev. W. G. RUTHERFORD, LL.D. 1s. 6d. [Preliminary and Junior.]

**Livy—Book V.** With Notes and Vocabulary. By M. ALFORD. 1s. 6d. [Senior.]

**Horace—Odes.** Book III. With Notes and Vocabulary. By T. E. PAGE, M.A. 1s. 6d. [Senior.]

**Virgil—Æneid.** Book X. With Notes and Vocabulary. By S. G. OWEN, M.A. 1s. 6d. [Junior and Senior.]

**Xenophon—Anabasis.** Book II. With Notes and Vocabulary. By Rev. A. S. WALPOLE, M.A. 1s. 6d. [Junior.]

**Æschylus—Prometheus Vincetus.** With Notes and Vocabulary. By Rev. H. M. STEPHENSON, M.A. 1s. 6d. [Junior and Senior.]

**Æschylus—Prometheus Vincetus.** Edited by E. E. SIKES, M.A., and Sr. J. B. W. WILLSON, M.A. 2s. 6d. [Junior and Senior.]

**Thucydides.** Book VII. Edited by E. C. MARCHANT, M.A. 3s. 6d. [Senior.]

**Thucydides.** Books VI. and VII. Edited by Rev. P. FROST, M.A. 3s. 6d. [Senior.]

## OXFORD LOCAL EXAMINATIONS, 1903.

**Scott—The Talisman.** Border Edition. 3s. 6d. [Preliminary and Junior.]

**Shakespeare—Macbeth.** With Introduction and Notes. By K. DEIGHTON. 1s. 9d. [Junior and Senior.]

**Chaucer—The Prologue, &c.** Edited by M. H. LIDDELL. 3s. 6d. [Senior.]

**—Works.** Edited by A. W. POLLARD, &c. 3s. 6d. [Senior.]

**Cæsar—The Gallic War.** Edited by Rev. JOHN BOND, M.A., and Rev. A. S. WALPOLE, M.A. 4s. 6d. [Senior.]

**Cæsar—Gallic War.** With Notes and Vocabulary. Book IV. By C. BRYANS, M.A. 1s. 6d. [Junior and Senior.]

**—Works.** Edited by Rev. JOHN BOND, M.A., and Rev. A. S. WALPOLE, M.A. 4s. 6d. [Senior.]

**Virgil—Æneid.** Book VI. With Notes and Vocabulary. By T. E. PAGE, M.A. 1s. 6d. [Junior and Senior.]

**Horace—Odes.** Books III. and IV. With Notes and Vocabulary. By T. E. PAGE, M.A. (Elementary Classics.) 1s. 6d. each. (Classical Series.) 2s. each. [Junior and Senior.]

**Horace—Select Epodes and Ars Poetica.** With Introduction and Notes. By H. A. DALTON, M.A. 1s. 6d. [Junior.]

**Horace—Epodes.** Edited by T. E. PAGE, M.A. 2s. [Junior.]

**Xenophon—Anabasis.** With Notes and Vocabulary. Book V. By Rev. G. H. NALL, M.A. 1s. 6d. Book VI. By Rev. G. H. NALL, M.A. 1s. 6d. [Senior.]

**Euripides—Medea.** With Notes and Vocabulary. By Rev. M. A. BAYFIELD, M.A. 1s. 6d. [Junior and Senior.]

**Euripides—Medea.** Edited by A. W. VERRALL, Litt.D. 2s. 6d. [Junior and Senior.]

**Hausf—Die Karavane.** Containing "Kalif Storch" and "Das Gespensterschiff." With Notes and Vocabulary. By H. HAGER, Ph.D. 3s. [Preliminary.]

**The Acts of the Apostles.—Authorised Version.** With Notes. By T. E. PAGE, M.A., and Rev. A. S. WALPOLE, M.A. 2s. 6d.

**—The Greek Text.** With Notes. By T. E. PAGE, M.A. 3s. 6d.

**The Gospel according to St. Luke.—The Greek Text.** With Introduction and Notes. By Rev. J. BOND, M.A. 2s. 6d.

NEAR THE BRITISH MUSEUM.

# KINGSLEY HOTEL,

HART STREET, BLOOMSBURY SQUARE, LONDON.

OPPOSITE THE BRITISH MUSEUM.

# THACKERAY HOTEL,

GREAT RUSSELL STREET, LONDON.

These well-appointed and commodious **TEMPERANCE HOTELS** will, it is believed, meet the requirements, at moderate charges, of those who desire all the conveniences and advantages of the larger modern Licensed Hotels. These Hotels have

**PASSENGER LIFTS, ELECTRIC LIGHT THROUGHOUT, HEATED THROUGHOUT, BATHROOMS ON EVERY FLOOR, SPACIOUS DINING, DRAWING, WRITING, READING, AND SMOKING ROOMS.**

*Fireproof Floors. Perfect Sanitation. Telephone. Night Porter. The Kingsley Hotel has a good Billiard Room.*

Bedrooms from 2s. 6d. to 5s. 6d. Inclusive Charge for Bedroom, Attendance, Table d'Hôte Breakfast and Dinner, from 8s. 6d. to 10s. 6d. per day.

*Full Tariff and Testimonials on application.*

ALSO UNDER THE SAME MANAGEMENT.

# ESMOND HOTEL,

1 MONTAGUE STREET, RUSSELL SQUARE, LONDON.

This **Temperance Hotel**, which has been carried on so successfully for the last fifteen years, adjoins the British Museum, and is exceptionally quiet and economical.

Bedrooms from 2s. to 3s. 6d. per night.

*Full Tariff and Testimonials on application.*

## PRIZE DISTRIBUTION, Christmas, 1903.

## THE EDUCATIONAL SUPPLY ASSOCIATION

HAS NOW IN STOCK

AN IMMENSE ASSORTMENT OF BOOKS SUITABLE FOR  
REWARDS.

Bound in Cloth,

Bound in Morocco,

Bound in Calf,

Bound in Paste Grain.

The greatly enlarged Showrooms of the Association afford extra facilities for the selection

### OF PRIZES.

The Association has purchased a great number of books at prices much under the market value, and offers these to Teachers at specially reduced prices. A Catalogue of these will be sent on application.

The following are now ready:—

CATALOGUE OF CLOTH-BOUND BOOKS,

CATALOGUE OF LEATHER-BOUND BOOKS,

which will be sent, post free, on application.

## A NEW SERIES OF MATHEMATICAL INSTRUMENTS FOR USE IN GEOMETRICAL DRAWING.

*PARTICULARS* are given below of Boxes of Instruments specially prepared for use in Geometrical Drawing, and containing only those Instruments that are absolutely necessary for this class of Drawing. Every article contained in the boxes is thoroughly reliable, and, as nothing superfluous has been included, the prices quoted are very reasonable.

No. 10. *The "Dulwich College" Box of Geometrical Instruments.* A strong Sliding Leatherette Box, 6½ inches by 3½ inches, containing:—

1 Brass Compass, 4½ inches, with Screw-head, fitted with Reversible Pen and Divider Leg.	1 Boxwood Protractor, 6 inches, with special additional markings of Millimetres and Centimetres.
1 Nickel Set Square, 60°.	1 Compass Pencil.
1 Nickel Set Square, 45°.	

PRICE 2s. NET.

No. 11. The same Instruments as in No. 10 contained in strong Polished Wood Box. Price 2s. 6d. net.

No. 12. *Pocket Case*, covered Leatherette, with Spring Clasp, lined with Silk and Velvet, containing:—

1 Brass Pencil Compass.	1 Compass Key.
1 Brass Divider.	1 Compass Pencil.

PRICE 2s. NET.

No. 13. *Polished Wood Case*, lined with Velvet, containing:—

1 Brass Compass.	1 Boxwood Protractor, 6 inches, with special additional markings of Millimetres and Centimetres.
1 Brass Divider.	1 Compass Pencil.
1 Celluloid Set Square, 45°.	
1 Celluloid Set Square, 60°.	

PRICE 4s. 6d. NET.

For further particulars and Specimens, which will be sent post free on receipt of stamps for the advertised price, apply to

**The Educational Supply Association, Ltd.,**  
42 HOLBORN VIADUCT, LONDON, E.C.

## University Tutorial Series.

### COLLEGE OF PRECEPTORS' EXAMINATIONS, 1903.

- CÆSAR.—GALLIC WAR, BOOK IV.** By A. H. ALLCROFT, M.A. Oxon., and T. R. MILLS, M.A. Oxon. Text and Notes. 1s. 6d. Vocabulary, 1s.
- BURIPIDES.—MEDEA.** By J. THOMPSON, M.A. Camb., and T. R. MILLS, M.A. Oxon. Text and Notes. 3s. 6d.
- HORACE.—ODES, BOOK III.** By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Camb. and Lond. Text and Notes, 1s. 6d. Vocabulary, 1s.
- LIVY.—BOOK XXI.** By A. H. ALLCROFT, M.A. Oxon. Text and Notes, 2s. 6d. Vocabulary, 1s. 6d.
- VERGIL.—ÆNEID, BOOK VI.** By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Text and Notes, 1s. 6d. Vocabulary, 1s.

### LONDON MATRICULATION NEW REGULATIONS.

- MATRICULATION ENGLISH COURSE.** By W. H. LOW, M.A. Lond., and JOHN BRIGGS, M.A. Camb., F.Z.S. 3s. 6d.
- MATRICULATION MODERN HISTORY.** With Maps, Plans, and Tables. By C. S. FEARENSIDE, M.A. Oxon. 3s. 6d.
- THE NEW MATRICULATION ALGEBRA.** With a Chapter on Graphs. By RUPERT DEAKIN, M.A. Oxon. 3s. 6d.
- MATRICULATION ADVANCED ALGEBRA AND GEOMETRY.** Edited by W. H. BRIGGS, LL.D., M.A. 4s. 6d.
- THE NEW MATRICULATION CHEMISTRY.** By G. H. BAILEY, D.Sc., Ph.D., and R. H. ADIE, M.A., B.Sc. Part I. (containing *The Tutorial Chemistry*, Part I, with Chapters on Electrolysis and Interaction), 4s. Part II. (The Chemistry of Daily Life), 2s.
- THE NEW MATRICULATION BOTANY.** By A. J. EWART, D.Sc., Ph.D., F.L.S. 3s. 6d.

### THE EQUIPMENT OF THE TEACHER.

On Wednesday, Nov. 12, at the monthly meeting of members of the College of Preceptors, Mr. JAMES WILSON, M.A., in the Chair, the Rev. J. O. Bevan gave a lecture on "The Equipment of the Teacher." He said:

#### INTRODUCTION.

The world is becoming increasingly conscious of its need of instruction. In olden times, few and far between, heaven-born geniuses like Socrates appeared, like fiery comets, and pursued their rapid and flaming path. Such teachers are like unto Melchisedec—without father, without mother, but, let us hope, not altogether without descendants. Men are sought for nowadays whose ancestry is assured and whose preparation has been conducted along well defined lines. They must be caught, certified, and branded in the orthodox manner. We need them not in twos or threes, but in battalions, for the nations are crying out in their impatience, and never before were so many teachers wanted. The rate of increase ought to be in geometrical progression, and all grades of society must be laid under contribution.

The dignity of the office is unquestionable, for it unites the functions and sympathies of parent, minister, and friend. The calls upon the strength and resources of the educator, the instructor—the one who draws forth what is already there in essence; the one who builds up, fact by fact, axiom by axiom—are correspondingly large. In truth, the perfect teacher would be the perfect man or woman.

There is a rapidly increasing competition for labourers in the world's school and workshop; inasmuch as fields of industry unknown to our fathers are opening out, in respect of engineering, electrical appliances, chemistry, and the like. Again, the vast increase of the Empire, in its distant outliers—our colonies and dependencies—causes a ceaseless drain of men from the centre to the circumference, to subdue, to civilize, and thus to prepare the way for the successive swarms yet to come.

The proportion of women teachers shows a tendency to increase, especially in the United States of America. In the elementary schools of their cities and large towns more than 95 per cent. of the teaching is done by women. This is due to the absorption of men in the various fields of activity above enumerated, to the special moral fitness of women for the work, to their emancipation, and to the growing facilities for their higher education. If co-education come into greater favour, this tendency to call for the service of women will become more marked.

#### THE PHYSICAL EQUIPMENT.

Perfect teaching is consistent only with perfect health. When one considers the demands made by preliminary study, the sedentary nature of the occupation, the confinement in an atmosphere invariably more or less vitiated, the strain upon the nervous system and upon the organs of sight, hearing, and speech, one cannot but allow that the teacher should be exceptionally gifted in respect of physical health, and, resulting from that, of mental equipoise. Under the old dispensation, it was forbidden that any person deformed or physically unsound should enter the priesthood. If the Jewish Lawgiver were our Director-general of Education, he would lay down the same rule with reference to the teacher. It is undesirable that young children—the most imitative of creatures—should have before their eyes, in a conspicuous position, any person afflicted with malformation, whose movements were constantly abnormal. How frequently has a squint or a stammer been acquired from nurse or teacher, and perpetuated in those under her charge! Bearing in mind, too, the pathological discoveries of the present day concerning the active and morbidic microbe, any individual suffering from tuberculosis should be precluded from coming into close contact with the young. Indeed, the same prohibition as to entrance into the school-room should apply to the scholar. Children and all persons suffering from tuberculous complaints should—in the perfect State—be subjected to isolation and a rigorous open-air treatment.\* Thus should we stamp out one of our greatest scourges in two or three generations.

#### THE SPIRITUAL EQUIPMENT.

The teaching function is more like the ministerial, the apostolic, than any other, inasmuch as it presupposes a call—a call to a distinct mission. One hardly imagines an individual entering upon the work of teaching with a view to leading an easy life or amassing a fortune. It is known to be exacting in no ordinary degree, to demand the exercise of unlimited patience and skill; whilst, of itself, it leads to no reward such

\* Since these words were written a recommendation in the same sense has been made at the International Congress on Tuberculosis, recently held at Berlin.

as falls to the lot of the successful merchant, soldier, or politician. There is no Distinguished Service Order for successful teachers; no Victoria Cross for him who builds up many lives at the hazard of his own. Further, a large proportion of those who volunteer into its ranks must be conscious that they will be called upon to pass many weary years in a subordinate position—subject not only to the waywardness of their scholars, but also, perhaps, to a lack of appreciation on the part of their superior officer. Moreover, the emoluments cannot be said to be excessive, for butlers, cooks, and ladies' maids would scorn to change places if salaries only were concerned. No, the budding teacher must look upon his work as a mission, and be led to devote himself upon the altar of duty from the highest motive; *i.e.*, that he might be enabled to exercise the mother-feeling of humanity—the creative and formative principle—whereby one is enabled to take dead matter, to breathe into its nostrils the breath of life, so that the thing of dust may become a living soul.

#### THE MORAL EQUIPMENT.

The possession of certain fundamental qualities we assume—such as truthfulness, honesty, conscientious endeavour to act one's part aright; but, in a special degree, teachers need humility, sympathy, tenderness, patience, perseverance, self-control, and clearness of thought and expression. One lays stress, too, on the possession of chivalrous justice—a disinclination to take undue advantage of differences in age, position, and acquirement. A very naughty boy once said to the writer: "Every teacher is at heart a bully." Of course, he was but a naughty boy; but one is led to feel that in the case of teachers there is often a tendency to be unduly severe—to visit upon our pupils our own whims, bad temper, or disappointment; to fail to make allowances for the immaturity of youth, the lack of complete understanding of the position, the passing ailment or fretfulness, the loss of memory through a kind of stage-fright, and so on; that there is also, too often, a disposition to show off one's superior sagacity, information, or wit: to chaff one's scholars, to make them ridiculous in the eyes of their fellows, whose good or bad opinion is as much to them as the good or bad opinion of our contemporaries is to ourselves. One might, then, be more mindful than custom leads one to be of the sensitiveness of youth, especially at the blushing stage; of the fact that our scholars cannot meet us on equal terms of strength, raillery, irony, or invective. In the schoolroom, as elsewhere, more evils are wrought by want of thought than by want of heart. These considerations should make us tolerant equally of mistakes and weaknesses, and, indeed, if we run these mistakes to earth, we shall frequently find that they are really marvels of ingenuity.

#### STUDY OF CHILD NATURE.

It is stated that the elements of the body are completely changed in every cycle of seven years, but it is frequently forgotten that a similar law operates in regard to the elements of the mind. Yet, in both cases, are we scarcely conscious of the change. Thus there often yawns a great gulf even between the young teacher and the child he sets himself to instruct. In what degree formal training would lead to the bridging of this chasm it is difficult to say. It is said above "the young teacher," for frequently it is only when one advances in years that one becomes a child again. It may be that this is partly owing to our becoming parents ourselves, and being thus brought into personal and sympathetic relation to young children. Otherwise, it may be due to the growth of tolerance and larger forgiveness which come with lengthening years, and partly also to the greater difference in time between us and our scholars, so that we can the more easily afford to unbend.

It may well be contended that our primal requisite, as teachers, is to *know ourselves*—our strength, our knowledge, and our limitations in respect of both and in our expression of them. The second great requisite is an acquaintance with the child—its faculties of body and mind, and, indeed, with its whole nature. We should know the leading facts concerning the structure of the body—*i.e.*, the body as an animated machine, governed by the laws of mechanics, measure, and avoidupois; the bony framework, the shape of the constituent parts, their composition, manner of growth, and interlocking movements; the muscles, their attachment, mode of action, variation in size, waste, replenishment; the nervous system, its response to impulses from within and from without, its automatic and its conscious exercise; the digestive system, assimilation, nutrition, the character and variation of the teeth; the senses, their limits of activity and preservation in perfect and painless use. Further, in relation to those under our charge, we should study the laws of growth; the mysteries of direct and reflex action, the telegraphy of the senses; the avenues of knowledge in respect of sight, hearing, tactile movements; the signs and symptoms of simple ailments and infectious disorders; the dangers to be looked for and overcome in regard to possible accident; the laws of brain growth, signs of brain disturbance, fatigue, torpor, excitement, hysteria, chorea. In thought, we should follow our charges even to their cots at night. The other day I met with a little maid of four who was discovered by her mother, night after night, excitedly talking to her dolls about her lessons and worrying them, under the impression that they were her schoolmates. Such a case should immediately be dealt with, and shunted off to more natural fields of activity.

The general question of hygiene should occupy our attention, including as it does the all-important subjects relating to construction of school-house, site, materials, space, heating, lighting, ventilation, furniture,

playground, sanitary matters, avoidance of dirt, damp, bad smells, provision of a plentiful supply of pure water, &c.\* The eye of the teacher should be everywhere, taking in appearance, demeanour, posture of scholars, evidence of damp clothing, wet boots, signs of physical or mental over-exertion, of scarcity of food or malnutrition. We should follow our charges even into the playground—the mimic world of sport and battle; provide, where necessary, stimulus for play; instruct as to the true limits of emulation; see that fair dealing is practised by the seniors towards the juniors, thus setting bullying at a discount, and engaging gradually in everything the responsibility of the older scholars. This is only one illustration of the necessity under which the teacher lies to induce co-operation between himself and his scholars, so that the impulsive mind and heart of the young may be enlisted on the side of justice and mercy, as embodied in him who presides over the fortunes of the little world of school.

Many teachers are also lodging-house—or should we say boarding-house?—keepers. These stand very closely *in loco parentis*, and should be experts in respect of such things as food, clothing, and medicaments, knowing how to provide a generous and varied diet to meet the peremptory demands of growing youth, whilst at the same time refraining from pandering to any unwholesome appetite, which would certainly eventuate in physical evil, or even in a tendency to private vice and moral depravity. The latter caution is necessary in view of the increasing tendency to self-indulgence amongst the young.

Some heads of schools regard parents as necessary evils, as fools, or as their natural enemies; but, after all, parents have a certain interest in their children, and may fittingly be humoured so far as to have explained the reasons for any course of conduct, and to have their wishes consulted so far as the general curriculum and the common good may allow. It must be confessed that many persons who have assumed the functions of parenthood are inordinately weak and foolish, and, worse still, that they are lamentably ignorant of the functions of education in the truest and highest sense. In these cases it may be necessary that a head master—assuming, indeed (what is not axiomatic) that he is a true educationist—should take a strong line in some given instance, and express himself with vigour. Even so, if he be wise, he will allow it to be seen that his desire is not so much to gain his own way as to advance the highest welfare of the child committed to his keeping.

#### THE MENTAL EQUIPMENT.

The foundation of learning, on the part of an intending teacher, should be ample in length and breadth. Depth will come in due time; for that can be realized only after long seasons of reflection and experience. The teacher should know something of everything and everything of his particular something—*viz.*, the science and art of teaching. It is impossible in this paper to give enlarged specific instruction as to authors and books. One can but lay down general principles and mention a few of the more important works. Some persons present have, doubtless, followed the course of study prescribed by the College to those who aim at obtaining their diplomas, or have submitted themselves to other examining bodies. They will, therefore, have possessed themselves of the information derived from the standard works recommended for perusal. It will be possible for diligent students who wish to keep themselves abreast of the age to consult the new books which are added to our library from month to month. There may be strongly recommended a persistent use of the Pedagogical Library secured for the Teachers' Guild by the operation of the Quick Memorial Fund. All of these works are of value; many are unique.

One may not disregard the wisdom of the ancients of Greece and Rome—Plato, Socrates, Aristotle, Cicero; of the rising stars of the Renaissance—Ascham, Colet, Comenius, Jacotot; of the Restoration period—Locke; of the reformers—Pestalozzi, Froebel; of the Romancists—Rousseau; of those nearer our own time—Herbart, Coombe, Arnold, Thrng, Quick, Payne, and Spencer. There is much of practical and present-day good to be gathered from the perusal of the courses of lectures delivered yearly, and for many years past, at this College; and the practice of attending these lectures—an inexpensive luxury to members—cannot fail to inform the mind and deepen the *esprit de corps* of the diligent student.

#### COURSE OF STUDY.

The classes of technical subjects necessary for the student are: (a) history of education, the lives of educators; (b) physical and mental science; (c) school management; (d) practical teaching; (e) definitions of terms and things, logic.

(a) *History of Education and the Lives of Educators.*—Some of the greatest men who have figured on the world's stage have been teachers; therefore we may congratulate ourselves that we come of a noble ancestry. The student will learn to devote himself, with an impartial mind, to the writings of professed educationists; but frequently these are pragmatical and dogmatical; so that, as a corrective, he may visit, in thought, countries and times far distant from his own. What an attractive picture is presented in certain Sanscrit works of Indian teachers of the olden time—men of simple life and manners, who, for

sheer love of wisdom and of their fellows, taught all who came, gentle and simple, without fee or reward, living in a hut with an earthen floor, and subsisting on the free-will offerings of rice furnished by the faithful! Alas! they knew not the blessings of civilization in the twentieth century, represented by the butcher and the baker, the tax-gatherer and the inspector. Then, again, how pleasant to join the groups in the Academy and the Grove, and listen to the sententious wisdom of the Alexandrian, the Epicurean, and the Stoic. Turning over many pages of the world's history, we may say that it is useful, with all necessary caution, to win through the ecstatic periods even of a Rousseau. Again, it is good to meet with men like unto Carlyle and Ruskin of the generation just past, not schoolmasters in the ordinary sense, yet having a message to deliver, often paradoxical and exaggerated, yet all the more likely, perhaps, to strike the ear and impress the imagination. Those who have listened to Mr. Churton Collins's lecture on "Ruskin as an Educational Reformer" will realize what is meant.

(b) *Physical and Mental Science.*—In the present day a certain substratum of physical science is indispensable to every man, much more to an instructor of youth. To the teacher, likewise, a knowledge of mental science is *mine qua non*. This science is not complete, even on its physical side, and most text-books are unsatisfactory, because a student of psychology expects so much—so much, indeed, that no author can tell him. In the study of this department of learning one caution is necessary. For purposes of description and comparison authors are compelled to divide and subdivide the matters of which they treat, and to regard the human subject as if the various faculties relating to the intellect, the emotions, and the will were perfectly differentiated and separated, as it were, into water-tight compartments; but, when expression is given by an individual to any thought, feeling, or manifestation, the organism acts together. Intellect, emotion, and will all run into one mould, and life, so potent and elusive, with true vital energy, transforms and fuses all Nature's elements to furnish a result which one part could not produce alone. Even so the electric spark acts upon a mixture of gases to produce a resultant—water—different in all its reactions from each of its constituent parts.

(c) *School Management*; (d) *Practical Teaching.*—Concerning school management and practical teaching, little need here be said. There are extant admirable text-books; but guidance under a head master, both experienced and sympathetic, is absolutely necessary to beginners in the craft. In this connexion it is lamentable to think how little help and encouragement is vouchsafed by those in authority to the junior teachers in their schools.

(e) *Logic.*—There is little doubt that the study of formal logic should be undertaken by the student, especially by women, not only in early years in the guise of Euclid, but as a distinct preparation for "getting up" lessons, and for the presentation of fact and argument to a class.

If this course of study be undertaken, it may be possible to lead up to a science of education, a science that many, even now, and with some reason, count as non-existent. What has been said resolves itself into a plea that a teacher should know his subject, should know himself, should know the child; the last-named element, in the past, being almost wholly neglected. Especially in respect of knowledge of the child, when the laws of brain growth, order of development, capacity for assimilation have been carefully laid down, it will be found possible to determine the kind and order of studies, so as in due sequence and degree to provide for the stimulation of the memory, the training of the powers of observation, the exercising of mechanical aptitude in relation to such subjects as arithmetic and rhythmic exercises, generally and finally, the habit of reflection and reasoning which involve the comparative and logical faculty and abstract elements of the mind.

#### TEXT-BOOKS.

In what has been said, the requirements have been laid down, and it has not been found possible to say anything about the methods to be adopted. It is impossible, however, to leave out of account the question of text-books. In a discussion on this part of our subject, we are met by an initial difficulty, viz., the lack of easy access to a good and comprehensive bibliography of works dealing with education, in the various departments relating to history, theory, and practice. In the present day it is not enough that such a compilation should refer to works published in this country; it must include those which see the light in the United States and Canada, France, and Germany. Monroe's list of works relating to educational science (published in the United States) brings us down to the end of 1899, but it needs a concerted effort on the part of educationalists and of such a body as the Education Section of the British Association to keep abreast of the times. One has reason to hope that such an effort will be made.

[At this point the lecturer gave a list of books corresponding to the various headings of his subject.]

#### A PLEA FOR ORIGINALITY.

Teachers are the most conservative of beings. There avails for proof a review of the curriculum and traditions of our public schools for a couple of hundred years, even up to the present time. It is astonishing that such teaching as was given should have eventuated in the results undoubtedly furnished. It serves to show that the school, in the largest sense of the word, means more than the class-room; and, moreover, that the human mind, as the human body, possesses a wonderful faculty

for accommodating itself to successive doses of slow poison and of eliminating the virus from the system.\*

The present age, with its new life, its new creative and motive power, its new requirements, furnishes a suitable opportunity for teachers to pause in their work, and investigate the principles which should underlie that work: the subjects which are essential alike to the discipline of the character, to the enlargement of the mind or the cultivation of the memory, and to measure the relative importance to be attached to Nature-study, the dead and living languages, humanities and science, literature, music, and the arts. Again, they should aim at distinguishing between the different methods of teaching languages (whether living or dead), of teaching science, Euclid, and elementary mathematics; at settling how far our work should be directly instructional and informative, how far educational, how far utilitarian. Indeed, such investigations should be *periodically* undertaken: for, even when at a certain age or epoch innovations or improvements are introduced, it comes to pass (by lapse of time and the natural perversity of man) that the best elements of the change are lost, and only the worst and least effective stereotyped: so that (even as an hypothesis such as the Darwinian requires to be re-stated from time to time, as new facts are introduced and new interpretations of old facts admitted) Froebelian or Herbartian methods likewise need to be overhauled as time goes on, and all other educational theories to be reconsidered in the dry light of the twentieth century. All the above-mentioned problems should be present to the mind of the young teacher. Stress is laid upon the adjective here, for of the grey-headed teacher it may well be said that the leopard cannot change his spots nor the Ethiopian his skin.

It is important that every dominant principle of education should be established on a foundation based on the strongest and most permanent elements in our own nature, and on our living powers of activity and expression. Therefore, over and above our ordinary routine work, room should always be found for a certain amount of experimentation. The ultimate influence of much that goes by the name of education tends to the repression of originality; indeed, this has worked itself out so as to constitute the most depressing feature of our daily life in respect of art, architecture, social life, and conversation. Therefore, we plead the more earnestly for the discovery and fostering of originality in the schoolroom during the period of quickest and most spontaneous growth. The traditional treatment of subjects in public schools tends to discourage, even to paralyze, any efforts of the earnest teacher in this direction. To balance obvious disadvantages in their lot, private teachers have the great advantage that they are untrammelled and unfettered; so that, if they are disposed to avail themselves of this freedom, they can try new schemes and new methods. We may naturally call upon them, therefore, to use their liberty for the good of their scholars and of the community at large, for it cannot fail to conduce to the general advancement that old truths should be presented from time to time in a new way, or new truths in a way which is well tried and old. In respect of the introduction of the young into the marvels of the world of which they form a part, it is interesting to follow the system of Nature study now in vogue in the leading centres of the United States of America.

#### THE TRAINING OF TEACHERS.

That teachers should be trained is axiomatic, but many questions arise when the subject is presented with any degree of completeness. What is meant by training? On what preliminary qualifications, moral and intellectual, must that training be superposed? How far does one's ordinary experience and recollection of school and college life tend to furnish a part or a whole of such training? If there must be formal training, how far should it be severely technical? At what age should it begin? How long should it continue? Could it be carried on concurrently with ordinary education? What literary, humanistic, psychological qualifications are presupposed? At what institution is this specific training available? Can one combine teaching with preparation for teaching? What is the probable cost? How can such cost be met in the case of poor students? How far may aid be looked for from Imperial or local taxation? What advantages may training be expected to secure in after life in respect of one's status, remuneration, efficiency, and success? It must be allowed that with every advantage at disposal it is sometimes impossible to develop the true teacher out of the raw material available. Sometimes there are obstacles in respect of physical defects or of mental sluggishness, inducing difficulties in learning or in reproducing what has been learned. Further, it is rarely that one individual is good at everything. At one time there is lack of clearness and accuracy in arithmetic or the higher mathematics; at another, a want of facility in mastering the intricacies of grammar or the involutions of a foreign tongue. Even so, defects in one class of subject may co-exist with extraordinary ability in others.

At the time that a decision is to be taken with reference to the choice of a profession, there should be much searching of heart on the part of the person most concerned. In respect of teaching, above all other occupations, the question of motive is all-important. Should teaching be taken up by reason of the excitement it furnishes? No, rather let

\* Said a head master to a pupil: "Why, your younger brother could have done this exercise better than you have done it!" "But, sir," rejoined the pupil, "he has not been here so long!" "The moral of this story lies in the application thereof." Digitized by Google

the individual join the Army, or cast himself in a white-winged ship on the bosom of the restless sea. Could a teacher hope, by one supreme effort, to sway the minds of thousands of his fellow-creatures by clamorous or persuasive eloquence? Nay, his rôle is far too cabined and confined. Rather should he mount the pulpit of the popular divine or the rostrum of the political partisan. Should a teacher hope to become wealthy beyond the dreams of avarice? Not so; if he seek for sordid gold, let him betake himself to distant Klondyke or to the packing-sheds of Porkopolis. But, on the other hand, if he be moved by sympathy for the tender, wayward, fractious, coy, winning, troublesome, disappointing child; if he be content to lay the foundations—broad and deep—of an edifice of which he will never see the coping-stone; to begin a work, the end of which is beyond the limits of the finite; to teach the stammering tongue to lisp the rudiments of which the full expression will be heard but in the far distant future: if, in this and other ways, he be content to cast his bread upon the waters; to sow the seed, and never to behold the harvest; to labour, but to labour apparently in vain; if he be forward to be and to do all this, and more, for a reward oftentimes in inverse proportion to his merits; then let him go on, with patience, energy, and hope as his faithful attendants; otherwise, let him pause on the threshold and incontinently turn back, to put his hand to some vocation wherein there is less responsibility and a larger earthly fruition and reward.

Different persons, moved by the like good intentions, will yet assimilate training in different ways. In this, as in other walks, a little learning is a dangerous thing, *i.e.*, if it be regarded by the individual as perfect and complete: for then it puffs up with the idea that the first step is equal to the last; it brings about invidious comparisons, whereby one becomes disinclined to learn from others and to garner for oneself the harvest of daily experience in the school-room and the larger world outside; it leads to self-consciousness, so that one teaches but to please oneself or to gratify one's own vanity rather than to ground in progressive knowledge the young and immature minds submitted to one's dominion.

There is no doubt that training, as at present carried on, frequently begets vanity and narrowness of vision. This is evidenced alike in elementary and secondary teachers. Even at the best, training must lead to interference with one's own originality—to the inception of a large amount of theory; for it brings us into close contact with the opinions of men living at other times and under other conditions, thus rendering our assimilation of such theories difficult and sometimes even pernicious. In this relation the *dictum* may still be hazarded that "an ounce of practice is worth a pound of theory." It cannot be denied that, in the field of secondary labour, a large proportion of head masters look upon the artificially trained teacher with a certain amount of suspicion—a few, even with disgust. This may be due to the fact that the trained teacher is prone to give himself airs, and, in no uncertain way, to insinuate that what he does not know about the science and practice of teaching is not worth knowing. He hardly cares to conceal the fact that he looks upon the head as an old fogey, born before the golden epoch when training became the whole duty of man. Teachers of this stamp know just so much as to induce them to imagine they know everything. With the addition of a little more knowledge they would come to the right conclusion, a conclusion reached by all truly wise—*viz.*, that they really know nothing as they ought to know. In respect to these it is not surprising that the head is a trifle sceptical of their superiority, and that he is sometimes goaded into the declaration that he prefers to train his own teachers. In spite of all this we assert emphatically that a special apprenticeship should be served by intending teachers, that it would render the *tyro* incalculable service to undergo a two years' course in a training institution, under masters in the art, in generous emulation with students whose aims and aspirations were as lofty as his own, where a well stocked and well selected pedagogical library would place him *au courant* with past masters of the science, and where demonstration schools were available for persistent exhibition of the art of his profession. Every one must make mistakes in entering upon the practice of a profession. Under the circumstances described, mistakes would not be of such a serious character as in the case of the untrained, as they would stand a good chance of being rectified in their very inception before serious class teaching commenced.

As an element in the organization of secondary education, the training of teachers seems scarcely to receive the attention it merits. This is rendered the more noticeable when one compares the existing state of things with that prevailing in respect of elementary education. Doubtless, the original training colleges were founded by voluntary agencies; but, of late years, they have been largely subsidized by Government, and the number has been recently increased by the establishment of day training colleges in certain School Board centres; where it is sought that they should be, in part, supported out of the rates. All these establishments have relation to one class of teachers only, *viz.*, those intended for work in public elementary schools. Some of these students afterwards take up work in private and grammar schools, but the number is so small that it may be left out of account. The enlargement of the curriculum and the improvement of the work in those schools have resulted in additional demands being made upon the training colleges, and in the desire of many elementary teachers to matriculate in the University of London or to obtain diplomas from the College of Preceptors. Further, what is worthy of special mention, an Association

has been formed to raise a fund available for sending eligible ex-pupil-teachers to Oxford or Cambridge, that they might thereby have the advantage of a full residential course. As educationalists, we must rejoice at the improved education thus given to the children of the people, and at the more elaborate preparation demanded from their instructors. But, when we consider the numerous and important agencies at work in this direction and the large sums expended by the State, by public bodies, and by voluntary agencies in the work of preparation, we are led to look at the contrasted position in secondary education. On one side, the State does everything, or almost everything; in the other case, nothing. From the present relations between so-called elementary and secondary education, and from what we may conceive as likely to happen in the immediate future, if the present forces in the lower stratum continue to act, the gravity of the position becomes more apparent.

We may anticipate that a time will soon arrive when, under the pressure of the Registration Scheme, training will become *sine qua non*. When that occurs, the Universities will be required to take it up in earnest, and difficulties as to the provision of Chairs of Education and demonstration schools will arise. Furthermore, the cost, in time and money, involved in a post-graduate course will press heavily on expectant secondary teachers. It may be contended that the public grants to elementary teachers are balanced by the endowments appertaining to grammar schools and Universities; but these endowments can be utilized only in respect of general culture, leaving nothing available for specific training in the science and art of education. With reference to a certain number of grammar schools and a larger proportion of private schools, intending teachers are mostly poor and dependent upon their own exertions. Although they may be able to afford, with extraneous help, to work for a London degree, yet they cannot afford to spend a further term of two years or so in an educational centre whilst submitting themselves to the discipline of a regular pedagogic course. Does not this condition of affairs represent a real and growing danger to secondary education? We are not making invidious comparisons between the two kinds of education or classes of educators; neither are we intending that a sixpence less should be spent on the education of elementary teachers. The following facts, however, should be kept before the mind. The importance to the State of a sound education for the middle class is incontestable. The middle class, in respect of the sacrifices for education made by its members, deserves well of the country. These educate their own children, and not only so, but they contribute largely besides towards the education of the children of the artisan class. If it be a matter of necessity that the children of the labouring classes be well instructed, it is still more a matter of necessity that the children of our tradesfolk, merchants, manufacturers, and professional men be likewise well instructed. These elements of society, in this particular, have been left entirely to themselves up to the present; and it has become a question whether the State holds the balance evenly as between the two classes.

What can be done to redress the balance? Existing voluntary agencies can be sustained. Amongst these the College of Preceptors bears an honourable record. As a writer in an educational paper reminds us, "the training of teachers was in the forefront of its earliest scheme, and Prof. Payne was the first, and very well known, occupant of its Chair of Education." Lectures on pedagogy have been consecutively given during a long series of years. Diplomas, which would be all the better in the lower stage for a little screwing up, have been granted. Endeavours have been made to engage the students in practical training. Lectures are open to women and men alike. Here is all that is wanted for active work amongst a large class; but the difficulties are great, and some step is necessary to render all this provision effectual. A new departure may surely now be looked for when a teaching University for London, with affiliated colleges, is constituted, and when the long-expected Board of Education has come into effective operation; but is it even now premature to approach the Legislature—in conjunction, it may be, with other secondary training colleges—for a grant which would advance the good work and provide substantial help for those student-teachers who would then find it possible to set aside two years for profitable study?

In the meantime one could not do better than bring into prominence the part of the Report of the Royal Commission dealing with training, and impress its conclusions upon the profession, the public, and Parliament. Voluntary effort has done something, especially for women teachers. The Universities are waking up; but all that has gone before is only a beginning, and, with the best intentions, these bodies can do but little without substantial help. Under existing circumstances, especially in face of public calls now being made, it is of little use to look for aid to private individuals. We turn our eyes, then, to the country at large and to Parliament. Of late Parliament has dealt with the devolution of large sums of money; but, whilst some has gone to the provision of technical education, and more to elementary, the secondary side has been neglected. We have a right to ask that the State shall foster what has been satisfactorily originated.

One may be allowed to appeal to private teachers for the support of this plea; for the question affects them more than those engaged in endowed or high schools, since a large proportion have not been in a position to obtain degrees and diplomas. Some persons may look for a solution of the difficulty by suggesting that teachers for all classes of schools should be trained together. There would be no objection to this being done under certain conditions; but these conditions would be

rendered more favourable if those interested in secondary education would do what the case demands—secure for teachers in that class of school the recognition and help which are their right. Then, in due course, would come a united profession, the abolition of invidious distinctions, and a complete interchange of duty and of work.\*

#### REGISTRATION.

If it be true, as the proverb asserts, *salus populi suprema lex*, it follows that those who have to deal with the bodies of men should be tested before they are let loose on society. So much has been admitted and acted upon, but more grudging and longer delayed has been the recognition of the principle that those who deal with the mind and budding faculties of the race should be inquired of as to their fitness and capacity before they are permitted to undertake a task which realizes alike the responsibilities of the family and the State, and is fraught with tremendous issues for the future of the Empire.

Possibly the Consultative Committee may ultimately be moved to advise the Board of Education to make certain modifications in the Order which will get rid of the anomalies now presented and ensure a fair representation of all grades of teachers when the three or four years' limit has expired.

[The lecturer proceeded, at some length, to deal with the provisions of the Registration Order.]

#### CONCLUSION.

No one will deny that a critical period has been reached in the history of education in this country. Ecclesiastics and politicians of every denomination are dealing with the question, complicated as it is in their minds with various issues. The general public is invited to a consideration of the problem, but usually only to that part considered vital by a particular clique or party. The whole of our system—elementary, technical, and secondary—is, in effect, to be tested by new criteria, and, to a great extent, thrown into the melting-pot.

It may safely be asserted that the form this new adjustment will take depends, to a considerable extent, upon the views expressed by bodies of teachers like those gathered together this evening; and it may be affirmed as truly that the administration of the novel systems that are now being shaped will mainly devolve upon teachers, and teachers alone, when the fires of controversy have died down and the public have sunk again into apathy.

Never was there an epoch when such a weighty responsibility rested upon the teachers that are and that are to be: but, after all, "responsibility" is only another word for "opportunity." That we may seize occasion by the forelock and cope with this opportunity, we must be fired with enthusiasm and possessed with a noble and lofty conception of duty and self-sacrifice. Not only so, but our zeal must be according to knowledge—a knowledge to be gradually chastened and enlarged by growing experience. Furthermore, the *Zeitgeist* of the present day demands that our methods should display scientific aptitude—i.e., be based upon definite means made to work to a definite end.

Our country needs, and dumbly demands, our most active and intelligent service. It is we who must be saviours of society; for no thoughtful person can look around without discerning the perils of the times and the need of great, inspired teachers. Owing to causes patent to all, the lower strata of the population in our large towns are deteriorating at a rapid rate. A self-satisfied spirit has possessed itself of the middle class; the blight which often attends riches and idleness lies upon those who largely constitute our ruling and administrative element. Pleasure and self-indulgence have seized upon all ranks without exception. Old sanctions are passing away; new ones have not yet found their application. The education now given in our elementary and secondary schools alike leads, to a great extent, to learned ignorance and superficiality and presumption.† Mediocrity is writ large upon our statesmen, our writers, our architects—yea, upon society in general. The results are evidenced in many a sad episode in the late war and in the slackening in the race of industrial effort and commercial life.

To know the evil is to be in a position to apply the remedy; but it needs the physician to watch over the patient as well as to diagnose the disease. It is our mission to act the part of the healer and guide. The summons "Wake up!" comes to us in an especial sense, as it comes to all England to-day. It appeals to us individually; it appeals to us as a society. It has long been thought by some that this College is too much inclined to rest on its laurels and to slacken its pace just when it should have sought to take a step forward. It is understood that a Committee has recently been appointed to consider whether our influence cannot be legitimately extended. It is to be hoped that its labours will be fruitful of results.

My task is now ended, and the important part of the proceedings, viz., the discussion, is about to commence. In this debate, many points will undoubtedly be touched upon, but it is to be hoped that in

\* *Vide* remarks of Prof. Withers at the Educational Science Section of the British Association at Belfast in September last. We may anticipate interesting, and perhaps important, results from the Cambridge Conference on Training to be held two days after the reading of this paper.

† *Vide* the presidential address of Prof. Dewar and the sectional addresses of Profs. Perry and Armstrong at the British Association at Belfast.

its course something may be said upon the possibility of this College being involved, in a very real sense, in the training of teachers for secondary schools. A direct effort has already been made in this direction, but it failed, inasmuch as the raw material was not forthcoming. The reason for this was twofold: (a) the indifference of so many of the profession to the advantages secured by training; and (b) the lack of funds to provide for the expenses incurred by students during the period covered by the curriculum. How can these obstacles be lessened or removed?

Further, it may be interesting to have the opinion of those present in reference to the course of study prescribed by the College for the diploma examinations, and to the possibilities of so modifying and enlarging the requirements for the Associateship as to cause its acceptance as a qualifying examination by the Registration Council.

It may be that, in this paper, I have failed to touch on certain essential points relating to the subject. In that case, it is important to have them noted. Furthermore, the grave importance of the matter before us demands a close scrutiny and criticism of all that has been here advanced.

The CHAIRMAN said that he feared it was only too true that the equipment of the teacher in all grades of our schools left much to be desired. The lecturer had quite rightly insisted on the adequate equipment of the teacher in respect to the three departments of education—physical, intellectual, and moral—but he thought that his requirements in respect to the first were too severe. A teacher of defective physique might satisfactorily preside over the physical training of his pupils. The suitable exercises were fairly well agreed on, and, as to whether they answered their purpose or not, the test of fruitfulness could easily be applied. It was in respect to intellectual training that the most serious complaints had been recently made. There was at the meeting of the British Association at Belfast quite a chorus of disapproval of the results of our teaching. Prof. Dewar dwelt on the serious industrial loss this country suffered from the fact that "we did not possess the diffused education without which the ideas of men of genius cannot fructify beyond the limited scope of individuals." The discovery of the aniline dyes by our chemists and the migration of the great industry which grew out of that discovery to Germany gave point to his assertion. Prof. Armstrong complained that the cultivation of that imaginative faculty which was so essential in scientific research was quite neglected in our schools. Prof. Perry said that "the average boy leaves an English school with no power to think for himself, with a hatred for books, with less than none of the knowledge which might help him to understand what he sees, and he has learned what is called mathematics in such a fashion that he hates the sight of an algebraical expression all his life after." Our school classical teaching, it would seem, was just as unsatisfactory as that of mathematics and science. Prof. Postgate (Cambridge) in the current number of the *Fortnightly Review* stated that for many years he had to do the chief part of the teaching in Greek and Latin grammar at his college (Trinity), and the sum of his experience was this: "The average classical student does not know grammar when he comes up, he does not know that he is ignorant, and he does not want to learn." He also said in the same article that "our whole teaching of Greek and Latin is too formal, too verbal, too unreal." The unsatisfactory state of our education, which justified such criticisms, was, it must be confessed, humiliating. Prof. Postgate suggested a remedy which had a wider application than to classics. "We must," he said, "limit our aims, and thoroughly reform our methods." There could be little doubt that too much was attempted, and that wrong methods of teaching were too common in our schools. In the domain of moral education there was general agreement that those spiritual powers and capacities whose cultivation made for right conduct and high character in after life should receive due attention. The late Prof. Huxley and Mr. Herbert Spencer were as emphatic on this point as any spiritual guides could be. Unfortunately there was no harmony as to what the substance of such teaching should be.

Mr. ORCHARD said there were three things that were essential in the equipment of the teacher: he must know his subject, he must know himself, and he must be able to exercise a healthy control over his pupils. He ought also to cultivate clearness of thought and expression. In order that teaching might be of value there must be co-operation between the teacher and his pupils. To secure this a teacher must strive to interest the pupils by a clear presentation of the subject, and also to enlist their sympathy and affection.

A vote of thanks to the lecturer concluded the proceedings.

#### MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on November 15. Present: The Rev. T. W. Sharpe, President, in the Chair; Mr. Armitage Smith, Mr. Barlet, Mr. Baumann, Rev. J. O. Bevan, Mr. Butler, Mr. Charles, Mr. Chettle, Miss Crookshank, Miss Day, Mr. Eve, Mr. Ladell, Mr. Pinches, Mr. Rule, Rev. Dr. Scott, Rev. J. Stewart, Rev. J. E. Symms, and Rev. J. Twentyman.

The minutes of the last meeting were read and confirmed.

The Secretary reported an increase in the number of candidates

entered for the Certificate and Lower Forms Examinations as compared with the entries for the corresponding examinations in 1901.

The report of the Education Committee was adopted.

The report of the Examination Committee was adopted. The report recommended that greater liberty of choice of obligatory subjects should be allowed in all classes of the Certificate Examinations, and that alterations should be made in the requirements for passing in Euclid and Latin in the First Class, and in the method of conducting the oral examination in French and German.

The report of the Joint Committee for considering the ways in which the usefulness and influence of the College might be extended was adopted.

The following persons were elected members of the College:—

- Mr. J. Bailey, A.C.P., Bren Holly, Clytha Park, Newport, Mon.  
Miss R. Gould, A.C.P., 28 Irene Road, Parson's Green, Fulham.  
Mr. C. Heath, A.C.P., Penygroes, Carnarvonshire.  
Mr. E. P. Horsey, L.C.P., Waltham College, Waltham Cross.  
Mr. W. W. Norris, A.C.P., Tetbury Collegiate School, Tetbury.

The following books had been presented to the Library since the last meeting of the Council:—

- By G. BELL & SONS.—Baker and Bourne's Elementary Geometry.  
By BLACKIE & SON.—Blackie's Complete History Reader, No. V.; The Picture Shakespeare (Hamlet); Atkins's Skeleton French Grammar; Barbé's Poems for Recitation; Brownrigg's Xenophon's Anabasis, Book I.; Cotterill's Selections from the Nibelungenlied; Etheridge's Heine's Die Harzreise; Grierson's Practical Book-keeping for Commercial Classes; Harrison's Practical Experiments in Elementary Science; Mardon's Geography of Egypt and the Anglo-Egyptian Sudan; Schoedelin's *Merimée's Colomba*.  
By C. J. CLAY & SONS.—Flather's Scott's Lord of the Isles; Gardner's Kingsley's The Heroes; Ropes's Sandeau's Mademoiselle de la Seiglière; Shuckburgh's Sophocles' Antigone.  
By W. B. CLIVE.—Matriculation Directory, No. XXXIII.; Briggs's Matriculation Advanced Algebra and Geometry; Deakin's New Matriculation Algebra; Fearnside's Matriculation Modern History; Low and Briggs's Matriculation English Course; Stewart and Don's Matriculation Physics.  
By GINN & CO.—The Youth's Companion Series (Strange Lands near Home, Under Sunny Skies, and Toward the Rising Sun); Gardiner, Kittredge, and Arnold's Elements of English Composition; Pinney's Spanish and English Conversation, Second Book; Robinson's History of Western Europe (Part I., The Middle Ages); Tarbell's Essentials of English Composition.  
By MACMILLAN & CO.—Russell's Latin Elegiacs and Prosody Rhymes for Beginners.  
By G. PHILIP & SON.—Philips' Sixpenny Atlas of Comparative Geography, London School Board Atlas, and Visual Memory Atlas; The Dale Readers, Book I.; Dale's Further Notes on the Teaching of English Reading.  
By RIVINGTONS.—Analytical Grammar as applied to the Latin Language.  
Calendars of University College, London; The Royal College of Surgeons of England; City of London College; University College, Nottingham; Durham College of Science; Trinity College, London.  
List of Members, Examination Papers, &c., of the Society of Accountants and Auditors.

## REVIEWS.

### A GREAT SCHOOLMASTER.

*Edward Bowen: A Memoir.* By the Rev. the Hon. W. E. Bowen. (12s. 6d. net. Longmans.)

The life of a schoolmaster, especially if passed at a single school, is necessarily uneventful. It becomes the main task of the biographer to show us the man at his work, and to trace as far as may be the influence of that work on his pupils. This task Mr. Bowen, a nephew of the subject of the memoir, has fulfilled with a loving and skilful hand, and that with but a scanty store of written material at his command, for Edward Bowen was not much of a letter-writer. The details of his life are simple. After a brilliant career at Cambridge he went for a term as a master to Marlborough. He was then invited to Harrow, where he remained for forty years. During the early years of his mastership he was a frequent contributor to the *Saturday Review*, then in its prime, and to the *National Review*. Unfortunately it has been found impossible to identify more than three or four of his contributions. From two of the longer essays, those on Bishop Colenso and on Dr. Davidson's "Introduction to the Study of the Old Testament," both written at the age of about twenty-six, his biographer has given extracts. They are thoughtful and outspoken, and show remarkable familiarity with German Biblical criticism. As time went on his intense devotion to his school-work left him but little time for literary occupations, and his subsequent productions are limited to a few essays, mostly written for the U.U. (a small club of schoolmasters), one or two school-books, and the famous songs happily reprinted in the volume before us. "Forty Years On," with Mr. Farmer's music, is in the repertory of most schools, whether for boys or for girls, and there are other poems in the collection—notably the memorial verses on Mr. Grimston and Lord Bessborough—which stamp the writer as a real poet. In 1869 he was selected to be the first head of the Modern Side at Harrow. Dr. Butler gave him a free hand, and he was able to work up to his ideal without the embarrassment of having to study too much external ex-

aminations or to provide for all the dullards of the school. Both are difficulties only too familiar to modern-side masters. Perhaps it was his quickened interest in teaching modern languages and modern history that about this time stimulated his love of travel. Many of his holidays were spent in visiting the chief battle-fields of the Continent. Four volumes of annotated selections from Thiers bear witness to his zeal and thoroughness in the study of military history. Though it may seem paradoxical, his fondness for that study was only equalled by his detestation of war. Perhaps his most remarkable journeys were on the track of the German Army into France after Würth, and a visit to Paris at the time of the Commune. Twice in the course of his career there was a chance of a wider field of activity opening to him. In 1880 he unsuccessfully contested Hertford in the Liberal interest, and in 1885 he allowed his name to be considered by the Governing Body of Harrow as a possible successor to Dr. Butler; had they elected him, it would probably have been an advantage to Harrow, and certainly a great gain to the profession. Their choice showed that no amount of professional experience or success could outweigh the curious prejudice in favour of clerical head masters.

But it is time to show briefly what manner of man Edward Bowen was. When he went to Harrow there was a barrier between masters and boys, which he at once set himself to break down. His views are embodied in some humorous verses, in which Mercury harangues the Council of the Gods, and says, amid general consternation:

But suppose we turn human; the deified tell us  
That men are not monsters, but excellent fellows.

His ideas of the true relations of masters and boys come out again in his latest published essay, "Arnoldides Chiffers," a satire on the well meaning, but rather narrow, type of school-masters who would fain mould all boys after their own ideal. "The mass of our forms," he says, "would rather learn than not, and, if a master drives, instead of leading, he will gain what is hardly worth having"; and, again, "to overcome is less glorious than to lead." His favourite mottoes were "Play the game" and

Be to their faults a little blind,  
Be to their virtues very kind.

It was this unaffected sympathy and tolerance, this utter absence of priggishness, combined with an unselfishness almost without parallel, that gave him his incomparable influence in guiding, almost unconsciously, the little society he governed. But this was not all: no one knew better how to say the word in season; no one was a more trusted counsellor at the critical moment of a boy's life; few felt so entirely with, and for, their boys. The same applied to his teaching. The boys knew how hard he worked for them, and felt bound, in their turn, to "play the game." "I don't know how it is," they would say; "but, if Mr. Bowen takes a lesson, he makes you work twice as hard as other masters; but you like it twice as much, and you learn far more." A colleague describes him as an "enchanter." Another point is that he was always trying to make boys not only accurate, but well informed and alive to what was going on in the world. He would begin a Latin or a French lesson with one or two questions on current events or on some historical incident the anniversary of which fell on the particular day. The real work was none the less thoroughly done. The testing of preparation was soon over, and the bulk of the time was given to vigorous teaching.

Rewards and punishments were often of a humorous character: a six-sided pencil, purchased from Palm (the grandson of Napoleon's victim) required one special kind of merit; to count the trees along a certain road, or to face the noddings of a mechanical goose, was an occasional penalty. The part he took in games is well known, and his essay on the way a master should treat them and on their place in school life is well worth perusal. In his habits he was extremely simple; in the management of his house he combined most liberal treatment with great strictness and the discouragement of luxury. One of his institutions was an astronomy class, held in his plainly furnished drawing-room, which every boy in the house passed through in his turn. On some points he was at variance with the views now popular in the educational world; he had little belief in the training of teachers, holding that personal character was what, above all, made a good master; he deprecated the certificate examinations instituted by the Universities; and he was opposed to inspection. On the other hand, he anticipated by many years the present movement against excess of grammar, he spoke up

for the educational value of modern languages, and he advocated the addition of judiciously selected tests of physical vigour to the Army examinations. His remarks on these and other points, and his admirable memorandum on the work of the Harrow Modern Side, ought to find a permanent place in pedagogic literature. The book is a worthy memorial of a man who, for his attainments, his power of teaching and influencing boys, and the nobility of his character, has rarely, if ever, been equalled in the profession. It ought to have an index.

#### THE GREATEST OF THE PLANTAGENETS.

"Heroes of the Nations."—*Edward Plantagenet (Edward I.): The English Justinian, or The Making of the Common Law.* By Edward Jenks, M.A. (Oxon. et Cantab.). (Putnam.)

There will be no disposition to question the title of our first Edward to a place among the "Heroes of the Nations." Nor can his biographer omit the legislative record of those "three glorious years 1283-85," which "have only twice been rivalled for honourable activity in the annals of English statesmanship." But, with every willingness to concede to Edward the utmost credit for such legislation, one cannot but express surprise that even "a mere lawyer" should give such prominence to an extravagant popular misnomer. Mr. Jenks's own (rather irrelevant) enumeration of the contents, and narrative of the influence, of Justinian's "Corpus Iuris" will prompt the uninstructed reader to cast about for some explanation of the comparison. However, we will not quarrel about a secondary title of the catchpenny variety. Mr. Jenks expounds the great legal events of the King's reign in a brief chapter—"the brightest chapter in Edward's career"—by no means disproportionately. But what can be said in patience about the first five chapters occupying 121 pages out of 360 (index included)—just one-third of the small book? The first deals with "The Middle Ages in Europe"; the second with "The Emergence of Modern Europe, 850-1250"; the third with "England in the Thirteenth Century"; and the fourth and fifth with "The Reign of Henry III." Edward, our hero, is not born till the last line of page 73, and only about one in ten of those 121 pages expressly mentions him or directly refers to him. Of course, something must be allowed for the preparation of the scene, but a score of pointed pages of summary might well have accomplished that. Mr. Jenks is to be congratulated on finding an editor indulgent enough to allow him to empty his mediæval note-book so freely and conveniently. We are not finding fault with the matter, which is fairly good of its kind; we simply say that it is in the wrong place.

Yet Edward had an exceptionally busy and arduous reign of more than a generation, which has therefore to be compressed unnecessarily. From the outbreak of the War of the Barons to his death he had a great deal of fighting to do, and did it with conspicuous military ability; and his home and foreign policy, varied and exacting, also drew forth his strong intellectual qualities. He was every inch a king. As Mr. Jenks admits, his Scottish policy was "the one great mistake in his career"; but we think that the implications of this condemnation detract from Edward's greatness considerably more than Mr. Jenks allows. We are willing to accept Mr. Jenks's assurance that his "book is written absolutely from first-hand sources"; but then such sources often conflict, and we occasionally doubt his historical judgment. There is, indeed, authority (of a kind) that "the younger Bruce had served under Antony Bek at Falkirk," but a position that Mr. Jenks finds "curious" is somewhat clarified when one sees that the allegation is mistaken. We are not aware of the existence of any trustworthy authority for the statement that "Wallace was back again in Scotland" in 1301, or that Wallace was captured "at Hexham." Of course, it is "beyond question that Edward paid money rewards for the capture of Wallace," but the suggestion that "these may have been given only to his own subjects for their exertions" overlooks the evidence of express rewards to renegade Scots. That Bruce agreed with the Bishop of St. Andrews at Cambuskenneth "to strike a bold stroke for Scottish freedom" is a mere inference—and, we are satisfied, a mistaken one—put forward as a fact. Nor are we aware of any evidence that various other leading men "joined the league," or that the "leaguers" murdered Comyn. The raid by Thomas and Alexander Bruce was not "on England," but on Galloway, though they happened to be executed at Carlisle. These and other points indicate an insufficient grasp of the Scottish branch of the subject. The illustrations are numerous and good, though a few of them are not particularly relevant to Edward I.

#### LIFE OF WILLIAM BLACK.

*William Black, Novelist: a Biography.* By Wemyss Reid. (10s. 6d. Cassell; Sampson Low, Marston, & Co.)

The career of a busy novelist is apt to be rather barren of external events. Black had the good fortune to get disengaged from other work at an early age, and his methodical diligence was divided between his annual Highland holiday for yachting and fishing and his regular months of composition, with an exceptional run to Egypt, to America, to the Mediterranean, or through some part of England or Ireland. There was little or nothing, indeed, in such expeditions more exciting than a twenty minutes' play with a lively salmon or a brief struggle with a keen nor'easter in a rough sea. The materials of the trip were always practised in the next novel; so that his life and work are readily harmonized. Occasional letters throw sidelights on the passing scenes, and the biographer has obtained most useful assistance from other friends of Black who knew him intimately at various periods. Sir Wemyss Reid has woven the facts together with practised skill, though not without some unnecessary repetitions and now and again a looseness of expression that recalls his journalistic days. The best service he has rendered is his careful and sympathetic presentment of the real Black—a very different personage from the Black of the casual observer.

The systematic industry of Black, if it rendered impossible a varied record of personal incidents, ensured a long list of literary products. The quality varies, of course; but several of the novels took, and keep, high rank—"A Daughter of Heth," "A Princess of Thule," "Madcap Violet," "Sunrise," "MacLeod of Dare"; while "The Penance of John Logan" is regarded by Mr. Swinburne as holding the first place in short English fiction. The repetition of incidents, and even of characters, with variations, can easily be converted from a fault to a pleasure by a little judgment applied to the system of reading. The whole Black library is thoroughly sound in sentiment, pure, manly, and chivalrous—like himself. Indeed, it is himself; for he lived in his imaginative world far more than in the actual world. He conquered new fields for fiction; he described scenery with the eye of an artist, and to the admiration of Ruskin; but his special fame rests on the fine qualities of feeling that permeate, with the glow and elevation of poetry, both his characterization and his prose. There has been no nobler portraiture of women in English literature since Shakespeare, no more genial prose since Goldsmith. By the way, Sir Wemyss Reid has not mentioned, we think, Black's monograph on Goldsmith for the "Men of Letters" series. He gives several interesting indications, positive and negative, as to the originals of some of Black's characters; but he is also careful to insist on Black's habit of large variation and idealization. One is also glad to meet in these pages many of Black's personal friends, most of them well known in their own lines of life. Perhaps the deepest interest of all attaches to William Barry, the prototype of Willie Fitzgerald in "Shandon Bells," to whom Black was chivalrously devoted in his last illness. There is no fear that Black will get antiquated so long as human affection and noble ideals and the love of Nature sway the hearts of man and woman: his work is founded on a basis of perennial interest, and it was accomplished with all the strength and care of a most earnest workman, guided by no inconsiderable strain of genius. The present volume will be found a charming and instructive companion to the novels.

#### A REHABILITATION OF TIBERIUS.

*Tiberius the Tyrant.* By J. C. Tarver. (15s. net. Constable.)

Mr. Tarver has had a good few predecessors in the difficult task of endeavouring to clean and remount the historical picture of Tiberius, but his work makes it clear that he has first-hand knowledge of the materials and a perfectly independent method. His style is not always controlled by the scholastic canons, but it has the fortunate quality of fluent readability. Even the introductory chapters, dealing with constitutional arrangements and developments, run in a clear and pleasant stream, unbroken by technical boulders. The fact is that the author is full of his subject, and has realized in his own mind the men, women, and events that he discusses. The work is an original criticism, fully informed, very reasonably conducted, incisive, and effective; and, if at points Mr. Tarver's zeal has carried him rather far, yet his argument must always be reckoned with by his successors. The book will be right welcome to the general reader as well as to the scholar.

The introduction puts the reader in position for the critical narrative. It deals summarily but pointedly with the expansion

of Rome, and particularly with the rise, character, and influence of the Equestrian Order; obviates likely misconceptions of the term "the Roman People"; explains the characteristics of the Senate—"no mere house of representatives," but "a dynasty believing itself to rule by divine right"; and draws distinctions necessary to a just idea of the institution of slavery in the particular place and time. There would probably have been no need for the main inquiry at all if Tiberius had possessed a spark or two of the genius of Julius Cæsar, or some measure of the tact of Augustus. He was too matter-of-fact and downright to establish the Empire without drawing upon himself the hatred of many in high places under him, in that age of persistent intrigue. "Tacitus and Suetonius alike seem to have collected their information from three chief sources—private memoirs, popular rumours (in which are to be included pasquinades and the topical songs of actors), and the official record of the transactions of the Senate." Mr. Tarver properly repudiates the authority of the first two sources, and finds that the evidence of the last, "whenever Tacitus gives it us, is invariably such as to compel us to believe that Tiberius was a wise and moderate ruler." Unquestionably, he was an able general; he was devoted to intellectual pursuits; he was not ambitious. Was he licentious, especially in his latter years? "Men do not, of forethought and design, practise virtue for seventy years in order that they may indulge in vice at a time of life when they are oftenest incapable of taking exercise except in a bath-chair." The theory of monstrosity is overdone. The main root of the prevalence of the misrepresentation is "the fascination of the style of Tacitus." Of course, the vindication of the public life of Tiberius and the grosser charges affecting his private life still leave open a variety of no inconsiderable possibilities to his disadvantage. But even in this case Mr. Tarver has materially strengthened the probabilities in his favour. The details must be sought in the volume; the study of them will be amply rewarding.

#### ENGLISH HISTORY FROM THE SOCIAL SIDE.

*Social England.* Edited by H. D. Traill, D.C.L., and J. S. Mann, M.A. Vols. I., II., and III. (12s., 14s., and 14s. net. Cassell.)

The first three volumes of the reissue of this elaborate and handsome work, in a generously illustrated edition, revised, re-arranged, extended, and largely re-written, bring the history down to the death of Elizabeth, the breaks between the volumes occurring at the accession of Edward I. and the accession of Henry VIII. The work, it is expected, will be completed in about six volumes. As the title implies, the writers, who are acknowledged experts in their several departments, treat the life of the nation as the evolution of a social organism, describing the operation of the internal forces and of the external influences affecting its development. The social events cannot, of course, be intelligibly separated by a rigid line from the political, legal, administrative, and international events; but the approximation in fact effected may be regarded as a very judicious compromise. The position of the editors may be recalled in Dr. Traill's words:

It is open to us, and it has been the object aimed at in these pages, to abstract from the political, and to isolate the social facts of our history, wherever this can be done; to deal as concisely as the demands of clearness will permit with matters of war and conquest, of treaty and alliance, of constitutional conflict and dynastic struggle; but to treat at length and in detail of the various stages of our English civilization, whether as marked by recognizable epochs in moral and intellectual advance, or as indirectly traceable through those accretions of wealth which, by increasing comfort and enlarging leisure, do so much to promote the intellectual development, and, within certain limits, the moral improvement, of peoples. It is possible, and it is here intended, to dwell mainly on such matters as the growth and economic movements of the population, the progressive expansion of industry and commerce, the gradual spread of education and enlightenment, the advance of arts and sciences, the steady diffusion, in short, of all the refining influences of every description which make for the "humane life."

The successful accomplishment of this broad purpose has been amply recognized. Mr. Mann, in his several "Prefatory Notes" to these volumes, intimates the lines of improvement that have been followed, indicating the earnest practical efforts that have been made to perfect the original design. The divergences between different contributors have been reduced as far as possible, but even these are historically instructive, and by no means blemishes. The illustrations, which are abundant and excellent, are really directed "to elucidate and emphasize the information given in the text." In a word, we have nothing

to compare with this elaborate work as "a record of progress of the people in religion, laws, learning, arts, industry, commerce, science, literature, and manners, from the earliest times to the present day." The print, the reproductions of the illustrations, and the general get up are examples of technical excellence.

#### GRIEB'S GERMAN-ENGLISH DICTIONARY.

*Christoph Fr. Grieb's Englisch-Deutsches und Deutsch-Englisches Wörterbuch.* Zehnte Auflage. Von Prof. Dr. Arnold Schröer. Zwei Bände. Zweiter Band: Deutsch-Englisch. (Pp. xxii.+1,194, three columns each; 12s. Frowde.)

It is but a few months since we welcomed the first volume of Prof. Schröer's thoroughly revised edition (the tenth) of Grieb's well known Dictionary. Here now is the second volume—perhaps, on the whole, the more important of the two for English students. Prof. Schröer shall state in his own words his chief objects:

To arrange the meanings of the words historically or genetically as far as possible; to employ, wherever it seemed safe to do so, the etymology as the proper basis of this historical arrangement; to introduce a just proportion in respect of rare and obsolescent terms of the language of everyday life and that of poetry, as likewise of science, commerce, and technology, and to state the modern German pronunciation or pronunciations.

The task was thus a sufficiently complicated and arduous undertaking. Prof. Schröer liberally acknowledges the assistance of several Englishmen, which may account, in part at least, for the remarkable abundance of English idioms and the no less remarkable absence of Germanisms.

More efficiently in the present volume than in the first, we think, Prof. Schröer has cleared away "that needless ballast which dictionaries accumulate through indiscriminate preservation of effete matter." The meanings are marshalled with great care, compounds are explained in vast numbers, and phrases and idioms are very freely given. From a wide and varied series of tests, we cannot but conclude that the volume will successfully meet any reasonable demand upon it, and will prove exceedingly serviceable to English students of German. The chaos of pronunciation must have caused very great trouble to the editor. "There is as yet no standard of pronunciation," he says: "nor is it likely that we shall attain to anything like the standard in English for some generations to come." It would be ungracious to quarrel with him on this head; he has, on the whole, handled his nettle with judgment on principles that he fully explains. We commend the work without finical reservations.

#### THE ENCYCLOPÆDIC DICTIONARY—SUPPLEMENT.

*The Encyclopædic Dictionary—Supplementary Volume.* (7s. 6d. Cassell.)

The original work is well known and appreciated; but since its publication, fourteen years ago, new words for new ideas and new objects have been coming into use in shoals, and, no doubt, a good many old words had been, for one reason or another, omitted. Mr. Henry Scherren has prepared this supplementary volume with extraordinary diligence. It fills 768 pages, three columns each. Current books, reviews, and journals have been ransacked; and the scientific spoils are legion. The original plan has been followed as far as practicable. There are many illustrations. The volume will be found exceedingly useful.

## GENERAL NOTICES.

### CLASSICS.

*The Antigone of Sophocles.* With a Commentary, abridged from the large edition of Prof. Sir Richard C. Jebb, Litt.D., by E. S. Shuckburgh, M.A. (4s. Cambridge University Press.)

Mr. Shuckburgh has had a difficult task, and he naturally fears that some may think he has "erased what could not be spared," while others may think he has "left more than can be well digested even by sixth-form boys." We are of the latter party; but the fault, if any, leans to virtue's side. The introduction deals very fully with the play. The metrical analysis will be helpful; and there are good indices. An edition of the first class of workmanship, and beautifully printed and got up.

"Blackwoods' Classical Texts."—(1) *Livy, Book XXVIII.* By G. Middleton, M.A., and A. Souter, M.A. (1s. 6d.) (2) *Cicero, Pro Lege Manilia and Pro Archia.* By K. P. Wilson, M.A. (2s. 6d.)

(1) This edition "aims almost exclusively at explaining the Latinity of the book for junior students." The notes are full, careful, and

effective; and the brief introduction will be useful. There are several illustrations, the frontispiece being coloured. We should gladly exchange one of them for a map of the field of operations.

(2) Mr. Wilson gives a full and lucid introduction, and directs his notes very largely and advantageously to explanation of the matter of the text. The legal notes, though, perhaps, broadly sufficient, sometimes lack technical qualifications; and some of the grammatical notes seem superfluous. We are surprised at "a basilicum" (page 91). But the work is virile and sensible, and will prove very useful. There are some excellent illustrations.

\*\* In our notice of Mr. Anden's "Arrian's Anabasis" in this series last month we missed a map of the route, and supposed the binder had omitted it. We were mistaken; on the contrary, he had fixed it so skilfully to the inside of the end cover that our reviewer took it for part of the cover. And an admirable map it is. We regret the oversight.

#### MATHEMATICS.

*Academic Algebra.* By Prof. W. W. Beman and Prof. D. E. Smith. (Ginn.)

This work may be confidently expected to become popular. It is well planned and well written. It is intended to give students a thorough elementary training up to entrance to college. Examples and problems occupy a leading place in the scheme. A great deal of the theory is purposely left to be developed at greater length by the individual teacher, but all that is included in the text is clearly shown to have its origin in *common sense*, and is set forth in the simplest manner possible. An excellent insight is afforded into the proper methods of classifying and attacking the examples and problems that occur in practice, and a special feature is the systematic indication of the readiest modes of checking the accuracy of solutions. Much valuable information is included in the volume: for example, the student is led to understand how there gradually arose the need for the extension of known quantities so as to include not merely positive integers, but, in their turn, fractions, negative quantities, surds, and, finally, imaginaries; and in the case of each new type considered a graphical demonstration is introduced, to prove that it fulfils the function for which it may be said to have been created.

*Elementary Geometry.* By W. C. Fletcher, M.A. (Arnold.)

Within its limited range, this is a good little book, but the author is quite correct in stating that it discusses only the *irreducible minimum* which can be considered as constituting any knowledge at all of geometry. The volume is merely intended to supplement good teaching; but is it possible to insure that wherever the book is used such teaching will be available, and, if not, how are the many gaps to be filled and how is the student to derive full benefit from the pages of his text, and thus become possessed of the desired *minimum*? Mr. Fletcher is very happy in some of his methods: e.g., in his practical demonstration of the second corollary of Euclid I. 32, in his treatment of the propositions on parallels, and in his section on "Locii."

*The First Principles of Ratio and Proportion.* By H. W. Croome Smith, B.A. Lond. (Macmillan.)

At present this little treatise is issued in pamphlet form only. It is specially interesting in its earlier pages, which develop the theory of ratio and proportion in a manner essentially satisfactory, and more over suitable as a substitute for the Fifth Book of Euclid. The line of argument employed in demonstrating the principal theorems is based on a preliminary investigation of the properties of *directly varying magnitudes*.

*Arithmetic made Easy.* By Mabel A. Marsh. (Murray.)

A serviceable little book, with many valuable hints. It aims at making the study of arithmetic useful not only for its own sake, but also as a means of mental discipline. Through the medium of concrete examples and by untiring appeal to the senses the mind is to be led to a clear conception of the properties of abstract number.

#### SCIENCE.

"Twentieth Century Text-Books."—(1) *The Elementary Principles of Chemistry.* By A. V. E. Young, Professor of Chemistry in North-Western University. (2) *Elements of Physics.* By C. Hanford Henderson, Ph.D., and John F. Woodhull, Ph.D., Professor of Physical Science, Teachers' College, Columbia University. (5s. net each. Hirschfeld.)

The series is projected on a comprehensive scale: it will include some fifty volumes, embodying the latest advances in knowledge of the various subjects, and it is shaped so as "to give greater vitality to our secondary course and better correlation with the subsequent College education." In the present volumes the exposition is full, clear, and interesting; problems are added to various chapters, but the serious business of practical work is specially provided for in an appended course of experimental illustrations, occupying over 100 pages in each volume; and a stimulating human interest is supplied by a number of good portraits of the more eminent men in the different branches, inserted in connexion with their more special contributions to science. In the Chemistry volume a history of the development

of the science is incidentally outlined, with a concise account of the more important practical applications in smaller type. So in the Physics volume we have the phonograph, the telephone, and the electric motor, as well as the venerable pulley and siphon; and the illustrations are abundant. These examples of the series make a strong bid for the attention of teachers on this side of the water.

"Bell's Science Series."—*Injurious and Useful Insects.* By L. C. Miall, F.R.S., Professor of Biology in the Yorkshire College.

"An introduction to the study of Economic Entomology"—a well packed volume of some 263 pages, thoroughly practical, addressed to "the wants, not only of those who are concerned with insect-ravages, but also of those who seek to inquire into the works of Nature." First comes a short course of work giving the student a useful acquaintance with insect structure and some knowledge of technical processes; next a series of types, easier and more difficult, for detailed examination—beetles, moths, bees, flies, aphids, &c.; then, a descriptive account of the larger orders, with short notices of remarkable forms; and, finally, remarks on the destruction or mitigation of insect-pests, with special reference to American experience. An admirable book, simple and popular, with an outlook on large issues, scientific and practical, and no budding entomologist with a soul above "collecting and naming" will overlook it. In the particular branch of Nature study, it will prove an extremely helpful ally.

#### ENGLISH.

*Tales from the Faerie Queene.* Told by Clara L. Thomson. Illustrated by Helen Stratton. (Speight.)

These charmingly told tales of the Red Cross Knight and Sir Guyon are based on the first two books of Spenser's poem. They were originally told "to children between nine and thirteen years of age" by way of literature lessons. We can well believe they were received with "great interest and enthusiasm," and we hope they will be read by children through the length and breadth of the land—but not as task-work. Miss Thomson has the idea of "a reading book"—a "means of revising alone what the pupils had learnt in class." Certainly let them read the book "alone." The tales keep close to Spenser's narrative, and the frequent quotations from the original are skilfully utilized to draw the pupils to the poem itself. The style and the tone are excellent. There are about 30 illustrations and decorated pages, thanks to the deft pencil of Miss Stratton. These will form a great attraction. The print and get-up are very creditable to the Norland Press.

*One-Hour Exercises in English Grammar.* By R. Harris, M.A. (Relfe.)

Mr. Harris gives fifty-two sets of papers, "intended primarily for use in the lower and middle forms of schools where it is the custom to devote one hour a week to written home-work in English grammar," but also, of course, "convenient for oral work." Examples for analysis figure prominently throughout. In the earlier exercises they seem rather difficult—for lower forms, at least, and in comparison with later exercises. They are all intended to be set out "in tabular form," and Mr. Harris suggests the use of "special exercise-books, or special sheets, with headings printed and lines ready drawn." This saves time, no doubt; but the tabular form needs sharp watching, for it tempts to slackness in details. The demand for an elaborate grammatical terminology is implied; but, as things stand, Mr. Harris cannot help that. Evidently much care has been taken to put the questions in such a way as to require the pupils to think. Generally, they will be found very helpful. Probably, however, the most useful of them are such as invite the pupil to correct or justify given sentences, stating his reasons. Mr. Harris asks: "Would you say that *he* was a *personal* or a *demonstrative* pronoun?" There is a casuistical look about the question, and perhaps the virtue of the answer lies in the reasons annexed. When the laddie was asked whether he would prefer a halfpenny or a bawbee, he promptly answered: "Both." In any case, why "was"?

*The Royal Princess Readers.* V. (Nelson.)

There is plenty of variety in this series, both as to illustrations and letterpress. We have stories from English history, from classical myth, and from modern novelists, and there is plenty of good poetry. The present volume is well printed on good paper, and is certainly attractive as a school book.

#### MODERN LANGUAGES.

*Andersen in German.* Edited by Walter Rippmann. (Dent.)

Prof. Rippmann gives seven of Andersen's stories, adding brief "Aufgaben" (under three heads—Fragen, Wortschatz, Grammatik-sches)—which will serve as samples, and an exhaustive "Wörterverzeichnis," which occupies just half the volume. All explanations are in German. From another author's preface we learn that "the condonation of a single English word is equivalent, in the view of the new method, to a moral lapse." Prof. Rippmann is not chargeable with any such equivalent. But, then, does not the pupil require a dictionary? And, given a dictionary, does not much of the "Wörterverzeichnis" become superfluous? The book is beautifully got up, with seventeen fine illustrations by T., C., and W. Robinson.

*French Commercial Correspondence.* By Charles Glauser, Ph.D., Officier d'Académie, Professeur à l'Académie de Commerce de Vienne. Arranged and adapted by W. Mansfield Poole, M.A., Instructor in French to the Channel Squadron. (4s. 6d. Murray.)

The present volume concludes Poole and Becker's course of Commercial French, and "is intended for use in the highest forms of commercial schools and for students at commercial institutes and colleges of University rank." It is written in French (excepting only the English of small groups of terms and phrases), and it is meant to be taught in French. Each section gives an account of the operation to be dealt with in it, explains the technical terms, &c., sets out models, and closes with "exercices" and "devoirs." Besides the examples of commercial documents in the body of the book, a number of common official forms are reproduced at the end. A comprehensive, substantial, and business-like volume, thoroughly well conceived and executed.

*Commercial German.* By Gustav Hein, Lecturer in German (Honours) to the University of Aberdeen, and Michel Becker, Professor of Modern Languages in the Ecole Alsacienne, Paris. In Two Parts. Part I. (with a Map of Germany). (3s. 6d. Murray.)

Messrs. Hein and Becker give 100 passages in German dealing with what we may call the materials and machinery of commerce, followed by plenty of "Fragen," and interspersed with grammatical "Aufgaben." All this is excellent; and the appendix of weights and measures, &c., is essentially useful, and so is the vocabulary. But why interject an outline grammar (pages 149-226)? The outline is very good indeed, but the pupil, it seems to us, ought to know so much grammar before starting on these reading lessons. The lessons "are suited to general use for the teaching of German in secondary schools," no doubt; but are not the authors trying to ride two horses at once? However this may be, the workmanship is thoroughly sound, and the book ought to be widely used.

#### HISTORY.

(1) *Mediæval and Modern History.* Part I.—*The Middle Ages.* By Philip van Ness Myers, formerly Professor of History and Political Economy in the University of Cincinnati. (5s. Ginn.) (2) *An Introduction to the History of Western Europe.* Part I.—*The Middle Ages.* By James Harvey Robinson, Professor of History in Columbia University. (4s. 6d. Ginn.)

(1) Prof. Myers presents the first half of his work, "Mediæval and Modern History" (published sixteen years ago), in a carefully revised form, the general perspective not being essentially modified, though the emphasis has been slightly shifted here and there. He subordinates political, dynastic, and military affairs to religious, moral, intellectual, and social interests. "Unity has been impressed upon the narrative," he says, "by keeping prominent the great ideals of the mediæval time, especially the ideals of the Papacy and the Empire, and by laying upon the Renaissance, which is viewed as essentially an intellectual movement and as the unconscious goal of mediæval endeavour and life, an emphasis corresponding to that laid upon the Reformation and the political revolution in modern history." Very useful bibliographical notes are appended to the chapters. There are twelve excellent coloured maps and three sketch maps. A very careful, able, and serviceable volume.

(2) Prof. Robinson has paid especial regard to the problem of proportion, regarding it as the fundamental one. Hence he has omitted many secondary personages and episodes, and many anecdotes, that usually figure in manuals of the period, and devoted the space saved to more useful purposes—to a fuller treatment of institutions (and, above all, the Church), to a larger presentation of the life and work of indubitably first-rate men, and to a broader view of the life of the times, including the economic, intellectual, and artistic aspects, as well as the political movements. Comprehensive bibliographies, with a selection of illustrative material, are promised in a companion manual, "Readings in European History," now in preparation. There are eighteen admirable maps (six of them double-page and coloured) and other effective illustrations. An extremely capable and useful work.

*History of England.* Part II., 1485-1689. By George Carter, M.A. (Relfe.)

The object is to help "those who are preparing any part of the period as a 'special period.'" We can recommend it for that purpose. The subject-matter is full and clearly arranged. An appendix contains many short biographies, well written. Pupils that have mastered the book will have no inconsiderable knowledge of the political history of the period.

#### EDUCATION.

*Pastors and Teachers.* By the Right Rev. E. A. Knox, D.D., Bishop of Coventry. (Longmans.)

Bishop Knox's "Six Lectures on Pastoral Theology" at Cambridge are introduced in handsome terms of appreciation by Bishop Gore. Dr. Knox deals with the Church Catechism and the history of catechisms (the text of half a dozen of them forming a large appendix), and earnestly impresses the need of preparation for the duty of catechizing. A special lecture is devoted to the Sunday school. Dr. Knox recognizes that "the monopoly of education" has passed from the Church to the State. "Education, so far as the State undertakes

it, is, and must be, secular. But, thank God, education has not been secularized." But the Church must train her teachers; and it is for the Universities—particularly the theological faculties—to find "instructors in the art of teaching, instructors who could help to bring the methods of religious and secular instruction into line with each other." The lectures are wisely outspoken at points. Bishop Gore says they "demand very much of the Church and the clergy." How, then, shall the demands of other professions be measured?

"The Great Educators."—*Pestalozzi, and the Foundation of the Modern Elementary School.* By A. Pinloche, Professor in the Lycée Charlemagne and the Ecole Polytechnique, Paris. (Heinemann.)

From the eighteen volumes of Pestalozzi's collected works, and the multifarious mass of commentary on the man and his method, Prof. Pinloche has constructed a systematic and tolerably full account of the wayward genius that "immortalized himself by creating, at the price of his repose and happiness, what was till then almost unknown, the education of the lower classes." Part I. sketches Pestalozzi's life; Part II. carefully outlines his method; and Part III. very briefly indicates his influence in other countries, particularly Germany. The work has been very diligently compiled, and is most lucid and readable. It should be welcome to all teachers.

#### SCRIPTURE.

*The Book of Exodus.* Edited, with Introduction and Notes, by the Rev. H. F. Stewart, M.A. (Rivingtons.)

The book is designed for the use of junior pupils, but it would appear to be better adapted for more advanced students. In the introduction the editor clearly accepts as final the latest theories of the "higher criticism." Any one that has followed the course of Biblical criticism during the last quarter of a century can scarcely fail to observe that such finality has by no means been reached. However, without entering upon such thorny questions as these, we not a little doubt the wisdom of confusing the minds of children with theories, however plausible, concerning the untrustworthiness of the Biblical tradition and the legendary character of the heroes of Jewish history. The introduction and notes contain much valuable matter, and, under the guidance of a capable and discreet teacher, will be found useful.

The Cambridge Bible for Schools and Colleges.—*Psalms, Books IV. and V.* By A. F. Kirkpatrick, D.D. (Cambridge University Press.)

Psalms xc. to cl. are treated in this volume, preceded by the full introduction, dealing with the authorship of the Psalms, the forms of Hebrew poetry, the Messianic hope, the Psalter in the Christian Church, and other general topics relating to the subject, all of great interest. It is not only by students that this volume will be appreciated, but by numbers of people to whom the Psalms are not only a devotional exercise, but a literary treasure. Dr. Kirkpatrick's scholarly notes deal with the subject from both points of view, and the ethical difference between the Old and New dispensations is also fully and luminously treated.

#### MISCELLANEOUS.

*A Concise Dictionary of Egyptian Archaeology.* By M. Brodrick and A. Anderson Morton. With 80 Illustrations and many Cartouches. (Methuen.)

The interest and importance of the recent discoveries in Egypt and the promise of a progressive unveiling of a long buried civilization of far reaching influence commend this "handbook for students and travellers" to favourable consideration. As it stands, it appeals mainly to travellers. For students a systematic treatment would be much more useful: the alphabetic arrangement tends to scrappiness and isolation. The matter is judiciously selected and competently presented, so that the book will be very serviceable in its present form, and we trust it will meet such a reception as to encourage the authors to expand it. The illustrations are indispensable and excellent, and the volume is nicely got up.

Cassell's 'Eyes and No Eyes' Series.—Book V.: *Trees and Shrubs*; Book VI.: *Insect Life.*

Two more of Arabella B. Buckley's delightful little primers in natural history, to be heartily recommended to teachers of young children. The practical exercises at the end of each chapter will be found especially useful. The illustrations—some of them tastefully coloured—are good and clear.

*Dick Knap and his Master.* By George Kitching. (Simpkin, Marshall, & Co.)

Dick is a rather belated arrival; but then he is a country lad, and only a bird-tenter. Mr. Kitching is careless of classical refinements, and unkind critics may have hard names for his verse; but he embodies in his tripping and reckless measures much shrewd observation and kindly feeling, often effectively expressed.

*Letts's Diaries* (Cassell) are always handy and serviceable. We have several samples for 1903:—Office Diary (No. 11, 4s.), strongly bound) Rough Diaries (No. 32, 1s. 6d.; No. 33, 1s. 4d. or 2s.; No. 35, 1s. or 1s. 6d.); Scribbling Diary (No 47, 1s. or 1s. 6d.); medical and clerical diaries, with special professional memoranda and arrangements; and dainty pocket diaries in various forms. Accident insurance coupons (£1,000) are attached.—*Pitman's Year-Book and Diary* (twelfth year, 1s.) contains useful information about shorthand and typewriting.

## GIFT-BOOKS AND PRIZES.

## II.

## HISTORICAL TALES.

Mr. G. A. Henty, whose death has just been announced, closes a long and honourable record with three bright volumes of adventure more or less mixed up with history. *With Kitchener in the Soudan* (Blackie, 6s.) is "a story of Atbara and Omdurman," recording (with maps) the reconquest of the Soudan.—*With the British Legion* (Blackie, 6s.) is "a story of the Carlist wars"—a chequered history of the legion raised by Sir de Lacy Evans to support the cause of Queen Christina and the infant Queen Isabella—one of Mr. Henty's best.—*In the Hands of the Cave-Dwellers* (Blackie, 1s. 6d.) is a shorter tale, the scene laid in Mexico, with stirring adventures among the Indians.

*A Hero of the Highlands*, by E. Everett-Green (Nelson, 5s.), is "the romance of a rebellion, as related by one who looked on"—the story of the Forty-Five, with Bonny Prince Charlie, Flora Macdonald, plenty of Jacobite enthusiasm, and—Culloden. It is written with much spirit.—*The Story of a Scout*, by John Finnemore (Pearson), takes us back to the Peninsular War. It has rapid and vivid sketches.—*For the Red Rose*, by Eliza Pollard (Blackie, 2s. 6d.), is concerned with the lively adventures of a little girl found in the forest by a gypsy after the sacking of a castle by the Yorkists and adopted by the tribe. Margaret of Anjou and her son also figure in the story.

Captain F. S. Brereton wields the pen (as well as the scalpel) with vigour. He now presents two capital stories of adventure in connexion with recent warfare—*Under the Spangled Banner*, which has for its background the Spanish-American War, and *One of the Fighting Scouts*, which is a tale of guerrilla warfare in South Africa (Blackie, 5s. each).—Dr. Gordon Stables, ever indefatigable, packs a great deal of adventure and not a little fun, along with much information, into his new volume, *In the Great White Land*—the Antarctic regions (Blackie, 3s. 6d.). It should go without saying that all these books are well illustrated.

*The Siege of York*, by Beatrice Marshall (Seeley), is a fine "story of the days of Thomas Lord Fairfax," with excellent illustrations—a worthy addition to Mrs. Marshall's historical gallery.

## STORIES OF ADVENTURE.

*The Diamond Seekers*, by Ernest Glanville (Blackie, 6s.), is "a tale of adventure by veld and river." The hero goes to Cape Colony to learn farming, but, hearing of a mysterious diamond mine, he goes in search of it. The incidents are abundant and stirring, and the author seems to know his ground at first hand. Capital illustrations by William Rainey, R.I.

*The Treasure of the Incas*, by G. A. Henty (Blackie, 5s.), involves the crossing of the Cordilleras and an arduous search, followed by re-crossing and further search. There are lively encounters with Indians and with brigands. Whether the treasure—"part of the wealth of Atahualpa"—was discovered in the Castle of the Demons or not the reader may be trusted to find out. Eight illustrations by Wal Paget and a map.

*The Secret of the Everglades*, by Bessie Marchant (Blackie, 2s. 6d.), takes us to Florida, to the ancient fastnesses of the Seminoles and the clear waters of the Okeechobee. There is a family tragedy, and search expeditions, and the secret is kept up to the end. The material troubles lead to moral development. The story is well written and well illustrated.

*Grit will Tell*, by R. Stead (Blackie, 2s. 6d.), is occupied with the adventures of a boy on a barge (on the Leeds and Liverpool Canal), in a brickyard (with a strike), at sea, on travel in Belgium (with a bear hunt), and in a battle of the Franco-German War. The story is forcibly written. Four illustrations.

## FOR CHILDREN.

Mr. G. E. Farrow takes his young friends *In Search of the Wallypug* (Pearson, 5s.)—the famous Wallypug of Why. The preposterous dodo, with ever-blooming conceit, is also very much to the fore; and many new characters, fairy and gnome, furred and feathered, play amusing parts. Mr. Alan Wright furnishes numerous appropriate illustrations, and the get-up is brilliant. A charming addition to a whimsical series of prolific imaginative power.

*Kids of Many Colours*, by Grace Duffie Boylan and Ike Morgan (Pearson, 6s.), is a wonderful collection of pictures, with descriptive verses, lullabies, and mother songs. Children of all nations, from China to Hawaii, and from Lapland to the Philippines, are represented in brilliant colours. An attractive book, certainly—though printed in Chicago (last year).

Messrs. Blackie & Son offer *Six and Twenty Boys and Girls* (3s. 6d.) in various moods and situations, and *Games and Gambols* (2s. 6d.), animals masquerading as children—with clever pictures in colour and amusing descriptive verses.

Mr. S. Hamer presents this year *The Ten Travellers, and other Tales in Prose and Verse* (Cassell), with four coloured plates and forty or fifty good illustrations by Harry B. Neilson.

*The New Pupil*, by Raymond Jacobens (Macmillan, 4s. 6d.), is a story of Fraulein Friederich's old-fashioned "home school." Why "Frau-

lein"? Pollie is refreshingly unconventional—"a funny kind of girl"—"always impulsive and up to pranks."

*Comrades All*, by Florence Coombe (Blackie, 2s.), chronicles a variety of children's adventures—the raven, the bicycle, the flying-machine, &c.—with a philanthropic episode. The construction is somewhat loose, and the boys' vernacular is not severely toned down; but the book has elements of promise.

In *A Little Cockney*, by S. G. (Nelson, 1s. 6d.), a town child tells her experiences of a visit to the country and the seaside—a simple and pleasant narrative.

Of the "Little Blue Books for Children" (Methuen, 2s. 6d. each) we have three specimens—*The Peeles at the "Capital"* (and a meddlesome little girl), by Roger Ashton; *The Treasure of Princegate Priory* (with adventures in the recovery of it), by Thomas Cobb; and *A School Year* (with brisk scenes of schoolgirl life), by Netta Syrett. Good stories all, and prettily got up.

## VARIOUS.

There could be no finer gift-book for a youngster—or for an adult either—than William J. Long's *School of the Woods* (Ginn, 7s. 6d.). Mr. Long tells of the animals he has watched in the woods; the sketches "are all life studies, and include also some of the unusual life secrets of animals and birds." He emphasizes "the large place which early education holds in the life of every creature" and the vital importance of obedience in forest education. A most delightful and instructive book, full of observation and instinct with humane feeling, quaintly and lavishly illustrated, and handsomely got up.

*The Boy's Book of Battles*, by Herbert Cadett (Pearson), is briskly written and well got up; but the tone does not commend it, and the historical grasp is feeble.

*The Romance of Modern Invention*, by Archibald Williams (Pearson), contains simple and lucid descriptions of wireless telegraphy, liquid air, dirigible torpedoes, airships, modern artillery, and so forth; with twenty-five illustrations—a very interesting and attractive volume.

*The Fairclough Family*, by Mrs. Henry Clarke (Blackie, 3s. 6d.), turns on a secret that operates on certain young people for a time in a trying way, but is duly unfolded. The story is skilfully contrived and well told.

*Robinetta, or The Light of his Eyes*, by L. F. Tiddeman (Nelson, 2s. 6d.), is a story of a spirited little girl of Walworth, fresh and interesting.

*The Adventures of Downy V. Green, Rhodes Scholar at Oxford*, by George Calderon (Smith, Elder, & Co.), gives a very clever sketch of the hero's first term at the University. Downy is a grandson of the celebrated Verdant, whose "adventures" at Oxford are well known. New times, new manners. The book will provide "a real boss time"—"a gallows old time"—"jags of fun"—"oodles of it." Some readers may be "a bit pixilated" from lack of a glossary of the Amurkan (or Ameracan) tongue; but does it matter? The author's illustrations are capital.

*The Golden World*, by Reed Moorhouse (Dent, 2s. 6d. net), is a pretty "book of verses for children," chiefly about fairies and birds, and not without an unobtrusive moral.

We may include here the first two volumes of the "Red Letter Library"—*Poems by Alfred Lord Tennyson*, and *Poems by Elizabeth Barrett Browning* (Blackie, 1s. 6d. net, cloth; 2s. 6d. net, leather), with brief introductions by Alice Meynell. They are beautifully printed and most tastefully got up—delightful little books.

## NEW EDITIONS AND REPRINTS.

It is just possible that we may make a slip under this head, for want of sufficient indications. For our own part, we should say that the books reissued are quite as good as if they were new; and they will be new to many.

*A Mystery of St. Rule's*, by Ethel F. Huddle (Blackie, 6s.), a mysterious and charming story of St. Andrews, which appears in a finely illustrated edition, rivals any of the new stories. *The Girls of Banshee Castle*, by Rosa Mulholland (Lady Gilbert) (Blackie, 3s. 6d.), is bathed in the glamour of Irish folk-lore. *A Girl's Loyalty*, by Frances Armstrong (Blackie, 3s. 6d.), is in excellent tone and good style. *The Lion of St. Mark and Through the Fray*, by G. A. Henty (Blackie, 3s. 6d. each), are old favourites, as fresh as ever. *The Boys of Wynport College*, by Frederick Harrison (Blackie, 3s.), and *The Golden Galleon*, by Robert Leighton (Blackie, 3s.), will again meet a glad welcome. All these volumes are beautifully illustrated and handsomely bound.

The series of "historical stories collected out of English romantic literature in illustration of the reigns of English monarchs from the Conquest to Victoria"—*The King's Story Book*, *The Queen's Story Book*, and *The Prince's Story Book*—has just been completed by the issue of *The Princess's Story Book* (Constable, 3s. 6d. each). They are all edited, with an introduction, by George Laurence Gomme, and are well illustrated and prettily got up. Date of issue is irrelevant: these books will be as fresh and attractive a generation hence as they are to-day.

Messrs. Macmillan reissue, in their delightful and handy series of "Illustrated Pocket Classics" (2s. net each), Miss Austen's *Pride and Prejudice*, *Sense and Sensibility*, *Emma*, *Mansfield Park*, *Northanger*

*Abbey*, and *Persuasion*—her whole works—with interesting introductions by Austin Dobson; Miss Mitford's *Our Village*, with a charming introduction by Mrs. Anne Thackeray Ritchie; and Goldsmith's *Vicar of Wakefield*, with introduction by Austin Dobson (on Goldsmith's illustrators). All these volumes, except the first, are illustrated by Hugh Thomson. The first is illustrated by Charles E. Brock.

If one's purpose of liberality must be restricted to a modest expense, and is content with close type and paper covers, what can one do better than invest the coin in the "People's Edition" of A. J. Church's delightful *The Story of the Iliad*, or *The Story of the Odyssey*, just issued by Messrs. Seeley? Both volumes have a number of illustrations after Flaxman. An amazing sixpennyworth!

## ANNUALS.

The yearly volume of *Cassell's Saturday Journal* (7s. 6d.)—in a very full sense a magazine of useful and entertaining literature—makes a handsome and portly collection of good things to read, with abundance of illustrations, several of them full-page and coloured.—The Christmas volume of *Little Folks* (Cassell, 3s. 6d.)—always welcome—has two serials and a great variety of stories and articles for children, with pictures on almost every page, six full-page coloured plates, and numerous illustrations printed in colour.—The *Girl's Own Annual* (Religious Tract Society, 8s.), with its long stories, short tales, general papers, and profusion of illustrations, will make a delightful gift-book.—The *Sunday at Home* (Religious Tract Society, 7s. 6d.) is a treasury of excellent reading, with abundant and good illustration.—The *Leisure Hour* (56 Paternoster Row, E.C.) is full of well considered and instructive matter presented in popular form and effectively illustrated.—The *Children's Treasury* (Nelson, 1s.) is rich in attractive pictures and suitable stories.

## FIRST GLANCES.

## CLASSICS.

Allen, the late J. B., M.A.: *An Elementary Greek Grammar*. 3s. Clarendon Press.

[Revised by Mr. D. B. Monro. Lucid and compact.]

Analytical Grammar as applied to the Latin Language. By Two Graduates of Oxford. 2s. 6d. Rivingtons.

["Why should not relations (between thoughts) and symbols (of those relations) be brought before the student in one view?"]

Macmillan's Latin Series.—The Poems of Ovid—Selections. Edited by Prof. C. W. Bain. 6s.

[About 40 illustrations. Get-up agreeable and serviceable.]

## MATHEMATICS.

Alexander, Prof. T., C.E., &c., and Prof. A. W. Thomson, D.Sc.: *Elementary Applied Mechanics*. 21s. Macmillan.

Arnold's Mathematical Series.—Mensuration. By R. W. Edwards, M.A. 3s. 6d.

[Third edition, revised and improved.]

British Association Discussion on the Teaching of Mathematics (Glasgow, 1901). Edited by Prof. Perry. 2s. net. Macmillan.

[Second Edition. Now includes a communication made to the Committee by 22 masters of public schools, and also the Report of the Committee, drawn up by the Chairman (Prof. Forsyth).]

## MODERN LANGUAGES.

Alfa Etimologia e Sinfasi Inglese. Per M. G. Howard. L.2.30. Author (Villa di Donato, Portici, Napoli).

[Much useful matter, greatly confused.]

Black, Cour Élémentaire.—(1) Contes et Préceptes (L. Charleville); (2) Rires et Larmes (A. Vessiot)—both edited by F. B. Kirkman, B.A. (3) Berthe aux Grands Pieds. Adapted from Adenet's poem, and retold in modern French by Mrs. J. G. Frazer. 6d. each.

[Appropriate; well edited; good illustrations.]

Black, Cour Moyen et Supérieur.—(1) Mélanges (Voltaire). Edited by F. B. Kirkman, B.A. (2) La Farce de Maître Patelin. Edited by M. Ninet. (3) Chicot chez Henri de Navarre (Dumas). Edited by A. R. Florian, M.A. 6d. each.

[Excellent editions, capitally illustrated.]

Blackie's Little French Classics.—(1) Selections from Buffon. (2) La Mule du Pape (Daudet). 4d. each.

[Excellent additions to a very useful series.]

Blackie's Little German Classics.—Select Ballads by Schiller. Edited by Frieda Weekley. 6d.

[Good selection. But is it right to explain "fraget" for "fragt" by saying that "an e is often inserted for the sake of the rime or rhythm"? And is it not missing the point to say that for "verhehle" ("Der Taucher," 59) "the indicative 'verhehlt' would be more usual"?]

Hossfeld's Series.—A New English and French Vocabulary. By Profs. A. Ludwig and H. Lallemand. 2s. 6d. net. Hirschfeld.

[Alphabetical and analogical. New edition, revised. Practical and useful.]

Macmillan's French Classics.—*Athalie* (Racine). Edited by F. C. de Sumichrast. 3s. 6d.

[Introduction, running commentary, notes.]

Molière's Plays.—Vol. I. By A. R. Waller. 3s. 6d. net. Grant Richards.

[*Tartuffe*, *Don Juan*, *L'Amour Médecin*. French and English on opposite pages. Delightful; handy; translation too often loses by conciseness.]

## DRAWING.

Lydon, F. F.: *Floral Design in Colour*. Sets 1 and 2. 1s. 6d. net each. Burns & Oates.

[Varied, progressive, and delicate.]

Lydon, F. F.: *Nature Lessons with the Blackboard*. 3s. net. Burns & Oates.

[43 full-page plates (plants and animals), with full "notes" opposite. Extremely instructive and suggestive in all respects.]

Macmillan's Free Brush Design Drawing Cards. By Francis N. Wallis. In 3 sets—Junior, Intermediate, and Senior. 2s. each set.

[24 cards in each set. Judiciously progressive.]

Normal Tutorial Series.—The Normal Guide to Model Drawing. By Arthur Schofield, A.R.C.A. (Lond.). 2s. 6d. net. Normal Correspondence College Press.

[Good illustrations; brief and lucid explanations.]

Philips' Free Brush Drawing Copy Books, applied to pattern. By Stanley Thorogood, A.R.C.A. In three books of seven stages. 3d. net each.

[Skillfully graduated; attractively got up.]

Philips' Primary Drawing Cards. By F. F. Lydon. 6 packets. 1s. 6d. net each.

[18 cards (plants, animals, and simple objects, with ornamental lettering in Standards IV.-VI.) in each packet. "To meet the requirements of the Illustrated Syllabus for Primary Drawing." 10 x 7½ in. Excellent.]

## MISCELLANEOUS.

Aunt Kate's Conjuring and Parlour Magic. 1d. Leng.

Balfour, Right Hon. A. J.: *Speech on the Education Bill at Manchester*. 3d. Eyre & Spottiswoode.

[Reprinted from the *Times* (October 15).]

Books for the Bairns.—(1) *The Sleeping Beauty* (No. XLVI.); (2) *Cinderella* (No. LXIX.); (3) *Dick Whittington* (No. LXXXI.) 1d. each. Mowbray House, Norfolk Street.

[Musical plays; illustrated, interesting.]

Browne, M. Prince: *The Practical Work of Dressmaking and Tailoring*. 2s. 6d. Cox.

[Many good illustrations. Business-like.]

Browne, M. Prince; *Dress Cutting, Drafting, and French Pattern Modelling*. 2s. net. Constable.

[Practical and useful. Good illustrations.]

Cambridge, *The Student's Handbook to the University and Colleges of*. 3s. net. Cambridge University Press.

[Unofficial, but "compiled from authentic sources." Most ably done and exceedingly useful.]

Cape of Good Hope Education Report for 1900.

Cassell's Illustrated History of the Boer War. Part I. 6d. net.

[Brightly written and well illustrated.]

Cassell's Social England. Part I. 1s. net.

[Excellent work, beautifully got up.]

De Brath, S., and F. Beatty: *Over-Pressure*. 1s. 6d. Phillip.

[Cheap edition. Much sensible matter.]

Encyclopædic Dictionary. Part I. 6d. net. Cassell.

[New edition, revised and enlarged; including supplementary volume and 76 coloured plates expressly prepared for this issue. A work of proved excellence and utility.]

Genge, R. S., M.A.: *A Kalendar of Hymns, Ancient and Modern, for 1903*. 2d. Frowde.

Handy-Man's (The) *Book of Tools, Materials, and Processes employed in Carpentry, Joinery, and Cabinet Work*. Edited by Paul N. Hasluck. Part I. 6d. Cassell.

[With numerous illustrations and working drawings. To be completed in 12 monthly parts. Practical and useful.]

Hodgkins, J. G., M.A., LL.D.: *The Rev. Dr. Ryerson as a Public Man and an Educationist, 1825-82*. 25 cents. Briggs (Toronto).

Holmes, H. T.: *Reform of Reformatories and Industrial Schools*. 1d. Fabian Society.

Kerner and Oliver: *The Natural History of Plants*. Parts IV., V., VI. 1s. 6d. net each. Blackie.

[Able and popular. Numerous good illustrations.]

Marsh, C., M.A., and H. W. Ord, M.A.: *Graphic Mark Book and Reducing Scale*. 1s. 4d. Educational Supply Association.

**Messrs. J. M. DENT & CO. beg to draw the attention of Teachers to their New Books especially prepared for the CAMBRIDGE LOCAL EXAMINATIONS, 1903, as enumerated below:—**

**ENGLISH TEXTS.**

**SCOTT'S LORD OF THE ISLES.** Edited by W. KEITH LEASK, M.A. (Edin. and Oxon.). With Illustrated Biography, Introduction, Illustrated Notes, and Glossary. Crown 8vo, 1s. 4d.

**KINGSLEY'S THE HEROES.** Edited by OLIPHANT SMEATON, M.A., late Principal, Whangarei Grammar School. With Introduction, Notes, and Illustrations. Fcap. 8vo, 1s. 4d.

**MILTON'S PARADISE LOST.** Books V. and VI. Edited by FLORA MASSON. With Introduction and Notes. Fcap. 8vo, 1s. 4d.

**POPE'S ESSAY ON CRITICISM.** Edited by B. M. WANTEDLOVE, M.A., Litt.D. With Introduction and Notes. Fcap. 8vo, 1s. 4d.

*Uniform with the above.*

**Scott's Marmion.** Edited by Rev. R. P. DAVIDSON, M.A. (Oxon.). With numerous Illustrations. 1s. 4d.

"A very useful edition. The introduction is sufficient, and the notes are good. The illustrations are copious and of a high character. . . . A capital book for regular use."—*Schoolmaster.*

**THE TEMPLE SHAKESPEARE FOR SCHOOLS.**

General Editor: OLIPHANT SMEATON, M.A.

**SHAKESPEARE'S JULIUS CÆSAR.** Edited by F. ARMITAGE MORLEY, M.A., D.C.L. With numerous Illustrations, and 5 Drawings, by T. H. ROBINSON. Crown 8vo, 1s. 4d.

*Also Ready Immediately, for King's Scholarship Exam., 1903:—*

**AS YOU LIKE IT.** Edited by Miss FLORA MASSON. With Illustrations by DORA CURTIS. 1s. 4d.

*Uniform with the above. Each 1s. 4d.*

**Tempest.** Edited by O. SMEATON, M.A. 1s. 4d.

**Macbeth.** By G. SMITH, M.A., LL.D. 1s. 4d.

"Everything about this edition speaks of unwonted care. . . . The artistic merits are unique. The editorial matter is carefully arranged, and the notes are splendid. If this series maintains such high interest at so cheap a price, it will speedily out many others which are comparatively dull and unattractive."—*School World.*

**CLASSICAL TEXTS.**

**CÆSAR'S GALLIC WAR. Books II. and III.,** in one Volume. Edited by A. CROOM PATERSON, M.A. (Edin. and Oxon.). With numerous Illustrations. Fcap. 8vo, 1s. 4d.

*Uniform with the above.*

**Cæsar's Gallic War. Book I.** Edited by A. S. WILKINS, LL.D., Litt.D. Illustrated. 1s. 4d.

"There is nothing but praise to give for the matter and manner of the introduction and notes. . . . The illustrations taken from ancient monuments are excellent, and the imaginative frontispiece is very creditable. The book is cheap at the price."—*School World.*

**DENT'S FIRST LATIN BOOK.** By HAROLD W. ATKINSON, of Rossall School, and J. W. E. PEARCE, Head Master of Merton College, Sidcup. With twelve coloured Illustrations by M. E. DURHAM. Fcap. 8vo, cloth, 2s. 6d. net. [*Just published.*]

**DENT'S ENGLISH GRAMMAR OF PARSING AND ANALYSIS.** By W. BRYANT. Fcap. 8vo, 1s. 4d. [*Just published.*]

**DENT'S FIRST FRENCH BOOK.** Based on the Hülzel Pictures of the Seasons. By S. ALGE and W. RIPPMANN. **Eighth Edition, completing 32,000 copies (with the Addition of Five Simple Songs and Music).** 1s. 6d. net. (*Dent's Modern Language Series.*) [*Just published.*]

\*\* For other volumes of the Series see Special List.

**PRIZE BOOKS:—Write for Particulars of Messrs. Dent's Books suitable for Prizes, sent post free to any address.**

EDUCATIONAL AND GENERAL LISTS POST FREE.

J. M. DENT & CO., 29 AND 30 BEDFORD STREET, W.C.

**GIFT BOOKS AND PRIZES PUBLISHED BY GINN & COMPANY.**

LONDON, BOSTON, AND NEW YORK.

London Representative—FRED. J. MATHESON.

9 St. Martin's Street, Leicester Square, London, W.C.

**SCHOOL OF THE WOODS.** New Matter. Just published. By the Author of "Beasts of the Field" and "Fowls of the Air." Descriptions of Animal Life. By WILLIAM J. LONG. Copiously Illustrated by CHARLES COPELAND. Three Volumes, 5½ by 8 inches, uniform in style. Printed on heavy paper with full-page and marginal Illustrations. Decorative satine-cloth cover stamped in full gold. Each 7s. 6d.

*Excerpts from Reviews just received of "School of the Woods":—*

*Churchwoman.*—"We would rank very high among our prize books 'School of the Woods,' by W. J. Long, as one of the most charmingly written and charmingly illustrated animal books that we have ever met. . . . Everybody, old and young, must be the better for reading this book."

*St. James's Gazette.*—"The author views the forest people as creatures rational with a human form of reason; and this discernment, followed up as it is with sincerity and sanity, makes the book one of unusual charm."

*Daily Telegraph.*—"No reservation is necessary in the praise bestowed upon this delightful work. . . . Would that the incidents of most novels were half as engrossing!"

*Review of Reviews.*—"Author, artist, and publisher have united in producing volumes that are a model of their kind. These books are sure of an especially warm welcome in any household where there are children, as their dainty illustrations make them doubly attractive to the little ones."

# BLACKIE & SON'S BOOKS

## For Cambridge Locals, 1903.

SPECIAL LIST OF BOOKS SET FOR OXFORD LOCAL AND COLLEGE OF PRECEPTORS' EXAMINATIONS  
POST FREE ON APPLICATION.

- Julius Caesar.** Edited, with Introduction, Notes, &c., by A. D. INNES, M.A. 1s. [*The Warwick Shakespeare*]
- Julius Caesar.** Edited, with Introduction, Notes, &c., by W. DENT. 8d. [*The Junior School Shakespeare*]
- Julius Caesar.** Edited, with Introduction, Notes, &c. Illustrated, 1s. [*The Picture Shakespeare*]
- Pope's Essay on Criticism.** Edited, with Introduction, Notes, &c., by FREDERICK RYLAND, M.A. 1s. 6d. [*Blackie's English Classics*]
- Caesar—Gallic War. Books II. and III.** Edited by Prof. JOHN BROWN, M.A. With or without Vocabulary. 1s. 6d. each. [*Blackie's Illustrated Latin Series*]
- Nepos—Selections.** (*Lives of Lysander, Alcibiades, Thrasybulus, Conon, Iphicrates, Chabrias.*) Edited by A. W. CARVER, M.A. 1s.
- Livy V.** Edited by W. CECIL LAMING, M.A. With or without Vocabulary. 3s. 6d. [*Blackie's Illustrated Latin Series*]
- Horace—Odes III.** Edited by STEPHEN GWYNN, B.A. With or without Vocabulary. 1s. 6d. [*Blackie's Illustrated Latin Series*]
- Xenophon—Anabasis II.** Edited by the Rev. G. H. NALL, M.A. With or without Vocabulary. 2s. [*Blackie's Illustrated Greek Series*]
- Outlines of the World's History.** By EDGAR SANDERSON, M.A. Illustrated. Part II. Greece and Rome. 2s.
- Perrault—Fairy Tales.** Edited, with Notes and Vocabulary, by LOUIS BARBÉ, B.A. Illustrated. 1s. [*Nearly ready*]
- Sandeau—Mademoiselle de la Selglière.** Edited, with Notes, &c., by J. E. MITCHELL, M.A. [*In active preparation*]

## NEW BOOKS.

- PIERRE ET CAMILLE.** By ALFRED DE MUSSET. Edited by W. G. ETHERIDGE, M.A. With Vocabulary, cloth, 1s. *Specially prepared for Oxford Local Examination, 1903.*
- A PRIMER OF OLD FRENCH.** By G. H. CLARKE, M.A., and C. J. MURRAY, B.A. 2s.
- MOLIÈRE—LE BOURGEOIS GENTILHOMME.** Edited by MAURICE GEROTHWOHL. Price 8d.
- BLACKIE'S LITTLE FRENCH CLASSICS.** *New Volumes.* 4d. each.  
DAUDET—La Mule du Pape. BUFFON—Selections. VOLTAIRE'S LETTERS—Selections. ERCKMANN-CHATRIAN—Contes Fantastiques. French Poems for Recitation.
- BLACKIE'S LITTLE GERMAN CLASSICS.** *New Volumes.* 6d. each.  
SCHILLER—Select Ballads. HEINE—Die Harzreise. The Nibelungenlied. KÖRNER—Select Songs.
- GERMAN IDIOMS AND PROVERBS.** Compiled by ALFRED OSWALD (Author of "A First Course of German Commercial Correspondence"). 1s. 6d.  
Contents: (1) Prepositions and adverbs used idiomatically. (2) Idioms with other parts of speech. (3) Particles used idiomatically (4) German Proverbs with English equivalents. (5) English Proverbs with German equivalents.
- A PRACTICAL GERMAN COMPOSITION.** By ALFRED OSWALD. 2s.
- GOETHE'S POEMS.** Selected and Edited, with Introductions and Notes, by H. G. ATKINS, M.A., Professor of German at King's College, London, and L. E. KASTNER, B.A., Lecturer in French at Owens College. 3s. 6d. net.
- A FIRST GREEK READER.** By R. A. A. BERESFORD, M.A., Author of "A First Latin Reader," and R. N. DOUGLAS, M.A., of Uppingham School. 2s.  
This Reader (a companion to Mr. Beresford's popular First Latin Reader) consists of two parts: in the first part each lesson consists of one page, containing an illustration explained by eight or nine simple sentences; the second part consists of stories and anecdotes of greater length, carefully graduated, and freely illustrated with full-page plates and photographs of famous statues and busts. The text is set at the Clarendon Press in a large and bold type.
- THEORETICAL AND PRACTICAL GEOMETRY FOR BEGINNERS.** By RAWDON ROBERTS.  
Crown 8vo, cloth, 1s. 6d.  
This is a text-book of Geometry on modern lines, and should be welcomed by those teachers who, while wishing to adopt modern methods, seek to secure for their pupils a mental training similar to that afforded by a study of Euclid's Elements. It is an eminently practical book, being replete from the very beginning with exercises requiring the use of the straight-edge, the pencil, the compass, and the protractor. The definition and the axiom receive a somewhat more extended application than is the case in Euclid. All the essentials of the earlier books of Euclid are here reduced into a small number of propositions, but the spirit of the book, its coherence, and the rigid logic with which the propositions are developed are quite Euclidian. The figures and illustrations are plentiful and are carefully drawn.
- THE BRITISH EMPIRE IN THE NINETEENTH CENTURY.** A New History Reading Book, bringing the story of Britain at home and abroad down to the close of the African War. With many Coloured and other Pictures. Crown 8vo, cloth, 1s. 6d.

BLACKIE & SON, LIMITED, 50 OLD BAILEY, LONDON, E.C.  
GLASGOW; DUBLIN; BOMBAY.

**MATHEMATICS.**

The Integration of  $\int \frac{d\theta}{\sec \theta + \operatorname{cosec} \theta}$ .

By GEORGE SCOTT, M.A.

$$\int \frac{d\theta}{\sec \theta + \operatorname{cosec} \theta} = \int \frac{\sin \theta \cos \theta d\theta}{\sin \theta + \cos \theta}$$

Now  $2 \sin \theta \cos \theta = (\sin \theta + \cos \theta)^2 - 1$ .

Therefore 
$$\int \frac{d\theta}{\sec \theta + \operatorname{cosec} \theta} = \frac{1}{2} \int \frac{d\theta \{ (\sin \theta + \cos \theta)^2 - 1 \}}{\sin \theta + \cos \theta}$$

$$= \frac{\sin \theta - \cos \theta}{2} - \frac{1}{2} \int \frac{d\theta}{\sin \theta + \cos \theta}$$

$$= \frac{\sin \theta - \cos \theta}{2} - \frac{1}{2\sqrt{2}} \int \frac{d\theta}{\sin(\frac{1}{2}\pi + \theta)}$$

$$= \frac{\sin \theta - \cos \theta}{2} - \frac{1}{2\sqrt{2}} \log \tan(\frac{1}{4}\pi + \frac{1}{2}\theta).$$

**14885.** (Professor SANJANA, M.A.)—Let  $K_1$  be the pole of the side BC of a triangle ABC with regard to the circum-circle, and O the circum-centre; let D, E, F be the mid-points of BC, CA, AB respectively; and  $K_1A_1, K_1B_1, K_1C_1$  perpendiculars to OD, OE, OF respectively. Then the six points  $K_1 \equiv A_1, B_1, C_1, B, C, O$  lie on a circle. So also the similar points  $K_2 \equiv B_2, C_2, A_2, C, A, O$  and  $K_3 \equiv C_3, A_3, B_3, A, B, O$  lie on circles. [These circles have been called the ex-Brocardal circles of the triangle.] The triangles  $A_1B_1C_1, A_2B_2C_2, A_3B_3C_3$  are each inversely similar to ABC, and in perspective with it; they are also in perspective two by two, and their axes of perspective meet in a point. [These triangles have been called ex-Brocardal triangles.] The ex-Brocardal triangles form a system of similar figures whose circle of similitude is the circum-circle ABC; whose invariable points are  $A', B', C'$  on the circum-circle diametrically opposite to A, B, C, and whose invariable circles are the ex-Brocardal circles (so that every three collinear corresponding points of the figures lie severally on these circles).

Note by C. E. YOUNGMAN, M.A.

These and other properties are proved in the solutions of Questions 14819, &c. (New Series, Vol. 1., p. 68, q.v.). A few more may be mentioned.

Since  $A_1, B_1, C_1, A_2, B_2, C_2, A_3, B_3, C_3$  have two by two the same centre of perspective, the three axes will concur. Let  $J_1F_2D_3$  be one of them; then angle  $B_3D_2B_1 = B = B_3F_2B_1$ ; therefore  $B_3D_2, F_2I_1$  are concyclic, and  $B_3D_2F_1$  is a right angle. Hence  $J_1J_2J_3$  is orthologic with ABC.

To follow up the analogy between  $A_1B_1C_1$  and the first BROCARD triangle, consider the three similar figures  $A_1BC, B_1AC, C_1BA$  on the sides of ABC. The double points are  $A'', B, C$  ( $A''$  is the projection of O on  $AA_1$  and lies on the circle  $OBCA_1$ );  $A_1, B_1, C_1$  are the invariables; and the director-point is A, which is therefore, in any triangle  $a_1b_1c_1$  of homologous points, not the centroid (as in the case of the BROCARD tri-

angle), but an ex-centroid, i.e., vertex of parallelogram  $Ab_1a_1c_1$ . Any triangle  $pqr$  made by three homologous lines is directly similar to ABC, and its ex-symmedian (homologue of  $A_1$  in ABC) is its centre of perspective with  $A''BC$ ; in other words,  $Bq$  and  $Cr$  touch the circle  $pqr$ , and meet on the circle  $A''BCOA_1B_1C_1$ .

Again, complete the parallelogram  $CABA_0$ . From Euc. 1. 43, *conv.*, it can be shown that  $A_1A_0, B_1C, C_1B$  meet at a point  $G_1$ ; this is the double point of ABC and  $A_1B_1C_1$ ; for the angles  $G_1BA, G_1CA, G_1B_1A_1, G_1C_1A_1$  all equal A. And  $G_1$  lies at the intersection of the two EULER lines OH and  $O_1H_1$ , as may be proved thus: first,  $A'$  lies on  $O_1H_1$ ; for O is the orthocentre of  $AC_1B_1$ , which is equal to  $A_1B_1C_1$ ; therefore  $A_1H_1 = AO = OA'$ ; therefore  $H_1A'$  bisects  $A_1O$ ; and next,  $G_1$  lies on  $A'O_1$ ; for the angle  $OG_1A'$  in the figure ABC is equal to  $O_1G_1O$  in  $A_1B_1C_1$ .

Further, the circles ABC,  $AB_1C_1, BC_1A_1, CA_1B_1$  meet at N, the NEUBERG point, on the EULER line of the first BROCARD triangle. N lies also on the EULER lines of  $A_1B_1C_1, A_2B_2C_2$ , and  $A_3B_3C_3$ . For AN is perpendicular to the EULER line of  $AC_1B_1$ ; and therefore to that of  $A_1B_1C_1$ , i.e., to  $A'O_1$ ; and it is also perpendicular to AN.

The trilinear coordinates of  $G_1$  are given by  $aa = (c^2 - a^2) \beta b (b^2 - a^2) \gamma c$ . It follows that  $AG_1, BG_2, CG_3$  meet BC, CA, AB on the line  $\Sigma (b^2 - c^2) a/a = 0$ ; i.e., on the BROCARD axis, the trilinear polar of N; and A (NBG<sub>1</sub>C) is a harmonic pencil.

The line  $A_0A_1G_1$  corresponds (in a way) to GK, the "symmedian-point axis," and meets it on BC.

**15031.** (ALETROP.)—Résoudre en nombres entiers  $x^{-2} + y^{-2} = z^{-2}$ .

Solution by D. BIDDLE and R. CHARTRES.

Take  $a, b, c$ , any integral values that will serve to represent the sides of a right-angled triangle, such that  $c^2 + b^2 = a^2$ . Divide both sides of this equation by  $a^2b^2c^2$ . Then  $(ab)^{-2} + (ac)^{-2} = (bc)^{-2}$ . The simplest example has  $x = 20, y = 15, z = 12$ .

Taking Euclid III. 36 as the Definition of a Circle, show that the ordinary Definition is a Theorem.

By J. MACLEOD, H.M.I.S.

In the figure the tangents at B, C meet in A. If BO, CO are perpendicular to the respective tangents, BO = CO, and AM bisects BC perpendicularly, all resulting from the evident equality of the tangents.

We can now prove that but one tangent can be drawn at any one point. If possible, at B let there be the two tangents BA, BF.

$$AE \cdot AD = AB^2 = AE^2 + EB^2 + 2AE \cdot EM,$$

$$AE^2 + AE \cdot ED = \dots \dots \dots$$

therefore  $AE \cdot ED = EB^2 + 2AE \cdot EM,$

or  $AE \cdot MD = EB^2 + AE \cdot EM.$

Hence  $MD > EM,$

$$FB^2 = FE \cdot FD = (FA + AE)(FA + AD)$$

$$= FA^2 + FA \cdot AD + FA \cdot AE + AE \cdot AD$$

$$= FA^2 + AB^2 + \dots,$$

$$FA^2 + AB^2 + 2AF \cdot AM = \dots \dots \dots$$

Hence  $AF \cdot EM = AF \cdot MD,$  which is impossible, and therefore there can be but one tangent at each point.

At E draw the tangent GH, meeting those at C, B in G, H respectively. The following equalities are evident: —BE = EC, GF = GC, HE = HB. Also  $\angle GCE$  or  $\angle GEC = \angle HBE$  or  $\angle HEB$ , and HE = EG and OE is perpendicular to HG. Therefore OB, OE, OC are equal. Similarly, it can be proved that all radii within the arc BEC are equal. Again, from the equality of OE to OC, and therefore of the rectangle  $AE \cdot AD + OE^2$  to  $OA^2$ , it follows that ED is bisected in O.

By drawing a tangent at D to meet AC produced it may similarly be proved that all radii within the arc CD are equal to each other, and to those in BEC. Likewise those within BD for similar reasons are equal to each other and to the other radii.

**15146.** (Professor NANSON.)—If (A, B, C) is the adjugate of the determinant (a, b, c), prove that

$$(BC, CA, AB) = -(bc, ca, ab)(a, b, c)^2.$$

Solutions (I.) by T. MUIR, LL.D.; (II.) by A. M. NESBITT, M.A.

(I.) The determinant (a, b, c) must mean the circulant  $\begin{vmatrix} a & b & c \\ c & a & b \\ b & c & a \end{vmatrix}$ , which may be denoted by  $\begin{vmatrix} a & b & c \\ a & b & c \end{vmatrix}$ .

Using thrice the fact that any three-line circulant  $\begin{vmatrix} x & y & z \\ y & z & x \\ z & x & y \end{vmatrix}$  is equal to  $(x + y + z)(x^2 + y^2 + z^2 - yz - zx - xy)$ , we have two factors on the left,

viz.,  $\Sigma BC$  and  $\Sigma B^2C^2 - \Sigma A^2BC$ , and six factors on the right, viz.,  $\Sigma bc$ ,  $\Sigma b^2c^2 - \Sigma a^2bc$ ,  $\Sigma a$ ,  $\Sigma a^2 - \Sigma bc$ ,  $\Sigma a$ ,  $\Sigma a^2 - \Sigma bc$ . Now, the first of the former set is resolvable into the first and sixth of the latter set, and the second of the former set is equal to the product of the remaining four of the latter set; in other words, Prof. NANSON'S identity implies two, viz.,

$$\frac{\Sigma BC}{\Sigma bc} = \Sigma bc - \Sigma a^2 \quad \text{and} \quad \frac{\Sigma B^2C^2 - \Sigma A^2BC}{\Sigma b^2c^2 - \Sigma a^2bc} = \Sigma a \Sigma a (\Sigma a^2 - \Sigma bc).$$

(II.) Denote  $(a, b, c)$  by  $\Delta$ . In the determinant

$$\begin{vmatrix} B_1C_1 & B_2C_2 & B_3C_3 \\ C_1A_1 & C_2A_2 & C_3A_3 \\ A_1B_1 & A_2B_2 & A_3B_3 \end{vmatrix}$$

form a new first row by subtracting  $B_1/A_1$  times the second row from the first. This new row will be

$$0, \frac{C_2}{A_1}(A_1B_2 - A_2B_1), \frac{C_3}{A_1}(A_1B_3 - A_3B_1), \text{ or } 0, C_2\Delta c_3/A_1, -C_3\Delta c_2/A_1.$$

Similarly, by subtracting  $C_1/B_1$  times the third row from the second for a new second row, we get  $0, -A_2\Delta a_3/B_1, A_3\Delta a_2/B_1$ . Thus the proposed determinant

$$= \Delta^2/A_1B_1 \begin{vmatrix} 0, & C_2c_3, & -C_3c_2 \\ 0, & -A_2a_3, & A_3a_2 \\ A_1B_1, & A_2B_2, & A_3B_3 \end{vmatrix} = \Delta^2 \begin{vmatrix} C_2c_3, & -C_3c_2 \\ -A_2a_3, & A_3a_2 \end{vmatrix} = \Delta^2 D, \text{ say.}$$

But, if we treat the determinant  $\begin{vmatrix} b_1c_1 & \dots \\ c_1a_1 & \dots \\ a_1b_1 & \dots \end{vmatrix}$  in a similar way, it becomes

$$\begin{vmatrix} 0, & c_2C_3/a_1, & -c_3C_2/a_1, & i.e., & c_2C_3, & -c_3C_2 \\ 0, & -a_2A_3/b_1, & a_3A_2/b_1, & & -a_2A_3, & a_3A_2 \\ a_1b_1, & a_2b_2, & a_3b_3 \end{vmatrix} = -D.$$

**15182.** (G. HEPPLE, M.A.)—The three forces represented by the perpendiculars from the symmedian point to the sides of a triangle are in equilibrium.

Solutions (I.) by R. TUCKER, M.A.; (II.) by LIONEL E. REAY, B.A.; (III.) by R. F. DAVIS, M.A., and H. BATEMAN.

(I.) This is equivalent to proving that forces, acting at  $O$ , proportional to  $a, b, c$  as indicated in the figure equilibrate. Evidently

$$b \cos C + c \cos B = a, \\ b \sin C - c \sin B = 0.$$

(II.) If  $x, y, z$  are the perpendiculars

$$x/a = y/b = z/c,$$

therefore

$$x/\sin A = y/\sin B = z/\sin C;$$

therefore  $x/\sin yz = y/\sin zx = z/\sin xy$ ,

since  $yz = 180^\circ - A$ , and similarly; therefore by LAMÉ'S theorem, the forces represented by  $x, y, z$  are in equilibrium.

(III.) The symmedian point  $K$  of any triangle  $ABC$  is the centroid of the triangle formed by joining the feet of the perpendiculars from  $K$  on the sides of  $ABC$  (MILNE'S Companion, § v., chap. iii., Art. 29).

**15172.** (Professor NANSON.)—Sum to infinity the series

$$\frac{1}{1.2} - \frac{1}{3.4} + \frac{1}{6.7} - \frac{1}{8.9} + \frac{1}{11.12} - \dots$$

Solution by Professor SANJANA, M.A.

Let  $f(x) = x - \frac{1}{2}x^2 - \frac{1}{3}x^3 + \frac{1}{4}x^4 + \frac{1}{5}x^5 - \frac{1}{6}x^6 - \frac{1}{7}x^7 + \frac{1}{8}x^8 + \frac{1}{9}x^9 + \dots$

then  $f(1) =$  the series given, and  $f(0) = 0$ . Also

$$f'(x) = 1 - x - x^2 + x^3 + x^4 - x^5 - x^6 + x^7 + x^8 + x^{10} - x^{11} \dots \\ = 1 - x(1+x) - x^2(1+x) - x^{11}(1+x) - \dots + x^3(1+x^2) + x^8(1+x^2) + \dots \\ = 1 - \frac{(1+x)x}{1-x^5} + \frac{(1+x^2)x^3}{1-x^5} = \frac{(1-x)(1-x^2)}{1-x^5} = \frac{1-x^2}{1+x+x^2+x^3+x^4}$$

Hence, series  $= f(1) - f(0) = \int_0^1 f'(x) dx$

$$= \int_0^1 \frac{(1-x^2) dx}{1+x+x^2+x^3+x^4} = \frac{1}{\sqrt{5}} \left\{ \log \frac{x^2 + \frac{1}{2}(\sqrt{5}+1)x + 1}{x^2 - \frac{1}{2}(\sqrt{5}-1)x + 1} \right\}_0^1 \\ = \frac{1}{\sqrt{5}} \log \frac{\sqrt{5}+1}{\sqrt{5}-1} = \frac{1}{\sqrt{5}} \{ \log(3+\sqrt{5}) - \log 2 \}.$$

**15109.** (Lt. Col. ALLAN CUNNINGHAM, R.E.)—Find the least solution in positive integers of  $x^3 + y^3 = mz^3$ , where  $m = (3\mu - 1)$ , a positive integer  $> 2$ , and  $x \neq y$ ; and  $x, y, z$  have no common factor.

Note by R. W. D. CHRISTIE.

(1) If  $x^3 + y^3 = mz^3$ , then

$$\{(x^3 + z^3 \cdot m) y\}^3 + \{(x^3 - y^3) z\}^3 m = \{(y^3 + mz^3) x\}^3.$$

(2) General Solution of 15109.—

$$(a^3 + 3a^2b - b^3)^3 + \{3ab(a+b)\}^3 = \{a^3 + 3ab(2a+b) - b^3\} (a^2 + ab + b^2)^3$$

for all values of  $a$  and  $b$ .

$a = 2, b = 1$ .— $a = 4, b = 1$  will give solutions of Col. CUNNINGHAM'S example, and another.

(3) If  $a^3 + b^3 = (a+b)z^3$  .....(1),

then  $(a+b)^3 + (2a-b)^3 = 9 \cdot a \cdot z^3, (a+b)^3 + (2b-a)^3 = 9 \cdot b \cdot z^3$  .....(2, 3),

$$(a-2b)^3 + (2a-b)^3 = 9(a-b)z^3, a^3 + (a-b)^3 = (2a-b)z^3$$
 .....(4, 5),

$$b^3 + (b-a)^3 = (2b-a)z^3$$
 .....(6).

(4) Two other general solutions are:—

$$(a) \{a(a^3 - 2b^3)\}^3 + \{b(2a^3 - b^3)\}^3 = (a^3 - b^3)(a^3 + b^3)^3,$$

$$(b) (a^4 + b^4 - 2ab^3 + a^3b - 3a^2b^2)^3 + \{3ab(a^2 - b^2)\}^3 \\ = (a^3 + 3a^2b - 6ab^2 + b^3)(a^3 + b^3)^3.$$

From (b) the common factor  $(a+b)^3$  may be eliminated, but it is left thus designedly to show that when 4 ( $a$ ) is fixed then 4 ( $b$ ) can be obtained by adding fixed constants to the cubes; e.g.,  $a = 3, b = 1$  gives, for 4 ( $a$ ),  $7^3 + 5^3 = 26 \cdot 2^3$ , and consequently, by adding the constants  $b(b^3 + a^3 - 3a^2b), b(a^3 + b^3 - 3ab^2), b(2b^2 + 3a^2 - 6ab)$ , i.e., 1, 19, 11 respectively, we secure  $7^3 + 7^3 = 37 \cdot 2^3$ .

**15119.** (H. BATEMAN.)— $\xi, \eta, \zeta$  are the distances of a point from the angular points of a triangle. Prove that the two points for which  $\xi^l \eta^m \zeta^n$  is a maximum are the foci of the ellipse whose areal equation is

$$\sqrt{(lx) + \sqrt{(my) + \sqrt{(nz)}} = 0.$$

Solutions (I.) by G. F. S. HILLS; (II.) by Professor SANJANA, M.A.

(I.)  $u = \xi^l \eta^m \zeta^n$  to be made a maximum subject to condition

$$a^2 \xi^2 \dots - 2bc \cos A \eta^2 \zeta^2 \dots - 2a^2 bc \cos A \xi^2 \dots + a^2 b^2 c^2 = 0,$$

which is the relation connecting the distance of four points in a plane (SALMON, Conics, p. 134).

Differentiating, &c., we get

$$[a \xi (a \xi^2 - b \cos C \eta^2 - c \cos B \zeta^2 - abc \cos A)]/l \xi = \dots = \dots$$

Now  $\xi^2 = bc \cos A (x-1)^2 + ca \cos B y^2 + ab \cos C z^2, \dots$ ,

formula for distance in areals; therefore

$$a \xi^2 - b \cos C \eta^2 - c \cos B \zeta^2 - abc \cos A = -2abc \sin B \sin C x,$$

on easy reduction: therefore  $\xi^2 x/l = \eta^2 y/m = \zeta^2 z/n$  gives the maximum points, or, substituting value for  $\xi^2$ , and putting  $1-x = y+z$ ,

$$[(c^2 y^2 + b^2 z^2 - 2bc \cos A yz) x]/l = \dots = \dots,$$

which are the foci of  $\sqrt{(lx) + \sqrt{(my) + \sqrt{(nz)}} = 0$ .

[A proof of this latter is, if  $(x, y, z)$  be one focus,  $(x', y', z')$  the other,

$$x'x/a^2 = yy'/b^2 = zz'/c^2 = k^2, \text{ whence } k^2(a^2 yz + b^2 zx + c^2 xy) = xyxz,$$

and centre is  $\frac{1}{2}(x+x') = \frac{1}{2}(x^2 + k^2 a^2)/x, \dots$ ;

but centre from usual formula is  $(m+n, n+l, l+m)$ ; hence, equating these,

$$\text{we have } \{x(a^2 yz + b^2 zx + c^2 xy) - yz(x+y+z)a^2\}/(m+n) = \dots = \dots,$$

whence above equations for foci easily follow.]

[Rest in Vol.]

**14918.** (REV. T. ROACH, M.A.)—If from  $S'$ , the second focus, a line be drawn parallel to  $SP$ , meeting the ellipse in  $P'$  and  $SY$  in  $Z$ , show that  $SP'Z$  is an isosceles triangle.

Solutions (I.) by the PROPOSER; (II.) by A. W. POOLE.

(I.)  $SZ = S'W$ ,

opposite side of parallelogram

$$= SP + S'P = AA'$$

$$= SP' + S'P';$$

therefore  $SP' = P'Z$ ;

therefore triangle is isosceles.

concyelic." Prove that (1) the centre of the circle P'QRS lies on a concentric ellipse; (2) the circle itself envelops the curve

$$(2x^2 + 2y^2 - a^2 - b^2)^2 = (a^2 - b^2)^2 (x^2/a^2 + y^2/b^2);$$

(3) the line joining P with the centre of the circle always touches the curve  $(\lambda x)^3 + (\mu y)^3 = (a^3 - b^3)^3$ , where  $\lambda \pm \mu = (a \pm b)^3$ ; (4) the normals to the ellipse at Q, R, S meet at the same point T; and (5) the locus of T is an ellipse.

**9346.** (Professor NEUBERG.)—Soit, dans le plan d'un triangle ABC, un point D tel que les droites joignant A, B, C respectivement aux centres des cercles BCD, CAD, ABD concourent en un même point E. Démontrer (1) que la droite joignant D au centre du cercle ABC passe par E; (2) qu'entre les angles A, B, C du triangle ABC et les angles BDC =  $\alpha$ , CDA =  $\beta$ , ADB =  $\gamma$  il existe la relation

$$\begin{vmatrix} 1 & \cot A + \tan \alpha & \cot A \tan \alpha \\ 1 & \cot B + \tan \beta & \cot B \tan \beta \\ 1 & \cot C + \tan \gamma & \cot C \tan \gamma \end{vmatrix} = 0.$$

**9799.** Deduce the solution of  $a^2z/ax^2 - a^2(a^2z/dy^2) = 0$  from the expansion of  $\phi(x, y)$  in ascending powers of  $x$  and  $y$ .

#### NOTICES TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss CONSTANCE I. MARKS, B.A., 10 Matheson Rd., West Kensington, W.

Vol. II. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price to Subscribers, 5s.; Non-Subscribers, 6s. 6d.

#### THE LONDON MATHEMATICAL SOCIETY.

Thursday, November 13th, 1902.—Annual General Meeting, Dr. E. W. Hobson, President, in the Chair.

Mrs. A. Stott, Liverpool, was elected a member.

The De Morgan Medal for 1902 was presented to Prof. A. G. Greenhill in recognition of his eminent services to mathematics and to mathematical physics.

The President stated that Mr. Tucker was retiring from the office of Honorary Secretary, and he moved the following resolution:—"That the thanks of the London Mathematical Society be offered to Mr. Robert Tucker for the eminent services which he has rendered to the Society during the thirty-five years in which he has held the office of Honorary Secretary." This resolution was seconded by Dr. Glaisher and carried unanimously. A circular has recently been issued, signed by four past Presidents of the Society, calling attention to the facts that, during his long tenure of the office, Mr. Tucker has grudged neither time nor labour in promoting the interests of the Society, and that it is largely owing to his zeal and devotion that the Society has advanced from a comparatively local beginning to be the representative Society of mathematical science in Great Britain. The circular invites those who concur with the signatories, in wishing to offer to Mr. Tucker some permanent mark of their appreciation of his services, to send subscriptions for that object to Dr. J. Larmor, St. John's College, Cambridge.

The Council and Officers for the ensuing Session were elected as follows:—President: H. Lamb, M.A., F.R.S. Vice-Presidents: R. Tucker, M.A.; E. W. Hobson, Sc.D., F.R.S.; H. F. Baker, Sc.D., F.R.S. Treasurer: J. Larmor, D.Sc., F.R.S. Secretaries: A. E. H. Love, D.Sc., F.R.S., and W. Burnside, Sc.D., F.R.S. Other Members of the Council: J. E. Campbell, M.A.; Lt.-Col. A. J. Cunningham, R.E.; J. W. L. Glaisher, Sc.D., F.R.S.; A. G. Greenhill, M.A., F.R.S.; H. M. Macdonald, M.A., F.R.S.; Major MacMahon, R.A., Sc.D., F.R.S.; A. E. Western, M.A.; E. T. Whittaker, M.A.; and A. Young, M.A.

The newly elected President having taken the Chair, Dr. Hobson read an address on "The Infinite and the Infinitesimal in Mathematical Analysis."

The following papers were communicated:—

Prof. D. Hilbert: "Ueber den Satz von der Gleichheit der Basiswinkel im gleichschenkligen Dreieck."

Prof. W. Burnside: "On Linear Homogeneous Groups."

Prof. H. Lamb: "On Wave-Propagation in Two Dimensions."

Prof. A. C. Dixon: (1) "Summation of a certain Series," (2) "Expansions by means of Lamé's Functions."

Mr. W. H. Young: (1) "On Sets of Intervals," (2) "Note on Unclosed Sets of Points defined as the Limit of a Sequence of Closed Sets of Points."

Prof. M. J. M. Hill: "The Continuation of certain Fundamental Power Series."

Prof. L. Crawford: "A Geodesic on a Spheroid and an Associated Ellipse."

Prof. A. W. Conway: "The Propagation of Light in a Uniaxal Crystal."

Mr. E. T. Whittaker: "On a New Connexion of Bessel Functions with Legendre Functions."

Write for Complete List of New Books and Illustrated Catalogue.

## MR. G. A. HENTY'S NEW STORIES.

**WITH KITCHENER IN THE SOUDAN:** A Tale of Atbara and Omdurman. With 10 Full-page Illustrations by W. RAINEY, R.I., and 3 Maps. Crown 8vo, cloth, olive edges, 6s.

**WITH THE BRITISH LEGION.** A Story of the Carlist Wars. With 10 Full-page Illustrations by WAL PAGET. Crown 8vo, cloth, olive edges, 6s.

**THE TREASURE OF THE INCAS.** A Tale of Adventure in Peru. With 3 Illustrations by WAL PAGET, and a Map. Crown 8vo, cloth, olive edges, 5s.

**IN THE HANDS OF THE CAVE-DWELLERS.** Illustrated by W. MILLER. Crown 8vo, cloth, 1s. 6d.

A notable addition to the list of Mr. Henty's shorter tales.

NEW AND CHEAPER EDITION OF MR. HENTY'S BOOKS AT 3s. 6d.

**THE LION OF ST. MARK:** A Tale of Venice in the Fourteenth Century. With 6 Full-page Illustrations. Crown 8vo, cloth, 3s. 6d.

**THROUGH THE PRAY:** A Story of the Luddite Riots. With 6 Page Illustrations. Crown 8vo, cloth, 3s. 6d.

## MR. HENTY'S RECENT BOOKS.

**WITH ROBERTS TO PRETORIA:** A Tale of the South African War. With 12 Full-page Illustrations by WILLIAM RAINEY, R.I., and a Map. Crown 8vo, cloth elegant, olive edges, 6s.

"Here Mr. Henty is at his very best. Martial ardour glows in every page, and the fortunes of the English boy who was at Magersfontein, Paardeberg, and Mafeking are calculated to hold all boy readers enthralled."—*World*.

**AT THE POINT OF THE BAYONET:** A Tale of the Mahratta War. With 12 Full-page Illustrations by WAL PAGET, and 2 Maps. Cloth elegant, 6s.

"Altogether it is a most dramatic story, and the historical element is skilfully interwoven with the action."—*Standard*.

**TO HERAT AND CABUL:** A Story of the First Afghan War. With 8 Full-page Illustrations by C. M. SHERIDAN, and Map. Cloth elegant, 5s.

"The practised narrator has done good service in reviving the recollections of a stirring episode in our long contest to strengthen our Indian frontier."—*Athenæum*.

**WITH BULLER IN NATAL;** or, A Born Leader. With 10 Illustrations by W. RAINEY, R.I., and a Map. Crown 8vo, cloth elegant, olive edges, 6s.

"One of the most powerful of Mr. G. A. Henty's annual instalments of boys' books."—*Pall Mall Gazette*.

"Mr. Henty seems to have surpassed himself this year. Never has he done better work, if as good."—*Graphic*.

## MR. HENTY'S PREVIOUS BOOKS.

PRICE 6s. EACH.

Won by the Sword.  
A Roving Commission.  
Under Wellington's Command.  
Both Sides the Border.  
With Frederick the Great.  
With Moore at Corunna.  
At Agincourt.  
With Cochrane the Dauntless.  
A Knight of the White Cross.  
The Tiger of Mysore.  
Wulf the Saxon.  
St. Bartholomew's Eve.  
Through the Sikh War.  
Beric the Briton.  
In Greek Waters.  
The Dash for Khartoum.  
Redskin and Cowboy.  
By Right of Conquest.  
By England's Aid.  
With Lee in Virginia.

PRICE 6s. EACH.

By Pike and Dyke.  
The Lion of St. Mark.  
Captain Bayley's Heir.  
Bonnie Prince Charlie.  
For the Temple.  
The Young Carthaginian.  
With Wolf in Canada.  
When London Burned.  
The Lion of the North.  
With Clive in India.  
In Freedom's Cause.  
Through the Fray.  
Under Drake's Flag.  
True to the Old Flag.  
In the Irish Brigade.

PRICE 5s. EACH.

No Surrender.  
At Aboukir and Acre.  
A March on London.  
On the Irrawaddy.

PRICE 5s. EACH.

Through Russian Snows.  
In the Heart of the Rockies.  
A Jacobite Exile.  
Condemned as a Nihilist.  
Held Fast for England.  
Maori and Settler.  
One of the 28th.  
In the Reign of Terror.  
Orange and Green.  
Bravest of the Brave.  
A Final Reckoning.  
The Cat of Bubastes.  
The Dragon and the Raven.  
St. George for England.  
By Sheer Pluck.  
Facing Death.  
Out with Garibaldi.  
For Name and Fame.

PRICE 3s. 6d. EACH.

The Young Colonists.  
A Chapter of Adventures.

**The Diamond Seekers:** A Story of Adventure in South Africa. By ERNEST GLANVILLE. With 8 Full-page Illustrations by WILLIAM RAINEY, R.I. 6s.

**A Mystery of St. Rule's.** By ETHEL F. HEDDLE. With 8 Full-page Illustrations by G. DEMAIN HAMMOND. 6s.

**One of the Fighting Scouts:** A Tale of Guerilla Warfare in South Africa. By Captain F. S. BRERETON, R.A.M.C. With 8 Full-page Illustrations by STANLEY L. WOOD, and a Map. 5s.

**Under the Spangled Banner:** A Tale of the Spanish-American War. By Captain F. S. BRERETON, R.A.M.C. With 8 Full-page Illustrations by PAUL HARDY. 5s.

**In the Great White Land:** A Tale of the Antarctic Ocean. By GORDON STABLES. With 6 Full-page Illustrations by J. AMBROSE WALTON. 3s. 6d.

**The Fairclough Family.** By Mrs. HENRY CLARKE. With 6 Illustrations by G. DEMAIN HAMMOND, R.I. 3s. 6d.

**The Girls of Banshee Castle.** By ROSA MULHOLLAND (Lady Gilbert). With 6 Illustrations by JOHN H. BACON. 3s. 6d. New Edition.

**A Girl's Loyalty.** By FRANCES ARMSTRONG. With 6 Illustrations by JOHN H. BACON. 3s. 6d. New Edition.

**The Boys of Wynport College:** A Story of School Life. By FREDERICK HARRISON. With 6 Illustrations by HAROLD COPPING. 3s. New Edition.

**The Golden Galleon.** By ROBERT LEIGHTON. With 6 Illustrations by W. RAINEY, R.I. 3s. New Edition.

NEW AND REVISED EDITION OF POUCHET'S "UNIVERSE."

**THE UNIVERSE;** or, The Infinitely Great and the Infinitely Little. By F. A. POUCHET, M.D. Revised and Edited by J. R. AINSWORTH DAVIS, M.A., Professor of Biology and Geology in University College, Aberystwyth. Illustrated by 259 Engravings on Wood and 7 Coloured Pictures. Medium 8vo, cloth elegant, gilt edges, 7s. 6d.

# Oxford University Press.

**THE COMPLETE WORKS OF JOHN LYLY:** now for the First Time Collected and Edited from the Earliest Quartos: with Life, Bibliography, Essays, Notes, and Index. By R. WARWICK BOND, M.A. 3 Vols. Demy 8vo, cloth, 42s. net. [Now ready.]

**THE LAY OF HAVELOK THE DANE.** Re-edited from the unique MS. Laud 108 in the Bodleian Library, Oxford, by W. W. SKRAT, Litt.D. Extra fcap. 8vo, cloth, 4s. 6d.

**LA DIVINA COMMEDIA DI DANTE ALIGHIERI,** nuovamente riveduta nel testo dal Dr. E. MOORE: con Indice dei Nomi Propri, compilato da PAGET TOYNBEE, M.A. Crown 8vo, cloth, 6s.

Also, in 3 Vols., the *Inferno*, *Purgatorio*, *Paradiso*. Separately, 2s. net each.

**AN ENGLISH COMMENTARY ON DANTE'S DIVINA COMMEDIA.** By H. F. TOZER, M.A. Crown 8vo, cloth, 8s. 6d.

Also, in 3 Vols., the Commentary on the *Inferno*, *Purgatorio*, and *Paradiso*. Separately, 3s. net each.

**LA LIGNÉE DES POÈTES FRANÇAIS AU XIX<sup>e</sup> SIÈCLE.** PAR CHARLES BONNIER. Demy 16mo, cloth, 3s. net, and in leather bindings.

**MOLIÈRE.—LES FACHEUX.** Edited, with Introduction and Notes, by E. J. TRECHMANN, M.A. Fcap. 8vo, cloth, 2s.

**A SHORT HISTORY OF FRENCH LITERATURE.** By GEORGE SAINTSBURY, M.A. Sixth Edition. Crown 8vo, cloth, 10s. 6d.

**A PRIMER OF PHONETICS.** By HENRY SWEET, M.A. Second Edition, Revised. Extra fcap. 8vo, cloth, 3s. 6d.

**THE HARMONICS OF ARISTOXENUS.** Edited, with Translation, Notes, Introduction, and Index of Words, by HENRY S. MACRAN, M.A. Crown 8vo, cloth, 10s. 6d. net.

**EURIPIDES.—HECUBA.** Edited, with Introduction and Notes, by C. B. HEBERDEN, M.A. Extra fcap. 8vo, cloth, 2s. 6d.

**HOMER.—ODYSSEY. Books XIX—XXIV.** With Introduction, Notes, and Table of Homeric Forms, by W. W. MERRY, D.D. Extra fcap. 8vo, cloth, 3s.

**SCENES FROM SOPHOCLES. AJAX. ANTIGONE.** Edited, with Introduction and Notes, by C. E. LAURENCE, M.A. With Illustrations. Extra fcap. 8vo, cloth, 1s. 6d. each.

By the late JOHN BARROW ALLEN.

**AN ELEMENTARY GREEK GRAMMAR.** Extra fcap. 8vo, cloth, 3s.

**TALES ADAPTED FROM THE TEXT OF LIVY.** With Notes, Maps, Vocabularies, and English Exercises. Extra fcap. 8vo, stiff covers, 1s. 6d. each.

(1) Of Early Rome. (2) Of the Roman Republic, Part I. (3) Of the Roman Republic, Part II.

**APPIAN.—CIVIL WARS. Book I.** Edited by J. L. STRACHAN-DAVIDSON, M.A. Crown 8vo, paper covers, 3s. 6d.

**CICERO.—PRO MILONE.** Edited, with Introduction and Notes, by A. B. POYNTON, M.A. Second Edition. Crown 8vo, cloth, 2s. 6d.

**COMPANION TO ENGLISH HISTORY (MIDDLE AGES).** With 97 Illustrations. Edited by F. P. BARNARD, M.A. Crown 8vo, cloth, 8s. 6d. net.

**A CONCISE ETYMOLOGICAL DICTIONARY OF THE ENGLISH LANGUAGE.** By W. W. SKRAT, Litt.D. New Edition. Rewritten and re-arranged. Crown 8vo, cloth, 5s. 6d.

**GRADUATED LESSONS ON THE OLD TESTAMENT.** By the Rev. U. Z. RULE. Edited by the Rev. Lt. J. M. BEBB, Principal of St. David's College, Lampeter. 3 Vols. Extra fcap. 8vo, paper boards, cloth back, with Maps, 1s. 6d. each vol.; in cloth, 1s. 9d. each vol.

**MANUALS OF THE NEW TESTAMENT.** By T. H. STOKER, D.D.

Vol. II.—*Life and Letters of St. Paul*. 3s. 6d. Or, Part I, *Life of St. Paul*, 2s. Part II, *Letters of St. Paul*. 2s.

**ARITHMETIC.** With or without Answers to the Exercises. By R. HARGREAVES, M.A. Crown 8vo, cloth, 4s. 6d.

**THE "JUNIOR" EUCLID.** By S. W. FINN, M.A. Crown 8vo, stiff covers. Books I and II, 1s. 6d. Books III and IV, 2s.

**PHYSIOLOGICAL HISTOLOGY. Methods and Theory.** By GUSTAV MANN, M.D., C.M. Edin., B.Sc. Oxon., Senior Demonstrator of Physiology in the University of Oxford. 8vo, cloth, price 15s. net.

**THE STUDENT'S HANDBOOK TO THE UNIVERSITY AND COLLEGES OF OXFORD.** Fifteenth Edition. Crown 8vo. 2s. 6d. net; by post, 2s. 9d.

**OXFORD UNIVERSITY CALENDAR FOR THE YEAR 1903.** Crown 8vo, cloth, 5s.

**THE OXFORD ALMANACK FOR MDCCCXCIII;** with an Etching of the Interior of the Latin Chapel, Christ Church Cathedral, Oxford, by W. MONK. 4s. 6d.

Also Published by HENRY FROWDE.

**CHE. FR. GRIEB'S DICTIONARY OF THE ENGLISH AND GERMAN LANGUAGES.** Third Edition. Re-arranged, Revised, and Enlarged with special regard to Pronunciation and Etymology. By A. SCHROEBR, Ph.D. 8vo, morocco back. Vol. I—*English-German*, 14s. Vol. II—*German-English*, 12s.

**NAVE'S INDEX-DIGEST OF THE HOLY SCRIPTURES.** By ORVILLE J. NAVE, D.D. Comprising over 20,000 Topics and Sub-Topics and 100,000 References. Demy 8vo, pp. 1,622 and 12 Coloured Maps, from 12s. New impression on Oxford India paper, from 17s.

## FOR PRIZES.

**DAY BY DAY OF THE CHRISTIAN YEAR.** Being Daily Readings from the Revised Version in the Words of Holy Scripture, following the Seasons of the Christian Year. Demy 18mo, from 2s. On Oxford India paper, from 3s.

## OXFORD MINIATURE POETS.

*In single Volumes, 32mo, printed on Oxford India Paper, with Portrait, from 3s. 6d. each.*

**AURORA LEIGH, SONNETS FROM THE PORTUGUESE,** and other Poems. By ELIZABETH BARRETT BROWNING.

**EVANGELINE, THE SONG OF HIAWATHA,** and other Poems. By H. W. LONGFELLOW.

**TALES OF A WAYSIDE INN, THE GOLDEN LEGEND,** and other Poems. By H. W. LONGFELLOW.

**THE DIVINE TRAGEDY, MICHAEL ANGELO,** and other Poems. By H. W. LONGFELLOW.

*Previously published, uniform with the above.*

**DRAMATIC LYRICS AND ROMANCES AND OTHER POEMS OF ROBERT BROWNING.**

**THE EARLY POEMS OF ALFRED, LORD TENNYSON.**

**THE COMPLETE POETICAL WORKS OF JOHN MILTON.**

## THE OXFORD POETS.

*In single Volumes, crown 8vo, from 3s. 6d.; on Oxford India Paper, from 8s. And in sets of miniature Volumes in cases as under.*

**BURNS,** 3 Vols., from 8s. 6d.—**BYRON,** 4 Vols., from 11s. 6d.—**CHAUCER.**—**LONGFELLOW,** 6 Vols., from 12s.—**MILTON.**—**SCOTT,** 5 Vols., from 12s.—**SHAKESPEARE,** 6 Vols., from 16s.—**WHITTIER,** 4 Vols., from 14s. 6d.—**WORDSWORTH,** 5 Vols., from 12s.

**THE EARLY POEMS OF ALFRED, LORD TENNYSON,** including the "Princess," "In Memoriam," &c. Crown 8vo, cloth, 2s. 6d.

**THE OXFORD BOOK OF ENGLISH VERSE. 1250-1900.** Chosen and Edited by A. T. QUILLER-COUCH. Crown 8vo, cloth, gilt top, 7s. 6d.; fcap. 8vo, on Oxford India Paper, cloth extra, gilt top, 10s. 6d.

**SELECTIONS FROM THE ENGLISH POETS.** Being an Illustrated Edition of the "British Anthologies." Edited by Professor E. ARBER, F.S.A. Crown 8vo, cloth extra, 3s. 6d. each.

The original edition of "British Anthologies" is still to be had, 2s. 6d. per Volume; also in leather bindings.

**THE OXFORD INDIA PAPER DICKENS.** Complete Copy-right Edition. In 17 fcap. 8vo volumes. With Reproductions of the Original Illustrations by CRICKSHANK, "PHIZ," &c. In decorated cloth, 2s. 6d. net; in decorated leather, 3s. 6d. net; and in superior leather bindings.

Cases to hold the 17 volumes may now be had, in Cloth, 2s. 6d. net and 7s. 6d. net; Oak, 10s. 6d. net; and Leather, 12s. 6d. net.
